VOL. XLI. NO. 1. JANUARY 3, 1918. ** WEEKLY.

# Farm Loan Bank Unpatriotically Assailed

## *Private Interests Must Not Be Allowed to Wreck or Impair the Farm Loan System*

The alarming fear is expressed by the federal farm loan board that "the next move of those who are seeking to break down the system will be to institute a suit contesting the constitutionality of the farm loan act."

In other words, the enemies of the system, seeing the futility of their efforts to induce congress to repeal the law, may try a flank movement in the courts.

**It would be a national calamity if that threat were carried out and sustained by the supreme court of the United States.**

The system was needed in times of peace; it is doubly needed now. We must spur up the farms and maintain increased farm production to win the war, and the farm loan plan is a powerful aid to that end. It is particularly needed in the west, where the surplus wheat to feed our allies must be grown, if it is to be grown anywhere.

While private mortgage interests would be within their legal rights in attempting to wreck the farm loan banks, they have no moral or patriotic right now to assail the law. The nation is at war, and needs constructive, not destructive, policies.

Moreover, the government is under moral obligations to finance the farm loan bonds. Wartime necessities compel Uncle Sam to drain the investment world to float Liberty bond issues, and that fact makes it next to impossible for the federal farm loan board to find a sufficient market for its bonds.

In this emergency the government is asking congress to authorize the secretary of the treasury to purchase the coming year $100,000,000 of these farm loan bonds. Opposition must be expected from private interests, the same interests that the federal farm loan board finds framing up an attack in the courts.

**To meet these varied and insidious attacks, friends of the system must rally to its defense. The law was passed for the benefit of the farmers, and farmers must stand guard against its foes. Every farm loan association, every grange, every farmers' union and all other farmer organizations should immediately urge this matter upon the attention of their congressmen.**

The federal farm loan act built two competing systems in one—the government system and also a system of privately owned and operated "joint stock land banks" that are under government regulation.

Authority was given ten or more persons to organize such institutions "for carrying on the business of lending on farm mortgage security and issuing farm loan bonds." They must have not less than five directors, not less than $250,000 capital, can loan only on farm mortgages and can operate only in the state in which they are organized and in one contiguous state.

The wisdom of this coupling up of two competing systems under one act was seriously questioned when the bill was pending in congress, but the prevailing belief at the time was that this plan of chartering private land banks would cut away much of the opposition to the proposed law.

Evidently the results are not entirely satisfactory, for the federal farm loan board will ask congress for two amendments:

(1) To remove the present restriction permitting a joint stock land bank to do business only in the state where it is situated and in one contiguous state.

(2) To permit a bank to issue bonds to the amount of 20 times its capital stock instead of 15 times, as under the existing law, and to raise from six to six and one-half per cent the maximum interest rate that the joint stock land banks may charge on loans to farmers.

These amendments have been sought by the farm mortgage bankers' association, whose leaders predicted that a large proportion of the members would seek government charter and operate under supervision of the farm loan board is the modifications were made. Their plea to be allowed to use the name "National Land Bank" instead of "Joint Stock Land Bank" has not been received favorably by the board, owing to fear of confusion of private institutions with the government's 12 federal land banks.

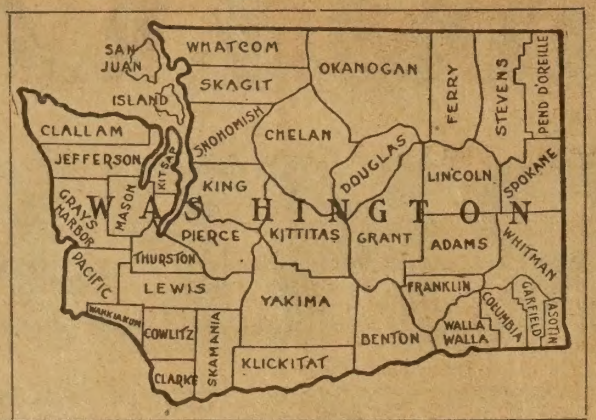
Joint stock land banks would still be compelled to limit the interest rates on loans within one per cent more than the selling price of their bonds, even though the maximum were raised to six and one-half per cent. They also would have to compete with the federal land banks' new rate of five and one-half per cent.

# Grow Vegetables

## *State College Will Teach How*

The state college at Pullman is undertaking something a little out of the ordinary, but greatly to be commended—a garden school. Beginning next Monday, January 7, a garden "short course" of 12 weeks will be given by experienced and expert garden authorities at the college, with F. O. Kreager, head of the elementary science department, in general charge. The instruction is intended for the women and girls of the state, especially those of the farm. It is a part of the nation's great food production campaign and should result in a great stimulus to farm gardening. The instruction will include all manner of garden subjects, such as the making and use of hot beds and cold frames, the preparation of soils, the methods of planting and transplanting, and the methods of cultivation and care of the various garden crops. The school will include also a brief treatment of poultry production, with special reference to the hatching and care of chicks.

# Plan Crop System



## *Maximum Efficiency Is Sought*

With a view to securing the maximum efficiency in production of food and feed crops for the coming season, and succeeding seasons, the state college, the state department of agriculture and the national food administration as represented by Charles Hebberd, administrator for this state, are collaborating in the preparation of a complete program of crop production for Washington. A conference was held last week in Spokane between President E. O. Holland of the college, Commissioner E. F. Benson of the state department of agriculture, and Mr. Hebberd of the food administration. The chief result of the conference was the expression of general ideas and purposes and the decision to have President Holland and agricultural department heads at the college draw up a definite plan for presentation at another meeting to be held the latter part of this month. The program, when announced, will include both grain and meat production.

# Regulate Everything or Nothing

## Sentiment on Farms Seems to Favor the Regulation of Both What Is Sold and What Is Bought by the Farmers

COVILLE, Stevens County, Wash., Dec. 24.—So far the price regulation has not affected this locality to any great extent. Outside of a few commodities as wheat and sugar it is doubtful if any change has taken place in the prices asked or given for commodities used on the farm. There is a great divergence of opinion as to price regulation, but the great majority favor either entire or no regulation. The great majority of substitutes we are asked to use in place of wheat, meat, fats and sugar are still much higher than those products themselves. The mildness of the fall and early winter have helped the feed situation somewhat as many feeders have not been forced to feed hay as early as usual. It will enable some to carry stock over, who a few month ago could not see their way to do so. Hay at present is too high to expect any profit from feeding to either the common dairy or beef stock at the present prices of milk and beef. The dairymen are fortunate indeed if they are able to break even at the present prices, and in the case of the beef men they can not do so. In some cases farmers are cutting their hay and straw and mixing the two to secure better results, and at the present prices they will be paid for doing so. Even at the high prices of feeds, the sheep men will be able to show some profit. The draft has hit the farms here very heavily, and a great number of those not drafted have enlisted during the last month. There undoubtedly will be a great shortage of labor for the farms the coming season. A. H. HAHNER.

### Twenty-five go to War.

NEPPEL, Grant County, Wash., Dec. 14.—The effect of partial price regulation has a tendency to curtail buying and selling, as the farmers are in favor of a complete price regulation for their produce according to average cost of production. All products of the farm should be increased by this method, as it guarantees a certain margin of profit. The mild fall weather is a great help to the stock owner here, as most people are short of feed for their ever increasing herds, especially as wheat hay is bringing $25 to $30 per ton and alfalfa, loose, $20. This has caused owners of milk herds to sell some or all their milking stock. A farmer this season should receive at least $18 per ton for alfalfa to make a profit on his labor, and wheat headings, in some instances, have not been profitable at $30 per ton on account of the unfavorable season. Sheep men have paid on the average of $20 per ton for the wheat headings for sheep feed and $16 for alfalfa and they are fortunate to purchase at that figure as they can make a large profit. Sheep have more than doubled in value while feed has not advanced more than two-thirds of its old standard value. Several neighbors have tried out different methods of feed for stock over winter. Some have fed nothing but straw chaff with salt scattered over each feeding. Others have let the stock out and at large to straw piles with no further attention. This usually has caused the loss of an animal on account of mustard in the straw and no salt. Others have used carrots with their straw ration with fine success and as long as the carrot ration with free access to salt is given the stock has done remarkably well and are fit for work on short notice with but a few feeds of chopped grain or oats. Outside of using grain and hay, the first and third methods are the best in the long run. Some 25 farmers' sons have gone into the army. The effect has a tendency to throw a lot of land idle or for leasing, as there is a large acreage farmed by the average wheat farmer and high priced labor is an unknown factor. That does not tend to encourage the farmer to prepare a field and fall down on the work later on, when there is no labor available. MARTIN PENHALLICK.

### Has Been a Bad Season.

OAKESDALE, Whitman County, Wash., Dec. 14.—The last summer and fall was the driest on record for the Palouse country. Consequently the crops of all kinds were the lightest in the history of the country. The prospects for the wheat crop next season is not very bright. Very little fall seeding has been done and what was seeded has not come to amount to anything. There has been no fall plowing done, due to dry condition of the ground. The labor shortage threatens to become a serious menace next season, owing to the fact that hundreds of young men have enlisted or have been drafted into the army. A large per cent of these are young farmers and farmers' sons. The farmers would like to increase their acreage of wheat and other crops, but can not see their way clear to do so. As for price regulation the farmers are for it to a man if it is done right. That is, if the government will go far enough and include that which they have to buy as well as that which they have to sell. The farmers, as a whole, are not satisfied with the price regulation as it stands today. They feel that when the government controls the prices of what they have to sell and leaves them at the mercy of the profiteers for what they have to buy they are not getting a square deal by any means. Most of the potato growers of this section were hit hard the last season and they are feeling pretty blue over the way things have panned out. Owing to the high prices paid last year and the agitation last spring for greater production of the patriotic spuds, there was a very large acreage planted. Quite a number of the growers were laboring men of the towns who had never grown potatoes before. They rented land from the farmers at $5 and $6 per acre, while some planted them on shares. They planted $4 seed and hired them cultivated; the bugs were pretty bad here the last season, so they were forced to fight the bugs with paris green and arsenate of lead. Labor was scarce and high priced. It cost the growers from 20 to 35 cents per sack to dig them; second-hand sacks cost 5 cents each. It also cost 5 to 7 cents per sack to sort the spuds. The season was extremely unfavorable for the production of potatoes, therefore the yield was only half a crop and some places not that. Then at digging time quite a few were frozen. Now to cap the climax, the best prices offered at present is $1 per hundred pounds, with no cars to ship them in at that. Everything that went to produce these potatoes was paid for at war prices. Now when they are produced the best they are offered for them are peace prices. Unless something is done to relieve such conditions as these, I am afraid there will be a very short crop of potatoes next year. Last spring the production of seed peas promised to become a leading crop in this section. Dozens of farmers signed contracts with the seed pea companies and hundreds of acres were planted to peas. But unfortunately the season was unfavorable and the same thing has happened to the pea growers that happened to the potato growers, only the pea growers got it twice as hard. The growers lost from $45 to $500 in cash, not to speak of their time and labor. The larger the acreage the more the loss. Feed of all kinds is very scarce and the price is high. Farmers are selling off a large per cent of their live stock.

MASON BROWN.

### Regulate From Tractor to Hoe.

FAIRFIELD, Spokane County, Wash., Dec. 20.—The fixing of prices on farm produce has not caused any marked change in the generan running of things to any noticeable extent except that the wheat was disposed of much earlier in the season than is usually the case. Public opinion seems to favor the government reglation of prices of not only the more important farm produce but also the many things that the farmer has to buy to carry on his business. And farm implements should receive the price fixing at once. The prices should range from the farm tractor clear down to the humble hoe. The mild fall and winter weather has helped out the feed situation wonderfully. All stock is in fine shape for the winter and can be carried through on the minimum amount of feed. The farmer, this year, should get $18 to $20 per ton for fall wheat hay to make a fair profit. Oat and spring wheat hay, if sold at $20, would make very little profit, if any. If the cattle and sheep men can't pay that price and make a profit they can at least break even and stand a chance to make something the next year. Many farmers did not break even this year so it is a standoff between the two. Very few farmers' sons have been called from this section, although quite a lot of the farm help has either been called or enlisted in the service and as a result help may be scarce next year. ROY G. ADAMS.

**"The 'Acme' Way to Crops That Pay"**

is the title of our free book that points the way to increased yields. Shows how to secure deep, firm, moist seed beds without waste of time or labor. Fully describes the "Acme" Tillage Line and explains *"Why the Coulters Do the Work"* in field, orchard and garden better than it can be done in any other way. Gives the findings of State Experiment Stations in every part of the country.

This book will help you to grow bigger crops. Send a postal today.

**DUANE H. NASH Inc.**
343 E. Morrison St., Portland, Oregon.

**OLDS' Seed Book**

**and Packet Flower Seed FREE**

FOR 30 years I have sold reliable seeds. Thousands of customers testify to this. My seeds not only grow, but produce big yields. They must make good or I will. 31st annual catalog now ready. Write for copy.

**Lists All Kinds of Farm Garden and Flower Seeds**

The best arranged, most comprehensive and easiest catalog to order from ever issued. A few specialties are:

**Certified Seed Potatoes**
**Wisconsin Grown Seed Corn**
**Pedigreed Oats and Barley**
**Wheat, Speltz, Rye, Buckwheat**
**Northern Clover and Alfalfa**
**Tested Garden and Flower Seeds**

Send postal today. Mention this paper. Will include packet flower seeds.

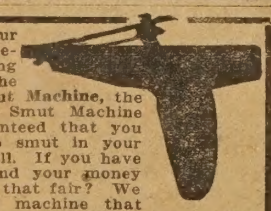
Drawer 60 MADISON, WIS.



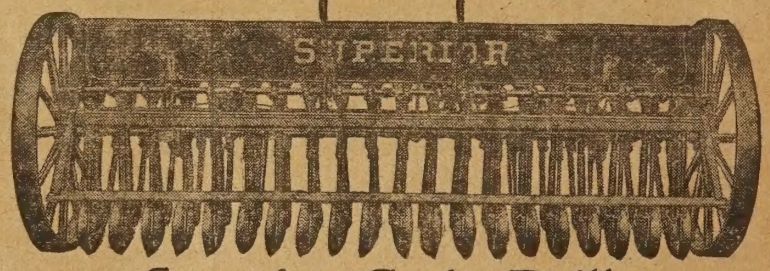
**In writing advertisers, be sure to say that you saw their advertisement in this paper.**

Treat your seed oats before seeding again with the Smut Machine, the only perfect Smut Machine made. Guaranteed that you will have no smut in your grain next fall. If you have we will refund your money in full. Isn't that fair? We also have a machine that takes wild oats out of tame oats for seed, and the best cleaner and grader for all grades. All machines trial guaranteed. Write us.

**MINNEAPOLIS SEPARATOR CO.**
304 Erie Street. Minneapolis, Minn.

***Clean Your Seed***

and grade it by weight.



**Clipper Cleaners**

will do it as well as though you weighed each individual kernel.

Let us show you. Nine-tenths of the seed houses use Clipper Cleaners. Why?

**Spokane Seed Co.**
Spokane.

***PLANT for PROFIT***

**Superior Grain Drills**

plant for profit, because every feed sows a measured quantity of seed; because the Superior does not skip, choke or bunch; because every furrow opener makes a perfect, roomy seed trench; because an equal amount of seed is sown in every furrow; because the seed is planted at an even depth. "Even Sowing Means Even Growing"—an evenly ripened crop.

**The purchaser of a Superior Drill runs no risk whatever, because the warranty covers every vital point.**

Superior Drills meet every seeding condition that confronts the northwest farmer. They are easy on both man and team. Light draft, great strength. Light running Disc Bearings that are guaranteed never to wear out. Positive Force Feeds, Hard-work Change Speed Disk Gear Drive, Furrow Openers that will work in any soil no matter how wet, sticky or dry. The Superior will stand right up to the work year in and year out, and satisfy the most particular farmers.

Send for The Superior Catalog. Read it. Note the warranty. Then go to your Implement Dealer and insist on seeing the SUPERIOR.

## U. S. Helps Solve Seed Problem

### *Possibility of Federal Aid Illustrated in Montana*

The widely circulated report that the federal government has actually appropriated money with which to purchase seed for the farmers of various states that need assistance is not exactly true, though the government is lending practical aid in this regard. The report referred to is one which stated that the government had advanced half a million dollars for Montana farmers, and that the grain buying corporation of the food administration had advanced a like amount, making $1,000,000 all told for the purchase of seed for the farmers of that state. Montana farmers are receiving aid from the government, but not in exactly that easy fashion. Here is the truth of the situation in a nutshell:

(1) There was some time ago set aside by the government a limited amount of money which may be spent, with the approval of the United States department of agriculture, in assisting farmers in buying seed where such assistance is needed. This money is not to be loaned on easy terms, nor is the government authorized to use it to buy seed for the farmers' use. It is merely to be used in securing seed to be held until needed, and then sold to the farmers AT COST and FOR CASH. This is the case in Montana to the extent of about $500,000.

(2) The grain buying corporation of the national food administration is empowered by the food administration law to buy seed wheat and to sell it to farmers where needed AT COST and FOR CASH. This corporation has been requested by the authorities of Montana to so purchase and sell to the farmers of that state some 200,000 bushels of seed spring wheat.

There are two advantages that naturally result from this arrangement: (1) The assurance to farmers where either method is followed out that there will be sufficient seed for their plantings when seed time comes, and (2) the saving to farmers of whatever profits might be taken by private dealers on the seed that they would otherwise purchase through such private sources.

When the report reached The Farmer that the government had made advances of something like a million dollars to the farmers of Montana the exact facts of the case appeared doubtful and clouded. In order to clear the matter up a telegram was sent to Professor F. S. Cooley of the Montana Agricultural college, who was active in the movement in behalf of the farmers of Montana, asking for a statement. Immediately came his reply, corroborating the opinion of The Farmer, and setting forth plainly the manner in which the producers of his state were being aided. His telegraphic statement was as follows:

The chairman of the seed stock committee, with the approval of the secretary of agriculture at Washington, and in conference with representatives of Montana, North Dakota and Texas, has set aside a fund appropriated by congress to purchase seed and hold it for farmers at convenient points until the close of the spring seeding season.

This seed will be sold at cost for cash to those who require it. It will be seen that the government seed supply does not contemplate the financing of seed purchased by farmers. It will, however, save the profits charged by dealers and the freight out and back on seed kept within the state. Montana's allotment of the federal seed of the federal appropriation is about a half million dollars. It is expected that 60 per cent of this allotment will be used in purchasing seed oats, 20 per cent for barley and 20 per cent for flax. The United States grain buying corporation, under management of Mr. Julius Barnes of New York, has been requested, with the indorsement of the United States Department of Agriculture, to purchase and hold 200,000 bushels of seed spring wheat for Montana in addition to the oats, barley and flax previously mentioned. It should be distinctly understood that the seed provided by the United States government is to be sold only for cash and that purchasers will have to finance their seed buying without federal aid.

Last summer when Dr. Pearson of the United States department of agriculture was in the northwest consultation with him resulted in the later working out of a plan whereby each agricultural state was to have a committee whose duty it would be to study the seed situation in its own state and work out plans to assure plenty of seed available for crop planting. It is apparently this committee for Montana to which Professor Cooley refers in the opening sentence of his telegram.

Seed committees have been appointed in most or all of the western states, and have been working on the problems under their jurisdiction. Generally it is thought that the seed situation in the northwest is good, though the dry fall in many sections will necessitate much more spring wheat for seed than would otherwise have been the case. This will be especially true in Washington and to some extent in both Idaho and Oregon.

In many sections the banks are making special efforts to accommodate farmers by assisting them to purchase seed, and, as a rule, no distress seems to be felt because of inability either to secure seed or to secure funds with which to buy it.

Representative Baer of North Dakota has introduced a bill in congress which would, if passed, appropriate $50,000,000 to aid western farmers in the purchase of seed grain and feed for live stock.

The bill provides that the governor and two officials of the respective states shall be designated by the president to investigate into the necessity of federal aid to farmers and stockmen. Aid was said to be needed in several of the western states as follows: In North Dakota, $6,000,000; South Dakota, $3,000,000; Montana, $4,000,000; Kansas, $4,000,000, and Texas, $5,000,000. This will leave a balance of $25,000,000 to be used in any other states that may require aid.

## Marshall Is Coming

### Will Attend Live Stock Meeting

Duncan Marshall, minister of agriculture of Canada, with headquarters at Calgary, and perhaps the most prominent live stock authority in the dominion, will be one of the principal speakers at the second annual meeting of the Northwest Live Stock conference at Spokane February 21 and 22. Announcement of his acceptance of a place on the program has been made by W. L. Tennant, secretary of the association. Among the other speakers will be such men as T. W. Tomlinson, secretary of the American National Live Stock association; Dean E. J. Iddings of the agricultural college of the University of Idaho; William Hislop of the animal husbandry department of the State College of Washington, and probably E. L. Potter of Oregon Agricultural college. There will also be representatives of the federal government, packing companies and stock yards from various of the leading live stock centers.

Announcements of the conference have been sent to about 800 stock men throughout the west, and it is expected that a large attendance will be had. Special rates have been announced on all the railroads leading to Spokane.

On February 23, the day following the principal features of the conference, the annual sale of pure-bred Shorthorns will occur at the Spokane stock yards. Something like 100 head of animals consigned by a number of the well-known breeders will be offered at that time.

## Bulk Grain Sure

### Will Devise the Ways and Means

That it will be necessary for most of the wheat grown in the northwest to be handled in bulk this season is coming to be the consensus of opinion of those who are studying the situation. This is due to what appears to be an unusual sack shortage, which has not only made sacks practically unavailable, but so high in price as to be almost prohibitive. The shortage is due to two main causes, use of sacks for fortifications in the war and the lack of shipping to import the material from which they are manufactured.

There will be a bulk grain conference at Spokane January 25 and 26 for the purpose of threshing out the situation. One thousand letters have been set out by the Spokane Chamber of Commerce to parties interested in the questions involved, and it is believed that an unusually large attendance will be recorded. The speakers on the program are not yet definitely selected, but the committee in charge has taken the matter up with authorities in many lines. The committee expects to have representatives of, or messages from, the United States department of agriculture, bureau of farm markets, the food administration, the federal grain-buying corporation and many other departments and institutions.

Arrangements have been made for one and one-third fare on all railroads for the conference. Each person should see to it that he secures a certificate from his home depot agent at the time of the trip, so that he will be entitled to a rate of one-third fare back home.

The following is the tentative program of the conference, without the names of those who will lead the discussion of the subjects given:

Handling the 1918 grain crop of the Inland Empire. (a) Grain sack situation—necessity of bulk handling.

Present storage situation and probable storage at Coast terminals for 1918 crop.

Increased food production, a war necessity.

Grain dockage.

Grading and inspection.

Storing grain on the farm.

Loading and unloading devices.

Storage tank construction.

Elevator construction.

Elevators at shipping points.

Farm labor situation.

## Feed Mixed Ration

### Demonstrations Prove Its Value

By E. L. Potter.

At the last Portland show the Oregon Agricultural college exhibited three experimental lots of hogs that illustrated forcibly the value of middlings, buttermilk and garbage for fattening hogs. All lots were fed a grain ration consisting of one-third middlings and two-thirds ground barley by weight. The first lot received only this grain mixture, while the second lot received buttermilk, and the third lot garbage in addition to the grain. The first lot on grain alone made a daily gain of 1.1 pounds, the second lot 1.5 pounds and the third lot 1.4 pounds. It took 470 pounds of grain to make 100 pounds of pork with the first lot; 367 pounds grain and 220 pounds of buttermilk for the second, and 355 pounds grain and 511 pounds of garbage for the third.

The first lot made very satisfactory and economical gain for grain alone, showing a mixture of middlings and ground barley to be a very good grain ration. This ration, however, was very much improved in lot two by the addition of a very small amount of buttermilk. It was intended to give a gallon of milk daily to each pig, but this amount was not available and, in fact, scarcely one-half gallon was actually fed. As it was, 200 pounds of buttermilk saved 100 pounds of grain as compared with lot one. This is, of course, a very high value for the buttermilk, but the college has been able to get results in other tests almost as good, but only where the milk was fed in very small quantities. The milk supplies elements lacking in the straight grain ration and thus enables the hog to properly utilize the nutrients in the grain as well as in the milk. Two pounds of buttermilk does not have anywhere nearly the nutrients that are contained in one pound of grain, in fact it takes about nine pounds of buttermilk to contain as much digestible nutrients as one pound of grain. Let one on grain alone gave about the usual results for grain alone, but it must be borne in mind that grain alone is never profitable in comparison with a properly balanced ration, and that to compare buttermilk with grain alone is hardly fair since we are comparing a supplementary feed with a basal feed. It would be better to compare buttermilk with another supplement, such as tankage or alfalfa pasture.

Lot three on garbage made gains almost as large as the lot with the buttermilk, thus showing that the garbage had considerable value as a supplement to a grain ration. In this case the use of 411 pounds of garbage saved 100 pounds of grain. The value of the garbage as a supplement was therefore about one-half that of the buttermilk. The garbage used was of good quality, free from soap, dishwater or coffee grounds. It was also quite dry. The garbage was fed in larger quantities than the buttermilk and it is very probable that if as much buttermilk as garbage had been fed the buttermilk would not have given so much better results than the garbage, at least that has been the results of other tests.

The general conclusions of this test may be stated as follows: Middlings may replace at least one-third of the ground barley in a fattening ration. Barley and middlings, however, are not a balanced ration and need a good supplement. This test shows a very marked increase in the rate of gain and in economy of gain by supplementing the grain ration with buttermilk or garbage. There arises, however, the question of whether more garbage and less grain could not have been fed to lot three. This must be answered by future tests.

**The Indian Pioneers.**

It will be found that the North American Indians rolled tobacco leaves into primitive cigars and "astounded the early explorers." This is all that can be obtained appertaining to the history of tobacco, but the Japanese are on record as having made tobacco for pipe consumption many years before the weed itself came into the hands of white men.

# More Boys for Farm Work

## *Plan to Release Them From School Early in Spring*

The problem of securing farm labor for 1918 is attracting much interest in Whitman county, where more than 1,000,000 acres are in cultivation and a large per cent of this is to be planted to spring crops. The commercial clubs and the school boards are discussing a plan to release from school early in the spring all of the boys capable of doing farm work, and it is estimated that from 1200 to 1500 can be released. The state school superintendent has been asked to permit this plan to be carried out, and to allow the boys thus released to have full credit for the time spent in farm work, upon presentation of evidence that they have been employed on farms.

So acute is the situation that the labor question is awakening interest in all parts of the state. A petition asking Governor Lister to call a special session of the legislature to pass a law forcing all men who are able to work to do some kind of labor that will assist in crop production, manufacture or in carring on the war, is being circulated. The Colfax Commercial club has been asked to assist in this call, but C. L. Chamberlain, committeeman to whom it was presented, says it would be useless. To The Washington Farmer correspondent Mr. Chamberlain, who was formerly a member of the legislature, said:

"I oppose calling a special session because of the expense and the fact that I do not believe the results desired can be obtained. If it is the object to conscript labor that is a national government function, and a law passed by Washington would simply drive the idlers into other states. We have a vagrancy law that permits men who refuse to work and have no visible means of support to be arrested and imprisoned for not to exceed six months and fined not to exceed $500. That will cover the case, and if there are idlers who ought to be put to work the vagrancy law will cover their case."

Thirty dollars per acre from summer fallow land was secured this year by C. L. Chamberlain on his farm, a few miles from Colfax, Wash. Mr. Chamberlain planted 10 acres of his summer fallow to beans. It was very late, the last week in June, when the beans were planted, and they never had a drop of rain until they were grown and harvested. The crop was very light, and the squirrels got fully an acre of the beans, yet he got $300 worth of beans from the 10 acres and the expense was light. They were not cultivated, and nothing was done to them except to plant and harvest them. Had the season been favorable and the crop cultivated Mr. Chamberlain believes he would have had several times that many beans, but he is well satisfied with the results.

### Squashes for Hogs.

Ninety dollars an acre for a single crop of squashes is the record made by E. H. Newton, whose farm lies three miles southeast of Colfax. Mr. Newton planted 30 acres of summer fallowed land to squashes and fed them to hogs. He turned the hogs into the field and let them eat the squashes from the vines. No harvesting expenses of any kind were incurred. The hogs ate the squashes greedily and fattened quickly. It required less than $50 worth of grain to finish the hogs for market, and they brought him the top price at Spokane.

Mr. Newton kept a close account of the weight of the hogs before turning them into the squash field and when they were sold, and estimates that he got $2700 from the 30 acres of squashes, which is $90 per acre for the crop, and the land is in better condition for fall wheat than it would have been had it been summer fallowed, the hogs cultivating and enriching it. It required very little work in planting and cultivating the squashes, and the returns have paid much better than a crop of wheat. Next year Mr. Newton will plant a larger acreage to squashes.

## BAD POTATOES
### Are Shipped in Violation of Law

Shipments of potatoes damaged by frost or decay have been reported to Charles Hebberd, federal food administrator for Washington. "Such shipments are in direct violation of federal licensing regulations," said Mr. Hebberd, when the matter was brought to his attention by Asher Hobson, head of the bureau of markets of Washington State college.

According to investigations conducted by the bureau of markets, producers have failed to grade their potatoes according to department of agriculture regulations, and shipments have gone forward to large distributing centers, such as Seattle, in damaged condition.

"Such violations come within the prohibition of rule two of the United States food administration regulations governing dealers in fresh vegetables and other perishable commodities," says Mr. Hebberd.

Rule two of the food administration licensing provisions is as follows:

"The licensee shall not ship or sell for food purposes from points of production potatoes which are not practically free from frost, injury and decay, and which are not free from serious damage caused by dirt or other foreign matter, sun burn, second growth, cuts, blight, dry rot or other disease, insect or mechanical means."

"Retail dealers or merchants who handle vegetable commodities, even when doing less than a $100,000 business per annum, are subject to this rule so far as they engage in the business of buying and shipping potatoes," says Mr. Hebberd.

At a conference of potato men at Toppenish this fall the department of agriculture grading and shipping regulations were adopted as the standard, and it is believed that those attending that meeting and most other shippers are adhering to such standards.

## Walla Walla Cow Testing.

At the annual meeting of the Walla Walla County Cow Testing association, officers for the year were named as follows: President, V. E. Brown; vice president, J. H. Compau; secretary, Charles Baker; treasurer, Henry Drum; directors, A. A. Bixby, F. J. Pingry and O. C. Plaquet.

# Nurses' Aids

## Requirements for Eligibility

To the Editor: Will you please give me some information in regard to the Red Cross work. I have made up my mind to help by being a nurse and would like to know how much training one must have before she can be accepted, and where she can get the training. Subscriber.
Sunset, Wash.

The following information is taken from a bulletin of the American Red Cross, northwestern division, with headquarters at Seattle, Wash.:

**Eligibility.**

To be eligible for assignments as a volunteer nurse's aid applicant must have had the course of instruction in elementary hygiene and home care of the sick, and preference will be given to those who have had the other Red Cross courses and the practical instruction in the hospital as a member of a base hospital unit, as this gives a familiarity with hospital procedure and some of the elementary principles of nursing. Under certain circumstances service in France or elsewhere, in connection with a hospital, as an auxiliary aid, under nursing supervision, might be considered as the equivalent of the practical course.

**Age.**

The desirable age for applicants for this service is between 25 and 40. Exceptions may be made to this in cases of women of unusual attainments and sound health.

**Civil Condition.**

Applicants desiring service as a nurse's aid under the Red Cross should be unmarried women or widows. Married women are not acceptable for this service in order to conform to the regulations of the state and war departments governing the sending to Europe of women whose husbands are or might be assigned to duty there.

**Endorsement.**

Applicants should, if possible, be known to some one connected with the nursing service of the Red Cross or will be expected to furnish satisfactory references before assignment to duty.

**Assignment to Duty.**

Assignment to duty will be under the bureau of nursing service, and aids will be under the direct supervision and authority of the chief nurse in charge of the department to which she is assigned.

**Physical Examination.**

The physical examination must be submitted to the bureau of nursing service and approved by the medical director. Nurse's aids must also take the immunity treatment for typhoid and paratyphoid and be vaccinated against smallpox, and these certificates must be on file in the bureau of nursing service before they can be assigned to duty.

**Uniform.**

The indoor uniform worn will be that selected for the aids in connection with base hospital units. No outdoor uniform will be required.

**Response to Call.**

Volunteer nurses' aids are expected to respond promptly to any call after they have definitely notified the bureau of nursing service that they are available.

**Compensation.**

Nurses' aids are expected to serve without remuneration and to maintain themselves and pay their traveling expenses to and from destination. In exceptional cases this latter requirement may be waived and provision allowed for transportation and maintenance from the Red Cross.

**Length of Service.**

Length of service is for one year, at the expiration of which time they may resign, and the resignation will be accepted and the release granted if the reasons for the request meet with the approval of the authorities of the Red Cross. They may, however, be relieved from duty at any time in case of misconduct or should their services prove unsatisfactory. Resignation from service should be presented to the chief nurse of the department under which they serve and will by her be forwarded to the proper authorities.

**Assignment in France.**

Nurses' aids assigned to duty in France will be required to speak French.

**Arrival in France.**

Aids report upon arrival in France to Miss Martha Russell, or the representative of the Red Cross nursing service at Red Cross headquarters in Paris, and will be assigned to duty under her direction and at her discretion.

# Perishable Food Policy

In order that there may be no misconception by the public of the attitude of the U. S. Food Administration toward the free consumption of perishable foods, the following statement is given out, reaffirming the position the Food Administration has always taken:

Foods of the "perishable products" group are essential to nutrition, and their continued production, distribution and consumption are vital, in view of national and international necessities.

The Food Administration desires to emphasize these facts, and to assure all producers and handlers of milk and dairy products, poultry and eggs, fish, fruits, potatoes and vegetables that no restrictions have been placed on such food materials, or are likely to be.

Not only are these foods of great use and value in supplying the ordinary bases of nutrition, but they vary the diet and promote palatability of the foods used with them; most of them are succulent or supply necessary bulk in the ration, which aids digestion; and some serve as efficient and necessary regulators of bodily functions, thus warding off ill health.

Since we must save for exportation wheat, meat, fats and sugar, we should utilize more than ever before the bulkier, more perishable products. Wholesalers, commission men, storage warehousemen and other intermediate handlers of most of these perishables must operate under license and report their transactions to the Food Administration.

## Apple Returns Good.

P. S. Darlington, district horticulturist for north central Washington, has estimated the apple output of that section this season at a little more than 5,260,000 boxes, an increase of more than 450,000 boxes over last season. The price is estimated to average $1.15 a box, giving the crop of that district a value of more than $6,000,000.

**Wages Up in New York.**

NEW YORK CITY.—The aggregate wages paid in manufacturing in New York state factories in September, 1917, showed an increase of 5 per cent over August.

# John J. Dillon Retires

## *Made It Possible for Farmers to Name Price for Milk*

When John J. Dillon retires to private life January 1 from the office of commissioner of foods and markets in New York the farmers of that state will suffer a distinct loss, for Mr. Dillon has been a fearless fighter for their interests and rights.

The biggest single achievement of his administration was his organization of the dairy farmers and the salvation of that industry from impending ruin. He made it possible, for the first time in 40 years, for the farmers to name the price for their milk—and get it, too.

Reviewing the work of his administration Mr. Dillon said:

"I have convinced the people of this state that there is such a thing as a food problem. I have made them realize that there is a necessity for an economical distribution of food. I have made them admit that gambling, speculation and the manipulation of food in the markets of this state is a discouragement to the producers of food and a tax on the consumers of food.

"We went out to the farms of this state and showed the farmers that the men who bought their apples were paying too little for them. We established market prices through public sales that brought the farmers an average of $1 more per barrel than they formerly received. By bringing food products to the city and making arrangements with retail stores we succeeded in selling many of these products at a much lower price to the consumer than he had previously paid. In other words, the farmer received more and the consumer paid less.

"For the first time in the history of this state the consumers of eggs knew when they were buying cold storage eggs. The custom had always been to sell these eggs at the same price paid for fresh eggs. The courts upheld this egg marketing order. We fought the express companies and railroads through the courts and the public service commission and were upheld in our demands that these organizations revise their orders and protect shipments of cases of eggs from being damaged or stolen in transit.

"We have done all these things with an insignificant appropriation of $24,000 annually, whereas the state food commission received $1,300,000 to do the same work."

"What recommendations would you make to your successor?" he was asked.

"I would not recommend anything to him, but if I had a little of that $1,300,000 myself I would assemble food at the farms, bring it here in carload lots, sell it to retail stores and consumers and save 25 to 30 per cent on the distribution of that food. If these commissions are ever going to do anything to reduce the cost of food they will do it by reducing the cost of distribution and they will do that in the way I have outlined. In my judgment, they may cut off a little here and there, but they will never completely cut out gambling and profiteering during this state administration, because they are tied up with the big interests."

"How do you think the food problem will eventually be solved?" he was asked.

"Indications are that there will be a food shortage prevalent in about a year and a half at which time the people will wake up and see to it that there is an efficient and fair distribution of food."

### All a Farmer Wants.

To The Washington Farmer: Enclosed please find $1 for your liberal offer of October 25. Your paper has all a farmer wants in regard to all kinds of farming for this state.

J. J. BARRY.
Tolt, Wash.

# Crisis Demands Food Production Administrator

## *President Wilson Is Urged to Consider Creation of New Position to Insure Food Production*

A movement for the immediate creation of the office of "national wartime food production administrator" and the appointment of "the ablest available man in the country" to fill the position was launched in Spokane last week, when a representation of men who have been looking squarely at the gravity of the food production situation wired President Wilson urging the necessity for such action. The movement is actively participated in by The Washington Farmer, its managing editor being one of the signers of the telegram to the president. The other signers were E. F. Benson, commissioner of agriculture for Washington; Charles Hebberd, federal food administrator for Washington; R. Insinger, chairman of the agricultural committee of the Spokane Chamber of Commerce; Waldo G. Paine, vice president of the Spokane & Inland Empire railroad; David Brown, president of the Hazelwood company; J. L. Paine, president of the Spokane Chamber of Commerce; N. W. Durham, chairman of the Spokane County Council of Defense; David Munro, Holstein breeder and farmer of Spokane; D. W. Twohy, president of the Old National bank, and E. T. Coman, president of the Exchange National bank and regent of the Washington State college.

The matter will be called to the attention of senators, representatives and cabinet members in Washington also, and all the governors and council of defense chairmen of the 48 states are being asked to consider the idea as a practicable solution of the stupendous problem now confronting the nation.

The telegram to President Wilson sets forth the grave need and the recommendation for its solution, and is as follows:

"The President, Washington, D. C. Sir:—When the assistant secretary of agriculture, Dr. Pearson, left Spokane, after regional conference with large farmers, agricultural college representatives and bankers, strong hope was raised that the Pacific northwest would produce greatly increased crops. Dr. Pearson left here believing that the work could be followed up effectively. We regret to advise you, however, that, notwithstanding the State College of Washington and the state department of agriculture have done their utmost to carry on these plans, the present outlook here is exceedingly discouraging. Because of adverse weather conditions not more than 25 per cent of the average fall crop acreage has been planted. If wheat yield is to be even normal enormous spring planting is necessary and more labor will be required. The farms are being stripped of workers, and the remaining youths are eager to leave for the war. Unless something is done quickly there will be an alarming slump in the agricultural production of this region.

"The west is called on to produce the wheat surplus needed to feed our allies, but can not do it unless a way shall be found to hold our young men to the soil. Some system should be developed whereby loyal service in the production of foodstuffs shall be impressively recognized. Some way must be found to better labor conditions and hold young men on the farm with a patriotic consciousness of honor and dignity.

"The crisis demands the immediate appointment of the ablest available man in the country as national wartime food administrator, who will fire the imagination of all the people, consumer as well as producer, to the supreme necessity of increased food production, and who will establish farreaching cooperation with the agricultural department, agricultural colleges and farmers in all sections of the country in meeting their war-time food production difficulties, just as Hoover has brought home to every family the need of food conservation, and just as the Red Cross campaign has swept the entire nation under the leadership of Davison."

## Wheat Acreage

### Is Below Goal Set by Government

The United States department of agriculture estimates that the present winter wheat acreage in the state of Washington is 56 per cent of the acreage of last year, or 422,000 acres now seeded as against 754,000 acres a year ago.

The department's figures for other Pacific northwestern states are as follows:

| | 1917. | 1916. |
|---|---|---|
| Oregon | 562,000 | 450,000 |
| Idaho | 302,000 | 335,000 |
| Montana | 775,000 | 775,000 |

The department has evidently been misinformed by its Washington correspondents, for the best judgment of authorities here is that the present acreage of winter wheat is much less than 56 per cent of the acreage last year.

Adverse weather conditions account for the alarming falling off. A fall of almost unprecedented dryness left the ground in no condition for seeding, and another deterrent was the high price of seed wheat.

This condition will put over to next spring a tremendous amount of farm labor that otherwise would have been completed this fall, and intensifies the labor problem growing out of the draft. In other words, we ought to have an increased labor supply next spring instead of the decreased supply that is giving our farmers such grave concern.

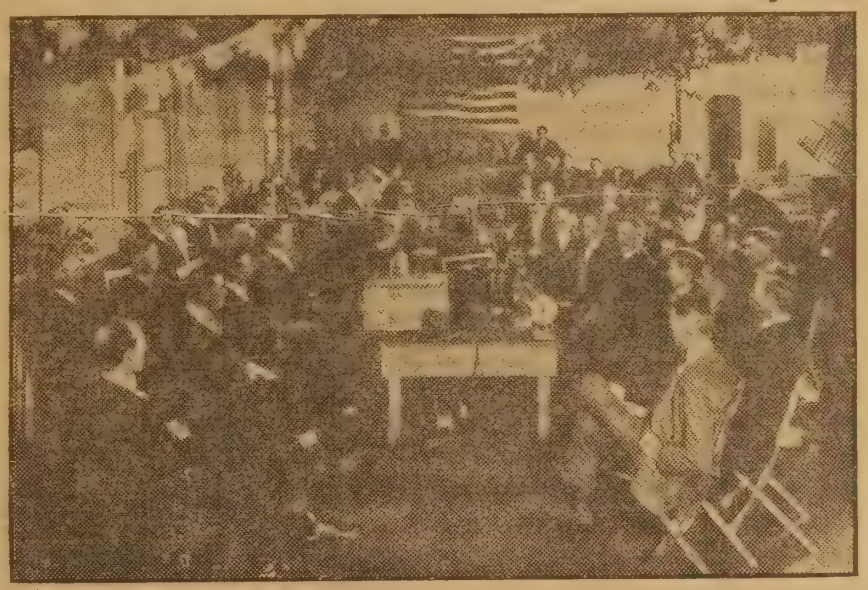
The department's present estimates of winter wheat acreage are probably excessive in all four northwestern states. But accepting them as accurate, they yet disclose a shortage in the four states of nearly 1,000,000 acres below the department's suggested agricultural program of last August.

To spur up production, the department sent Assistant Secretary Pearson on a four of the country last summer. He conferred in Spokane with representative farmers, state college professors, county agents, bankers and editors of farm journals from half a dozen states. He urged then the following winter wheat acreage for the four northwestern states.

| | Recommended Acreage. | Present Estimates. |
|---|---|---|
| Idaho | 405,000 | 302,000 |
| Montana | 1,000,000 | 775,000 |
| Oregon | 708,000 | 562,000 |
| Washington | 850,000 | 422,000 |
| Totals | 2,963,000 | 2,061,00 |

For the whole United States the department last August urged a winter wheat acreage of 47,337,000 acres: Its present estimated total acreage is 42,170,000.

We hope these estimates are more accurate for the country in general than they are for the state of Washington.



### War Bread at Penitentiary.

Patriotic service, by strict compliance with the Hoover program by conservation and nonwaste of food products, is the program at the state penitentiary at Walla Walla.

Having established a per capita cost varying from 15 to 16 cents a day per inmate, Warden Henry Drum has gone further and solved the bread problem "We observe the meatless Tuesday and two meatless meals a day and have solved the wheat flour problem," says Warden Drum. "When the inmates of the institution learned what Mr. Hoover is trying to do, the men, with hardly an exception, fell into line for the national food campaign.

"The steward has solved the bread problem by mixing 150 pounds of potatoes with 300 pounds of flour and the result is a war bread both excellent in flavor and nutritious in substance. The saving in wheat flour is not at the expense of the physical condition or the efficiency of the men. I believe that the same nutriment exists in the bread baked at the institution as that found in the bread of the bakeries."

## Learn How to Care for Farm Machinery

Farm implement manufacturers are more and more taking a long look ahead. They know that a farm machine which makes good for the farmer is the best advertising that they can get. In order that the farm machine shall make good, it must be suited to the best conditions of the individual farm and the farmer and his sons. They must learn the most efficient ways of using and conserving the life of a machine, so every now and then we see how these implement manufacturers are holding schools for their patrons.

Among others, the Avery company of Peoria, Ill., does not alone confine its efforts to the protection of machinery, but is going farther and is conducting service schools, attended on the average by a hundred farmers and dealers. In addition to these general schools, each salesman is conducting his own local school in his block, the general and local schools numbering 200 to 300 for a season.

Now that the demand for tractors is rapidly on the increase, the company is also sending out special information to its patrons as to how to handle their tractors in order to get the greatest possible use out of them. Besides offering the use of special service men who are experts with the tractor to help out tractor owners at a very reasonable compensation.

## Today the Red Cross Needs Your Aid

**Fill out the coupon below and mail it to the Editor of The Washington Farmer, Spokane, Wash. Upon receiving this coupon you will be enrolled as a member of the Patriotic League of The Washington Farmer.**

I am glad to express my patriotism at this time by pledging myself to render whatever special service I can to my country, and will you tell me especially about Red Cross work and the different ways in which I may be able to aid in that work?

Name .....

Postoffice .....

**Watch the Red Cross department of the Farmer each week for different ways in which you can help in this work.**

**The following have been enrolled as members of the Patriotic League of The Washington Farmer in addition to those previously reported:**

A. Lee McDonald, Winthrop, Wash.
Maud E. Heller, Barry, Wash.
Dee Case, Wheeler, Wash.
Mary Lewis, Johnson, Wash.
Wymona Tilla, Rockford, Wash.
Mrs. James Tilla, Rockford, Wash.
Mrs. J. D. Robertson, Rainier, Wash.

## Farm Labor

### Believes Situation Can Be Met

United States Secretary of Agriculture Houston has this to say of the farm situation:

"Attention has been given without cessation to problems in the field of (farm) labor. It was obvious that difficulties would be presented and that apprehension would run beyond the actual condition. An army could not be raised without taking men from every field of activity, and it would have been unfair to any class of workers in the community to have proposed its exemption. It was impossible in the haste of the first drill satisfactorily to work out in detail the principle of selective service; but, nevertheless, under the regulations, consideration was given throughout by exemption boards and by the officers of the war department to the needs of agriculture.

"With more time at its disposal, the war department has worked out a system of classification which gives due regard to the necessity of retaining skilled farmers and expert agricultural leaders on the farms and ranches and in the educational and administrative service. * * * I am confident that with the assistance of all the organized agencies and the alert and cooperative action of the farmers of the nation the situation can be met and that those remaining on the farms can produce as much or more than has heretofore been available.

"This struggle is one which calls not only for enormous resources, but also for invincible determination and endurance. It is a test even more of the spirit than of physical strength. That we have the physical resources in larger measure than any other nation in the world is a matter of common knowledge. We do not yet fully realize the enormous power of the nation.

"There must be no breakdown on the farm—no failure of foods, foodstuffs and clothing. The duty is pressing of furnishing abundant supplies for our own people and, in large measure, for the peoples with whom we are associating."

## Irrigate in Winter

**By C. A. WYCOFF, Toppenish, Wash.**

Those who have tried it are fully convinced that it is very profitable to water the land in the winter, especially the alfalfa. This should be done before the warm weather comes in the spring, allowing the moist ground to warm up with the weather. This makes it unnecessary to put cold water on the ground in the early spring. The early irrigation has a tendency to check the growth of grain and hay. Having the ground moist, also, enables the farmers to get a better germination of all kinds of seeds. Unfortunately there is no water available in the government's ditches during the winter. It is found necessary to have the ditches dry part of the winter for cleaning and for repairs, and the government not being familiar with the needs and conditions of the valley will not turn the water on till about April. The local men in charge of affairs fully realize this and have advised changes, but a rut is hard to get out of, especially when the affairs are directed by men three thousand miles away.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## The Thrift Habit Invites You

There is an unusual opportunity to develop the thrift habit in this country right now. There is not only special incentive under the stress of the times, but the government needs the practice of that thrift by everybody, and has made it possible. The thrift and saving scheme that has been started is as simple as buying postage stamps. Go to any postoffice or bank with 25 cents. You can buy a thrift stamp with it. That thrift stamp is nothing more or less than a 25-cent government bond. If you want to "go heavy," take $4.12 and buy a war-savings stamp. It is also like a government bond, and will bear 4 per cent interest compounded quarterly, making the stamp worth an even $5 on January 1, 1923—five years hence. Either stamp can be cashed in at lesser amount at any time before 1923.

And the children! It is the chance of a lifetime. Systematic campaigns are under way for the schools to allow the children to buy small stamps—or large if they can and wish to—and add to them from week to week or month to month. Such investments are as safe as the United States treasury. They afford the finest way in the world to lay by small sums. They teach thrift, a moral duty, one of the greatest single necessities to be added to our educational system in this country. Encourage the boys and girls to take part in the system.

## The Red Cross Wins Gloriously

The patriotism and humanity of America are proved. The great Christmas Red Cross campaign overshot the mark just as the great Liberty loan campaigns overshot. The goal was set at 10,000,000 new members during the week preceding Christmas. As the Farmer goes to press reports indicate that this number was beaten by nearly 40 per cent. Each membership simply means that one American citizen has spent one dollar and aligned himself or herself openly in behalf of the relief of human suffering. War has been forced upon humanity by inhumanity. It trails with it terrible misery and desolation. It is the one aim of the American Red Cross to bring relief and hope where trouble does now so much more abound. What a different spirit from that which, for the sake of conquest, plunged so many millions of people into the hell of war! What a glorious message to send back to heaven in reply to the chorus of the heavenly host that sings at Christmas time, "Glory to God in the highest, and on earth peace, good will toward men"!

## Whitman Takes Step Forward

Whitman county is one of the leading agricultural counties of the state, but its crop has been so largely wheat alone that it has been slow to realize that a county agricultural agent would be worth while. But it has at last come to it, as was inevitable. The county commissioners have arranged to employ one under the government and state college provisions. It is one of the biggest things that ever happened for the farming interests of that wonderful, rich farming county.

## Use What Your State Produces

Our own state produces the best things on earth. Why go out of it to pay fancy prices and freight charges for what other states produce? Our own fruit, potatoes, butter, cheese, beef, mutton, pork, vegetables and the like can not be improved upon, yet we ship in thousands of tons of these things or of needless substitutes for them. Especially is this true of fruits, but it is true of many other products. Some fruits that we think are necessary can not, of course, be raised here, but why send our apples and prunes to New York and import oranges and bananas by the thousand tons from points a thousand or five thousand miles away? Why import butter and cheese when we make the finest butter and cheese on earth right at home?

It is not merely a matter of state patriotism to use home-grown and home-manufactured things. It is a matter of national patriotism. Shipping facilities are greatly needed for staple foods and munitions for war purposes, and when we eat or wear a home-grown or home-made article we are relieving just that much car space for the handling of shipping that is absolutely necessary to the winning of the war.

## What Is Your Utmost?

Will you please make a cross in the square given below according to your plans for the coming year's crops, clip the list, sign your name and address and mail to the Editor of The Washington Farmer, Spokane, Wash. Your name will be held in strict confidence if you so request.

I am planning for the season of 1918 to change my usual system of farming by raising more, or by raising less, of the following farm products:

| | MORE. | LESS. |
|---|---|---|
| Wheat | ☐ | ☐ |
| Oats | ☐ | ☐ |
| Barley | ☐ | ☐ |
| Rye | ☐ | ☐ |
| Corn | ☐ | ☐ |
| Potatoes | ☐ | ☐ |
| Peas | ☐ | ☐ |
| Beans | ☐ | ☐ |
| Sugar beets | ☐ | ☐ |
| Vegetables | ☐ | ☐ |
| Fruits | ☐ | ☐ |
| Hay | ☐ | ☐ |

| Beef cattle | ☐ | ☐ |
| Dairy stock | ☐ | ☐ |
| Sheep | ☐ | ☐ |
| Swine | ☐ | ☐ |
| Poultry | ☐ | ☐ |
| FOR FEED | | |
| Carrots | ☐ | ☐ |
| Mangels | ☐ | ☐ |
| Rutabagas | ☐ | ☐ |
| Turnips | ☐ | ☐ |
| Artichokes | ☐ | ☐ |
| Silage | ☐ | ☐ |

Name .....

Postoffice .....

J. C. Child of Wapato is an advocate of nitrate of soda as a fertilizer. He told delegates at the recent irrigation congress at Yakima that he has used a light application in his orchard and has found it highly satisfactory. But it must be remembered at all times that different conditions of soil and croppings require different forms of fertilization. What serves one purpose might not serve another. Study conditions before applying fertilizer.

A woman in Iowa made a pound of butter and donated it to the Red Cross, which had it sold at auction for $567. The purchaser sent it to President Wilson to be used on the White House table. The president has not reported on its quality yet, but we venture the guess that it was no better butter than any one of several thousand dairies of the northwest produces every day of the year. But congratulations to the Red Cross for receiving that $567.

## Washington Gleanings

The second week in January will mark the opening at Wenatchee of the largest poultry show ever held in Chelan county.

The weather has been so mild around Walla Walla that spinach, sowed for early spring use, has grown so rapidly that it is being cut and shipped to outside points.

Whitman county is to have an agricultural instructor, employed by the federal department of agriculture, which will pay his salary, the county to pay his expenses.

The annual crop report for the Sunnyside project places the total value of products grown on 65,858 acres at $8,006,233 or $121.67 an acre, a gain of 40 per cent over returns of last year.

County Agriculturist A. B. Nystrom has asked all county farmers' organizations, granges and all others, to name a representative to act as a member of the Lewis County Agricultural commission.

Demand for dried apples for jelly stock is so heavy in the east that all the efforts of the evaporating plant at the state prison at Walla Walla are being turned toward preparing apples for this purpose.

A three-day drive for sugar beet acreage on the success of which depended whether the Utah-Idaho company would build a factory at Toppenish, ended with 6900 acres signed. The required acreage was 6000.

The boys in the agriculture classes in the high school of Prescott have completed the agricultural survey of the school district that has been made at the request of Commissioner of Agriculture Benson.

By the building of four byproducts plants and the material improvement of two others during the year, Yakima valley fruit growers are able to find a home market for 16,000 tons of apples which would otherwise have been wasted, but which sold at an average of $7 a ton, return $112,000. Other fruit and vegetables sold to evaporators brought $117,820, making a total of $229,210.

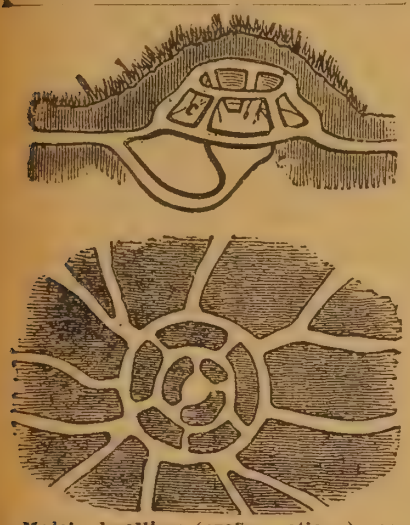
## What Others Say

Kimball's Dairy Farmer: A community is made up of individuals, and each individual has a decided effect upon every other individual, either directly or indirectly.

Hoard's Dairyman: There are all sorts of foolish men and foolish notions wrapped up in this business of dairy farming. One of the most foolish is the notion that registration papers are of no particular value to the owner of a pure-bred animal.

Farmer's Review: Farming without figures has been the custom, but there is evidence that the modern farmer is using figures more than ever before. The more carefully we study the work in which we are engaged the more interesting it becomes and the greater is the satisfaction derived from it.

Wallace's Farmer: It is not difficult for the business man to understand that the cost of the raw material and the expense of operation must be considered to determine the cost of production in a packing or manufacturing enterprise; but it does not seem to occur to him that these same items must be considered in determining the cost of agricultural production.



# Mole Trapping by Country Boys

By H. H. BUSHNELL.

War has been declared on the Cowlitz county moles and Theo. H. Shaeffer of Puyallup, mole expert, came down to tell the boys and girls how to do it. Meetings were held all the week, concluding at Kelso.

Mr. Shaeffer, who is connected with the U. S. biological survey, has an intimate acquaintance with moles of all sorts and kinds, and his talks were interesting and entertaining too.

There are possibilities in the moleskin industry which we have not realized as a nation. In 1916 New York furriers imported 6,000,000 moleskins from Europe. Apparently they do not know that we have moles of our own; at all events they have not developed

Mole's dwelling (cross sections), upper figure, side view; lower figure, top view.

the industry in this country. The fur of our moles is equal to if not superior to that of the European digger, and the moles are larger. The Townsend mole is quite a large creature and it does not take many of him to make a muff or neckpiece of the soft, lovely fur. There is also a smaller mole and the little shrew, which looks like a doll mole, and is not a mole at all.

The mole's forefeet are set on sideways. He is not designed by nature to do anything with them but dig and he is an efficiency expert at his job. He can even dig beneath a macadamized road with those powerful forefeet. He is not a true rodent and does not have the gnawing teeth. In fact, he is not much of a vegetarian and his chief diet is composed of earthworms. He devours insects and some vegetables when they come his way and appeal to his taste. But his tunnels furnish an avenue for other animals, particularly field mice which are very destructive to all root crops, and if we banish the

Common Mole.

mole the field mouse will have no chance to get at the roots, for he is not an excavator.

The mole is not a social creature, but many use the same big tunnels. A well chosen spot for trapping may yield a number of pelts before exhausted. The slight upheavals across a field are not permanent runways for moles, but where we find a mound of dirt freshly turned up we can be sure a tunnel is beneath it. The mounds are formed by plugs of earth dug out of the tunnels. Under the mounds you will find a hole running down to the tunnel at an angle so the dirt will not fall back into it.

The trapper clears away this earth, locates the hole and digs away enough dirt to lay bare a section of the tunnel. There he sets his trap and fills in the earth. The mole comes along and is not surprised at finding what he takes to be a cavein. He starts to digging and is caught. There are several types of traps.

While the temperature in moledom does not vary as much as above ground still there are seasons of the year when the fur appears to be shed and is not first class. This period begins late in September and extends for a few weeks. A moleskin secured at the wrong season is black when it is cured and as the new fur comes in the skin shows the change. Half shed, half the skin is darkened and the rest a tan color. A prize skin is yellow on the skin side.

The latter part of November, December, January and March are good mole trapping seasons. In April again there is a short period when the pelts are not prime. Then they are good through the summer, so there is a long trapping season and no closed season, either.

It is not difficult to skin moles. Mr. Scheffer skins them at the rate of one a minute. He uses a pair of scissors, cutting down the belly from mouth to tail. The skin is very loose; the mole is not in the least hidebound. The feet are cut off and the skin is taken off quickly. He advises against the use of salt, alum, pepper, mustard or vinegar. The skins should be cured in a moderately cool place. Do not dry them before a fire.

It is best to market a number of pelts at a time, and so the county agriculturists usually arrange for collecting and pooling them. Better prices are generally obtained in this way.

In seven Oregon counties there are bounties on moles. No bounties are provided in Washington, but they can be arranged if the moles are a pest, and it pays to provide this incentive.

The mole likes damp ground, but flooded land usually drives them out. The diking projects will be followed as a rule by more moles.

Country boys are generally the most interested in mole trapping. Some girls take to it, too, for the sake of the fur, which is used sometimes for trimming collars and cuffs. Mr. Scheffer had with him a muff made from 15 moleskins and a neckpiece made from 10.

Prime pelts bring from 15c to 25c, and if they are plentiful furnish quite

**The shaded portion of the accompanying map shows the home of the common large mole of western Washington and Oregon. They are larger and have better texture than those from Europe.**

a bit of extra money, besides ridding the earth of a pest. While the mole may not deserve all the hard reputation he has for destructiveness he associates with evil companions who do the mischief, and he furnishes the means.

Those who are interested in mole trapping are advised to write to the department of agriculture at Washington, D. C., for Farmers' Bulletin No. 832, and also to the Washington State College at Pullman for the monthly bulletin of December, 1916, both of which deal with this subject.

The skins of plums can easily be removed by scalding, just as you would peaches.

# Community Cooperation

## *Why It Pays to Trade in Your Home Town*

Just about every big achievement recorded in history succeeded by reason of well directed cooperative effort.

This is true of towns and communities. Think of any live and prosperous town you are familiar with, analyze the reasons for its growth and advancement and you will find its character to reflect the amount and quality of united effort put forth by the residents in and around it.

Most thriving small towns owe their progress to the support that is given their retail stores by the surrounding community. In saying this we do not urge or expect our readers to patronize their local stores if they can do better elsewhere. We appreciate the fact that you want good goods and good service along with a fair price. If your local merchants do not deserve your trade on this basis it is only natural to expect you to trade outside your home town.

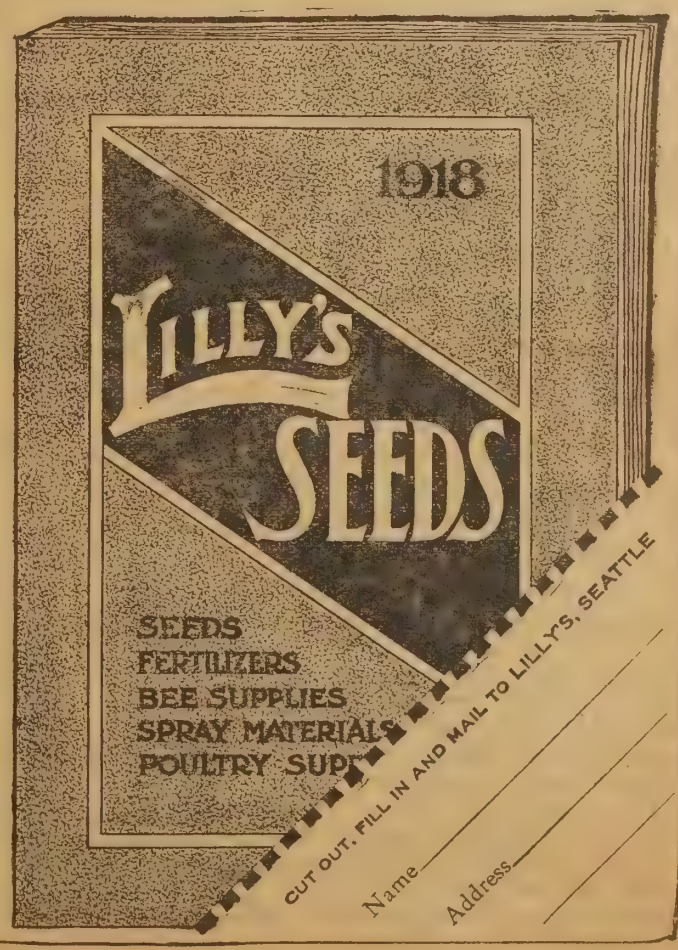
We believe, however, that our subscribers' best interests, both financial and social, are dependent on building up with their trade the communities in which they live. Trade kept at home means money kept at home—and money makes community progress possible—progress in which all may share.

Buy of your local merchants when you can do so to as good advantage as you can buy elsewhere. But don't make it hard for your local storekeeper to carry a fresh, up-to-date line of goods by withholding trade you can give him to your mutual advantage. If your home town merchants are well-meaning progressive men, you may be sure they want your trade and will do everything they can to please you and to give you good service and a square deal every time.

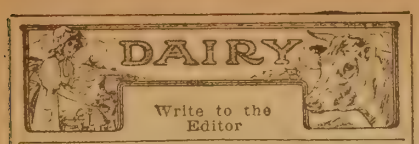
# Here's the Catalog for Northwest Farmers

## —*And it's free*

The farmer is the most important of Uncle Sam's soldiers because, as Napoleon said: "An army fights on its stomach." Every seed sown helps win the war—choose your seeds then by the select draft system.



LILLY'S seeds, acclimated for northwest soils and conditions—*best for the west*—are tested for germination and purity.



Our catalog is complete and contains the accumulated experience of thirty years in the selection of seed for Pacific Northwest farmers.

*Write for free copy and buy your seeds early*

# Feeding Cows

## A Few Common Sense Points

The dairy cow is one of the best food conservers we have today. She utilizes the waste hay and fodder that is found on many farms and makes the best food out of it. She produces remarkably well even on refuse, but she can not do her best on that sort of feed.

To get the best results from a cow a definite system of feeding must be followed. In the first place she must have fresh, clean water to drink. All animals need pure water to drink. The dairy cow is no exception. She must drink large quantities if she is a heavy milk producer. A cow producing from five to six gallons of milk daily should have from 18 to 25 gallons of water per day. Needless to say this should be given not less than twice a day.

Warming the water is not necessary if your cows have access to freshly drawn well water or spring water just out of the spring, but the practice of simply cutting a hole in the ice for watering dairy cows is not economical, to say nothing of the bad effect it has on the health of the animal. Drinking ice cold water affects the amount consumed and a lower milk production will result. The best temperature for water is between 50 and 60 degrees Fahrenheit.

Good hay is necessary to profitable dairying. Hay that is dusty, moldy or bleached does not make good cow feed. It may be used as a filler to furnish bulk, but ordinarily the best use it can be put to is for bedding. Green, well-leafed and properly cured alfalfa, clover or vetch hay makes the finest kind of hay for the dairy cow. She will consume large quantities of it, thus requiring less grain, and she will give economical returns from it. These legume hays of high protein content are, as a class, much superior to the grain or grass hays. A good rule to follow in feeding hay is to feed all the cow will clean up. Do not allow her to waste any. If the hay is coarse-stemmed and she leaves some of the stems these should be saved and fed to the horses.

It is also necessary to furnish succulence in the ration. A luxuriant pasture is best so far as the cow is concerned, but often more economical returns can be obtained from silage, soiling crops or the root crop. From 30 to 50 pounds of succulence should be the daily feed. Dairymen should never fail to provide succulence the year around.

The question of whether or not grain should be fed is not so easy to answer. Cows with a high producing capacity doubtless need grain. The point is simply this: If the cow has a large capacity for consuming feed with a low producing capacity no grain will be needed, but if the cow is rather small and has a high producing capacity concentrates should be fed. It is difficult to fix a minimum production under which no grain should be fed but it is safe to say that under normal conditions no grain should be fed to mature cows that do not produce more than 20 pounds of milk daily.

We like to have our cows respond well at the pail to proper feeding, and especially to the feeding of concentrates. In this connection it must be remembered that cows differ with regard to how they respond. In many cases the milk flow is increased immediately, but in just as many cases the lactation period is lengthened—the cow keeps up the heavy production for a longer time. A. B. N.

## Cost of Silos.

Figures have been compiled showing the cost of the three wooden hoop silos built in Grays Harbor county, Wash., this year. Those silos are of the following capacities: 36, 61 and 67 tons respectively. An investigation conducted by the office of the county agent last year shows that the silos of small size cost more per ton of capacity than the larger ones. Eleven silos of less than 80 tons capacity cost $3.06, while 13 silos of more than 80 tons capacity cost only $2.20. Comparing the former figure with the cost of the wooden hoop silos erected this year which cost $2.02 per ton we find that there was a saving of $1.04 for the wooden hoop type of construction. We should also consider that many of the silos that cost an average of $3.06 were built when all material was cheaper than it was this summer.

## Oleomargarine in Canada.

The greatly increased demand for butter and the desirability of making available substitutes therefor has led to the modification of the Canadian dairy and industry act, which prohibited the manufacture, importation, and sale of oleomargarine. The new regulations permitting such operations and transactions apply to oleomargarine, margarine, butterine, and any other substitutes for butter manufactured wholly or in part from any fat other than that from milk and cream, and containing no foreign coloring matter or more than 16 per cent of water. The use of any preservative other than salt is also prohibited except with the written consent of the food controller for Canada.

When lamp chimneys were universal to toughen them they were put in a vessel of cold water and put on the stove and allowed to slowly come to a boil. Undoubtedly other articles of glass might be toughened in the same way.

Guernsey Grades For Profit

In the only test where all breeds were represented the Guernseys won the first prize for the highest average score on butter—also for color and for flavor.

But, most important of all, they won the prize for net profit on butter and butter fat production—they gave the greatest return per collar invested in feed.

These characteristics are marked in Guernsey grades. They have won in test after test. Write for the book that tells the story—"The Grade Guernsey."

Have You Learned that KOW-KURE Can Make a Difference?

It is common knowledge in thousands of the best dairies from coast to coast that Kow-Kure has no equal as a medicine-tonic for cows that are "off color." Such common ailments as Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches are promptly eliminated by the active medicinal qualities of Kow-Kure, working on the digestive and genital organs.

As a preventive of disease, the occasional use of Kow-Kure will pay big returns in increased vitality and improved milk yield. Used before and after calving, Kow-Kure will prevent Milk Fever and Retained Afterbirth, and enable the system to resist the other diseases which frequently start at this period.

If you have a cow that is not yielding as she should, something is wrong with her organs of production. Try Kow-Kure and note the prompt improvement in appearance and yield.

Sold by druggists and feed dealers; 55c and $1.10 packages. Send for free treatise, "The Home Cow Doctor."

## More Pigs

With a shortage of brood sows throughout the country, gilts from the feed lots must be used to obtain the desired increase in the pig crop for 1918, specialists of the United States department of agriculture declare. Gilts will not produce as large litters as may be expected from mature sows, it is said, but their use in the emergency is advisable. Farmers using gilts should breed slightly above the prescribed number recommended in the state quotas in order to insure the requisite increase of pigs in the spring. The following per cent of increase is asked from the following states:

Missouri, 50; Alabama, 30; Kansas, 25; Iowa, 25; Illinois, 20; Indiana, 20; Nebraska, 20; Arkansas, 20; Mississippi, 20; Ohio, 15; Kentucky, 15; Tennessee, 15; South Carolina, 15; South Dakota, 10; Maryland, 10; North Carolina, 10; West Virginia, 5.

Farmers who do not breed as many as 20 sows can readily calculate the amount of increase which they should make in order to do their part. For example, if a farmer bred four sows in the fall of 1916 and breeds five this fall, he contributes at the rate of 25 per cent increase. If he bred 10 sows in 1916 and breeds 11 in 1917, he shares in a 10 per cent increase. If he bred only two sows in 1916 and breeds one more this year, he contributes exactly his quota if he lives in Missouri.

## Dr. John R. Mohler

The secretary of agriculture announces the appointment of Dr. John Robbins Mohler as chief of the bureau of animal industry of the United States department of agriculture. Dr. Mohler succeeds the late Dr. Alonzo D. Melvin, who died on December 7.

Dr. Mohler has been in the service of the bureau of animal industry since 1897 and has been assistant chief of the bureau since July 1, 1914. During the long illness of Dr. Melvin, Dr. Mohler performed the duties of acting chief, as well as those of chief pathologist.

The bureau of animal industry, in number of whole-time employes, is the largest division of the department of agriculture. Approximately 5000 employes are engaged in its work and are located in every state and nearly every county in the Union. The work of the bureau, generally stated, is to increase and conserve the live stock industry. The bureau also conducts the federal inspection of meat and meat products.

Dr. Mohler was born in Philadelphia May 9, 1875. After education in the Philadelphia Central high school, Temple college, University of Pennsylvania and medical department of Marquette university he engaged in private practice in Philadelphia in 1896. He entered the service of the bureau of animal industry in 1897 as a field inspector in the quarantine division. Later he was transferred to the meat inspection division, and in 1899 he was transferred to the pathological division, where he was advanced to the position of chief in 1902.

Dr. Mohler has translated a number of scientific works and is the author of numerous scientific articles.

## Veterinary

Dr. S. B. Nelson

**Feed Fewer Carrots**—I bought a cow three months ago, but she is too laxative so I can't feed her anything but dry hay and even that does not help much. Have tried to feed potatoes and carrots. She is in good condition and eats anything. She is to be fresh soon. —R. G. Olalla, Wash.

Try giving your cow one ounce of compound tincture of gentian and one teaspoonful of listerine in one quart of water morning and noon for some time. I would not feed her so very many carrots prior to her coming fresh. Do that a few days after she has had her calf. You may also continue the medical treatment soon after she has had her calf if necessary.

I have a cow about 8 years old. When fresh last March she gave birth to twin calves prematurely and both died. The mother took a heavy cold and she scarcely gave a cup of milk. The veterinarian in attendance suggested her being milked regularly as it would tend to bring up her flow of milk, but said she would not give her usual mess of milk until fresh again. She has given as much as four quarts at a milking by times and as low as two quarts since fresh. I am feeding her alfalfa hay and shorts in slop. She is in much better order than when I bought her and her milk is very rich, but in the last week she has dropped off in her milk almost two quarts a day in both milkings.—G. R. S., Olympia, Wash.

Try giving your cow one-fourth pound of Epsom salts in one quart of water daily. Also try feeding her a small quantity of carrots along with her other feed, say from two to three pounds to begin with and gradually increase it up to 10 or 12 pounds. If she is going dry, it might not be necessary to feed her more than six or eight pounds daily.

If an egg is cracked when putting it on to boil, salt shaken in the water will prevent the egg from running out.

Enjoy warm rooms at getting-up time

Whole house comfortable at the coldest time of the day —and at small fuel expense. Automatic Regulator gives uniform heat without any attention

The cold, bleak *outside* is made comfortable and happy *inside* when you have IDEAL heating to defy the winter winds. The whole house is as balmy as June. You don't shiver in any room. The days start right and the family is happy and healthful. You feel and know that your farm is more successful when there is an IDEAL Boiler and AMERICAN Radiators in your home.

AMERICAN RADIATORS & IDEAL BOILERS

Decide now to invest in an IDEAL heating outfit—they can be put in in a few days without disturbing the family at all.

IDEAL Boiler fuel pots fix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

With IDEAL heating you will notice a wonderful difference from old-time method of living. The house becomes a new home. Comfort and cheer abound. Drafts and chill spots are unknown. Great saving is made by burning the low priced fuels of your locality.

Don't delay buying IDEAL Heating

Big yearly fuel savings—no repair bill, no labor, no dirt, or coal-gases throughout the house—good for a lifetime of service. Cellar or water pressure system is not necessary.

*To save fuel this year send for our free heating book*

Write today for copy of "Ideal Heating." We want you to read this book through, for it gives you the truth about the heating question and shows why we want you to have IDEAL heating to change your house into a *home*.

Sold by all dealers. No exclusive agents.

JAMES DRYDEN
Editorial Contributor

# Feeds and Feeding

By JAMES DRYDEN.

The method of feeding, as pointed out in a previous article, is about as important as the feed. Unless the feed is dished up to the fowls in proper way we will not get the results in egg yield that we should get. We spoke of the necessity of two things; first, regularity in feeding, and second, the danger of making radical changes in the feed.

I wish to emphasize here some other points in feeding. First, the feeding should be done in such a way as to induce exercise. Activity is the life of the hen that is kept for the production of eggs. The laying hen is not a hog that eats and sleeps and eats some more until he is a fat hog and is killed that his fat may be used in the human dietary as fuel for the production of heat in the body. The lazy life of the hog does not produce fat, it conserves it. If the hog were compelled to work and scratch and run and fly and keep wide awake every hour of the day he would not get fat. The fat-producing foods would be used in the production of the energy to keep up the daily round of activities or gymnastics. Exercise burns up the fat and converts it into energy. Energy is what steam is to the engine; fuel is required to produce it and the food is the fuel.

Exercise is not essential in the production of fat or meat either in the hog or the fowl. The large meat fowls, like the Brahma, do not take to gymnastics or track meets. They are slow in moving and have little nervous energy, are not easily scared, do not scratch much or run much. Put a Brahma and a Leghorn in the same yard and the Leghorn will make the rounds of the yard four times when the Brahma makes it once. The Brahma conserves energy and makes fat and meat out of the food. Why does not the same process, why does not a life of ease, produce eggs as well as meat? Why does not feed give the same result when eaten by a Leghorn as by a Brahma, or by a Jersey and a Hereford? It is easier to ask that question than to answer it. But we know that activity and high nervous energy are associated with high egg production and not with meat production.

The point is that when we are feeding for egg production we must feed in such a way as to induce activity or exercise. It is a question of inducements. We can not compel the hens to exercise even though we furnish them with bloomers and Indian clubs and a gym. The hen takes her exercise when searching for her food, and so in modern poultry-keeping we take advantage of this trait of the hen and make the search so difficult that she will get the necessary amount of exercise.

How are we to induce them to exercise? Make them scratch. The hens will raise the mortgage if you will let them scratch. The best way to make them scratch is to cover their grain feeding floor 10 inche sdeep with straw and make them scratch their grain feed out of that. The straw while not a poultry feed is a valuable ally of the feeder. They won't scratch in the straw unless there is some grain in it, and they will not scratch if there is too much grain in it. It is here that skill in feeding comes in—to feed in such a way as to induce the proper amount of exercise.

We can not throw all the feed in the straw. All whole grain feeding is not the best way to feed. The fowls do better when part of their grain is fed in a ground state. It is not necessary that they should scratch all the time. There may be such a thing as too much exercise, but we know that we get better results when we feed a ground mash once a day than when we feed all whole grain. The proportion of ground grain to whole grain should be not less than one to two and may be two to three.

The following method will give good results. Feed a moist mash in the morning as soon as possible after the hens come from the roost. It will be an hour or two after eating the mash before they show much activity or desire to search for more feed. About 10 o'clock give them a light feed of grain in the straw, enough to keep them busy for an hour or more; then in the afternoon or evening give them a good feed of grain, all they will clean up in a couple of hours or before going to roost. This should be a liberal feed, so that they will go to roost with full crops.

This program, however, may be varied and give equally good results. The mash may be fed in the evening, giving them as much as they will eat before going to roost. In that case a light feed of grain should be fed first thing in the morning, and a heavy feed about noon. The amount given at this latter feed should be so gaged that they will eat of the mash at night about one-third as much ground grain as of whole grain. It is here where the difference between a skilful and an unskilful feeder come in. He must learn by experience and daily observation how much to give at a feed, first to induce exercise, and second to preserve a proper balance between whole and ground grain.

Straw is very essential in the business of egg production. It is not feed for the fowls, but its use brings us better returns from the feed fed. It is high in price at present, but at the same time it must be used in order to get results from the high priced feed. It is here where the grain farmer has the advantage in raising poultry, he has plenty of straw. The straw stack will produce eggs; make use of it.

---

After first removing the cork of a bottle from glue do not use it again, but in its place insert the stump of an old candle. It will never exasperate you by sticking, and the glue can not possibly spill.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4661 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

## Winter Is When Stock Get Out of Fix

Yet—healthy, thrifty animals mean more to you right now than at any other season of the year. It's because you are producing pounds of pork, beef, butter and milk with grain, hay and fodder, the products of your summer's toil. That's why your stock should be in prime condition and free from worms.

# Dr. Hess Stock Tonic

**Is a Conditioner and Worm Expeller**

It contains tonics to improve the appetite, blood builders to tone up and enrich the blood, laxatives for the bowels and vermifuges to drive out the worms.

Every ingredient in Dr. Hess Stock Tonic is highly endorsed by the United States Dispensatory and other world's experts for the same purpose for which we use them.

We have a dealer in your town, authorized to sell you Dr. Hess Stock Tonic with the understanding that it is to make your stock healthy, to make them thrive better, to drive out the worms; otherwise he gives your money back.

**25-lb. pail, $2.25;**
**100-lb. drum, $7.00**

Smaller packages in proportion.

GRANVILLE LOWTHER
Editorial Contributor

# Should Be Prompt

## Don't Hold Cars Unnecessarily

**By Granville Lowther.**

Last year I concluded to do a little marketing for ourselves instead of entrusting it to commission men or selling to buyers to be sold again at a profit. I came out without loss, and learned some things that I consider of value, and that I think should be passed along to the general public.

One thing that surprised me was that the jobbers seemed never in a hurry to unload their cars. To begin with, when a car of apples was received the jobbers had 48 hours in which to unload it without incurring any penalty. I had always supposed they unloaded as soon as possible, but I found they were never worried or hurried. At the expiration of the 48 hours there was a minimum demurrage charge of $1 on a car of apples. They never think of this demurrage as a penalty in the sense that that term is used in the courts, but they think of it as a charge for services rendered. At the end of the second day after demurrage charges begin $2 is charged, $4 for the third, etc.

I had sold a carload to a jobber and it was shipped in my name. I suggested to him that we unload as soon as possible. "No," said he, "in most cases I deliver them directly to the growers out of the car, and by that means save handling them twice." I said, "Won't you have to pay demurrage charges?" "Yes," said he, "but that is cheaper than handling them twice and paying the cost of storage at the warehouse." It dawned upon me that the railroad companies were not only furnishing cars for the transporation of our fruits, but that they were in a large degree furnishing warehouse accommodations as well. I saw that if these cars could be promptly released that it would be a big step in the right direction of relieving car shortage.

**Situation in Texas.**

Within the last five years I have made two trips to Texas, where I spent considerable time and always with a view of learning what I could in reference to fruits, shipments, etc. Texas formerly had the trouble to meet of which I have spoken, but they met it from a different angle. In that state the fruit growers from the Ozark mountains and some from Colorado would ship cars of fruit into the villages, towns and cities and leave the cars standing on the tracks until they peddled out the fruits among the citizens of the town or community. In this case the jobbers and growers appealed to the legislature of the state of Texas to pass a law prohibiting the sale of fruits directly from the cars, and requiring that they be unloaded from the cars into warehouses or some other receptacle. I do not know whether the bill as it appeared before the legislature finally became a law, but I do know that I heard several discussions on the subject.

I have recently been on Commission row in Seattle. The conditions there are best described by one of the city papers as follows:

"Consignees of foodstuffs in the past have taken from two to five and six days over the so-called 'free time' to unload their holdings, while other shippers were pleading for cars. Summary action taken by the railways and served on the commission men Saturday caused a wild search for cold and dry storage, as only one or two of the houses own such space, and none of the brokers, who are the principal intermediaries in handling carlot stuff, have space.

"Due to the zeal of brokers in earning their commissions on sales Western avenue has frequently been oversupplied with foodstuffs from California, Florida, Mexico and other distant points. This brought about price cutting by jobbers in order to get the stock out of the way, often at a loss.

"The effect of the car order is expected to gradually reduce the carload arrivals to the actual needs of this market and price cutting, it is said, will automatically cease, and, in the opinion of seasoned wholesalers, foodstuffs from outside the state will cost the consumer more money.

"The new order applies to all perishables, potatoes, onions and apples."

Tea is greatly improved by adding a slice of lemon; either for iced tea or for Russian tea on a cold day.

# Understanding the Tractor

## The Kinds of Tractors

Tractors are now commonly classified into two types—wheel tractors and crawlers. The wheel tractor delivers power from wider-surfaced wheels which are usually fitted with cleats or spikes for gripping the ground. The crawler type of tractor is one which works on the track-laying principle. Many of the crawler types of tractors have a supplemental front wheel or wheels which carry a portion of the weight and which are used to assist in steering.

There is now a wide variety of both wheel tractors and crawlers in use on farms throughout the country. The type to select for your particular farm depends on the size of the farm, the way it "lays"—whether level or rolling—and the nature of the soil. It is purely a matter of individual preference and requirements. Somebody has aptly said that one should use the same care in buying a tractor as in buying a horse—and that's as near a safe rule as we can suggest. If you intend to buy, it will be found a good idea to "read up" on tractor literature and to visit and talk to those who already have tractors in use on their farms.

Then select the size and kind of tractor suited to the needs of your farm. Questions regarding the tractor will receive prompt reply if addressed to the editor of this paper, Review Building, Spokane, Wash.

# WALNUTS

can be grown on a great many farms in the northwest. If you had planted grafted walnut trees a few years ago you could be selling the world's finest nuts today for from 25c to 30c per lb. Will you have any to sell a few years from now? Our grafted Franquettes are the best on the market, and are sold as low as many seedlings.

| | |
|---|---|
| 6 to 10 ft. trees, each | $1.25 |

# A Ranch Home for You and Fortune Too, Which Will You Have?

A nice piece of ground that you can improve like this picture, or only a bunch of rent receipts? It is for you to say. It is squarely up to you. Buy in a proven district, where farms have already produced results; where harvest is sure to follow seed time; where the red shot-clay and black silt loam soil shows what it will produce; where clearing is an easy problem—no gravel; no stone; where the land is just rolling enough to guarantee quick and thorough drainage; where the earliest vegetables and fruit are produced—early stuff brings the highest prices; where four passenger trains every day give the best of transportation; where city markets are within close reach; where nearby Canneries, Creameries and Cheese Factories are already in operation; where one of our 40-acre tracts, with a few Pigs, Chickens, Cows, with Vegetables, Fruit and Grain, will make you independent of the man who hands out JOBS.

All of this can be had on our Bryant 40-acre tracts, and at $25 per acre, on Ten yearly Payments at 6 per cent interest.

Opportunity is knocking on your door with sledgehammer blows. Won't you answer this profit-laden call?

# Will Unify Railroads

## *Government Assumes Full Control*

One of the most drastic war measures this country has ever known was taken last week when President Wilson, exercising the authority vested in him by congress, issued a formal proclamation taking over the railroads of the country for their complete control and operation by the government during the war. At the same time he announced that William G. McAdoo, secretary of the treasury, would be head of the operation system, having the title of director general of railroads. The appointment does not affect his position as secretary of the treasury. The absolute control of the railroads dates from January 1, though they were formally taken over on Friday, December 28.

Director General McAdoo announced immediately following the appointment that he would require the continuation of the present railroad officials and operatives in their present capacities until further notice, and that under their management the lines would continue to operate with as little disturbance from regular schedules and plans as possible. The railroad war board, composed of high railroad officials of a number of the most prominent lines, will continue in its present capacity. Walker D. Hines of New York, prominent in railroad business, was appointed assistant director to assist in the organization of the management under the government control regime.

Practically all the presidents of the railroads of the country have acknowledged the action of the government with pledges of personal support in all manners possible.

President Wilson announced in taking over the lines that the action was not taken because of dissatisfaction with the spirit or the efforts of the separate company managements, but because war traffic conditions demanded unification of all transportation, which could be accomplished only under one controlling management.

It is the plan of the government, as announced, to eliminate all lost motion possible, reduce passenger traffic as much as possible without interfering with necessary travel and route all freight over the most direct routes possible without regard to the lines on which the shipments originated or the ownership of the train equipment carrying them. Payment for service will be based on the earnings of the railroads during a considerable period just passed over.

### Italy Still Holds.

The Italian army still maintains control of the situation on its battle fronts. The combined attacks of the Germans and Austrians have been repulsed. All the territory lost in recent battles has been regained, and the Italians appear to be master of the situation again.

Comparatively little fighting has been in progress during the last week, owing to winter weather conditions.

Germany's peace offer at Christmas time fell on deaf ears everywhere except in Russia. There negotiations are still going on. The other allies have announced their intention to fight on relentlessly, regardless of what their former ally, Russia, does.

### Floods Menace Northwest.

The most serious floods for this time of year known in the northwest for decades have menaced property and life in various parts of the three states of Washington, Oregon and Idaho during the past two weeks. Especially is this true of western Washington, northern Idaho and parts of the Willamette valley in Oregon. Railroad traffic has been greatly handicapped.

### Gets Cold in the East.

While the northwest has been enjoying an open winter and almost springlike weather, the east has been in the grip of cold weather for several days. New York city reported temperature below zero; White River, Ontario, Canada, reported the remarkable low degree of 48 below zero, and Winnipeg, Canada, reported 32 degrees below. Sioux City, Ia., reported 28 degrees below zero.

### Still Probing Packers.

The federal trade commission continues its probe of the meat packing industry trying to discover the methods of control used by the large packers. Francis J. Heney of San Francisco is conducting the investigation. Volumes of testimony have been taken tending, it is claimed, to show that the large packing concerns have held such complete control of the situation as to squeeze the small packer or dealer out of business, control the price of meat and meat products and virtually establish the prices of hides and leather. The investigations probably will last for some time yet, following which definite action against the packers is a possibility.

# Farmers Must Pay in Loyalty to Get the Benefits of Cooperation

Among the persons who have done real work along the lines of better farming and helping to make better farmers and better farm conditions in the state of Washington must be included the name of W. J. Langdon of Sumner. His dairy experiences, as well as method of obtaining a market for other farm products when similar farm products raised by others farmers went a-begging are a real contribution to the market problem. Mr. Langdon was telling me the other day about an incident of his farm operations when it came to marketing potatoes. There was a big crop of potatoes that year, and the commission houses in Seattle were overloaded, and the price way down. The farmers generally were saying there was no money in potatoes, and they were going to quit raising them. For some years Mr. Langdon had been "standardizing" the potatoes he raised on his own individual basis. The trade in Seattle knew what Langdon potatoes were, and when Mr. Langdon visited the commission house with which he had traded and asked about the potato situation he received a reply that the market was overloaded. "But," said the commission man, "your potatoes are different, and I can use a carload and give you a fair price. I have an order right now that can only be supplied by such potatoes as you raise, and I will hold it until you can get your product in."

Mr. Langdon is prominently connected with grange work in this state, and is at work on a cooperative buying proposition by which individual granges can obtain goods from manufacturers and wholesalers direct. He is also at work with State Farm Market Director Hobson and with R. B. Coglon, at the head of county agriculturists in this state, the three working together to see if something can not be done in standardizing potatoes so as to create a market. As Mr. Hobson has continually pleaded with the growers that unless the buyer knows what he is getting he certainly will not buy with intelligence and will try to protect himself if he has to take a chance on getting the field run of potatoes.

Mr. Langdon doesn't despair of the growing success of cooperative enterprises. He believes that when farmers fully realize the importance of cooperative effect and are more willing to pay in loyalty to their organizations for the benefits conferred that the growth of the cooperative movement will be hastened.

**Newlands Laid to Rest.**

Senator Newlands of Nevada died recently after a career that gave him

## Time-Saving Ideas

With a tremendous amount of work to be done on the farm this coming year, and with the certainty that man power will be short, many wonder, no doubt, how they will get through.

One thought that will occur to many is to employ every good labor-saving device obtainable.

Thanks to the ingenuity of machinery manufacturers one can get many tools and machines that pay for themselves in the time they save and the increased amount of work they make possible.

Nearly every reader of a farm paper can trace the presence of some desirable piece of equipment on his place to having answered an ad and having secured a descriptive catalogue.

Take the present issue of this paper for example. Its advertising columns tell where to get scores of desirable things that will reduce work and save time.

The catalogues of manufacturers are easy to get and often prove the means of bringing to the farm valuable equipment.

You can learn a great deal by reading over advertisements—for there is where announcements are made of new and improved mechanical equipment that has been invented, perfected, found of practical value and offered for sale. Of course many things besides machinery are offered as well.

Every firm offering its goods through our advertising columns may be fully depended on. We will not accept advertising from firms who are not thoroughly reliable. In writing for catalogues or in writing to any of our advertisers we will appreciate it if you will mention this paper.

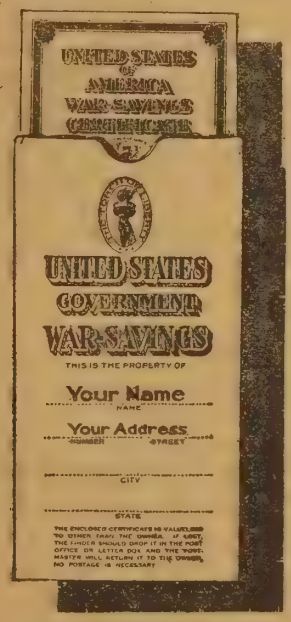
# A Call to Every American!

**W.S.S.**
**WAR SAVINGS STAMPS ISSUED BY THE UNITED STATES GOVERNMENT**

**War Savings Stamps are a call to the thrift and patriotism of every American—a call that must be met by every man, woman and child who shares the blessings of this free country, if we are to carry on this war as a united people.**

## What They Are

War Savings Stamps are the most democratic form of government securities ever issued—a profitable, simple and secure investment backed by the entire resources of the government and people of the United States. They steadily increase in value from the date of purchase to the date of maturity—this increase is **guaranteed** by the government.



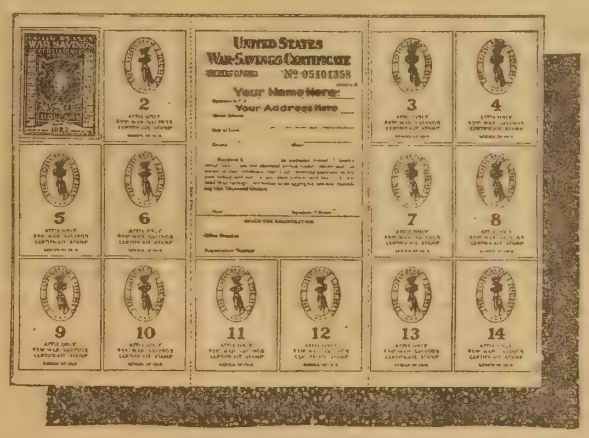
These stamps are issued in two denominations—the $5 stamp and the 25 cent Thrift Stamp.

## The $5 War Savings Stamp

The $5 War Savings Stamp is a stamp for which the government will pay you $5 on January 1, 1923. Its cost to you if bought this month is $4.12 (this cost increases one cent each month during 1918)—that is 4% interest compounded quarterly.

## How to Buy Them

Take $4.12 to the postoffice, a bank, your R. F. D. carrier or any other agent, buy a War Savings Stamp and ask for a War Savings Certificate.

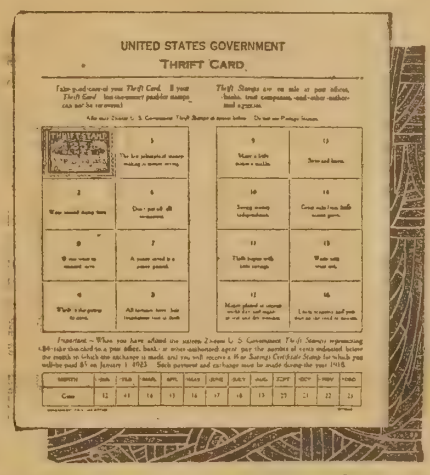


**U. S. Government War Savings Certificate and envelope. Envelope is 4x 8 inches.**

A War Savings Certificate is a pocket-sized folder containing 20 spaces upon which to affix War Savings Stamps. The agent from whom you purchase your first stamp will write your name and address on the certificate and will give you an envelope in which to keep it.

You are now a war saver—doing a personal part in winning the war by lending your savings to your government. Continue to buy War Savings Stamps every week or month and put them on your certificate until you have filled all of the 20 spaces. When this is done you can buy another War Savings Stamp and receive free of cost another Certificate, to which you can attach stamps as you buy them. For each certificate, filled with stamps, the government will pay you $100 on January 1, 1923—it is a $100 government bond, that if bought in January, has cost you $82.40.

## Simple, Secure



You don't have to figure interest, nor clip coupons, nor worry about the safety of your loan; the certificates are not transferable, and behind them are the wealth and taxing power of the richest country ever known. You can get your money back, on 10 days' notice, any time you need it.

**War savings certificate, with first stamp affixed. On this and the other side are 20 spaces for stamps. When filled it is a $100 government bond. Actual size of certificate 11½x8 inches.**

## Thrift Cards

The Thrift Card is furnished to all purchasers of the 25c Thrift Stamps. This card has spaces for 16 stamps. When all the spaces have been filled the thrift card may be exchanged for a $5 stamp by adding 12 cents in cash in January, or one cent additional each month thereafter.

**Thrift card with first stamp attached. When the 16 spaces are filled you have $4 toward the purchase of a war savings stamp.**

**Your Country needs your savings. War Savers are Life Savers. A Country worth fighting for is a Country worth saving for.**

**Start saving NOW. Get war savings Stamps from your R. F. D. carrier, postoffice, bank or any authorized agent.**

## War Savings Committee for Washington

# Truly Reaps What He Has Not Sown

## *But Farming the Sea the Fisherman Does Not Lack Incentive to Industry*

By PAUL E. TRIEM

There is one point in which those who go down to the sea in ships have a great advantage over the farmer; the latter must sow and cultivate his own crop, while the fisherman has only to harvest that which lies ready to hand. And so, at a time when the free range of the past is vanishing from the memory of men, it is natural that America, with untold riches waiting to be garnered from her inland and adjacent waters, should turn to that primal source of all life, the ocean, to look for a substitute for the soaring beef steak.

The fisherman truly reaps what he has not sown, but his life does not lack incentive to industry, for all that. When the romance of the great infant fishing industry shall be written, there will be as thrilling chapters in it as

**Type of fishing boat in which salmon and halibut fishermen brave all sorts of weather. This boat came round the Horn from the eat coast.**

are to be found in the literature of war, mining or exploration. Men now in the prime of life, for instance, can look back to a time when the fish trap threatened to render possible the cornering and exploitation of the fish market. All that was necessary, apparently, was for some wealthy monopoly to buy up all the advantageous sites, by which simple process competition would be eliminated and the great salmon industry would be gathered neatly into a bag. Those were the days of open warfare between rival fish interests, when the guards in charge of an isolated trap might be picked off at dusk or daybreak by a stealthy rifleman. Fishing was no pink tea occupation in those days.

And then, when the dreams of the fish barons seemed on the point of fulfilment, suddenly out of nowhere came the seiners. They were like locusts or the grasshopper plague to the men who had hoped to control the fishing industry, for while there are but a limited number of really first-class sites for traps, the infinite ocean was a hunting ground for the men with nets. With enough capital to buy a sein and a fishing boat, the hardy Norwegian with hardly a dollar in his pocket became an independent producer. The dream of world-wide control of fish production turned into a nightmare, and then the "fish barons" awoke. That phase of the proceedings had become history.

The traps still do business as of old, but they are handicapped by the fact that they are chained to a location which may be avoided by the fish, while the seiners are mobile and can go where the salmon are to be found. Many of the fishing boats are owned by the men operating them. Hardy and adventurous men they are, too, for even with the elimination of the gun men of earlier days, fishing is no child's play. Much salmon fishing is done on various parts of Puget Sound and on the lower Columbia river. Cannery boats call at the various traps and also buy from the seiners—there is never any trouble in selling, although, of course, the price fluctuates according to market demand and the abundance of the "run." During these years of the world war, when food of all kinds is at a premium, there is little likelihood of any surplus of fish being produced.

With the coming of winter, many of the men who have seined for salmon in the sound during the milder weather change their occupation and become halibut fishermen. And if fishing in general is hard work, halibut fishing may be termed a job for men of steel. The fish are caught on hooks, baited usually with herring or smelt. The fishing banks lie off the Washington and Alaska shores, out where real ocean weather prevails throughout the winter. Most of the boats are but "pop bottles," but apparently these modern vikings who man them are unconscious of the wonderful courage they display in going out in such diminutive craft.

They are a strange type of mankind, altogether, these fisherfolk. They are not even paid like other men, for the crew receives a share of the profit of the trip, so that a man may make nothing a day or a hundred dollars or so per week, depending on the size of the catch and the price of halibut when the boat reaches port. And all the time they are at work, manning the dories or hauling in the long lines armed with an infinity of hooks, out beyond the cape, they can hardly be unconscious of the fact that death is as apt as not to be one of the crew. Never a dark night settles down over the heaving ocean but that this possibility—the chance that not a mother's son of them will be alive when day breaks—is so close at hand that the fishermen must at times look it unflinchingly in the eye. But the world must be fed, even as it must be purified from cruelty and the lust for dominion. And so these stolid faced men go down to the great sea in their tiny boats, and many of them never come back.

**A Puget Sound fishing boat in port.**

## Two Potato Problems

To the Editor of the Washington Farmer: I see in the December 14th issue of the Seattle Produce News, a statement by Lloyd Garretson, that if the potato growers of the Yakima valley send to Seattle a quality of potatoes that will pass United States government inspection, they will lose 75 per cent of their crop in the cull pile, and will be permitted to market but 25 per cent of their total crop in the city of Seattle. Mr. Garretson is secretary-treasurer of the Pacific Fruit and Produce company and is known throughout this valley as one of the best posted men in the produce trade, and as a man whose word is given due weight. I also notice in a Seattle paper of recent issue a wail from Western avenue in which the statement was made that the buyers in the city of Seattle were exceedingly glad to see the government compel the potato growers of the Yakima valley sort their product in the very strictest accordance with the rules laid down.

Now, if the potato growers of the Yakima valley raise an average crop of six tons to the acre and are only permitted to market one and one-half tons of this crop in the coast markets, and that one and one-half tons the most select stock, what shall he do with the balance and where shall he get the money to pay for the raising of these six tons, and how many acres do you suppose he can be induced to plant next season?

Granger, Wash. SAM DOUGLASS.

## Automobiles

### Aiding National Transportation

The recent reports from Washington show that our railroads have carried this year 15 per cent more than they did in 1916, which broke all records for freight deliveries. Admission is made at the same time that the railroads are now swamped by commercial activities, the transportation of farm products, the delivery of mail and parcel post and the business of the government in the transportation of troops and munitions.

The automobiles, therefore, should constitute a secondary line of national transportation. It is estimated that there are 4,200,000 automobiles in service in the United States, of which approximately 1,750,000 are in the hands of the farmer. It is safe to say that practically all of these automobiles on the farm are used the greater part of the time for utility purposes. In cities and towns it is safe to say that at least 70 per cent are used for transportation uses, conveying people from one place to another on business errands, etc. The automobile has enabled the doctor to extend considerably his practice and very materially increase his own efficiency as a human factor in city and country.

The automobile, through volume manufacture and widespread use in city and country, has become as big a utility as the telephone or electric light. This is not only a manufacturing country on automobiles in the sense of volume, but in gasoline we are the producing center for practically the entire world.

The automobile in the present war has proved its utility to a surprising degree. When Paris was threatened by the Germans in 1914 General Joffre commandeered all the automobiles, trucks and taxicabs in Paris, conveying several hundred thousand French soldiers to the Marne, where they turned back the Teutonic invasion.

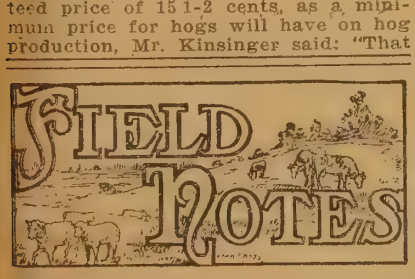
# Shall He Quit Hog Business?

## *Palouse Farmer Says Some Wheat Is Necessary*



By J. E. NESSLY.

If the ruling of the food administrator that no wheat be fed to live stock is enforced it will cause Daniel Kinsinger, the "hog king of the Palouse," to dispose of his herd of 300 hogs and quit the business, which he has built up to the largest hog industry conducted by one man in the Palouse country. Mr. Kinsinger has been one of the most successful farmers of this county and has always combined hog raising with the production of wheat. He raises from 500 to 800 acres of wheat every year and has from 500 to 1000 hogs on hand most of the time. He has all his land enclosed with hog tight fences and runs the hogs on the wheat field in the fall and spring, on the summer fallow fields in the summer and after harvest in the stubble fields.

"I have sold $7000 worth of hogs this fall and they were only fed grain four days. I took them off of the stubble and kept them penned up and fed four days before driving them to the railroad station for shipment and they averaged 230 pounds each. I have 300 stock hogs and shotes left and am feeding them some wheat," said Mr. Kinsinger. "I do not know what I will do if the government stops me feeding wheat for I have no other feed and will simply have to stop raising hogs, sell off what I have and quit the business.

"I can not get corn. If we could buy it in the middle west we could not get cars to ship it. I hate to feed $2 wheat to hogs but must feed wheat or give up the hog business. The government is clamoring for more hogs and I understand we are forbidden to feed wheat to hogs. The government can not have the wheat and hogs, too, not from this country. I would like to know 'where I am at' and if I am not to be allowed to feed wheat to hogs I will sell off my hogs and quit the business, but the government must not ask farmers to raise hogs and then forbid them feeding the only feed they have."

Asked as to the effect the guaranteed price of 15 1-2 cents, as a minimum price for hogs will have on hog production, Mr. Kinsinger said: "That will be all right if we are permitted to feed what we can raise and the packers are not allowed to put the price down several cents in the fall when the bulk of the hog crop goes onto the market as has always been done, and after the hogs are practically all sold by the producers and the packing houses filled with cheap meat, raise the price of hogs several cents a pound and then sell the bacon and other products on the basis of the highest price paid during the year. If the government will guarantee a stable market for hogs we will raise them and supply the United States and our allies with pork, but we must be assured of a price that will allow a small profit and not let the packer get it all. The farmers ask only a square deal and they are entitled to it. They must feed the world and it is taxing their capacity to do so with the scarcity of labor and the exhorbitant prices demanded for everything they buy."

D. C. Bunn, son of the general counsel of the Northern Pacific Railway company, is farming 110 acres on the Yakima river, near Prosser, Wash. He has gone in for Bearkshires and has 120, including his young pigs and breeding stock. Mr. Bunn is making the pigs pay. He has developed a splendid type of big-boned Berkshires, noted for their excellent lines in back, shoulder and ham, as well as for their good feet.

"I believe we farmers would be far and away better off if the United States would continue the food administration even after the war," said Preston Royer, a well-known Prosser farmer the other day. "The system now in effect will go a long way toward eliminating the man who has secured the profits which the producer is entitled to. We have been confronted by a situation which has led many farmers to stock up heavily with dairy cows, hogs and poultry and to raise great quantities of produce, only to be faced later by a dead market. Those persons whom the farmer depended upon to take his output have filled their cellars and warehouses following the farmers' first enthusiastic over-production. They can hold their produce while they force the selling maket up. They can do this because they have all the stock they need and are buying no more from the producers. The producer, becoming discouraged, raises but little as compared to what he did. It follows, then, that the middle man, with the cornered stock, sells what he has at big profit to the consumer. In the meantime the farmer wonders what he is going to do with his expensive live stock and his investment in acreage. He had been promised a never-ending demand for what he could produce, but he finds himself stuck just as soon as the middle man has enough with which to begin his manipulations. Something surely can be done to curb this practice. Most farmers know it exists, but as a class we have been unable to check it." R. W. F.

# MR. JONES HAS HARD LUCK WITH WILLIE'S NEW CURRYCOMB

DEAR TOMMY: I made a currycomb like this for Johnny Jones to groom his Shetland pony. It worked fine; but when Johnny's father tried it on his saddle horse, he went at it as if he was trying to bore a hole through Dobbins. Of course, he wouldn't stand for that and nearly kicked the stable down!

Yours, etc.,
WILLIE.

# JERRY MACJUNK GETS WISE TO THE CONDIMENT THING

# COST OF READING MATTER CUT BY ELIMINATING THE MIDDLEMAN

*"Cooperation" has been a rallying cry with farmers and farmers' organizations for many years. How to eliminate the middlemen has been the question.*

*The Washington Farmer put the principle of cooperation to a test when announcement was printed that an effort would be made to dispense with the middleman, or agent, in subscription matters. We said to our friends: "Send your subscription order direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription. Moreover, many men will be released to serve in many lines where needed."*

*If you believe in cooperation---if you believe in eliminating the middleman---help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.*

## High Quality Is Maintained

The low price of your state farm paper does not mean lowered quality. We are endeavoring to give you a better and better publication.

One of the means adopted to improve the paper was finer facilities for printing it. This paper is now printed on a high-speed magazine press with every modern facility and appliance. This press has an hourly capacity for printing, folding and stapling 30,000 twenty-four page papers. Think how this cuts down the time between the occurrence of something important and the hour you hear about it in your state farm paper!

# Have You a Live Food Committee?

## *Every Community Should Have Organization*

Complete and thorough organization for food conservation purposes in each county and community in the state is urged by Charles Hebberd, food administrator for Washington, on chairman of county councils of defense. In a letter sent to chairman of county councils Mr. Hebberd makes this vigorous appeal:

"Some counties are very well organibed and others not so well. If you have not already done so, will you not undertake at once a complete organization in every community in your county to handle this work? You realize, I am sure, that the work comes closer home and entails more sustained effort than probably all the rest of the county council's work combined.

"Therefore, if you have not already done so, will you not kindly select the strongest man obtainable in your county to head your county committee on food supply and conservation and give him the support of a strong committee. Then have this chairman and his committee proceed to organize a food committee in every community in the county. The size of this committee will depend on the size of the community. It should be made up of active men and women who will undertake to do the things outlined by the food administration.

"It is my intention that the food committee of the county council, with its auxiliary committees in the several communities, shall be the representative of the federal food administration and the agent of the administration in food work in its locality. The county superintendent of schools and the county agricultural agent should be members of the county food committee. Also, if there is a merchant representative in the community appointed by A. J. Rhodes of Seattle, who is merchant representative of the food administration in this state, he should be made a member of the local committee. The function of the merchant representative is to encourage and secure all manner of store publicity for the food conservation program by way of window display, store posters, etc.

"Also if there is a representative in the county or community of the home economics department of this work appointed by Miss Craig, home economics director, Pullman, she should be made a member of the food committee. The function of the home economics department of the food conservatin work is to promote food conservation in the homes and in the schools of the state through teaching the right preparation, use and conservation of foods. The county food committee and food committees in the several cmmunities should consist of both men and women and should include the most active leaders in the locality.

"In each county there is a committee of minute women organized by Mrs. J. S. McKee of the state council of defense. This committee should also be represented on the local food committee.

"If your food committee has not been fully organized on the above lines will you not undertake to see that this organization is completed within the next two or three weeks? Mr. Hoover advises me that there is very important work coming out shortly which can be handled only through effective organization in every community."

# Progress in Marketing

The Eastern Lewis County Farmers' exchange whose headquarters are at Morton, Wash., is filling a long felt need in helping the farmers of that section market their produce. The manager, N. D. Tower, makes the following statement regarding the activities of the exchange:

"It is very hard to put on paper all we have accomplished through our association. To be sure we have made some mistakes, but not many, and experience is the best teacher, but I want to say that I think it is the only way for the farmer to buy or sell anything that he may be interested in.

"In starting our association we divided the territory into six districts. Each district elected its own director and these directors elected the director at large. The seventh director is not needed xcept to make an uneven number of directors. Each director is supposed to look after his own district.

"We have shipped seven cars of live stock and we have another to go this coming week. We have shipped about 40,000 pounds of dressed meat besides a good many veal. We have also handled a good many hides. Shipped one car of potatoes and have two in the warehouse. Also shipped one car of vegetables. We got out two tons of turkeys at Thanksgiving time. We have handled one car of flour and have another ordered. We tried hard to take orders ahead for the flour and had it nearly all spoken for, but when the car came it went very fast. We are also handling hay, which the farmers have never had a market for before.

"The stockholders, which comprise about 100 farmers, are all well satisfied and are doing all they can to keep this association the largest in the state."

# Flour Too High

## Do Price Regulations Regulate?

To the Editor: The government fixing of the price of wheat seemed to work swiftly and thoroughly—a very fine thing for the miller. Flour was lowered at the same time about $1.50 per barrel. The miller uses with normal wheat four and two-thirds bushels for a barrel of folur. He gets this on the Coast here at 17 cents less per bushel than does the Minneapolis miller. That puts him to the good 76 cents on every barrel. Like the Minneapolis miller, he uses enough of the cheaper grades of wheat to lower the cost of his milling mixture 8 cents on every bushel. Both claim that the cost of milling is about 80 cents per barrel. They claim the by-products—bran, shorts and middlings—resulting are worth $1.36. Both are ordered to take only 25 cents profit on a barrel of flour and 50 cents profit on a ton of feed. The following table will show how they are obeying these orders:

| | |
|---|---|
| 4 2-3 bushels wheat (280 pounds), $1.95 mixture | $ 9.10 |
| Claimed cost of milling (too high) per barrel | .80 |
| Profit on barrel miller is allowed to take under law | .25 |
| Gross cost per barrel of flour | $10.15 |
| Deduct value of by-products (too low) | 1.36 |
| Lawful price per barrel of flour | $ 8.79 |

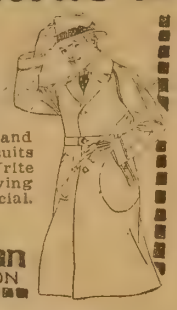
They are charging from $10.25 to $12!

They are charging us ranchers $75 per ton for chicken-feed wheat—No. 5 and worse. This figures out $2.25 per bushel. Compare this with the cost to them of milling wheat—$1.95 per bushel.

Oh, yes, we like government regulations that regulate: that are not defied and evaded; but we have no use for regulations that regulate only one end of the deal. I sent in a protest the other day to Hoover, who solicits such from the people. He replied by referring me to Washington State Food Administrator Charles Hebberd of Spokane and to Theo. B. Wilcox, chairman of milling division here, and to M. H. Houver, government zone agent for grain corporation, at Portland. Those gentlemen have had three months to work in. When are they going to get into action? Hundreds of cows and thousands of laying hens have in this time gone to the block in order to enable the owners to buy feed for the remainder. Scores of small ranchers are giving up the hopeless fight and going out to work in lumber mills, lumber camps, shipyards—anywhere that they can get a few dollars that the patriotic miller can not get his claws on.

W. D. BOYNTON.
Gig Harbor, Pierce County, Wash.

**Deleted.**



"This letter was deleted by the censor. So says the official stamp."

"Then I guess it's safe to read it. Them letters must pass through queer channels, I s'pose, and the censor ain't going to let us run the risk of ketching something or other."

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

# Saving Grain in Feeding

Saving grain in swine feeding is an exceedingly pertinent subject just at this time when there is a growing demand and a lessened supply for pork production, especially in connection with furnishing the necessary fats in an army ration.

In this connection the Farmer is glad to give added publicity to the efforts of the state college of Washington in publishiing the following article, prepared by William Hislop, professor of animal husbandry:

During the present winter, roots can be fed advantageously to brood sows, growing gilts and fattening shoats; however, as an exclusive diet, roots are not satisfactory, because they are too bulky and watery for the restricted capacity of swine. Their value lies in the fact that they reduce the amount of grain required per pound of gain, exert a tonic effect upon the digestive system thereby promoting better health and add variety to the ration.

During the next three or four months an excellent daily ration for pregnant brood sows would be seven to eight pounds of roots, six to seven pounds of red shorts, fed as a warm slop, and alfalfa hay (ad libitum) fed in a rack. As pregnancy advances, the roots should be produced and the red shorts increased. For growing gilts a ration similar in composition though less in bulk would promote efficient and economical development.

For fattening shoats now weighing 90 to 125 pounds a daily ration of four to six pounds of roots and three to five pounds of red shorts and ground barley, equal parts of weight would be a mixture well adapted to muscle and fat production; however, in the later stages of finishing, the daily allowance of roots should be cut down to two to three pounds and the concentrates increased to seven to eight pounds. The grain should be fed as a warm slop made by pouring warm water over it just before feeding.

At the Copenhagen experiment station, 204 pigs fed whole or sliced roots plus skim milk, whey and grain, demonstrated that 7.5 pounds of mangels or four pounds of sugar beets are as good as one pound of ground barley when all are combined with dairy by-products.

At the Utah experiment station pigs fed shorts in combination with sugar beets and also with beet pulp made daily gains of 1.2 pounds per head. In the above trial 396 pounds of sugar beets or 609 pounds of wet beet pulp proved equivalent to 100 pounds of wheat shorts.

At the Oregon experiment station cooked or steamed potatoes were fed with barley at the rate of three to six pounds of potatoes to one pound of barley. In this case, from 340 to 381 pounds of cooked potatoes replaced 100 pounds of grain while it required 552 pounds of raw potatoes to replace 100 pounds of barley.

Artichokes, pumpkins and squashes may also be used as grain savers. Artichokes have affected a saving of 150 to 200 pounds of grain for each 100 pounds of gain made, while 367 pounds of raw pumpkins plus 273 pounds of grain produced a 100 pounds of gain with fattening pigs.

In summarizing the experimental work reported it should be said that roots alone are never advisable, but as grain savers and health givers, they have a rightful place in hog feeding at all times, but more so today than ever before.

## Raising Hogs at a Profit.

A large amount of correspondence has followed the publication in The Spokesman-Review December 2 of a letter from G. H. Mottinger of Mottinger, Wash., who complained of the prices for poultry and hogs, and asked if he had not better trade his stock for a couple of whales.

Mr. Mottinger received a letter from L. R. McGee, secretary of the Portland Union Stockyards company regarding his complaint, and he replies in characteristic manner, a copy of which he sends The Spokesman-Review. The burden of Mr. Mottinger's letter to Mr. McGee is that just so soon as there are plenty of hogs or eggs the price goes down. The letter is worth noticing only for two points. First, it is a fact that price diminishes usually with supply, just as in any other line of trade. The second point—and the one stockmen and poultrymen should bear in mind—is that these lines of business can only be made a success by keeping at them. The stock business is not one that a man can win in by getting out and getting in. Given the established principle that hogs are high when scarce the successful stockman will see to it that he has them all the time, and will thus balance his profit and loss over a long period of years, just as the successful merchant does.

Mr. Mottinger makes the point that if the government would establish a guaranteed price for hogs for a period of six years, as England did with wheat, the farmers would go into the hog business. The laws of trade establish such a guarantee. All could take advantage of it. Six years ago hogs were high in price, and farmers began raising in large numbers. Three years ago the price went down and they quit. Now hogs have been high for a year again, thus proving the assertion that economic laws establish a price; not, however, at the same plane all the time, but spread over a period of years, the result would be the same. From the economic standpoint live stock is considered merely as a profitable way of marketing crops, and the farmer should not expect a large profit on both.

Mr. McGee inclosed a table giving the results of a recent feeding test to prove his assertion that hogs may be fattened at a profit, even on high-priced feed. In this barley and peas are charged at $40 a ton; tankage and oilmeal at $50 and shorts at $27. The shorts can not be bought for that now, but would cost $35. Four different lots of hogs were fed in the test, and the profit ranged from $3.72 to $5.71 per hog.

A letter also inclosed in the correspondence from an Oregon rancher makes the important point that no man should attempt to raise hogs unless he is properly equipped.

A. W.

# Discuss Live Stock

Among the many important subjects for consideration at the 21st annual convention of the American National Live Stock association, to be held at Salt Lake City, Utah, January 14-16, 1918, are the following:

Efforts of our government to stimulate the production of live stock, and what live stock producers should do; policy of the United States food administration toward the protection of producers; effect of the war on the live stock industry; better utilization of animal feeds, so as to produce meat animals at a lower cost; terms of the federal license of meat packers; investigation of the meat industry now being conducted by the federal trade commission; work of the bureau of markets in distribution of live stock and meat statistics; live stock conditions in foreign countries; necessity for an accurate federal census of live stock; effect of the drouth in Texas and the southwest; the cotton-seed meal combine, and what steps should be taken by the federal government to regulate the supply and price of cotton-seed cake and meal; land designations under the 640-acre stock raising homestead bill; reservation of driveways and water holes; classification and disposition or control of the remaining public land not designated as applicable to filing under the 640-acre law; some proposed changes in the grazing regulations on the national forests; extermination of predatory wild animals; poisonous plants; work of the bureau of animal industry in the eradication of ticks; inspection of meat, hides and wool from foreign countries; importation of live stock from countries where contagious diseases exist; protection of live stock owners and ranchmen in Mexico; meat inspection law; financing live stock loans; proposed advance in railroad rates; general investigation by the interstate commerce commission of all railroad rates, rules and practices involved in the transportation of live stock, known as docket 8436; service of railroads; shortage of cars; report of market committee; reports of other standing committees, etc.

These and other questions will be discussed by men prominent in the live stock world, government officials and others. An unusually attractive program is being arranged. Officers of the federal government connected with the food administration, bureau of animal industry, forest service and geological survey, as well as state live stock officials, will be present at our meeting.

The 54th annual convention of the National Wool Growers' association meets in Salt Lake City, Utah, January 17, 18 and 19, 1918, immediately following our convention.

# King County Corn

This photo shows some field corn grown by E. W. Trezise on the bottom land of Tolt, Wash. It is 13 1-2 feet high and the stalks are very large around. The ears are large and most of them are well developed. "This was sown about the 15th of June, 1917, and shows what this land can do with corn," says Mr. Trezise.

**Difficulties of Mining.**

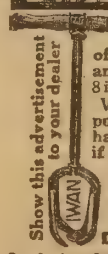
Every time a ton of anthracite coal and rock is hoisted from a mine an average of 11 tons of water must be pumped from the mine.

It takes about the same amount of power to pump fresh air into a mine as it does to hoist coal out of it.

In some mines with long drifts the car hauls may be as much as 15 miles per round trip.—National Engineering.

APPLETON WOOD SAWS

Safety and Service



Buy a wood saw strong enough to be *safe* under any strain and durable enough to last you for years. The Appleton has tremendously strong, rigid frame of angle steel; or hardwood, bolted, braced and mortised—doesn't get out of line. Lathe turned steel shaft. Dust proof, non-heating, self-adjusting bearings, keep saw true and steady even after years of wear.

10 sizes; tilting and sliding table types and drag circular log saws. Write for

# Humanity as Safe in the Desert as in the Palace

By IDA C. YOUNG.

Another set of characters are reproduced by the Bunch Grass Boy, and his hand is not losing its skill. The last article seems to me better than ever.

Poor Mrs. Henry, there came a time in the history of Paradise Valley or Poverty Flat—it went by either name—when all our hearts went out to her in common sympathy. It was the time when we buried her first wee baby.

A hearse at that time was an unheard of thing. Usually a neighbor kindly tendered the use of a hack and team to convey the casket of any who died from home to the cemetery. But in this case the hack seemed dusty and large and empty with one tiny dead baby, so Florenec Coley and I sat in the back seat with the little white casket on our knees. The baby was buried in the dusty, wind swept city of the dead, where Russian thistles and Jim Hill mustard hung in heavy banks against the surrounding fence. This is not a specially beautiful picture of the graveyard, and yet it compares favorably with the grass covered cemeteries of the Coast, where cement linings or quick balings have to be resorted to before the casket can be lowered into the wet, wet grave. The subject of funerals brings we to what was probably the first event of this kind in Douglas county. The infant child of Frank Day gave up its little struggle for life in the spring of the second year. The few neighbors gathered about the little grave and armfuls of wild lupine, with its great spikes of blue and purple blossoms were piled in lovely confusion over the bottom. Onto this the casket was lowered, and more lupines heaped above. Then the dry, crumbly earth was returned to its place, and the funeral was over.

I had a vague feeling that the profusion of wild flowers was a very fitting part of the service, but not until I heard the murmured approval of Mrs. Bosworth did the feeling crystallize into definite thought. Then there bloomed in my childish heart a beautiful flower of admiration and friendship for the dear old lady who said such a lovely thing.

That same summer Mrs. Bosworth died suddenly, in the night, of heart failure. All the lumber used in the settlement came from Hawk Creek, north of where Davenport now stands. There was not a spare piece in the neighborhood, so father ripped off some boards from the side of our barn and with his simple tools planed them, making a clean, unpainted pine casket. This mother lined with some fine old linen sheets that had once belonged to her grandmother away back in Holstein.

The short funeral service was held outside the little frame house that could not hold the few neighbors who gathered there. Out under the blue skies my grandfather uttered the few fitting words that close the page of earthly life. I can see him yet with his black flowing gown, his fine old face and this thick gray hair gently stirred by the summer breeze.

After the service the little procession wound its way to the hillside, where, amidst the thick growing bunch grass, the dear old soul was laid way for her last long sleep. Then we went away and left the lonely old man and his son to return to their desolate home.

Sickness and death were things to be considered in this new country wthout the help of doctors. There was no such thing short of 90 or 100 miles. So we died or got well, which, after all, is the best we can do under any circumtsances. In our family we seemed to be among the fortunate ones who lived through sickness and danger. It was during that very first summer that I had my experience with illness. One Sunday we all, except grandmother and little sitser, took a tramp to the Grand coulee walls, a distance of not more than two miles. But I ate coyote berries all the way there and part way back. Then being terribly thirsty I drank and drank and drank at a little spring that we discovered about a mile from home.

Well, I was good and sick. After a few days, just before the turn for the better came, I sat up in my cot one evening and announced to mother, who happened to be alone with me, that I didn't think I'd live through the night. She didn't think so either, but didn't say so then. She made some matter-of-fact answer and I lay down again. Next morning I was better. To this day the very sight of a coyote berry gags me.

However, none of us were afraid of death, which perhaps is the reason we did not die. It's the things we fear that finally come upon us if we do not in some way master that fear.

There were other dangers besides sickness that gave us anxious moments that first summer. The prairie fires were an item that kept us busy and watchful. Every summer for years the bunch grass had grown up thick and tall, died down through the winter, or rather cured just as it stood. The next summer new grass grew up among this old carpet and so on, year after year until this summer, when in some unknown way it was set afire time after time and burned fiercely. The worst of it raged during the time that we were alone beside the spring. That is, before the rest of the camp came into the country. However, there were six men in our party. Grandfather, father and his four unmarried brothers, Adolph, Jake, Will and Louie. There was considerable time put in making fire breaks. Each man took a pail of water and an empty sack. Then a fire was lighted and the men followed it, beating it out with wet sacks along the side nearest the camp, in this way burning a broad strip that meant protection to those behind it. All this took time and sometimes it seemed that the prairie fires were on all sides of us. One night mother had to take a hand and we three children were left with grandmother. There was not much sleep that night. Mother came in toward morning tired out and we went to bed. I think the men stayed out all night. But the battle was won, either the fire breaks did their work, or the fire fiend passed away, for in a few weeks there were no more fires and the grass grew up greener than ever, so there was no harm anywhere.

The thing that gave mother the most uneasiness, however, was the danger from range cattle. For the first two or three years we had nothing to ride, brother Ed and I went on foot to hunt our few cows. They ranged anywhere within a radius of about five miles, and anywhere within this radius we were likely to come across range stock to whom a human being on foot creates stampede and no one ever knows in which direction, coming or going.

One thing had been effectually drilled into us, that never, never were we to run away from a herd of range cattle. There is only one way to run and that is toward the herd. We had many opportunities to try this out, but we never got so accustomed to the experience that we enjoyed it. If we saw the cattle far enough away we went around, slipped through some ravine or behind a hill and avoided them. Usually, however, it happened when we rounded a curve or came over the crest of a hill that we discovered we were in for it. The experience never varied, usually the cattle were peacefully grazing like ordinary cattle; many lying down, chewing their cuds. Then a few would sight us and up would go their heads, high up in the air, then more heads and more and more. Almost a simultaneous movement brought the cattle lying down to their feet and facing us. Then a crowding together, shoulder to shoulder, and a general movement of hoofs marching toward us, heads still high in the air with great white spreading horns.

I don't seem to remember any particular sensation of fear or panic. I think my mind was a sort of blank for a little space until we somehow felt that it was time to move, then we made a rush toward the cattle. This was the time I always felt little thrills and prickles running up my back and spreading over my body, or maybe it was just the instant before we started to run. The result was always the same whether there were three cows or 300. They faced about in a panic and fairly flew over the bunch grass to get away from us. Then we yelled and swung our bonnets or hats. Occasionally a straggler would halt, face about, to see if the terrible thing were really true, whereupon we became more vociferous and sprinted ahead just a little faster. Then the creature would whirl and fairly break his neck to catch up with the crowd that had gotten just a little ahead. We chased them in this way until we came to a convenient ravine or rock ledge or clump of brush, anything that could hide us for a little while as we stole away out of sight and proceeded to hunt our own cows. The sweetest music that came to our ears those days was the sound of our cowbell strapped to the neck of old Betsy, the first gentle milch cow that we bought a few weeks after setting up our tents beside the spring. She had to be milked in a chute tied securely fore and aft, but we always felt kindly toward her because she gave so much good, rich milk.

As I look over it all I see so clearly the evidence of a higher power that led and shielded us all through the dangers and distress that seemed so often to threaten. How else do we come through life so happy and unhurt? Safety and happiness are just as much the privilege of the pioneer as of the dweller in the opulent city. Humanity is as safe in the desert as in the palace.

The danger of hunting cows on foot changed when we finally rode horseback. We were safe from range cattle but I believe we fell off our horses more than any other set of youngsters in the country. Brother acquired a little bay Indian cayuse which we called Gipsy. He also had a nondescript saddle. Gipsy was never sure of her feet. I have seen them go crashing down together like a crate of old iron and both always came up unhurt. Sister and I rode much of the time without saddles. We fell off every conceivable way there is to fall off. Even the side saddle that we owned for a time didn't change matters much, something gave way or the saddle turned.

Another time I was doing a little stunt of cutting out some cattle that did not belong to us. Lady and I did all the circling and sharp turns very creditably till the old side saddle turned and flung me backward with my right shoulder hitting the ground first. I do not remember that I was even lamed.

The only disasters that really came quite close happened to sister Frances at home in our own barnyard when she was about six years old. Early in the spring just after the snow went off she was standing beside a barn door when brother Ed led out the horses to water. We had one mule, Queen, blind in one eye. As she came out, just to show her good spirit, she flung her heels in the air. Frances, being on the blind side of the creature, caught one hoof square in the cheek. Long after she grew up she had a deep dimple in that cheek.

That same summer she had a mixup with a cow. Ed had just brought the cow in with a young calf and mother took the pail and sat down to milk her. I tagged along, crossed the corral and climbed to the roof of the cattle shed. Then Frances started to follow me, crawling under the barb wire and

(Continued on page twenty-seven.)

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## What the "Nervous" Person May Do for Her Own Relief

Dr. Hirshberg.

A "nervous" person is an abomination unto many, especially at this season of Christmas cheer. Quotation marks are used around such words as "nervous" because they are commonly employed in a faulty fashion. The "neurotic" or "nervous" individual is one generally dominated by his feelings, emotions and sentiments instead of by facts, figures, reason, common senes and the logic of events.

You who are victims of any one of the various maladies called "imaginary" or "nervous," which are none the less real because some doctors can not find an "organic" basis for them, should realize that one of the points at issue is your emotions.

If remedies are aimed at the restoration of a balance between the intellect and the feelings, of the subordination of the emotions to the mind, relief can perhaps be much more quickly attained than by calling the trouble "nerves," "nervous," "neurotic," "psychoesthenic," "neurasthenic" and similar verbal monstrosities.

To help treat the different emotional states, the sufferer must first study and practice a method of changing the target of his attention. One of the methods is to prepare the patient to take more interest in persons outside of the family.

War relief work, association with students, club members and constructive organizations, joining neighborhood associations, workers' guilds, lodges and various entertainments contribute toward the valuable end of making the patient meet new people, make new friends and acquire new interests.

### Work and Food.

With these novel, strange and stimulating oddities among the human tribe, there will arise a desire to converse. Conversation is often a sign of mental vigor and emotional health. Its absence over too long a time is, in the average person, a symbol of selfishness, self-exaggeration, sensitiveness and similar evidences of too much emphasis upon your own ego.

Thoughts and knowledge assist the practice of the neglected art of conversation. If the morose, moody person begins to take a wide interest in a variety of affairs and persons, new facts and information, as well as the suggestion of events, soon or late make conversation. This explains one of the causes as well as the treatment of "neurotics."

There are few superiors to this kind of counter-irritation to misplaced and long drawn out emotions, but certain foods, baths and exercises help considerably to drive away "blue devils."

Food and drink make some men unhappy and make others think. Tea, coffee, soups, water cress, meats, eggs, oysters, broths and salads are conducive to placid emotions. All of these sometimes arouse the feelings of many victims of "nerves" to states of unpleasantness. Taboo and anathema are to be levelled at such rations.

Soothsaying comfort can be had from cream, milk, oatmeal, rice, cabbage, cream cheese, custards, malt, spinach, celery, beans, fish, fats, oils and sweets. These are foods par excellence for the "neurasthenic."

Exercises in the open sunlight when possible, are preferable to home gymnastics, especially for the "nervous."

First clear the nostrils of all discharges by means of a weak salt water douche. Then drink a glass of cold water. Get rid of the kidney fluids, too, before beginning to exercise. Then heels together, toes turned out, chest well up and forward, with abdomen drawn in, and you are ready to start.

### Value of Warm Baths.

There are many books on home gymnastics which contain excellent and explicit details of exercises, such as stretching dumbbell aids, respiration, twisting, bending, shrugging, rolling shoulder, relaxation, body posture trunk-muscles and leg movements. All of these seem to improve the physical structures of those with "nervous prostration."

For the strong, alert, calm creature seldom disturbed in mind or fabric, the cold bath is a first-class whip. It arouses the sleepy, fagged and unstirred tissues and glands.

The warm bath is precisely the thing for the "neurotic." It causes a blush to pervade the flesh and profuse perspiration to break out. Then at its witching hour, namely, before bedtime, it is much more than a Job's comforter—it allays excitement, smooths the ruffled feelings and bestows the blanket of sleep over the restless. Physiologically, the warm—not hot—bath withdraws blood from the thyroid and other sometimes mischievous glands concerned in irritations of anxiety, grief, sorrow, moodiness, worry, anger and miserable feelings in general.

Copyright, 1908, by Harper & Brothers.

### SYNOPSIS.

Gale, trader, of Flambeau, has a beautiful daughter, Necia, and two half-breed children. Alluna, a squaw, is their mother. Lieutenant Burrel is sent to Flambeau to establish a military post. He and Necia become close friends. "No Creek" Lee, an unsuccessful miner, strikes a vein of gold. Stark comes to Flambeau to grubstake the miners and start a saloon. Runnion, a desperado, is his assistant. Stark's presence in the camp causes Gale and his squaw great uneasiness. Lee, Stark, Runnion, Gale and Poleon, a Frenchman, leave for the claim secretly so as to prevent a stampede. Necia hears of it, and, longing for riches so she may be as others girls, persuades Burrell to accompany her on a shortcut to the claim. Burrell, who is unpopular in Flambeau, chooses this means of beating the men at their own game. That night by the campfire Necia, realizing her peril, cautiously awakens in the lieutenant his slumbering conscience. They reach camp before the others the next morning and Necia stakes three claims. While Stark, Runnion and Poleon are locating Runnion makes some insinuations about Necia and Burrell. Poleon, who loves Necia, swears that either Runnion or Burrell will pay for them with his life. That night as Star is telling Necia a story a shot rings out and Gale jumps across the room shouting "My God! I've killed him." But the bullet misses Stark by inches. When Alluna hears of the affair she tells Gale that Stark is bullet-proof and gives him a knife, begging him to kill Stark as soon as possible. Burrell knows that he loves Necia, but, thinking she is a half-breed, he is afraid to marry her on account of what it would mean to his family, his position and his honor. One day as Necia is alone in the store Runnion tells her that he is wiling to marry her, even if the lieutenant has thrown her over and the story is being told on the street. Later Necia acknowledges to Poleon that while Burrell has sworn his love for her he has never spoken of marriage. She declares that she has never been unmaidenly, but that since the men are talking she will be married by Sunday, and that it may as well be to Poleon as anybody. They send for Burrell and Necia hides so that she may hear his answer for herself.

When Burrell enters Poleon wastes no time but asks him if he means to marry Necia. Maddened by the lieutenant's hesitation, Necia rushes out declaring she has played with him long enough, and that she is to marry Poleon on Sunday. Locked in his room through long hours of struggle Burrell finally realizes that Necia's love means more to him than all else. He finds her dressed in the black ball gown, her bare arms and neck gleaming in their whiteness. Not until after he has asked her to marry him does the revelation come to Necia that love means sacrifice. She refuses to spoil his future.

Gale decides that for the sake of Necia's happiness, he will go to Burrell and tell him his story. Grief-stricken, Necia flees from the store, to spend her anguish alone in the darkness. Stark finds her sobbing and takes her to his cabin. There he learns that she is Merridy and uses the knowledge to further his plan for revenge on Gale and burrell. He persuades Necia to go to the mission and tells her that he will provide a man to take her there. When she has gone he takes out his six-shooter and, with his face set in exultant cruelty, leaves the cabin.

### CHAPTER XIV.

#### A Mystery Is Unravelled.

Lieutenant Burrell was considerably taken aback when, a quarter of an hour after the young lover's ecstatic return to his quarters, Gale knocked at his door, for the trader's visit, coupled with the late hour and his sombre countenance, forecast new complications.

"He's here to object, but it won't go," thought the lieutenant, as he made his visitor welcome.

It was the trader's first glimpse of the officer's quarters, and he cast a roving eye over the room, as if measuring the owner's character by his surroundings.

"I've got to have a long talk with you, Burrell," he began, with an effort. "It's liable to take me an hour or two."

"Then take this chair and be comfortable."

Meade swung his big reading-chair out beneath the hanging lamp, and, going to the sideboard, brought back a bottle, some glasses, and a pouch of tobacco. Noting the old man's sigh of fatigue as he sat himself down heavily, he remarked, sympathetically:

"Mr. Gale, you've made a long trip today, and you must be tired. If this talk is to be as lengthy as you say, why not have a drink with me now, and postpone it until tomorrow?"

"I've been tired for 18 years," the other replied, "tonight I hope to get rested." He lapsed into silence, watching his host pour out two glasses of liquor, fill his pipe, and then stretch himself out contentedly, his feet resting on another chair—a picture of youthful strength, vitality and determination. Beneath the lieutenant's flannel shirt the long, slim muscles showed free and full, and the firm set of jaw and lip denoted a mind at rest and confident of itself. Gale found himself for a moment jealously regarding the youth and his enviable state of contentment and decision.

"Well, let's get at it," the younger man finally said.

"I suppose you'll want to interrupt and question me a heap, but I'll ask you to let me tell this story the way it comes to me, till I get it out, then we can go back and take up the queer stuff. It runs back 18 or 20 years, and, being as it's part of a hidden life, it isn't easy to tell. You'll be the first one to hear it, and I reckon you're enough like other men to disbelieve—you're not old enough, and you haven't knocked around enough to learn that nothing is impossible, that nothing is strange enough to be unreasonable. Likewise, you'll want to know what all this has to do with you and Necia—yes, she told me about you and her, and that's why I'm here." He paused. "You really think you love her, do you?"

Burrell removed his pipe and gazed at its coal impersonally.

I love her so well, Mr. Gale, that nothing you can say will affect me. I—I hesitated at first about asking her to be my wife, because—you'll appreciate the unusual—well, her unusual history. You see, I come from a country where mixed blood is about the only thing that can't be lived down or overlooked, and I've been raised with notions of family honor and pride of race and birth, and so forth, that might seem preposterous and absurd to you. But a heap of conceits like that have been bred into me from generations back; they run in the blood of every old family in my country, and so, I'm ashamed to say, I hesitated and tried to reason myself into giving her up, but I've had my eyes opened, and I see how little those things amount to, after all. I'm going to marry Necia, Mr. Gale. I'd like to do it the day after tomorrow, Sunday, but she isn't of age yet, and if you object, we'll have to wait until November, when she turns 18. We'd both like your consent, of course; I'd be sorry to marry her without it; but if you refuse, we'll be forced to displease you." He looked up and met the father's gaze steadily. "Now, I'll be glad to listen as long as you care to talk, but I don't think it will do any good."

The other man's lips framed a faint smile.

"We'll see. I wish to God I'd had your decision when I was your age, this story would be different, and easier to tell." He waited a moment, then settled to his self-appointed task. "I was mining at the time up in the Mother Lode country of California, which was the frontier then, pretty much as this is now, only we had better things to eat. I came from the east, or my people did, but I was ranch-raised, and loved the hills and woods and places where you don't talk much, so I went to prospecting because it took me out where the sun was bright and I could see the wild things at play. I was one of the first men into a camp named Chandon—helped to build it, in fact, and got hold of some ground that looked real good. It was hard mining, however, and, being poor, I was still gripping my drill and hammer after the town had grown up.

"A woman came out from the east—Vermont, it was—and school-teaching was her line of business, only she hadn't been raised to it, and this was her first clatter at the game; but things had broke had for her people, and ended in her pulling stakes and coming west all alone. Her folks died and left her up against it, I gathered from what little she told me—sort of an old story, I guess, and usual too, only for her. She was plumb unusual."

He seemed to ponder this a moment, and then resumed:

"It don't make any difference to you how I first saw her, and how I beban to forget that anything else in the world was worth having but her. I'd lived in the woods all my life, as I said, and knew more about birds and bugs and bees than I did about women; I hadn't been broke proper, and didn't know how to act with them; but I laid out to get this girl, and I did fairly well. There's something wild in every woman that needs to be tamed, and it isn't like the wildness that runs in wood critters; you can win that over by gentleness, but you have to take it away from a woman. Every live thing that couldn't talk was my friend; but I made the mistake of courting my own kind the same way, not knowing that when two of any species mate the male must rule. I was too gentle. Even so, I reckon I'd have won out only for another man. Dan Bennett was his name—the kind that dumb animals hate, and—well, that takes his measure. His range adjoined mine, and, though I'd never seen him, I heard stories now and then—the sort of tales you can't tell to a good woman; so it worried me when I heard of his attentions to this girl. Still, I thought she'd surely find him out and recognize the kind of fellow he was, but, Lord! a woman can't tell a man from a dog, and there wasn't any one to warn her. There were plenty of women who knew him, but they were the ones who flew by night, while she lived in the sunshine; and women of that kind don't make complaint, anyhow.

"This Bennett came from the town below, where he ran a saloon and a brace game or two; but being as he

John Gale reveals his identity.

rode into our camp and out again in the night, and as I didn't drink nor listen to the music of the little rolling ball, why, we never met, even after he began coming to Chandon. Understand, I wasn't too good for those amusements; I just didn't happen to hanker after them, for I was living with the image of the little schoolma'am in my mind, and that destroyed what bad habits I'd formed.

"I was along in the early spring that she began to see I had notions about her, but my damned backwardness wouldn't let me speak, and, in addition, I was getting closer to ore every shot at the mine, and was holding off until I could lay both myself and my gold mine at her feet, and ask her to take the two of use, so if one didn't pan out the other might. But it seemed like I'd never get into pay. The closer I got the harder I worked, and, of course, the less I saw of her, likewise the oftener Bennett came. I reckon no man ever worked like I did—two shifts a day, eighteen hours, with six to sleep. The skin came off of my hands, and I staggered when I came out into the daylight, for the rock was hard, and I had no money to hire a helper; but I was young and strong, and the hope of her was like drink and food and sleep to me. At last I struck it, and still I waited awhile longer till I could be sure. Then I went down to my little shack and put on my other clothes. I remember I'd gone so thin that they hung loose, and my palms were so raw I had hard work handling the buttons, and got my shirt all bloody, for I'd been in the drift forty hours, without sleep and breathing powder smoke, till my knees buckled and wabbled under me. To this day the smell of stale powder smoke makes a woman of me; but that morning I sang, for I was going for my bride, and the world was brighter than it has ever been for eighteen years. The little school-house was closed, at which I remembered that the term was over. I'd been living underground for weeks and lost track of the days, so that I had to count them up on my fingers. It took me a long time, for I was pretty tired in my head; but when I'd figured it out I went on to where she was boarding.

"The woman of the place came to the door, a Scotchwoman. She had a mole on her chin, I remember, a brownish-black mole with three hairs in it. She wore an apron, too, that was kind of checkered, and three buttons were open at the neck of her dress. I recall a lot more of little things about her, though the rest of what happened is rather dreamy.

"I asked for Merridy, and she told me she'd gone away—gone with Bennett, the night before, while I was coughing blood from the powder smoke; that they were married in the front room, and that the bride looked beautiful. She had cried a bit on leaving Chandon, and—and—that was about all. I counted the buttons on the Scotchwoman's waist eight or ten times, and by-and-by she asked if I was sick. But I wasn't. She was a kind-hearted woman, and I'd been to her house a good deal, so she asked me to come in and rest. I wasn't tired, so I went away, and climbed back up to the little shack and the mine that I hated now."

The trader paused, and, reaching for the bottle, poured himself out a glass of brandy, which he spilled into his throat raw, then continued:

"I turned into a kind of hermit after that, and I wasn't good to associate with. Men got so they shunned me, and I knew they told strange stories, because I heard them whisper when I went to the stores for grub once a month. I changed all over, till even my squirrels and partridges and other friends quite me; once in a while I got out a ton or two of rock and sold it, but I never worked the mine or opened it up—I couldn't bear to go inside the drift. I tried it time and again, but the smell of its darkness drove me out; every foot of its ragged walls had left its mark on me, and my heart was torn and gouged and shivered worse than its seams and ledges. I could have sold it, but there was no place for me to go, and what did I want with money? I was shy of the world, like a crippled child that dreads the daylight, and I shrank from going out where people might see my scars; so I stayed there by myself, nursing the hurt that never got any better. You see, I'd been raised among the hills and rocks, and I was like them in a way; I couldn't grow and alter and heal up.

"From time to time I heard of her, but the news, instead of gladdening me, as it would have gladdened some men, wrung out what bits of suffering were left in me, and I farily ached for her. Nobody comes to see clearer than a woman deceived, so it didn't take her long to find out the kind of man Bennett was. He wasn't like her at all, and the reason he had courted her so hotly was just that he had had everything that rightly belonges to a man like him, and had sickened of it so he wanted her because she was clean and pure and different; and, realizing that he couldn't get her any other way, he had married her. But she was a treasure no bad man could appreciate, and so he tired quickly, even before the little one came.

"When I heard that she had borne him a daughter I wrote her a letter, which took me a month to compose, and which I tore up. One day a story came to me that made me saddle my horse to ride down and kill him—and, mind you, I was a man who made pets of little wild, trusting things. But I knew she would surely send for me when her pain became too great, so I uncinched my gear and hung it up and waited and waited and waited. Three long, endless years I waited, almost without a glimpse of her, and every hour of that time went by as slowly as if I had held my breath. Then she called to me, and I went.

"I tell you, I was thankful that day for the fortune that made me take good care of my horse, for I rode like Death on a windstorm. It grew moonlight as I raced down the valley and the foam from the animal's muzzle lodged on my clothes and made me laugh and swear that the morning sun would show Dan Bennett's blood in its place. I rode

# War Makes Changes

## Democracy Among Individuals

Dear Young Folks of the Family Circle: We hear much these days about this being a war for world-wide democracy. What is democracy anyway? Boiled down it means equality of rights or giving the other fellow a chance.

Our country, as a country, has lived up to this idea after a fashion. All who set foot on our shore have been free to climb the ladder of fame and prosperity as high as they might choose to go. But still we are not truly democratic as individuals. We are most of us looking about for the best end of the bargains we make, and we are not worrying much about the rights of the other fellow.

We can be democratic or otherwise in the common everyday lives we live, but many are not, though perhaps they don't know that they are not. In schools we see the best dressed girls forming into clubs and cliques. There are frequently in the same classes poor girls of equal or more mental ability than others who would enjoy the social good times planned and carried out by the various clubs and "frats," but who are frequently left out because they are compelled to dress plainly and for that reason alone. There is no democracy about that kind of thing. In cases where girls or boys are left out because of plain clothes they need the social life more than those with money, because plain clothes commonly go with plain homes, where there is usually much work and little play. What a treat it would have been to me when a schoolgirl to have been invited into the homes of the rich girls, and how delighted I would have been if I had been taken to ride in a nice carriage with prancing horses. One such ride would have been a delightful memory for many weeks. But things do not work out that way. Our rich young Americans are not very much given to sharing their blessings with those who have nothing to give in return. I have noticed that the older people who own the big autos don't go about often taking out the folks who have none. I have many times stood by and seen big cars go by with two or more vacant seats, and have wondered if I should ever own a car, and, if so, would I be democratic enough to give the less fortunate folks a chance to ride.

It is so easy to look on and see the faults of others, and say if we were in their places we should do so and so, but at best we are all selfish. Selfish love of power has thrown the whole world into war. There is no hint of democracy or equality of rights or a fair show for the other fellow in the attitude of our adversaries.

But out of all the blackness and horror, we, as a nation, are being drawn more closely together. When traveling about the country last summer I saw women every where knitting. There were women who carried their knitting work in fancy knitting bags with pearl and gold mountings and whose diamond rings flashed in and out among their needles. Sitting close by in parks or pavilions were women in plain cotton dresses, with hands made hard by toil, who were just as industriously making garments with the same kind of yarn, after the very same set of rules and for the very same purpose. This common interest forms a bond of union, a point of contact never before brought about in my lifetime.

Uncle Sam takes his men as he requires them from all classes, the rich and poor alike, and it is not unlikely that the women knitting side by side in park or pavilion, the one with diamond rings and the one with cotton gown and work-hardened hands, each has a son in camp or "somewhere in France." What a common meeting point of interest for them is this!

Mother hearts, anxious, sore and sad, have much in common to draw them together. Beside the great calamity of our broken family circles the question of worldly possessions sinks into insignificance, where it belongs, and the fatherhood of God and the brotherhood of man stands out in greater importance as the anxious days go by.

We trust that out of this great black horror, which hangs over our land, will come not only world-wide democracy for nations but a kindlier, more democratic spirit in the hearts of all Americans. Already we are drawn closer together just because we are fellow countrymen and because we love the same flag and all it stands for. We do not know from day to day what new horror will confront us. The old adage so often quoted, "coming events cast their shadow before" does not hold good these days, for great calamities just swoop down upon us without any warning shadow. These are times when it is wise and comforting, it seems to me, to cling fast to God and his wisdom. A divinity great enough to create the sun and moon, to make the planets and set them whirling around the sun each in its own orbit and to create mankind is surely equal to the task of straightening out the great calamity into which our world is engulfed. "God moves in a mysterious way his wonders to perform," and perhaps when the last toll is taken and the song of the angels on the first Christmas day, 'Peace on earth good will toward men," is sung from the heart by all nations, then will come the time when we shall "beat our swords into plowshares and our spears into pruning hooks and nations shall learn war no more."

If we do not trust God to bring this about to whom shall we turn?

Let me make for you instead the wish that you hold fast your faith in God's wisdom.

A. W. B.

# THE BARRIER

(Continued from the preceding page.)

through the streets of Mesa, where they lived, and past the lights of his big saloon, where I heard the sound of devil's revelry and a shrill-voiced woman singing—a woman the like of which he had tried to make my Merridy. I never skulked or sneaked in those days, and no man ever made me take back roads, so I came up to his house from the front and tied my horse to his gatepost. She heard me on the steps and opened the door.

"'You sent for me,' said I. 'Where is he?' But he had gone away to a neighboring camp, and wouldn't be back until morning, at which I felt the way a thief must feel, for I'd hoped to meet him in his own house, and I wasn't the kind to go calling when the husband was out. I couldn't think very clearly, however, because of the change in her. She was so thin and worn and sad, sadder than any woman I'd ever seen, and she wasn't the girl I'd known three years before. I guess I'd changed a heap myself; anyhow, that was the first thing she spoke about, and the tears came into her eyes as she breathed:

"'Poor boy! poor boy! You took it very hard, didn't you?'

"'You sent for me,' said I. 'Which road did he take?'

"'There's nothing you can do to him,' she answered back. 'I sent for you to make sure that you still love me.'

"'Did you ever doubt it?' said I, at which she began to cry, sobbing like a woman who has worn out all emotion.

"'Can you feel the same after what I've made you suffer?' she said, and I reckon she must have read the answer in my eyes; for I never was much good at talking, and the sight of her, so changed, had taken the speech out of me, leaving nothing but aches and pains and ashes in its place. When she saw what she wished to know, she told me the story, the whole miserable story, that I'd heard enough of to suspect. Why she'd married the other man she couldn't explain herself, except that it was a woman's whim—I had stayed away and he had come the oftener—part pique and part the man's dare-devil fascination, I reckon; but a month had shown her how she really stood, and had shown him, too. Likewise, she saw the sort of man he was and the kind of life he lived. At last he got rough and cruel to her, trying every way to break her spirit; and even the baby didn't stop him—it made him worse, if anything—till he swore he'd make them both the kind he was, for his goodness seemed to rile and goad him; and, having lived with the kind of woman you have to beat, he tried it on her. Then she knew her fight was hopeless, and she sent for me.

"'He's a fiend,' she told me. 'I've stood all I can. He'll make a bad woman of me as sure as he will of the little one, if I stay on here, so I have decided to go and take her with me.'

"'Where?' said I.

"'Wherever you say,' she answered; and yet I did not understand, not till I saw the look in her eyes. Then, as it downed on me, she broke down, for it was a terrible thing for a good woman to offer.

"'It's all for the little girl!' she cried. 'More than her life depends upon it. We must get her away from him.'

"She saw it was her only course, and went where her heart was calling."

The lieutenant met the look of appeal in the trader's eyes, and nodded to imply his complete understanding and approval.

"We love some women for their goodness, others we love for their frailness, but there never was one who combined the two like her, and, now that I knew she loved me, I began to believe again there was a God somewhere. I'd never seen the youngster, so she led me in where it was sleeping, and I remember my boots made such a devil of a thumping on the floor that she laid her slim white finger on her lips and smiled at me. All the fingers in the world began to choke at my throat, and all the blood in me commenced to pound at my heart, when I looked on that little sleeping kiddie. The tears began to roll out of my eyes, they scalded like melted metal. That was the only time I ever wept—the sight of her baby did it.

"I love her already," I whispered, 'and I'll spend my life making her happy and making a lady of her,' which clinched what wavering doubt the mother had, and she began to plan quickly, the fear coming on her of a sudden that our scheme might fail. I was for riding away with both of them that night, back through the streets of Mesa and up into the hills, where I'd have held tehm single-handed against man or God or devil, but she wouldn't hear of it.

"'We must go away,' she said, 'a long way from here, where the world won't find us and the little one can grow to womanhood without knowing. She must never learn who her father was or what her mother did. We will start all over, you and I and the baby, and forget. Do you love me well enough to do it?'

"I uttered a cry and took her in my arms, the arms that had ached for her all those years. Then I kissed her for the first time."

The old man tried to light his pipe, which had gone out, but his fingers shook so that he dropped the match; whereupon, without speaking, Burrell struck another and held it for him. The trader drew a noisy puff or two in silence and shot his host a grateful glance.

"Her plan was for me to take the youngster away that night, and for her to join us later, because pursuit was certain, and three could be traced where one might disappear; she would follow when the opportunity offered. I saw that he had instilled a terror into her, and that she feared him like death; but, as I thought it over, her scheme seemed feasible, so I agreed. I was to ride west that hour with the sleeping babe, and conceal myself at a place we selected, while she would say that the little one had wandered away and been lost in the canyon, or anything else to throw Bennett off. After a time she would join us. Well—the little girl never waked when I took her in my arms, nor when the mother broke down again and talked to me like a crazy woman. Her collapse showed the terrible strain she had been living under, and the ragged edge where her reason stood. She had been brave enough to plan coolly till the hour for giving up her baby, but when that came she was seized with a thousand dreads, and made me swear by my love for her, which was and is the holiest thing in all my life, that if anything happened I would live for the other Merridy. I begged her again to come with me, but her fears held her back. She vowed, however, that Bennett should never touch her again, and I made her swear by her love for the babe that she would die before he ever laid hands on her. It woke a savage joy in me to think I had bested him, after all.

"I never thought of what I was giving up, of the clean name I was soiling, of the mine back there that meant a fortune any time I cared to take it, for things like that don't count when a man's blood is hot, so I rode away in the yellow moonlight with a sleeping baby on my breast, where no child or woman had ever lain except for that minute before I left. She stood out from beneath the porch shadow and smiled her good-bye—the last I ever saw of her.

"I traveled hard that night and swapped horses at daylight; then, leaving the wild country behind, I came into a region I didn't know, and found a Mexican woman who tended the child for me, for I was close by the place where Merridy was to come. Every night I went into the village in hopes that some word had arrived, and I waited patiently for a week. Then I got the blow. I heard it from the loafers around the little postoffice first, but it dazed me so I wouldn't believe it till I borrowed the paper and read the whole story, with the type dancing and leaping before me. It took some hours for it to seep in, even after that, and for years I recalled every word of the damned lie as if it had been branded on me with hot irons. They called it a shocking crime, the most brutal murder California had ever known, and in the headlines was my name in letters that struck me between the eyes like a hammer. Mrs. Dan Bennett had been foully murdered by me in a fit of sudden jealousy, and I had disappeared with the baby! The husband had returned unexpectedly to find her dying, so he said, but too far gone to call for help, and with barely sufficient strength to tell him who did it and how! Then the paper went on with the tale of my courting her, and her turning me down for Bennett. It told how I had gone off alone up into the hills, turning into a bear that nobody, man or child, could approach. It said I had brooded there all this time till the mania got uppermost, and so came down to wreak my vengeance. They never even did me the credit of calling me crazy; I was a fiend incarnate, a beast without soul, and a lot of things like that; and, remember, I had never harmed a living thing in all my life. However, that wasn't what hurt. What turned me into a dull, dead, suffering thing was the knowledge that she was gone. For hours I couldn't get beyond that fact. Then came the realization that Bennett had done it, for I reasoned that he had dragged a hint of the truth from her by very force of the fear he held her in—and slain her. God!—the awful rage that came over me! But there was nothing to do; I had sworn to guard the little one, so I couldn't take vengeance on him. I couldn't go back and prove my innocence, for that would give the child to him. What a night I spent! The next day I saw I had been indicted by the grand jury, and was a wanted man. From a distance I watched myself become an outlaw; watched the county put a price upon my head, which Bennett doubled; watched public opinion rise to such a heat that posses began to scour the mountains. What I noted in particular was a statement in the paper that 'The sorrowing husband takes his bereavement with the quiet courage which marks a brave man'! That roused me more than the knowledge that he had made me a wolf and set my friends on my track, which I hadn't covered very well, having ridden boldly. It happened that the Mexican woman couldn't read and talked little; still I knew they'd find me soon—it couldn't be otherwise—so I made another run for it, swearing an oath, however, before I left that I'd come back and have that gambler's heart.

"It was lucky I went, for they uncovered my sign the next day, and the country where I'd hidden blazed like a field of dry grass. They were close on my heels, and they closed in from every quarter, but, pshaw! I knew the woods like an Indian, and the wild things were my friends again, which would have made it play if I'd been alone, but a girl child of 3 was harder to manage. So I cowered and skulked day after day like a thief or the murderer they thought me, working always farther into the hidden places, traveling by night with the little one asleep on my bosom, by day playing with her in some leafy glen, with my pursuers so close behind that for weeks I never slept; and my love for the child increased daily till it became almost insanity.

"She was the only woman thing I had ever possessed, and it seemed like my love for the mother came back and settled on her. And she loved me, too, and trusted me. Every little smile, every clasp of her tiny, dimpled fingers showed it, and tied her to me with another knot till the fear of losing her became greater than I could bear, till it kept the chill of death in my bones and filled my veins with glacier water. I became an animal, a cowardly, quailing coyote, all through the love of a child.

"We had close squeezes many times, but I finally won, in spite of the fact that they tracked us clear to the edge of the desert, for I had hit for the state line, knowing that Nevada was a wilderness, and feeling that I'd surely lose them there. And I did. But in doing it I nearly lost Merridy. You see, the constant travel and hardship was too much for a prattling baby, and she fell sick from the heat and the dust and the thirst. I'd been going and going till I was a riding skeleton, till my arms were crooked and dead from holding her, but this new thing frightened me like those men and dogs had never done. Here was a thing I couldn't hide from nor outride, so I doubled back and came boldly into the watered country again, expecting they would take me, of course, for a runaway man with a babe in his arms isn't hard to identify, but I didn't care. I was bound for the nearest ranch or mining camp where a woman could

(Continued on page thirty-one.)

# Patterns

1823—Girls' dress. Cut in four sizes: 1, 2, 4 and 5 years. It requires 2 3-8 yards of 44-inch material for a 4-year size. Price, 10 cents.

2009—Ladies' lounging robe. Cut in four sizes: 34, 38, 42 and 46 inches bust measure. It requires 6 5-8 yards of 44-inch material for a 34-inch size. Price, 10 cents.

2082—Dress for misses and small women. Cut in three sizes: 16, 18 and 20 years. It requires 5 3-4 yards of 44-inch material for an 18-year size. The skirt measures about 2 7-8 yards at the foot. Price, 10 cents.

2103—A practical work dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6 1-4 yards of 36-inch material for a 36-inch size. Price, 10 cents.

2204—Girls' dress. Cut in five sizes: 4, 6, 8, 10 and 12 years. Size 8 will require 3 1-2 yards of 44-inch material. Price, 10 cents.

2291—Ladies' skirt. Cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 3 yards of 44-inch material. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

2295—Boys' suit. Cut in four sizes: 6 8, 10 and 12 years. Size 10 requires 3 1-8 yards of 44-inch material. Price, 10 cents.

2296—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 6 1-4 yards of 36-inch material for the dress and 1 1-2 yards for the jumper. The skirt measures a little over 2 yards at the foot. Price, 10 cents.

2302—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 requires 4 3-4 yards of 36-inch material. Price, 10 cents.

2307—A set of new collars: The pattern includes all styles illustrated. It is cut in 3 sizes: Small, medium and large. Size medium requires, for No. 1, 1 yard of 27-inch material; for No. 2, 1 yard of 36-inch material, and for No. 3, 1 1-4 yards of 36-inch material. Price 10 cents.

2317-2313—Ladies' costume. Waist 2317 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2313 cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size will require for the skirt and waist 5 5-8 yards of 44-inch material. The skirt measures 2 1-4 yards at the foot, with plaits drawn out. Two separate patterns, 10 cents for each pattern.

2322—Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. Size 12 requires 3 1-2 yards of 44-inch material. Price, 10 cents.

### Raw Eggs Keep Longer Than Boiled.

Raw eggs keep good much longer than cooked eggs, even when these are hard boiled. This was proved by Dr. Leon Lindet, a member of the Paris conseil d'hygieme, after many French soldiers had reported that the hard boiled eggs they received from home had gone bad, while the raw eggs remained edible for weeks.

Dr. Lindet explains this fact by saying that the boiling makes the inner membrane pervious to gases, liquids and micorbes, and the white of the egg becomes an agglomeration of coagulated albumen and particles of a serum that is an ideal medium in which microbes thrive.

**Go to Town By Boat.**

Dear Aunt Nellie: This is my first time to write to you. I am 11 years old. My birthday is the 22d of December. Have I any twin? If I have will they please write to me? I would be glad to join the Children's Corner. I live on a farm. We have to go to town by a bot. Sometimes I wish I could walk or ride horseback to town. I go to school every day. I have gone three years and haven't been tardy or absent. There is another family here. They work for papa. There are eight children in the family. They are just six in our school. I am in a grade all by myself. I am in the fifth grade. I have history, geography, hygiene, arithmetic, spelling, grammar and writing. We have four dogs. Their names are Bess, Bub, Bollie and Cap. We have lots of chickens, cows, four pigs, three horses and some little calves. I have a little brother one year old. His birthday is the 30th of November. It surely has been stormy weather this week. When the snow comes I go coasting. Papa made me a sled. Isn't this war awful. I wish it would stop.—Alice Carrie Case, Tokeland, Wash.

**Edith Likes to Play With Kittens.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it won't be the last. I am 9 years old. My birthday is the 13th of January. Have I a twin? I go to school. I am in the second grade. We have 26 pupils in our school. We gave a Thanksgiving entertainment and gave the money we made to the Red Cross. My little cousin is living with us. She is 6 years old. We have lots of fun playing together. We have three kittens. Their names are Snowball, Tommy and Lucky. I like to play with kittens. We have three horses, one colt. One is a riding pony. I like to ride horseback. Our horses' names are Mabel, Buster, Bab and Dicky. We have five cows and one dog. His name is Sport. I have one sister. Her name is Florence. My four brothers' names are Lowell, Henry, Grant and Max. I would like to hear from any little girl.—Edith Redmon, Riffe, Wash.

**Books for the School Library.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope to see my letter in print. We have 64 head of cattle. We are milking 20 cows. We have 37 head of hogs, one cat and 150 chickens and four horses. The horses' names are Chee, Johnnie, Daisy and Nellie. Sister Mary, Gladys and I wash the dishes and sweep the floor while mamma helps papa milk the cows. There are six of us children in the family, one boy and five girls. We girls are not going to school on account of having the whooping cough. Our school gave a program and a basket social. We are going to get some books for the library at school. My next birthday is June the 16th. I am eight years old and in the third grade. Have I a twin?—Frances Huot, Geer, Wash.

**Sold Red Cross Stamps.**

Dear Aunt Nellie: As I have only written once before I will write again. Our school is selling stamps for the Red Cross. I have already sold 10 and when we get 10 sold at one cent apiece we get a pin. Do you think they will kill all our kittens in 1920? I do hope not for I love them so. I have four cats, one cow, three chickens and two bantams. It has rained for two weeks. I think it will never stop raining now since it has started. There is a real nice story about a little child and her mother. She asked her mother, "May I have a small Christmas tree?" Her mother said, "No, none this year for papa is too sick." Then she began to cry.—Gladys B. Jacobsen, Olympia, Wash.

**The First One to Read the Paper.**

Dear Aunt Nellie: I am always the first one to read the Farmer. I am glad that father is going to subscribe for it another year. We have 17 little pigs and we are going to get a little pup from our neighbors. I would be very glad to see my letter in print. Then I will write you another letter. I am 12 years old, but I will be 13 February 17. I am in the seventh grade at school. My hair is dark brown. My eyes are hazel. Have I a twin? I would be very glad to correspond with some one.—Marie Hazel Bultman, Box 31, Oak Harbor, Wash.

**Had a Christmas Tree.**

Dear Aunt Nellie: I am 9 years old and in the fourth grade. I go to the Cunningham school. We have 27 scholars and nine in my class. We had a Christmas tree and a program Christmas. We live on a farm. We have 15 horses, four colts and three cows. We go to school in our new car. I have two brothers and two sisters. We haxe a nice time coasting at school.—Lowell Eden, Cunningham, Wash.

**In a Drill on Christmas.**

Dear Aunt Nellie: I am in the fifth grade at school. I am 10 years old. My teacher's name is Miss Mason. We had a Christmas tree at church and I was in the drill.—Blanche Bell, Davenport, Wash.

**Desks Open in a Funny Way.**

Dear Aunt Nellie: I have written to you before. I enjoy reading the letters very much. I should think more of the children would write to the Corner to make it larger. I am 10 years old. There is a girl who writes to the Corner who said she was 10 years old, but she didn't say when her birthday was. I would like to know and maybe I will write to her. Her name is Verna L. Huffman. She lives at Elk, Wash. My birthday is August 20. I have told you my sisters' names and my brother's, so I won't this time. I used to live at Wawawai, Wash., but I do not now. I live at Bishop, Wash. I live about 20 biles down the river farther than Lewiston, Idaho. My teacher's name is Miss Hazel Howell. She is a nice teacher. I like her and everybody around Bishop likes her. She came from Seattle. Our school just got new desks about a week ago. They open funny. They open at the top and I like them. Today is my smallest sister's birthday. I think I will write again.——, Bishop, Wash.

(This little cousin forgot to give her name when she wrote her letter. Be sure you tell us what it is the next time you write, won't you? Aunt Nellie.)

**Lives on Wild Rose Prairie.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and do not think it is the last. I am 12 years old and will be 13 the 19th of July. We live on Wild Rose Prairie about six or seven miles south of Deer Park. We live about two miles from school. There are about 24 pupils in our school this year. The name of our school is Edgewood. Our teacher's name is Miss Fornfiest. There are three of us from this place attending school. We have a church and a Sunday school about two miles from here. We go there nearly every Sunday. Sometimes we drive and sometimes we walk. We all like to read the letters in the Children's Corner and wish the papers would come and visit us a little oftener and would like to see my letter in the Corner.—Helga Peterson, R. F. D. 1, Box 62, Deer Park, Wash.

**Anna Is Going to Learn to Knit.**

Dear Aunt Nellie: This is the fourth time I have written to the Children's Corner. This time I will tell you how we save. We do not use much sugar or we do not eat much pastry now. I guess everybody ought to help in winning this war. If everybody would save it would help to save food for the allies. I am going to learn to knit, so I can knit something for the Red Cross for the soldiers. We had Thanksgiving program and I had lots of fun. We all spoke a recitation and we sang some songs. There were not many people at our program. I wish some of the cousins would write to me. I hope I will see this letter in print.—Anna Straube, B. 327, LaCross, Wash.

**Fun Sliding Down Hill.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father takes the Farmer and I always read the letters. My birthday is October 3. I am 12 years old and am in the sixth grade. My teacher's name is Miss Fornfiest. I like her very well. I have on sister and her name is Dortha. She is in the fifth grade. We go two miles and a half to school. The name of our school is Edgewood. We have lots of fun sliding down hill.—Eva McKenzie, Route 1, Box 55, Deer Park, Wash.

**Dortha's First Corner Letter.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We take the Farmer and I read the letters. I am 11 years old. My birthday is the 29th of March. I have four cats and one dog. We have four horses and four cows and two calves. I have one sister and her name is Eva. Our teacher's name is Miss Fornfiest. There are 27 pupils in our school. We children have lots of fun sliding down hill. We have to go two miles and a half to school.—Dortha McKenzie, Route 1, Box 55, Deer Park, Wash.

**Nigger and Pudge Are Her Cats.**

Dear Aunt Nellie: I am eight years old and I am in the third grade. I live on a farm. My teacher's name is Mr. Berry. My complexion is dark. I have blue eyes and brown hair. We have a horse, a cow, a sow and chickens. The horse's name is Queen and the cow's name is Beauty. I have a dog and her name is Fluffy. I have two cats and their names are Nigger and Pudge. I hope my letter will be in print.—Katherine Cady, Olalla, Wash.

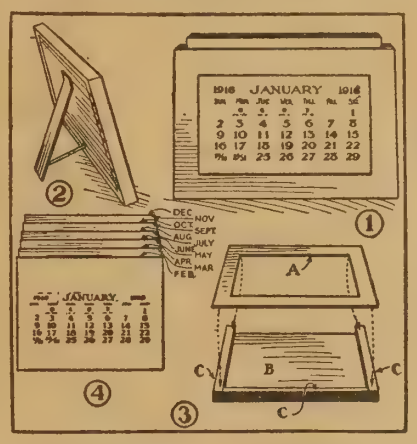
**Lester Goes to a Country School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and in the fifth grade. I go to a country school. There are only 11 pupils in our school. My teacher's name is Mrs. Backlund. I have three brothers and three sisters. The girls' names are Eunice, Pauline and Beulah. My brothers' names are Herbert, John Henry and Harold. Herbert, Eunice and I go to school.—Lester Hoech, Wilson Creek, Wash.

**Frances Answers Her Riddles.**

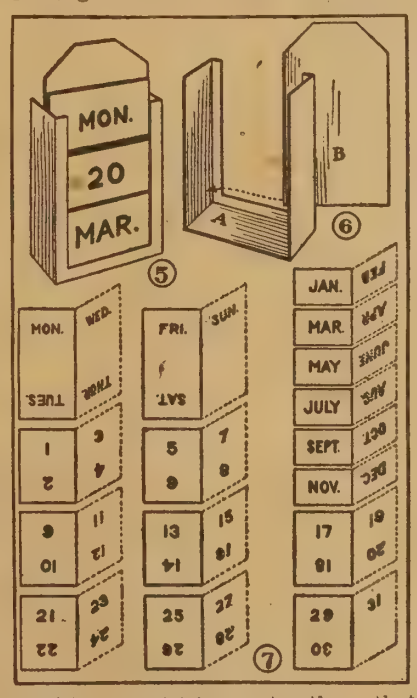
Dear Aunt Nellie: Here are the answers to the riddles I sent for the cousins to guess last week. One—a splinter. Two—a watermelon. Three—noise. Four—a negro with a black cat on his head riding a brown mule. Five—a churn. Six—because she is something to adore.—Frances McCauley, Route 1, Box 35, Dayton, Wash.

# Handicraft For Girls



By Dorothy Perkins.

## Homemade Calendars.



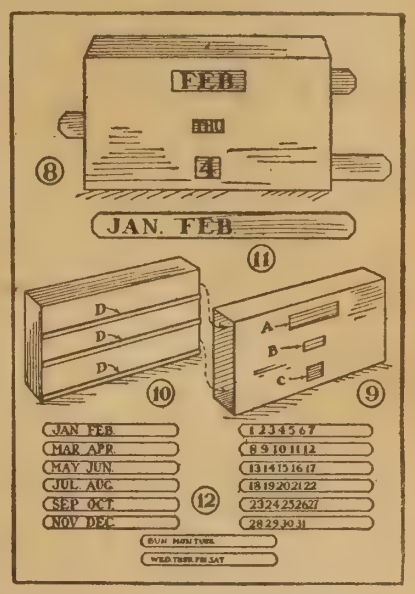
The illustrations show three calendars which I know you will enjoy making. You will need several calendar pads from which to cut the names of the months, days of the week, and the dates, and these can be obtained from advertising calendars.

## Desk Calendar.

The little desk calendar in Figs. 1 and 2 has a cardboard case (Fig. 3), and six calendar cards (Fig. 4). First make the cards, then the case. The size of your calendar pad will determine the size of the cards. Fig. 4 will

give you an idea of the relative size. The card tops must extend above the case as shown. Use a light-weight cardboard or heavy letter paper for the cards. You will see by Fig. 4 that one month of the calendar is pasted upon each side of each card. Be careful to get the margins equal so the printing will center upon the opening in the front of the case. Cut the front of the case from cardboard, with the opening of the right size so there will be a margin of about one-quarter inch around the opening about one-half inch wide. Use a very sharp knife so the edge will cut straight and smooth. Mark out back B with front A as a marker, and blue enough of the strips C along the side and bottom to make

a thickness a trifle greater than that of the six calendar cards.



To assemble the case, bind together A and B with paper lapped over and blued to their edges. Paste a piece of tinted paper on the front to conceal the binding strip. Fig. 2 shows how to fasten a cardboard strip to the back of the case to support the calendar. With the case finished, a new set of cards each year will keep the calendar up to date.

## Perpetual Calendar.

Perhaps you would prefer a perpetual calendar to the kind just described. The calendar in Fig. 5 requires a small cardboard box for a case (A, Fig. 6). Remove one end of the box, then cut away the bottom, with the exception of a margin of one-quarter inch along the sides and remaining end. Back B (Fig. 6) fits between the box sides, and extends an inch above them. Glue its edges to the sides of the box.

There are 16 calendar cards (Fig. 2), two for the "days," eight for the "dates," and six for the "months." Cut the "date" cards two-thirds of the length of the "day" cards, and the "month" cards one-half of the length of the "date" cards. The calendar pad from which you cut the "days," "dates" and "months" should be in heavy clear type. Arrange and paste the printing in the manner shown in Fig. 7. The dotted portions of the diagram indicate the reverse side of the cards.

The perpetual calendar in Fig. 8 is made of a cardboard box of the kind that slides into a sleeve cover

(Figs. 9 and 10). Cut the openings A, B and C (Fig. 9) through the sleeve cover, and paste the three strips D (Fig. 10) upon the box bottom for the "month," "day" and "date" strips to slide upon. Fig. 11 shows the relative length and width of the slide strips, and Fig. 12 the arrangement of the calendar letters and numbers. Fourteen strips are shown in the diagram, but by using both sides only seven will be necessary.

# Humanity as Safe in Desert as in Palace

(Continued from page twenty-two.)

crossing almost in my footsteps. I suppose she was just small enough to class in the intelligence of the cow along with the dog. For, like a flash, she was clear across the big corral and had knocked Frances down with her horns; before she could get up mother was there and threw the milk bucket half full of milk into the cow's face. That gave Frances time to scramble up and start off in a new direction, the cow after her. Mother slipped and sat down. The cow caught Frances in the back and then slipped and they both went down, the cow square on top. Then Ed appeared around the corner of the shed with a big stick and by the time the cow got to her feet he was upon her and she gave way, giving Frances a chance to scramble through a crack in the side of the cowshed. We all gathered round her while she, cobbing violently, dug into her mouth and took out one little tooth. "It was loose anyway," she gulped. That was the only injury that she suffered in the experience. To complete the cycle of three, toward fall Frances fell through the straw and brush roof of the barn, striking her temple against the manger. How long she lay in the barn we never knew, she was out of the house so much, scouting around with the dog and the calves, that we seldom knew where she was, except at mealtime. That day she came in early in the afternoon with her eye swelled shut and a general look of dilapidation.

That made three times and we all began to be easy, especially as winter was coming on and we all had to stay closer to the house. Life went on from that time without more trouble of that kind.

In this way we rode and raced and chased our way through childhood in the bunch grass days of the golden west, just grazing by a hair's breadth disaster and distress and enjoying to the full all the good things of time or earth or senso which come to all who know how to look for them.

**Education Delivered.**

"In the old days an ambitious boy used to walk 20 miles to borrow a book."

"Well?"

"But now the public libraries dump 'em at your door."—Louisville Courier-Journal.

# News for Breeders

J. E. Finnicum, the Amity, Ore., Duroc Jersey swine breeder, some little time ago purchased a very fine spring boar from the Waltermeier herd of Iowa. Tme pig is by Great Wonder, that was grand champion at the Iowa State fair in 1916, and that goes back three times to Ohio Chief, and is a great grandson of Crimson Wonder Again and H. A.s Queen, considered the greatest of Duroc mating. The young boar's dam is by Grand Model, grand champion of the Iowa, South Dakota and Minnesota state fairs in 1915. Grand Wonder is by Golden Model 2d, the boar that made the Waltermeier herd famous. At a sale of the same line of breeding a year ago Mr. Waltermeier had the higrest average price ever received for boars. A boar now in Nebraska by the same sire is said to be the largest Duroc alive. Mr. Finnicum's boar is a fine individual with strong back, good legs and feet, is smooth and has a good head. Mated with the Finnicum sows he ought to produce very high class stock. H. A.

## Denver Shorthorn Sale.

It is announced that a sale of 40 high class Shorthorns, 30 bulls and 10 females, will be conducted at Denver, Col., Friday, January 25, the week of the Western Live Stock show, conducted by the American Shorthorn Breeders' association, "not with a view to scoring high prices, but for the purpose of enabling western Shorthorn breeders and farmers to obtain breeding Shorthorns at their door with a minimum cost of freight and traveling expenses."

## Champion Duroc Jersey.

The above photograph shows the grand champion Duroc Jersey shown at the Spokane Interstate fair last fall, owned by George Swales of Johnson, Wash., where she is a decided addition to his very high class herd. H. A.

## Live Stock Men Elect.

At the annual meeting of the National Society of Record associations, just held, Secretary Wayne Dinsmore reported that the societies had taken up regulations promulgated by the American and National express companies this fall under which they had refused to accept breeding animals or exhibition animals weighing over 500 pounds for shipment. The matter had been brought to the attention of the public utilities commission by W. S. Corsa, and a hearing had been held on the same November 16, 1917, in Chicago. Following the hearing, the express companies had plead for a suspension of any order by the public utilities commission, and had promised to promulgate satisfactory regulations. This has been done, and all agents of all express companies have been notified that their previous orders debarring them from accepting shipments weighing over 500 pounds do not apply to animals intended for breeding or exhibition purposes. It was the opinion of the directors present that this was sufficient and it is not likely that any further complaint will be found with the action of the express companies in this respect.

The following officers were elected: Jess C. Andrew, of the American Shropshire Registry association, was elected president; J. R. Pfander, of the National Duroc-Jersey Record association, was elected vice president; Wayne Dinsmore was reelected secretary-treasurer.

Members of the executive committee were elected as follows:

C. F. Curtiss of the American Berkshire association, F. Lothrop Ames of the American Clydesdale association, L. D. Tomson of the American Shorthorn association, W. M. McFadden of the American Poland-China Record association, J. G. Truman of the American Shire Horse Breeders' association, H. G. Van Pelt of the American Jersey Cattle club, Comfort Tyler of the American Hampshire association, and A. J. Knollin of the American Rambouillet Sheep Breeders' association.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years
For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:
10 dose pkge, Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago
Eastern Agent

BERKSHIRE SWINE

BERKSHIRE HOGS

Gilts of any age, bred or open; can also furnish young boars, from the best of strains and prize winning parentage.

EARL WOOD, Silverton, Ore.

RIVERBY ORCHARD BERKSHIRES won 12 out of 15 first prizes at the Washington State Fair, 1916. A few outstanding boars for sale at reasonable prices.
D. C. BUNN. Prosser, Wash.

HORSES

Hunter Ranch Percherons

The Grand Champion KROUMIR at head of herd. Young stallions for sale at all times at breeders' prices.

A. R. HUNTER. Island City, Ore.

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.
C. E. LONG, Buhl, Idaho.

724 Pounds Butter

and 11,076 pounds milk is the record the dam of a bull calf dropped Sept. 1, 1917. The sire, Dominus, is out of an 817-lb. cow and sired by a bull out of an 853-lb. cow. PRICE $125 for quick sale.
J. B. STUMP & SON, Monmouth, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.
LADD FARM, Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Golden Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.
HENRY STEWART, Prop., Albany, Ore.

Ashwood Farm Jerseys

FOR SALE—BULL CALVES sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.
McARTHUR & STAUFF, Rickreall, Ore.

914 Pounds of Butter

This is the official record for a year of the dam of a choice bull calf by Rosaire Olga Lad, sire of 29 tested daughters. He and others priced according to quality.
ED CARY, P. O., Carlton, Ore.
Station, LaFayette, Ore.

Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.
IRA P. WHITNEY, Manager.
ROUTE 7, SPOKANE, WASH.

Mellow Lawn Jerseys

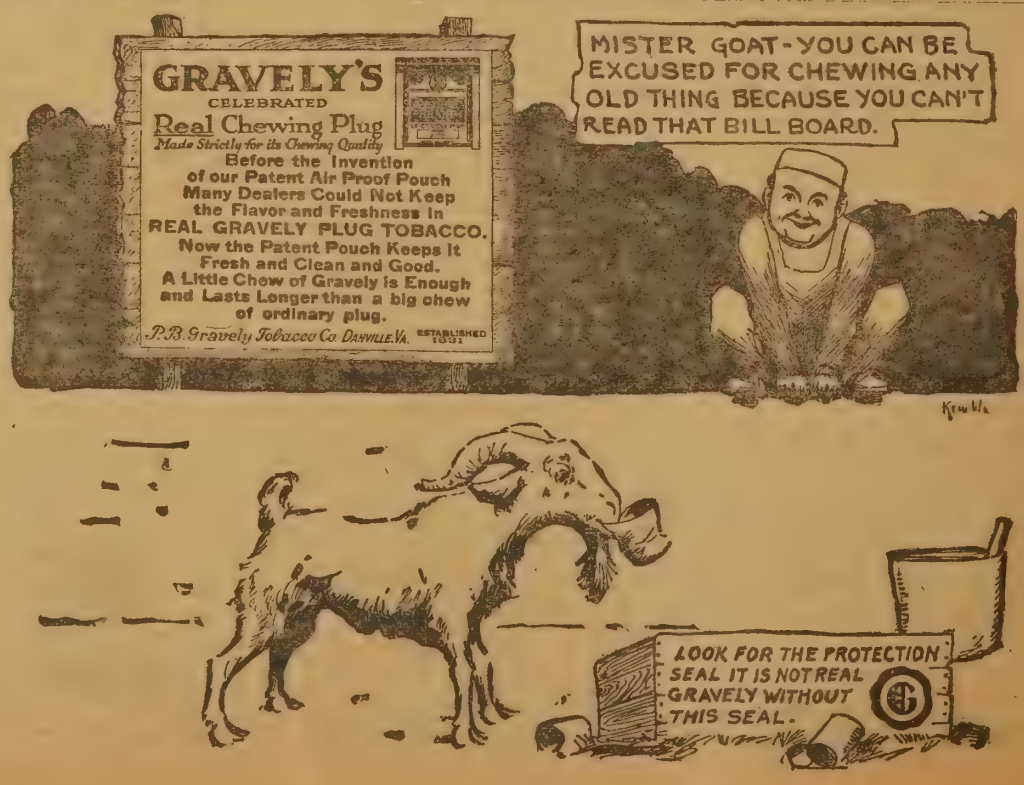
are promising to make a year's herd average of 700 lbs. butter, including every head from two to sixteen years old. Since June, 1916, none went under 612 lbs. butter. Junior champion bull calf at Oregon state fair, 1917, is our oldest male left for sale. Sired by our herd bull, Gertie's Poppy's St. Mawes.
F. A. DOERFLER, Silverton, Ore

Who Wants This Bull?

18 months old, out of Kadia F., with world's 4-year-old milk record and 797 lbs. butter. By Engineer's Bluster, whose first daughter, Pride of Cedar Hill, made, on test, a record of 600 lbs. of butter as a senior yearling.
N. H. SMITH, R. F. D. 2,
Oregon City, Ore.

ASHBURN FARM
Register of Merit Jerseys

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.
J. M. DICKSON & SON, Shedd, Ore.



Oak Ridge Jersey Farm
Register of Merit Cattle

Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address
RILEY E. HULBURT, Albany, Ore.

A Bit of Courtesy

When writing to any of the Jersey breeders advertising in these columns, you will confer a favor to the breeder and to the American Jersey Cattle club by mentioning this paper, as they want to be able to trace the exact source of their inquiries. Will you do this, please?

When you write to advertisers be sure to say that you saw their advertisement in this paper.

# Breeders' Department

## HOLSTEIN CATTLE

## A Rare Opportunity

To secure some thoroughbred Holstein male calves, described as follows:

No. 1—Born Feb. 19, 1917. Sire, Segis Walker Hartog, No. 162423; dam, Buckeye Grace Morley, No. 99452.

No. 2—Born Jan. 23, '17. Sire, Segis Walker Hartog, dam Naiad Jewel Netherland, No. 124102.

No. 3—Born April 14, '17, Sire, Segis Walker Hartog, dam, Buckeye Grace Morley. No. 248417.

No. 4—Born Jan. 11, '17. Sire, Segis Walker Hertog, dam, Susie De Kol Pauline 2d, No. 245999.

No. 5—Born Feb. 19, '17, Sire, Segis Walker Hartog, dam, Mary De Kol Stony Brook, No. 248416.

No. 6—Born March 26, '17. Sire, Hazelwood Sir Ormsby, No. 148496, dam, Queen Gerben Josephine Michtilda, No. 146519.

Application for registry for all the calves have been sent in. For further particulars, prices, etc., address The Intermountain Institute, or

E. A. PADDOCK, Pres., Weiser, Idaho.
R. F. D. 1.

## World's Record Holsteins

Herd headed by Ononis Cornucopia Johanna Newman, the best bred son of the world's record cow, Margie Newman, with more 100-lb. records in his pedigree than any other bull in the world.

Home of the world's champion junior 2-year-old and junior 3-year-old producers. Write for records and prices on young bulls.

CHAS. ELDRIDGE, Chimacum, Wash.

## LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1080.82 lbs.; milk, 24,380.3.

J. H. HULBERT, Mt. Vernon, Wash.

## Record-Holsteins

Young bulls, some of them ready for service, by a sire whose 5 nearest dams average 26.17 pounds butter, or another with 29.67-pound dam, and out of high-record A. R. O. dams. Priced to sell.

ERNEST WERNER, AURORA, ORE.

## Holsteins and O. I. C. Hogs

For sale—Bulls and cows, good breeding, from tested dams. May gilts and boars ready for service, from show ancestors. Priced to sell.

E. C. SCHUMACHER, R. 1, Granger, Wash.

## HOLSTEINS

Well bred young bulls for sale.

THOS. CARMICHAEL. Gaston, Ore.

## YORKSHIRE SWINE

## Spring Boars and Gilts

Gilts, bred or open, boars ready for service. Also weanling pigs. Best of breeding.

WM. NEUENSCHWANDER, Gaston, Ore.

## CHESTER WHITE SWINE

BLUE RIBBON STOCK FARM

Prize winning Chester White hogs and Jersey cattle. Young stock for sale.

ED SCHOEL, Suver, Ore.

## RABBITS

BARBER RABBITRY.

Pedigreed and registered Flemish and Checkered Giants. Bucks at stud. Stock for sale. Correspondence solicited.

MRS. R. W. BARBER, R. 4, Boise, Idaho.

## Registered Holsteins

Young calves, born last July and later; also 1 30-lb. bull, ready for service, whose sire, dam and sire's dam have all been grand champions at one or more state fairs, and full brother to his sire and full sister junior champions at a state fair. Here is production and type we hear so much about. Could also spare a few cows.

H. R. BOOMER, New Plymouth, Idaho.

Established 1887—100 in Herd.

REGISTERED HOLSTEIN CATTLE.

As I wish to reduce my herd I am offering the blood of such bulls as King Segis Pontiac, 13th, 30.39 lbs. breeding, 4.25 per cent fat; Iowana Rochdale Korndyke, 26 lb. breeding, and Prince Segis Korndyke De Kol, 31.41 lbs. breeding.

LAKE SIDE STOCK FARM.
P. A. FRAKES, Scappoose, Ore.

## 365-Day Holsteins

24,667 lbs. milk—1026 lbs. butter—is the s. o. advanced registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
WESTERNWOLD RANCH.
Prineville, Ore.

## ABERDEEN ANGUS

## Yakima Herd of Aberdeen Angus

In the famous valley of the Yakima is one of America's greatest collections of the breed.

At the recent Chicago International our breed won 1st on aged herd, 2d on young herd, 1st on calf herd and 2d on get of sire. All stock exhibited, except 2, were of our own breeding. We have an exceptionally good lot of yearling bulls for sale. To introduce our stock in this section we are pricing them within reach of small breeders and range men.

Congdon & Battles
Otto V. Battles, Mgr.
North Yakima, Wash.

## BROWN SWISS CATTLE

## Brown Swiss Stock Farm

Breeders of Brown Swiss Cattle, the Farmer's Dairy Cow. Young stock for sale.

THEO. BRUGGER, Route 3, Gresham, Ore.

## SHORTHORN CATTLE

# SHORTHORNS

A few young stock for sale by such noted sires as Precious Goods, a son of the great Golden Goods, and Scottish Sunrise 2d.

R. E. BOYCE, Baker, Ore.

## Hercules Shorthorns

For particulars write

DAY & ROTHROCK
Exchange Bank Bldg.
Spokane, Washington.

## CEDARHURST FARM

SHORTHORNS.

Am offering a number of richly bred young bulls, fit for service, also a few females. For particulars write

JOE TURNER, Meyers Falls, Wash.

## H. H. Schildman

breeder of registered Shorthorn cattle, Hampshire sheep and big-type Poland China hogs.

Filer, Idaho.

## For Sale

25 registered red, white and roan Shorthorn bull calves and yearlings.

WM. MULHALL. Fenn, Idaho.

## JERSEY CATTLE

## Jersey Home Dairy

Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.

Erickson Bros. Prop.
North Yakima, Wash.

TWO YOUNG BULLS

Ready for service. Sire, a Ladd bull of Brown Bessie strain and out of good working cows.

RALPH BILLINGS, Ashland, Ore.

JERSEY BULL FOR SALE.

Year old, good individual, priced reasonable. Dam gave 45 to 50 lbs. of milk a day, test 4.8. Sire, Island bred.

MRS. J. F. PEFFER, Dayton, Ore.

## GUERNSEY CATTLE

MIDDLEDALE FARMS GUERNSEYS.

Herd founded in 1904. May Rose breeding. Most all granddaughters of Jethro Bass (11366), son of Imp. King of the May. Have a few heifers, calves for sale. Goshen, Ore.

## Orchard Hill Farm

"Home of High-Class Guernseys."

Dr. Park Weed Willis, Owner.

Redmond, Wash.

## FAIRVIEW FARM

Breeders of high class registered and grade Guernseys.

A. J. SINNES.
Route 5. Mt. Vernon, Wash.

## HEREFORD CATTLE

## BULL RANCH

Registered Hereford cattle.

CHAS. BULL, Prop. Mabton, Wn.

In answering advertisements don't fail to mention this paper.

# Valley Junction Shorthorns

The grand champion bull, General Hampton 390583, at the head of the herd. Young bulls fit to head the best pure bred herds and others that will make impressive improvements on range herds. Priced according to quality.

W. W. GREEN & SONS, Union, Ore.

# BATTEN'S S. C. REDS

I have 50 of the best cockerels that I have ever seen in one yard that I am offering at low prices, quality considered, in order to move them quickly to make room for younger stock. Prices range from $5 to $15 and can give you good selection if you will write me your wants. Can spare a few good pullets at $2.50 each. Let me hear from you.

E. F. BATTEN, HOOD RIVER, ORE.

# TRAP NESTED WHITE LEGHORNS

The kind that lays and pays. A few fine range-bred cockerels for sale. Bred from high layers. Mothers laid from 180 to 266 eggs in pullet year. Entire flock averaged 191 eggs last year. All hens trap-nested continuously and only best layers used as breeders. Hatching eggs in season. Write for catalogue.

WM. HANDS & SON, Cottage Grove, Ore.

## *Imported and American Bred*

## Percheron, Shire and Belgian Stallions

They are of the very best breeding obtainable and are guaranteed to be breeders. They will be sold at very reasonable prices.

If in need of a good stallion weighing from 1800 to 2200 pounds, come direct to my stables and see them or write for description and terms to

WM. T. TRACY, Kennewick, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Dec. 31.—Peace talk and the disappearance of the cold wave tended to ease down the corn market. Largely as a result prices, although steady at the finish, were ¼c to ⅝c net lower, with January at $1.26⅜ and May $1.24¾. Oats fell 1⅛c to 3⅝c and provisions 5c to 42c.

Weakness in corn values developed chiefly in the last half of the day. During the earlier trading scantiness of receipts, together with continued reports of difficulty in getting cars for shipments from country elevators, had a temporary bullish effect. Backwardness of husking was also of some influence toward a transient hardening of prices. After slight gains had been scored, however, attention focused to a considerable extent on gossip of proposed answers to Germany's latest peace offer. Additional selling was also brought about by the fact that milder temperatures promised help in facilitating railway traffic and thus bring about more liberal arrivals.

Sharp breaks took place in the oats market, but not until new high price records for the season had been touched. Export business caused the upturn, whereas peace talk and the subsesquent withdrawal of export bids made prices tumble.

Forecasts of plentiful supplies of hogs toward the end of the week pulled down provisions.

**Cash Quotations.**

CHICAGO, Dec. 31.—Corn—No. 2 yellow, nominal; No. 3 yellow, $1.90; No. 4 yellow, $1.75@1.78.

## Seattle Market.

SEATTLE, Dec. 29.—Shrinkage of Yakima and Puget sound potatoes held in common storage in Seattle is causing much alarm among jobbers. The mild weather, with temperatures around 55 degrees in early morning and warm winds have cut heavily into the visible supply. Well informed dealers estimate that the loss in this way has already reached 25 to 35 per cent.

Sacks of spuds taken out of common storage show water-soaked exteriors and pulpy and ruined contents, originally well selected and graded before storing. Cold storage at this time of the year has never been considered, but it would have been impossible owing to the fact that all cold storage space in this city is already full. Fearful of a declining market, wholesalers bought and stored but little spud stock, and growers who own the bulk will be compelled to stand the loss.

Today jobbers took a tighter grip on their good keeping fancy and extra fancy pack apples when the orange market jumped to $5.25 and $6 for navels. This competitive fruit, while broadening the differential that is continually favoring apples, firmed up quotations and added stiffly to the value of the native product. It is not believed that it will be difficult for the remainder of the winter to get $3 per box for fancy Delicious and Winesaps.

Jobbers are shying away from accumulations of fresh ranch eggs. Storage stocks are cleaning up, and it was stated today that before January 10 all holdings will have been sold. Little in the present weather conditions make for bullish sentiment.

Japanese eggs are being offered at 43c, with pullets at 36c to jobbers, but the movement is light.

**BUYING PRICES.**

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle;

Eggs—Local, 47@48c per dozen; putlets, 38@40c.

Butterfat—54c lb.

Poultry—Live hens, fat, over 4 lbs., 22c per lb.; 4 lbs. and under, 20c; old roosters, 15c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15c per lb.; springs, live, fat, 20c per lb.; hens and young tom turkeys, dressed, 30c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 16@18c per lb.; heavy, 12@15c per lb.

Veal—Fancy, light, 14@16c per lb.; heavy, 9@13c per lb.

Hides—Salted, 16c per lb.; flint-dry hides, 30@31c per lb.; salt kip, 16c per lb.; green hides, 13c per lb.; green calf, 25c per lb.; dry calf (under 6 lbs.), 31c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 10c per lb.; dry full wool sheep pelts, 42@46c per lb.; salt bulls, 13c per lb.

**SELLING PRICES.**

Feed—Scratch feed, $76 per ton; all grain chops, $67 ton; oats, $63 per ton; rolled oats, $64.50 per ton; wheat, $74 per ton; bran, $35 per ton; shorts, $38 per ton; soy bean meal, $65 per ton whole carn, $78 per ton; cracked corn, $79 per ton; alfalfa meal, $35; chick feed, $80 per ton; barley, $63.50 a ton; all grain chop, $67 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $30@31 per ton; straw, $14@15.

Butter—Washington creamery extras, cubes, 52c per lb.; do bricks, 53c per lb.

Eggs—Rresh ranch, 54c per doz.

Onions—Yakima, $2.25@2.50 per cwt.; Oregon, $2.75@3 per cwt.

Potatoes — Puget sound, $1.25@1.35 per cwt.; eastern Washington, $1.50@1.60 per cwt.

## Seattle Wheat.

SEATTLE, Dec. 29.—Stocks of wheat shipped to terminals here before the order which transferred government purchases from tidewater to country warehouses are cleaning up rapidly. The orders of M. H. Houser, following the Baltimore dock fire, were to the effect that before any mills could buy wheat in the country all storage holdings on Puget Sound should also be cleaned up.

Notwithstanding this order, a total of 3179 cars have reached Seattle since July 1, as against 3464 cars for the same period a year ago. Grain buyers explain this apparent discrepancy in the fact that before the embargo against further shipments to Puget sound was placed the most phnomenal rush of wheat to tidewater in the history of the state had already been well started. It is expected that the effect of the order will become more visible from now on.

Mill prices of $29 for bran and $32 for shorts, sacked, will be the new cost of millfeed, according to rough estimates of costs of production and margins of profits allowed by the government in the new orders from Washington ordering a reduction in quotations on this commodity.

There has been practically as much confusion as to what the government meant by millfeed prices on the basis of 38 per cent of the bulk wheat cost as followed the announcement last fall of Coast terminal wheat prices as related to country prices.

How much farther millers can go in order to meet the urgent demand from the government backed by the dairy interests of Washington and Oregon and still keep off flour is not known.

## The Wool Market.

BOSTON, Dec. 28.—The Commercial Bulletin will say tomorrow:

"The last week of the year, true to form, has been a quiet one. Prices, except on fine short clothing wools, have been very firm on all grades and with the developments of the last week there has been no disposition on the part of holders to sell wool for any less money.

"The situation at the mills is a very strong one and bids fair to keep so, with the machinery engaged on government orders being increased more or less steadily."

Scoured basis: Texas fine, 12 months, $1.68@1.72; fine 8 months, $1.55@1.60. California northern, $1.70@1.75; middle county, $1.55@1.60.

Oregon eastern, No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70. Territory: Fine staple, $1.80@1.85; half-blood combing, $1.75@1.80; ¾ blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60; pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

## Portland Wheat.

PORTLAND, Ore., Dec. 29.—At a meeting of millers of the northwest, held at the office of T. B. Wilcox, chairman for this district of the milling division of the food administration, it was decided that, with mill feed prices reduced, no further cut in flour prices was possible. There was a revision of feed prices as recently given out, bran now being listed at $30 and shorts at $32, in car lots, with 50 cents added for less than car lots. It was also decided that the manufacture of 95 per cent flour, the so-called "war flour," called for by the government, will begin as soon as present stocks of patent flour are exhausted.

The coarse grain markets were strong at the close of the week. At the exchange 100 tons of January local oats were sold at $58.50 and 200 tons of eastern clipped oats at $56.

## Butter and Eggs.

PORTLAND, Ore., Dec. 29.—Butter—Prints, extras, 50@52c; cubes, extras, 49 1-2c; prime firsts, 49c; dairy, 34c.

Butter fat, Portland delivery, No. 1 sour cream, 56@57c.

Potatoes: Buying price, locals, $1@1.25; selling price, $1.25@1.50.

SAN FRANCISCO, Dec. 29.—Butter—Prime extra, 50 1-2c.

Cheese—Young Americas, 24c.

CHICAGO, Dec. 29.—Butter higher; creamery, 33@49c.

Eggs higher; receipts, 2919 cases; firsts, 56@57c; ordinary firsts, 52@54; at mark, cases included, 50@55c; refrigerator firsts, 40@41c.

## Portland Market.

PORTLAND, Ore., Dec. 29.—Poultry sold at record prices in the latter part of the week as the demand was keen and but little was available. Dressed turkeys for the New Year holiday brought 36 to 38 cents, dressed chickens of all kinds 23 to 25 cents and dressed geese 27 1-2 cents. Live poultry sold for almost as much; hens, large and small, and springs going at 22 to 24 cents.

The dressed meat market is also on a stronger basis as receipts have been small.

Butter continues scarce and firm. No early change in cheese prices is expected by dealers.

Eggs are accumulating and the market is weak. The general quotation is 45 cents, case count, and unless the weather turns colder, a further drop is expected. The market is likely to decline to a point where the Spokane and Montana trade will buy here instead of in the east.

There has been no improvement yet in the potato market. A set of state grades is being considered by the public service commission, and it is proposed to locate inspectors at all shipping points.

A fair volume of wool business has been done locally in the last week. The prices are said to have been equal to those recently current. The purchases were for eastern manufacturers.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $58.50 per ton.

Millstuffs — Carloads: Bran, $30; shorts, $32; middlings, $39; less than carloads and mixed cars, 50c more.

Barley—No. 1 feed, $54.50; brewing, $57.50; rolled, $61@62.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24; grain $24.

Eggs—Oregon ranch, case counts, 45c per dozen; candled, 47@51c.

Poultry—Hens, 22@24c; ducks, 24c; turkeys, live, 25c; geese, 20c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 49 1-2c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 16 1-2@17c; pork, 18 1-2@19c.

Hops—1916, 13@15c; 1917 crop, 16@20c.

Potatoes—Oregon, buying price, $1@1.25 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon white, 9@9 1-2c; colored, 8@9c.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1@1.50 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@$2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.40 box; Wageners, $1.10 box; Rome Beauties, $1.25@1.60 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.65 box; Staymen Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 45c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 12c lb; turkeys, 22@25c lb; local turkeys to retailer, 32c lb.

**Dressed Poultry**—Hens, 21@22c lb; broilers, 24@25c lb; old roosters, 11c lb; ducks, 20@23c lb; geese, 20@23c lb; turkeys, 20@28@32c lb.

**Hide Quotations.**

# "The Barrier" By REX BEACH

(Continued from page twenty-five.)

be found; but, as luck would have it, I went through without trying. I had gone farther from men and things, however, than I thought, and this return pursuit was a million times worse than the other, for I couldn't go fast enough to shake Death, who ran with his hand on my cantle or rode on my horse's rump. It was then I found Alluna. She was with a hunting party of Pah-Utes, who knew nothing of me nor of the white man's affairs, and cared less; and when I saw the little squaw I rode my horse up beside her, laid the sick child in her arms, then tumbled out of the saddle. They had a harder job to pull me through than they did to save Merridy, for I'd given the baby all the water and hadn't slept or rested for many years, so it seemed.

"The little one was playing around several days before I got back my reason. Meanwhile the party had moved north, taking us with them, and, as it happened, just missing a posse who were returning from the desert.

"When I was able to get about I told Alluna that I must be going, but as I told her I watched her face, and saw the sign I wanted—the white girl had clutched at her like she had at me, and she couldn't give her up, so I made a dicker with her old man. It took all the money I had to buy that squaw, but I knew the kiddie must have a woman's care; and the three of us started out soon after, alone, and broke, and aimless—and we've been going ever since.

"That's the heart of the story, Lieutenant, and that's how I started to drift. Since then we three have never rested. I left them once in Idaho and went back to Mesa, riding all the way, mostly by night, but Bennett was gone. He'd run down mighty fast after Merridy died, so I heard, growing sullen and uglier day by day—and I reckon I was the only one who knew why—till he had a killing in his place. It was unprovoked, and instead of stopping to face it out the yellow in him rose to the surface and he left before sunup, as I had left, making a clean getaway, too, for there was no such hullabaloo raised about killing a man as there was about—the other. So my trip was all for nothing.

"I was used to disappointment by now, so I took it quiet and went back to Alluna and the little one, knowing that some day we two men would meet. You see, I figured that God had framed a cold hand for me, but he would surely give me a pair before the game closed. Of course, never having seen Bennett, I was handicapped, and, added to that, he changed his name, so the search was mighty slow and blind, but I knew the day would come. And it would have come only for—this.

"There isn't much more to tell. I did what most men would have done, I reckon, because I was just average in every way. I took Alluna, and together we drifted north, along the frontier, until we landed here. Every year the little girl got more beautiful and more like her mother, and every year we two loved her more. We changed her name, of course, for I've always had the dread of the law back of me, and then the other two kiddies came along; but we were living pretty easy, the woman contented and me waiting for Bennett, till you stepped in and Necia fell in love. That's another thing I never counted on. It seems like I've always overlooked the plainest kind of facts. I've held off telling you the last few weeks, hoping you two wouldn't make it necessary, for I reckon I'm sort of a coward; but she informed me tonight that she couldn't marry you, being what she things she is, and knowing the blood she has in her I knew she wouldn't. I figured it wouldn't be right to either of you to let you go it blind, and so I came in to tell you this whole thing and to give myself up."

Gale stopped, then poured himself another drink.

"To give yourself up?" echoed Burrell, vaguely. "How do you mean?" He had sat like one in a trance during the long recital, only his eyes alive.

"I'm under indictment for murder," said the trader. "I have been for 15 years, and there's no chance in the world for me to prove my innocence."

"Have you told Necia?" the young man inquired.

"No, you'll have to do that—I never could—she might—disbelieve. What's more, you mustn't tell her yet. Wait till I give the word. It won't be long, perhaps a day. I want to go free a little while yet, for I've got some work to do."

Burrell rose to his feet and stamped the cramps from his muscles. He was deeply agitated, and his mind was groping darkly for light to lay hold of this new thing that confronted him.

"Why, yes, yes—of course—don't come until you're ready," he muttered, mechanically, as if unaware of the meaning of his words. "To be sure, I'm a policeman, am I not? I had forgotten I was a jailer, and—and all that." He said it sneeringly, and with a measure of contempt for his office; then he turned suddenly to the trader, and his voice was rich and deep-pitched with feeling.

"John Gale," he said, "you're the bravest man I ever knew, and the best." He choked a bit. "You sacrificed all that life meant when this girl was a baby, and now when she has come into womanhood you give up your blood for her. By God! You are a man! I want your hand!"

In spite of himself he could not restrain the moisture that dimmed his eyes as he gripped the toil-worn palm of this great, gray hulk of a man, so aged and bent beneath the burden of his life-long, fadeless love, who, in turn, was powerfully affected by the young man's impulsive outburst of feeling and his unexpected words of praise. The old man looked up a trifle shyly.

"Then you don't doubt no part of it?"

"Certainly not."

"Somehow, I always figured nobody would believe me if ever I told the whole thing."

The soldier gazed unseeingly into the flame of his lamp, and said:

"I wonder if my love for the daughter is as great and as holy as your love for the mother. I wonder if I could give what you have given, if I had nothing but a memory to live with me." Then he inquired, irrelevantly; "But what about Bennett, Mr. Gale? You say you never found him?"

The trader answered, after moment's hesitation, "He's still at large." At which his companion exclaimed, "I'd love to meet him in your stead!"

Gale seemed seized with a desire to speak, but, even while he hesitated, out of the silent night there came the sound of quick footsteps approaching briskly, as if the owner were in haste and knew whither he was bound. Up the steps they came lightly; then the room and the whole silence round echoed with a peremptory signal. Evidently this man rapped on the board door to awaken and alarm, for instead of his knuckles he used some hard and heavy thing like a gun-butt.

"Lieutenant Burrell! Lieutenant Burrell!" a gruff voice cried.

"Who's there?" called the young man.

"Let me in! Quick! I've got work for you to do! Open up, I say! This is Ben Stark!"

(To be continued.)

## CONSERVE BUG POISON.

### Food Administration Takes Hand.

With the idea of further conserving the nation's food supply by protecting it from insect ravages, President Wilson, in a proclamation dated November 15, has placed the arsenic industry of the United States under direction of the food administration. The president's action comes in answer to a threatened shortage in the supply of arsenical insecticides, which are the farmer's chief protection for his crops against the onslaught of "biting insects."

The arsenicals are used in nearly all the preparations for combating fruit farm pests. Arsenate of lead, paris green, arsenate of zinc and others of the common poisons are included. Potato bugs, grasshoppers and all biting insects are most successfully combated by the use of these poisons.

The food administration points out that the cessation of imports of arsenic has made it necessary to conserve the stock in this country for essential purposes, including several other government enterprises in addition to its use for insecticides. It is also thought that the arsenic industry, which has hitherto been subject to widely fluctuating demands and price, will be stabilized when under the control of the food administrator.

**Find Canoe 1000 Years Old.**

Workmen engaged in the dry river bed of the Namazue-gawa Osaka prefecture in Tokyo have unearthed a huge canoe made of camphor wood. The part so far dug out measures 40 feet in length, 6 feet in width and 26 inches in depth. According to archeologists the canoe is about 1000 years old.

REO
"THE GOLD STANDARD OF VALUES"

# This Reo Six Is a Light Six But It Is Also a Sturdy Car

THE TERM "LIGHT" as so frequently used in speaking of motor cars, is a relative term only.

IT MAY MEAN MUCH—or nothing. Depending on whether the reader knows all the factors that enter in.

THIS REO SIX IS LIGHT—just as light as sound engineering will permit.

AND IT MAY SURPRISE YOU to know that—not in the "ads," but on the scales—this Reo Six is as light as many, and actually lighter than some, whose claims to lightness are their chief recommendation.

WE REO FOLK have never talked much about lightness—because that quality in itself is proof of nothing, and yet, as we've said, we make Reos just as light as may be, by the use of the best materials known to the art—as light as may be compatible with the safety factor we desire.

WE LAY MORE STRESS in our advertisements on the staying qualities of the Reo product and the consequent low upkeep.

BECAUSE THAT REALLY COUNTS—those are the qualities the buyer most desires and seeks in the car he buys.

WE DO NOT SACRIFICE endurance for an immediate effect—either in our sales talk or in our designing.

REO ENGINEERING is admittedly sound—it is the standard by which other engineering is compared by those who know.

AND SO WE DESIGN each part of a Reo with an eye single to long time service. Doing that, we automatically obtain low upkeep.

SO, AS WE'VE SAID, this Reo Six is light, using the term relatively—but more important, it is sturdily built.

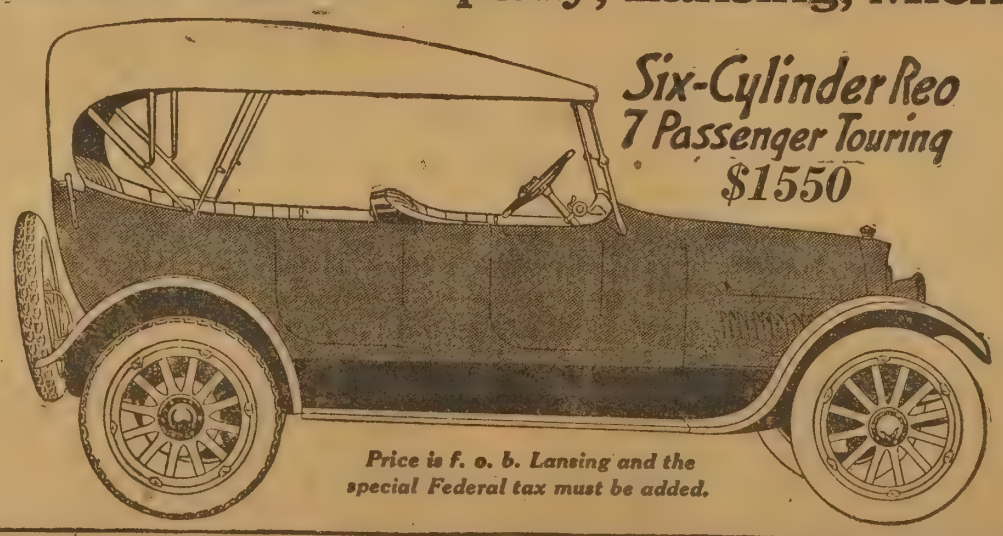
PUT IT ON THE SCALES—then weigh other cars of similar power and wheel base and size, and you'll agree this is indeed a Light Six.

AND WHILE YOU'RE at it, examine carefully the size of the various parts, especially bearings and the shafts that carry the load and take the driving strains—and you will find other arguments why, at the same price, you should select a Reo Six for yours.

THE SAFETY FACTOR in a Reo is greater than that in any other make of car—save one. And that other is also, in its special class, the world's best car.

STRANGELY ENOUGH, the real proof of "lightness" is not to be found on the scales alone—but in the tire mileage.

SOME CARS are so flimsily made and some others so poorly designed that they are practically dead weight on the tires. Result, excessive tire wear and expense.



ASK ANY REO OWNER of any Reo model about his tire mileage, and his reply will convince you that the Reo is the "Lightest" Six made.

SUPPLY IS LIMITED—we cannot hope to supply all who will want this Reo Six.

SO ONLY WAY is to see your Reo dealer at once, place your order and secure an early delivery date before his limited quota is disposed of.

TODAY won't be a minute too soon.

## Reo Motor Car Company, Lansing, Michigan

*Price is f. o. b. Lansing and the special Federal tax must be added.*

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XLI. NO. 2. JANUARY 10, 1918. ** WEEKLY.

# Farm Labor Is a Military Necessity

## *Wheat Convention Urges the Postponement of All Public Improvement During War*

The following resolution introduced by Honorable R. C. McCroskey "father of the wheat convention," and one of the leading farmers of the Inland Empire, was adopted unanimously and is regarded as the most important action taken by the wheat convention at Pullman, Wash., last week.

"Whereas, we are in a state of war and our military efforts demand a very large per cent of our able-bodied men; and,

"Whereas, there is a vital military necessity that the United States, 'The bread basket of the world,' shall furnish meat and bread for the American and allied soldiers of said war; and,

"Whereas, the withdrawal of millions of American citizens from productive industry to serve in the army will create a serious shortage of labor in this country and an ample supply of labor is needed to plant, protect and harvest the crops; therefore, be it

"Resolved: That this 12th annual convention of the Washington State Grain Growers, Shippers and Millers, respectively, urge all state, county and municipal governments and all other political divisions to desist as far as possible from all improvements which will require labor that can otherwise be used in planting, protecting and harvesting of crops, the saving of which is a military necessity.

"Resolved, further: That every paper in the state of Washington be earnestly requested to publish these resolutions.

"J. S. KLEMGARD,
"FRANK ATKINSON,
"H. E. GOLDSWORTHY,
"Committee."

Another resolution, also regarded as of vast importance, will be sent to our representatives in congress and to President Wilson. It provides that:

"The United States and British governments be asked to allow the use of sufficient ships to bring to the United States sufficient grain bags to handle the grain crop of the Pacific coast, and that the charter rates of these ships be reduced to a reasonable price, in order that the cost of grain bags may not be prohibitive."

### Spring Seed Wheat

#### Government to Hold Supply

**That the federal grain corporation will take care of the demands of the farmer for spring seed wheat of all varieties was the quieting news brought to the wheat convention at Pullman by M. H. Houser, head of the food administration and grain corporation of the northwest, who stated that sufficient wheat would be held to supply all the farmers who find themselves short of seed under the unusual conditions which will require an exceptionally heavy spring seeding. He estimated that between one-half a million and a full million bushels would be required for this purpose. He advised that the farmers pool their orders for this wheat as much as possible to relieve the shipping requirements, and stated that the wheat would be sold at a price that would be eminently fair to the farmer.**

**"Unfortunately," said Mr. Houser, "conditions were such that this year the farmer with the good wheat was forced to carry, to a certain extent, the farmer with the poor wheat. Under the new standards, however, this condition will be remedied, and the farmer who raises better wheat than his neighbor will come into his own."**

It was brought out by R. T. Lord, of the Seattle Grain company, Spokane, that there are plenty of sacks in India and there will be no scarcity of sacks if these can be brought to the Pacific coast. Mr. Lord had a letter from the Bemis Bag company stating that they will be able to supply all the sacks needed. But Mr. Lord said the price would be about 20 cents unless a reduction in ocean freights could be secured. This government and the English government are to be shown the need of sacks and reduced freight on them and asked to assist this coast in securing enough to supply the local demand. Other speakers said they believe this can be done. M. H. Houser of the national grain commission gave much valuable information on the wheat and the bag questions. Citing the grain bag situation as the most vital problem confronting farmers of the northwest. Mr. Houser, head of the corporation, urged a united and strenuous effort to induce the shipping administration to release a few ships to transport bags for the 1918 crop from Calcutta. The only possible remedies for the bag situation, according to the federal grain man, are the bulking of practically the entire crop or the release of ships to carry the bags. He called attention to the fact that it will be impossible for all the farmers to adopt the bulk system at once, and stressed the point that every farmer must consider it his duty to assist in placing the matter in its true light before the shipping heads, at the same time bulking as much of the northwest crop as possible, especially wheat going to Minneapolis.

Continued on page three.

# Ask Extensions and Developments of Irrigation Projects

The Washington State Horticultural association held its fourteenth annual meeting at Kennewick last week. The following officers were elected:

President, F. E. Williams, Opportunity.

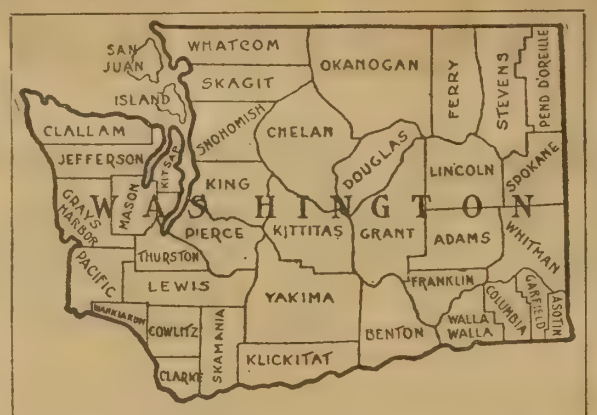
First vice president, J. F. Sugrue, Cashmere.

Second vice president, F. A. Wiggins, Toppenish.

Directors for one year—J. Howard Wright, Yakima, and Luke Powell, Prosser.

Directors for two years—M. L. Dean, Olympia, and A. G. Craig, Deer Park.

Directors for three years—Professor O. M. Morris, Pullman, and J. L. Dumas, Dayton.



The new secretary and treasurer and the location of next year's convention will be chosen by the board of directors.

A resolution was directed to the secretary of the interior, the secretary of agriculture and the food administration, asking that they at once investigate irrigation projects and other lands in the state where extensions and developments can be speedily made, and to take such steps as will insure a good crop.

A full report of this meeting, together with important addresses made and other fruit growing features, will be given in the next issue of The Washington Farmer.

# Calf Problem Is a Serious One

## Condenseries Pay Good Milk Price, Resulting in Shortage of Milk With Which to Raise Calves on the Farm

CHEHALIS, Lewis County, Wash., Dec. 29.—The labor problem is a serious one, but this is quite general. Perhaps the most important local problem is that of raising calves. The condenseries are paying such high prices for milk that very few farmers are saving any at home for feeding calves. This does not seem so serious on the face of it, but after this practice has been allowed to go on for four or five years it is easy to see that the herds will be inferior to what they are today. Then when the price of milk drops again their low producing cows can not make a profit. When a dairyman is forced to buy cows to replenish his herd nine times out of ten he gets culls.

Without any question the problem of quickly winning this war is the question of world-wide interest that is of most importance at the present. This community can play and is playing a very important part by increasing production, minimizing waste and practicing conservation at all points.

The crop prospects for 1918 look very good. The fall grains are in splendid condition and the mild winter has kept them, as well as all the winter pastures, growing steadily. There has been growing weather with a temperature around 55 to 60 degrees for over a month. This weather condition makes the feed situation much easier to handle. Most farmers will have hay enough to do them through the winter. Only a few will be forced to buy hay from over the mountains. Live stock is in fine condition.

Very few farmers will attend the college short courses this year, due to the shortage of help.

A. B. NYSTROM.

### Conditions Brighten.

LA CROSSE, Whitman County, Wash., Jan. 1.—As midwinter approaches crop prospects are much brighter. Excessive warm rains with very mild temperatures never before equaled as far as records go, caused winter wheat to germinate nicely. Pastures are green and stock is wintering the best in a number of years, and feed, which had the promise of becoming very scarce, is plentful. The rainfall for December was 3.42 inches, the greatest since 1886, when it was 3.57 inches. The month's mean temperature was 43 degrees, the normal for this station being 32 degrees. The rainfall for 1917 was 15.40 inches, about normal. The wettest month was December, and July, August and October had no precipitation at all. Lack of rain until the end of November stopped all fall work and present ideal condition is causing many farmers to plow for spring crops and farmers will put in every acre possible. The greatest drawback or obstacle to contend with is help for harvesting. The fact is every farmer is putting all the crops in he can possibly handle. Scores of our best help have gone and more will leave before harvest, so every nerve will be strained to harvest the 1918 crop.

M. E. SCHRECK.

### "Silver Thaw" in Whatcom.

FERNDALE, Whatcom County, Wash., Dec. 29.—A curious thing has happened in this part of the county. It rained and froze at the same time. The ground was covered with a sheet of ice. Rural mail deliveries were suspended. One day milk haulers failed to gather the milk. Telephone poles and lines broke down under the heavy weight. In some orchards almost every tree has lost half of its branches. Some trees will have to be entirely removed, while others that are not in such a bad condition will have to be cut back and a new head started.

CARL J. MENZE.

### Cut Up Big Tracts.

PORT ANGELES, Clallam County, Wash., Dec. 31.—For Clallam county I consider the most important local question to be solved in clearing off logged-off lands and to further this movement would be a state appropriation for cheap, or free powder to small farmers. Of a national character would be: cutting up big land holdings into smaller farm tracts. The 1918 crop prospects for this section of the country have never been better, due to the mild temperature and so with the condition of live stock and feed for it.

J. P. CHRISTENSEN.

### Will Trust Government.

PORT ORCHARD, Kitsap County, Wash., Dec. 26.—The partial price regulation put on by the government has, in some instances, saved the farmers in this county considerable. It no doubt has helped very materially to keep up the present standard of the poultry and dairy ends of agriculture. Prior to the fixing of the price on wheat the poultry flocks were being most severely culled and many poultrymen expressed themselves as going out of the business. Public opinion as to the government regulation of prices is very favorable here and the people are willing to abide by whatever the government sees fit, if there is necessity for it, but in the fixing of prices on all products sold from the farm care must be taken to keep a market open for such produce to keep the production up to a steady and high standard. The mildness of the fore part of the winter has undoubtedly saved the farmers a great deal in the manner of buying feeds. Young stock up to within the last two weeks has been taking very little, if any, feed. I think the supply of home grown feed ample to carry through the winter. The present price of alfalfa, as shipped in here ($26 to $28 per ton delivered on the wharf), is almost prohibitive to the making of any returns from the common run of cows such as the majority in this county are at the present time. Herds containing good cows, owned and managed by careful men, who make dairying their business and who study and plan to that end, are making a fair labor income. The cattle and sheep men can not well afford to pay the present price for hay and receive any returns for their work.

The only avenue left for them to make a labor income in the business is for them to raise more of their feeds at home and to build silos to put it in. More cattle and sheep should be raised in this county. Climate is favorable and the green, succulent feeds can be very easily and cheaply raised. A great many farmers' sons have gone into the army service. Fifteen have gone from one small neighborhood. In most of the farm homes where a member has left for the front a determination is found to do that member's share of the work.

C. B. SPRAGUE.

### "Our Band Is Broken Up."

STEVENSON, Skamiania County, Wash., Dec. 7.—Our long looked for fall rains have set in and since November 26 has been a pretty general rain and the grass has made quite a growth and no frosts to kill, so far. It will make quite a difference in the amount of feed needed for stock, as pastures are green and grazing is good yet. The price regulation has had quite a beneficial effect on things bought and sold and from what I can learn the consensus of opinion is it would work a benefit if the regulation applied to all principal articles of food, feed and clothing required. The situation as to feed and the supply is about the same, also the price; if any change has occurred the price is higher for hay and straw and last week shorts advanced 15 cents per sack of 80 pounds. About 37 or 40 young men have left this community for the army and navy and the effect is plainly visible in lack of help and influence on the community. Our band is broken up and while the loss in labor is not so badly missed at this season of the year next spring will see a real shortage of labor.

W. T. JACKSON.

### Hay Must Bring $15.

METHOW, Okanogan County, Wash., Dec. 27.—As to what effect the partial price regulation by the government has had on things bought and sold, will say that wheat is the only thing that it has affected, so far, and will say that it has had the effect of steadying the growing of wheat, and if the government would cut out some of the red tape and be more prompt about paying for the wheat it would be all right. Public opinion at present, owing to the embargo on wheat, is against more government regulation. It would be all right to fix the price on products of the farm providing the prices are fixed on all the farmer has to buy. The effect of the mild winter, until the last few days, has been a great saving on hay, as when the thermometer drops to zero it is necessary to feed 50 per cent more hay than when it is at 20 or 30 above. To make a reasonable profit on hay a

## Somebody Is Plundering Public Funds

### *Scandalous Revelations Are Made by Committees Now Investigating*

Astounding revelations regarding army supplies and government shipbuilding were made in public hearings before two investigating committees of the senate at Washington last week. Scandalous disclosures were made of gigantic rake-offs in government contracts and stupendous extravagance. The nation seems on the eve of the most sensational disclosures since the Spanish war.

The senate committee on commerce was probing the record of the United States shipping board, the organization that has been letting gigantic contracts for the building of government ships, and here are some of the facts brought out.

Contracts were let to the Sloan Ship Yards corporation of Seattle for the building of 16 wooden ships for $7,840,000. In his work of investigating the Sloan corporation Admiral Bowles interviewed Mr. Sloan about the item of $400,000 paid to the Clinchfield Navigation company. Mr. Sloan frankly told the admiral, the admiral testified, that he regarded the payment as brokerage or commission for obtaining the $7,840,000 contract.

In other words, some one got $400,000 rakeoff for getting contracts that should have been awarded without one dollar of commission.

But that is not all of it. When the shipping board started its investigation in August John Purse, the district auditor of the emergency fleet corporation at Seattle, was set to work on the books of the Sloan company. In his report as to the Clinchfield Navigation company's connection (which report did not take account of all payments), he says:

"It is further stated that the Clinchfield Navigation corporation was instrumental in securing for Sloan Shipyards corporation the contract for 12 additional Ferris type vessels, for which service they are to receive a commission of 5½ per cent of the contract price, or $323,400. This, together with the profit above mentioned, makes a total of $743,400, which is payable out of the funds received from the emergency fleet corporation."

But these disclosures were overshadowed later in the revelations of the contract entered into by the government with the American International, a company in which the firm of Stone & Webster of Seattle is the chief figure, for the erection of a steel ship fabrication plant at Hog island in the Delaware river, eight or nine miles below Philadelphia. The government advances some $21,000,000 or more to build this plant; in other words, puts up almost the entire capital and running expenses, promising the company as fees a total of $6,000,000, fees on 120 ships, all the costs of building which are to be paid by the government.

While these exposure were being made before the commerce committee, another sensational hearing was being conducted in another room at the capitol by the senate committee on military affairs that is ivestigating the letting of army contracts.

To better understand the government method of letting contracts a brief analysis is needed of the gigantic organization that has been built up under the council of national defense. This national coucil, created by act of congress, is composed of the following members of the cabinet:

Secretary of war, Newton D. Baker.

Secreary of the navy, Josephus Daniels.

Secretary of the interior, Franklin K. Lane.

Secretary of agriculture, David E. Houston.

Secretary of commerce, William C. Redfield.

Secretary of labor, William B. Wilson.

The council of national defense organized a large number of subordinate committees, composed mainly of able and patriotic citizens who volunteered their services without pay as a war-time duty.

It is evident, though from the revelations, that some selfish and designing men worked their way into this splendid volunteer service and used their vantage points to get fat contracts for friends and relatives.

Charles Eisenman, vice chairman of the supplies committee and a retired clothing manufacturer of Cleveland, and Samuel M. Kaplan of New York, one of the dollar-a-year volunteer members, were the principal witnesses. The latter's testimony was confined almost entirely to a contract with the Base Sorting plant, Inc., of New York, of which his brother, Ira A. Kaplan, has a third interest, for sorting army clothing scraps, which was said to promise profits of $400,000 annually. The contract recently was canceled.

Both Eisenman and Kaplan had lively clashes with committee members. Senator McKellar admonished the latter, who resented having his motives impugned, to speak respectfully, and Senator Weeks heatedly declared he was "about as impudent a man" as he had ever seen.

Senator McKellar said the circumstances indicated that Kaplan Brothers were dealing with the government through the witness.

"You were careful to evade the law," the senator suggested.

Senator McKellar turned temporarily to examine Frederick Edington of the supply committee. He said he is a foreign wool buyer for the American Woolen company, still receives a salary from it and is now devoting all his time to the government's interests at $1 a year.

"And your firm gets large contracts from the committee?" asked Senator McKellar.

"Yes," said Mr. Edington, "but the amount has diminished since I came here. I don't think my connection has had any effect on the contracts of the American Woolen company."

In further investigation of clothing and other army supply contracts negotiated by the civilian supplies committee of the council of national defense the senate committee received from Charles Eisenman, vice chairman of the contracting committee, a statement of merchandise bought from firms whose members or employes are or were connected with the committee.

Of supplies worth about $800,000,000 bought during the last eight months Mr. Eisenman's statement discloses that $128,830,000 worth came from such concerns, but that all except $14,830,064 worth was contracted for before the contractors' representatives became connected with the committee.

It is evident, from these revelations, that the whole government system of letting contracts needs overhauling, and to that end Senator Chamberlain of Oregon, chairman of the senate committee on military affairs, has introduced a bill to create a new cabinet member, known as the secretary of munitions, to have complete charge of all war material purchasing. This bill is promised virtually unanimous committee support.

The Farmer does not doubt that President Wilson and his cabinet members are innocent of all complicity in or approval of these monstrous evils. They should have been more vigilant, of course, but even on that ground much can be said in way of excuse, for the work of preparing against the enemy has thrown the government agencies into blinding confusion.

But now that the evils are revealed, it is the president's duty to cast out the rascals regardless of their standing or influence. Plenty of high-minded, honest and patriotic men stand ready to serve the government, and justice to the many splendid men who are now serving demands the casting out of the tricksters and profiteers who falsely garbed themselves in the cloak of patriotism that they might plunder the government and enrich themselves out of its wartime necessities.

## Farm Labor Is Military Necessity

### *Grain Men Urge the Postponement of all Public Work*

(Continued from page one.)

Under the demoralized commercial shipping conditions, Mr. Houser called attention to the increase in freight rates on grain bags from Calcutta from $7 and $8 a ton to $98 to $100, making the bags impossible under these conditions. If only enough shipping could be released to take care of a part of this tonnage, he said, the partial receipts might induce lower rates by commercial companies and solve the situation.

In touching on the subject of screenings and the clamor from the farmers for monetary return on the screenings, Mr. Houser advanced the opinion that all this foreign matter should be eliminated before the wheat is marketed, calling attention to the fact that it costs practically as much to clean the wheat at the terminals as the screenings are worth. "The farmers may be able to get some return from the screenings," he said, "but they should, especially under the bulk system, be able to take care of the thing for themselves."

Mr. Houser touched briefly upon the basic prices offered, declaring that, with government rail control and the added shipping facilities to result from the wholesale construction of ships, these problems would probably take care of themselves.

Mr. Houser urged the farmers who feel that abuses exist in the method of handling their grain to feel perfectly at liberty to register their objections or complaints with his office, stating that full consideration will be given every complaint filed.

"When the grain corporation was started," he said, "it was a good deal like sailing a boat on a sea that had never been charted, and errors were, of course, made." One correspondent, related the speaker, accused him of being friendly with the farmers. To this he replied that the farmer does not need friends in the premises; that he is asking only what he can get and taking what he gets uncomplainingly.

In answer to a statement made by J. C. Lawrence at a recent meeting in Spokane to the effect that committees operating under direction of Houser in Portland and Seattle were costing the farmers thousands of dollars, President R. J. Stephens of the convention stated that his investigations had disproved this. He has found, he said, that instead of costing the farmer money, these committees, which act as a buffer between the shipper and receiver, were actually saving the farmer from 4 to 10 cents on every bushel of such wheat inspected.

Mr. Houser's speech will be printed in full in the pamphlet containing the proceedings of the convention.

**Twelfth Convention.**

Although the attendance was disappointing the twelfth annual convention of the Grain Growers, Shippers and Millers' association of Washington held at Washington State college January 3 to 5, inclusive, was one of the best in the history of the association. The papers read, the addresses made and the discussions were all of importance and of interest to men engaged in producing and handling wheat. In order that the proceedings might get before the people and the farmer, in particular, the press of the state has been especially requested to give all the publicity possible to the work of the convention. No previous convention developed deeper thought or more intelligent cooperation between the various interests and a determination to do all within the power of the producer, the shipper and the miller of wheat, the great staff upon which the armies of the allied powers are depending to win the war, was shown throughout the convention.

Every phase of the important industry was discussed. Every obstacle to maximum production and minimum cost of handling and rapidity of delivery to the points where most needed, were given attention. The fear of labor shortage preventing a full crop being produced this year was expressed by all and steps taken to prevent it or to reduce its effects to the minimum.

**Officers Elected.**

Huston McCroskey of Garfield was elected president; Dr. E. Maguire,

(Continued on page seventeen.)

## Agricultural Council Plans.

During the last month all of the committees of the Cowlitz county agricultural council have met and made up their report for the February 2 meeting of the council, to be held at Kelso. The work of the committees has been to outline the farm problems coming under their division of farm operations in the county. With this outline as a basis they have recommended the one or two most important problems to be used as the nucleus of the council and county agent work for the coming year.

When the council meets on February 2 it will consider the reports of the committees and if such are satisfactory plans will be outlined for carrying out of the projects, says Lyman S. Keyes, county agriculturist. Thus it is that the farmers of Cowlitz county are becoming a large factor in the development of more productive farming practice in the county.

## DON'T HOARD WOOL.

### Wool Bureau Appeals to Growers.

Because the country needs wool, the National Sheep and Wool bureau is urging owners of wool clips not to hoard their wool. A resolution recently adopted reads in part:

"Knowing that there are individuals throughout the country who are at the present time hoarding wool and holding back as much as two or three years' clip, with the apparent purpose of getting still higher prices for their wool, and realizing the need of the country for wool and, in harmony with the feeling in general that any sort of hoarding is unpatriotic, be it

"Resolved, by the board of governors of the National Sheep and Wool bureau that this bureau goes on record as disfavoring any such practice and that a copy of this resolution be forwarded to the United States Council of Defense and to the various state councils of defense, with the request that such councils do everything within their power to stop this practice."

# Swat the Dog? Put a Tax on Him? Yes! No!

## *Mr. Martin Started Something When He Suggested the Elimination of "Useless" Canines*

Two stupendous problems have been brought to the attention of the public through the publication recently in The Farmer of an interview with J. M. Martin, a farmer of Colfax, Wash., in which he advocated ruthless warfare on useless dogs. Problem No. 1, What is a "useless" dog? Problem No. 2, Should he be eliminated?

St. Bernard.

Mr. Martin recommends a law placing a high tax—$10 to $50 annually—on all dogs, so that the dog that had no real value would soon have no master, either. Judging from letters received by The Farmer, there are those who agree with him and there are those who do not. Here are sample letters:

**Dogs Must Perform Labor.**

To the Editor: I fully indorse Mr. Martin's proposition; but, first, what is a useless dog? This will bring out a diversity of opinion, but in my opinion all dogs that are not actively employed in productive labor should be brought under this head. Of course, I know I am treading on dangerous ground, and something is going to pop, especially in the neighborhood of the dog fancier and the sportsman—two of the most useless classes of dogs on the face of the earth, and, as a rule, the best fed. If I had my say about the only dog that would find himself exempt from facing the firing squad would be the sheepman's faithful animal.

**To My Dog, Blanco.**

I look into your great brown eyes
Where love and loyal homage shine,
And wonder where the difference lies
Between your soul and mine.

I do not approve of the license system. That only gives the wealthy an opportunity to protect the worthless while it works a hardship on the sheepman, who must of necessity keep a number of dogs, and the poor boy in the large city, who uses the dog as a beast of burden.

It is surprising the distance the dog will sometimes travel at night to effect his work of destruction on sheep, pigs and oftentimes attacking cattle and other domestic stock. A recent experience of my own is as follows: The first of this month the wire netting in front of my pen of Belgian hares was out, and 10 fine young does I was keeping for feeding were killed. Realizing that Mr. Dog would be back again to wreak havoc in some other of my pens, I set traps for him. The next morning I had a fine specimen of the shepherd type in one of my traps. The poor fellow ran his head against an uncompromising obstacle, and he died. A few days later I was notified that a man living about seven miles away was offering $50 reward for the person who had stolen or killed his dog. I at once wrote to him, telling him where he could find all that was mortal of his dog. But as yet he has not come through with his dough.

Prosser, Wash. JOHN DUNHAM.

**Protect the Good Dog.**

To the Editor: In answer to Mr. J. M. Martin's "Dog Tax," good men should not be condemned because some men are bad; ditto dogs. I have a four-pound dog, 13 years old, that has never been 160 rods from the house in 13 years. The food she consumes would not help a dying Belgian catch his last breath, and here a man wants me to pay a $50 tax on that dog. My six children have had hours of comfort playing with little "Twig." Kill the dogs that need killing and allow a man's true friend his liberty. Always in behalf of the good dog.

Bulldog.

J. H. ALLEN JR.
Richester, Wash.

Boston Terrier.

**Raise Pigs Instead.**

Open letter to J. M. ("Roe") Martin and J. E. Nessley, Colfax, Wash.

I notice your communication in regard to useless dogs. I am with you on this subject and I will tell you my reasons for being so, from the standpoint of a farmer.

It is a fact that a dog or dogs on the farm worry milch cows and calves more than their owners realize. A cow is a mother and has that mother nature that is always looking out for their young; and a calf is an infant, fearful of all the canine kind. Where a farmer has a dog or dogs, if he would keep a strict account he would find at the end of the year a substantial loss in butterfat and beef to be charged up against the dogs.

The dog roams at night and eats on the carcasses (and rolls in them) of dead animals; he comes home and plays with the children and blows his foul breath in their faces. A charge must here be made on account of doctor bills.

The dog roams over the country at night and about other farms and attracts other dogs from ill-kept places and carries any contagion or disorder to his master's herd.

The dog has foul habits in and about the garden and is likely to render the lettuce and cabbage unfit for use. Almost any physician will tell you that the dog is very subject to taenia, and the avum of the taenia is abated only with the most strenuous washing.

Collie.

A prospective buyer for my herd sire seemed pleased with the animal and has not yet shown dissatisfaction with the price, when he asked if he was clear of disorders. My answer was, "I don't know, sir." He looked at me quick and sharp. I then told him that I had used the greatest care and went to extra expense in the way of preventives, antiseptics, etc., and so far he had shown no sign of any disease, but I could not guarantee him free, as no man can do that as long as the country is overrun by stray dogs. His countenance assumed a serious aspect;

**It makes no difference if he is a houn',**
**You've got to quit kickin' my dog aroun'.**

his teeth closed tight together; his visit was short, and I have not seen or heard of him since. He had just bought a bunch of $350 to $500 heifers and was looking for a sire to mate them.

The magnitude of the indiscretion manifest by the people of our nation by feeding dogs instead of a like number of pigs, and at a time when the country is so sorely in need of the bacon and hams for its army and navy, to say nothing of home supply, is remarkable. It would be interesting to estimate how much money we have invested in dogs in the United States. Let us figure a little: Say 100,000,000 people equals 20,000,000 families; one dog to a family is 20,000,000 dogs. Those families that do not keep a dog will be offset by those that keep two or more; so we have 20,000,000 dogs instead of 20,000,000 pigs of, say, 100 pounds each, at a value of $15 per pig. This equals $300,000,000 invested in dogs. A. J. WILLIAMSON.

Cocolalla, Idaho.

## From Time Out of All Memory the World Has Delighted in the Horse

From time out of all memory and history the world has delighted in the horse. What man is there who does not recall the childish thrill of that never-to-be-forgotten adventure when elder hands lifted him astride a friendly steed and a shiver of exquisite joy ran the length of his little spine when he felt the heaving sides of his first mount beneath his tiny legs?

Here was his first lesson in mastery, in courage. For the few brief moments of that delectable ride from the roadway gate to the barn he felt himself a boyish knight, eager to fare forth and conquer the vast, mysterious world.

Or that later event, when grown amazingly in worldly knowledge and boyish strength, he was allowed to call one horse upon the farm his very own?

More than any other single factor the horse has glorified country life and made endurable the isolation of the farm. But now, alas, old times are changed, old manners gone, old sentiments going into the discard. Scientific gentlemen are telling us the horse must go because he is a meaace to our health.

Dr. Charles F. Bolduan of the health department of the city of New York, has declared a crusade for the abolition of the remaining 10,584 stables in that wicked town.

> "We have recently completed a census of the city on the horse question," said Dr. Bolduan, "and have found that there are 108,036 horses in New York, with more than 55,000 of them in Manhattan and 35,000 in Brooklyn. There is no question but that the public health would be benefited if the present owners of horse drawn vehicles would make the change to motor trucks. The motor truck will do all and more than any horse can do.
>
> "Aside from the fly breeding possibilities of all stables and the odors which accompany most of them, especially in the poorer parts of the city, there is an ever present danger from a glanders epidemic, a disease which works havoc among the horses and is sometimes communicated to man, with fatal results in most cases."
>
> Dr. Bolduan added that the decrease in the horse population of all the larger cities had been noticed by the health authorities everywhere and had been welcomed as a most encouraging sign. The time has come, however, for his banishment. He said that the decrease in many diseases is believed to be due to the fact that the public is becoming educated in combatting the fly menace and that as the old style stable disappears the fly will, in a large degree, disappear with it.

But isn't there such a thing as paying too great a price for the new life that is to be all machinery driven and science ruled? We take note that the heads of the great insurance companies are more concerned just now over the increasing risks of automobile accidents than over this possible danger of association with Friend Horse.

Life will lose much of its ecstacy when the scientific monitors are given their full sway. The horse, the dog, the family cat will be banished then. The mother may not kiss her child nor the lover embrace his girl. We shall all be wearing gloves and breathing through screens, and taking a hundred other precautions that will be a constant reminder that disease and death are lurking everywhere. In a word, life will be so closely guarded that living will hardly be worth while.

Command us to place our stables right and keep them wholesome and clean, for that is sensible and in reason. But don't demand the utter extinction of the horse. Leave us a little sentimet and gratitude in this dazed and upset world.

N. W. Durham.

## For Animal Relief

### Special American Society Formed

For the purpose of contributing to the welfare and comfort of animals in this trying period an organization has recently been formed, known as the American Red Star Animal Relief society. It was organized at the request of the secretary of war and will be conducted under the auspices of the American Humane association.

There is at present in Europe, though working largely with European problems, a well organized dumb animal hospital system following in the wake of the armies much as the Red Cross hospital system serves the soldiers themselves.

The American Red Star Animal Relief would act in a similar capacity to the American forces, maintaining supplies and stores behind the lines, providing ambulances and hospitals as required and generally rendering service by meeting the exigencies of the campaign. To the American forces this service would be more valuable than even to the British, because the Amer-

(Continued on page twenty-eight.)

**Beans on Virgin Soil.**

To the Editor of The Washington Farmer: I found in 1917 we could produce one ton or more beans per acre from virgin soil, the sagebrush being removed and ground put in shape and beans planted. Of course this is an irrigated section and beans will stand considerable water. We had better success with a pink bean, called The Yakima Pink, and they are a much better bean than the navy beans. When cooked they turn brown. These beans we sold this fall for 10 cents per pound, bringing the returns for one acre of $200.

Beans do better on the heavier soils, they do not seem to produce as well on sandy land. There are thousands of acres in this valley that could be cleared and put into beans this next season of 1918. I will be glad to answer any other questions relative to the bean proposition with stamp enclosure.

L. N. FRY.

Allard, Wash.

# Washington Food Production, 1918

## *What the Farmers of the State Are Planning to Raise Coming Season*

Answers to the question, "What Is Your Utmost?" are beginning to come in from all over the state. The Washington Farmer is confident that this survey will be read with great interest. This instalment is only the beginning. If you have not already sent in your answers, fill out the coupon given on this page and mail it at once.

**Spring Wheat on Stubble.**

To the Editor of The Washington Farmer: I am very seriously considering the disking of some 1200 or 1500 acres of stubble and sowing it into spring wheat. I have consulted with some of my friends who are experienced farmers and who have resided in this district for 25 or 30 years and they say that considering the very unusual open winter and the excess amount of precipitation that there is a very fair chance of getting a crop of spring wheat by this method of farming. I have something like 400 acres of summerfallow that I am putting in, but if I can be reasonably assured that I can get a return on my money invested (in view of the very urgent demand for increased production), I am planning to take a chance and put in an additional 1200 or 1500 acres by the method which I have mentioned. Some of my friends tell me that they have in times past obtained very good results, and I think under the circumstances that I am justified in taking the chance.

I think it might be well for a great many of the farmers, especially those in the lighter land districts, to give this matter serious consideration. It might be the means of adding a million or a million and a half bushels, or possibly twice as much, to the 1918 crops of the Inland Empire.

J. C. CUNNINGHAM.

Spokane.

**Women and Girls Helped.**

To the Editor of The Washington Farmer: When Cherry Lane orchard was started practically the entire area was set to fruit trees, this of course, fixes it so that our principal crop must be fruit. We have almost all of the orchard seeded to alfalfa, which gives us enough hay so that we can now feel able to plow up our alfalfa field and grow potatoes and corn. As for the orchard it is kept up in the very best of shape in every respect.

A large number of men have been called to the colors and millions more must soon be called, the proportionately small number that has already gone are easily missed by farms who require hired labor in gathering their crops, in fact from observation, I am inclined to think that women harvested more than half of the fruit crop in the Yakima valley this year. We marketed 27,000 boxes of big fruit this year besides cherries and grapes, we were unable to get men to do the work, and if it had not been for the large number of women and girls who helped in this sort of work as a patriotic duty it is doubtful if half of the crop could have been saved.

Labor another year is bound to be scarcer and if the crops are to be gathered a very substantial amount of help must be given by women and young folks, I think the press especially should be mindful of this situation and make every possible appeal to the women, to do whatever they can in the matter of growing or gathering food crops.

H. C. BENSON, Manager.

Prosser.

**Little Children Help Out.**

To the Editor of The Washington Farmer: One more day's work then I can say that the biggest year's work ever accomplished by one family of three little children, five, nine and eleven years old, has been produced here in Chimacum valley. Not one day has been lost in the year. Our farm consists of about 70 acres mostly bottom land that requires a great deal of ditching and rooting every spring or fall when the crops are prepared for. Knowing help would be hard to get and feed very high, I ordered a 75-ton silo, a seven-horsepower gas engine and a silage cutter and blower. The next thing to make sure of was the crop to fill my silo and barn with feed for my stock. By the month of June four men had left me for higher pay and shorter hours. I talked the matter over with my wife that we would have to do our best without men, and she decided to do the milking. With a determination to win, the whole family went to work. Morning and evening two little girls turned out and tied up 22 head of cows, while the boy hitched and drove the horses, harrowed and took a man's place to help with the crops. It was fun for the children and they have learned a great lesson, to love the stock and farm. I succeeded in getting a man and neighbor to put in the hay, then there was the silo to build, and was able to get a man for one day. So myself and son, completed the job with a 20-foot foundation. My wife painted the lower half. My little girl of five would climb to the top, drive in bolts and tighten them without any fear of danger. We have succeeded in raising the following crops for the silo, oats, peas, vetch, barley, wheat. September 15 we commenced to fill the silo and after waiting about 20 days for the machinery, several neighbors were very kind in helping me with the work. I expect to open the silo now in a few days. We are all true Americans and have the same determination to win the war.

P. M. WRIGHT.

Chimacum.

**Will Work Early and Late.**

To the Editor of The Washington Farmer: We who have the interest of humanity at heart can readily see "American's big business is war," but only a few seem to realize it as yet. Some of the boys who succeeded in obtaining exemptions rejoiced at their good luck, as they called it, and now they are to be brought up again for another trial and some of them will go. Every man, woman and child should be a member of the Red Cross, and we are glad of the number, but too many are indifferent. We believe each able-bodied man, within the age limit, should be called regardless of his occupation. These farms will be tilled by someone. Many men who have not handled a team for years, can and will get into the field rather than leave their land idle. We can not win against such a foe unless we have men and they must be the best of our boys, and the sooner they are trained the less number it will take. I am too old to go, but I can work early and late to help care for the boys who fight for me and mine.

A. O. LEE.

Othello.

**Summary of Coupons.**

Here is a summary of the coupons so far received:

A. O. Lee, Othello, Wash.: MORE wheat, rye, potatoes, hay and swine.

L. J. Goodenough, Hatton, Wash.: MORE wheat, rye, potatoes, hay, beef cattle, swine and poultry; LESS dairy cattle.

J. L. Ankrom, Cheney, Wash.: MORE wheat, oats and corn.

C. E. Cox, Kennewick, Wash.: MORE corn, vegetables, hay, dairy cattle and silage; LESS horses.

Martin Penhallick, Neppel, Wash.: MORE vegetables, fruits, alfalfa, beef cattle, swine, carrots; LESS potatoes.

S. W. Batty, Wauna, Wash.: MORE wheat, corn, potatoes, peas, beans, vegetables, hay, beef cattle and swine; LESS fruits.

John Klingele, North Yakima, Wash.: MORE corn, peas, fruits, hay, dairy stock, swine, carrots and mangels; LESS potatoes.

D. W. Wallace, Mica, Wash.: MORE wheat, oats, barley, rye, corn, vegetables, fruits, dairy stock, poultry, carrots, mangels, artichokes and silage; LESS potatoes, hay, horses and swine.

Chriss Krogness, Quincy, Wash.: MORE wheat, corn, potatoes, vegetables, horses, poultry and carrots.

Eureka Ranch company, Cusick, Wash.: MORE wheat, oats, potatoes, hay, horses, beef cattle, swine and poultry.

L. N. Fry, Allard, Wash.: MORE wheat, oats, rye, corn, peas, beans, vegetables, hay, beef and dairy cattle, sheep, swine, poultry, carrots, mangels, turnips and silage; LESS potatoes.

S. J. Gross, Kelso, Wash.: MORE wheat, corn, potatoes, peas, vegetables, hay, horses, beef cattle, sheep, swine, poultry and artichokes; LESS oats, barley, beans.

Cherry Lane Orchard, Prosser, Wash.: MORE corn, potatoes, beans, hay, sheep and poultry; LESS horses, beef cattle and swine.

John Hopp Jr., Odessa, Wash.: MORE wheat, oats, potatoes, beans, fruits, beef and dairy cattle, swine, carrots.

J. C. Jantz, Ruff, Wash.: MORE wheat, potatoes, dairy cattle, swine.

C. A. Lester, Centerville, Wash.: LESS oats and barley, and usual amount of other things.

G. W. Wilgus, Prosser, Wash.: MORE potatoes, corn, peas, beans, vegetables, fruits horses, sheep, swine, poultry, carrots, mangels, turnips; LESS sugar beets, horses, beef cattle, dairy cattle and rutabagas.

W. A. Meister, Pullman, Wash.: MORE wheat, corn, potatoes, peas, beans, vegetables, fruits, hay, horses, dairy stock, swine, poultry, carrots and turnips.

J. S. Klemgard, Pullman, Wash.: MORE wheat, oats, barley, swine.

John E. Nicherson, St. John, Wash.: MORE wheat, barley, potatoes, beans, vegetables, horses, swine, poultry, carrots, mangels and rutabagas.

E. B. Capell, Mead, Wash.: MORE wheat, barley, corn, potatoes, peas, beans, fruits, hay, beef and dairy cattle, swine, poultry, carrots, rutabagas, and silage; LESS oats, rye, sugar beets, vegetables, horses, sheep.

E. J. Schnase, Colton, Wash: MORE wheat, barley, corn, potatoes, peas, vegetables, fruits, hay, horses, beef and dairy cattle, swine, poultry, carrots, mangels and turnips; LESS rye.

W. J. McDonald, Cheney, Wash.: MORE wheat, oats, corn, potatoes, peas, beans, vegetables, fruit, hay, dairy stock, swine, poultry, carrots, and rutabagas.

R. L. O'Hare, Boundary, Wash.: MORE wheat, oats, barley, peas, dairy cattle, swine, poultry and silage; LESS beef cattle, carrots, mangels, rutabagas, turnips and artichokes.

Harvey Herndon, Silcott, Wash.: MORE wheat, barley, rye, potatoes, peas, eans, horses, poultry; LESS hay, beef cattle and swine.

Leslie D. Herndon, Silcott, Wash.: MORE wheat, barley, rye, potatoes, beans, horses and poultry; LESS hay, beef cattle and swine.

Joe Turner, Meyers Falls, Wash.: MORE oats, hay, beef cattle, sheep and silage.

G. B. Sharinger, Snohomish, Wash.: MORE hay, sheep, silage; LESS dairy cattle.

R. V. Peringer, Belmont, Wash.: MORE oats, barley, potatoes, peas, poultry; LESS swine.

Edward Thomas, Cheney, Wash.: MORE oats, potatoes, vegetables, hay, dairy stock, poultry, carrots, mangels.

Kreps Brothers, Laurel, Wash.: MORE wheat, oats, rye, potatoes, vegetables, fruits, hay, beef cattle and poultry.

John Everett, Alderdale, Wash.: MORE wheat, rye, potatoes, vegetables, hay, horses, dairy and beef cattle, sheep, poultry.

W. T. Jackson, Stevenson, Wash.: MORE oats, peas, beans, hay, dairy cattle, poultry, carrots; LESS potatoes, vegetables, turnips.

P. M. Wright, Chimacum, Wash.: MORE wheat, oats, barley, potatoes, peas, beans, vegetables, fruits, hay, dairy cattle, sheep, swine, poultry, carrots, mangels, rutabagas, turnips and silage.

Mary Kimer, Sequim, Wash.: MORE wheat, oats, potatoes, peas, hay, dairy cattle, sheep, swine, mangels and silage.

James C. Cunningham, Spokane, Wash.: MORE wheat, peas.

Andrew J. Colhoun, Spring Valley, Wash.: MORE wheat; LESS horses, dairy cattle.

George McCroskey, Pullman, Wash.: MORE turnips; LESS wheat, oats, beef cattle, dairy cattle.

N. D. Johnson, Quincy, Wash.: MORE wheat.

Eli B. Robinson, Shelton, Wash.: MORE wheat, vegetables, swine, carrots, mangels, rutabagas; LESS dairy cattle.

Julius M. Fisk, Spring Valley, Wash.: MORE carrots, mangels; LESS swine.

William Bishop, Chimacum, Wash.: MORE wheat, oats, barley, rye, potatoes, peas, vegetables, hay, beef and dairy cattle, swine, carrots, mangels, rutabagas, silage.

J. E. Gibson and Son, Quincy, Wash.: MORE wheat, potatoes, hay, dairy cattle, swine.

S. A. Weipert, Waukon, Wash.: MORE wheat, oats, barley, corn, potatoes, vegetables, fruits, hay, horses, cattle, swine, poultry, carrots, mangels.

C. S. English, Camas, Wash.: MORE wheat, corn, peas, beans, beef and dairy cattle, swine, poultry, silage; LESS potatoes.

J. E. Reynolds, Guler, Wash.: MORE wheat, oats, corn, potatoes, vegetables, hay, beef and dairy cattle, swine, poultry, rutabagas, turnips.

George Bertrand, Castlerock, Wash.: MORE wheat, oats, barley, peas, fruits, hay, Shorthorn cattle; swine, poultry, silage; LESS horses.

A. E. Randall, Meyers Falls, Wash.: MORE wheat, oats, barley, corn, beans, vegetables, beef cattle, swine, poultry, carrots, mangels.

W. C. Halsey, Jerry, Wash: MORE wheat, barley, potatoes, horses, beef cattle, sheep, swine.

A. C. Borchen, Pateros, Wash.: MORE wheat, oats, corn, potatoes, peas, beans, vegetables, hay, horses, dairy cattle, swine, poultry, carrots, turnips.

H. P. Denis, Addy, Wash.: MORE wheat, oats, barley, potatoes, sugar beets, vegetables, hay, beef and dairy cattle, swine, poultry, mangels, rutabagas; LESS horses.

Peterson Bros., Espanola, Wash.: MORE wheat, oats, barley, beans, hay, dairy cattle, silage.

Charles Rumbolz, Malott, Wash.: MORE wheat, oats, potatoes, vegetables, fruits, hay, poultry, carrots; LESS sugar beets, cattle, swine.

August Larsen, Wapato, Wash.: MORE wheat, corn, potatoes, beans, vegetables, fruits, horses, dairy cattle, sheep, swine, poultry, mangels, silage; LESS oats, barley, hay.

B. L. Lyons, Odessa, Wash.: MORE vegetables, hay, dairy cattle, poultry, sheep.

### WHAT IS YOUR UTMOST?

Are you planning to raise more or to raise less of wheat, oats, barley, rye, corn, potatoes, peas, beans, sugar beets, vegetables, fruits, hay, horses, beef cattle, dairy stock, sheep, swine, poultry, or for feed carrots, mangels, rutabagas, turnips, artichokes, silage?

Please fill out this coupon, sign your name and postoffice address and mail to the Editor of The Washington Farmer, Spokane, Wash. Your name will be held in strict confidence if you so request.

I am planning to raise this coming season:

More of .....

.....

Less of .....

.....

# Federal Farm Loan System Sound

## *Secretary M'Adoo Is Positive All Attacks Will Fail*

Secretary of the Treasury McAdoo is positive that the efforts of enemies of the federal farm loan system to break down that institution will fail. In a public statement he says:

"We are advised that the next move of those who are seeking to break the system down will be to institute a suit contesting the constiutionality of the farm loan act. The purpose of this suit will be to alarm investors who have already bought bonds and to dissuade others from buying them. There is not the slightest reason to fear it, however. The constitutionality of the act has already been passed upon by the attorney general of the United States and by former Supreme Court Justice Hughes, who examined it critically for a group of banking houses who were not willing to recommend the bonds to their clients without disinterested opinion from eminent counsel of their own selection. The system is so strong and its administration is of such paramount importance to the agricultural development of the country that attacks upon it are bound to fail. It is only proper, however, that this warning should be given, in order that the farmers and all friends of the system should grasp the sinister purpose that is behind these attacks."

Mr. McAdoo says that while bankers and farm mortgage companies generally are not hostile to the system, there is "a small minority of farm loan men and country bankers bitterly opposed to it, and these interests have been waiting for an opportunity to attack it. Knowing perfectly the conditions under which the business is done, they now think they have found their coveted opportunity to attack the system. Their first step has been to in-

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Make All Energy Effective

There is one resolution that every man and woman in America should be starting out this new year of 1918 with: That every ounce of energy be expended in a way that will serve some real purpose in the world's great crisis.

Much is heard these days about American wastefulness. Foods and soils and fertility and money are wasted recklessly. But by far the greatest of America's waste is her lack of use or her misapplication of energy.

Where is the man or the woman who expends his or her energy with the degree of judgment that should be exercised? How many times is it the case that one's weariness at night fall is due to activity of one kind or another that was not productive of beneficial results?

There are thousands of men and women who overwork, who actually expend more energy than they should. But of this number there are few who accomplish results commensurate to their exhaustion. Well defined plans of work would enable such workers to secure better results with less bodily and mental weariness. The exercise of physical and mental control at all times would avoid much useless expenditure of energy.

There are many people who are too lazy and shiftless to expend their energy even wisely. To such no appeal can be made except to come out of their lethargy and be workers instead of drones. But to the thoughtful, ambitious man and woman, the appeal to systematize in the use of their powers should not fall on deaf ears. To them the call is not to more work, but to more efficiently directed work. To misapply energy is to lose it almost as certainly as not to apply it at all, and the world can not afford to lose energies in these trying times.

## Automobile a Utility Machine

In these days of congested freight traffic on the railroads, it is well to remember that automobiles constitute a secondary line of national transportation. It is estimated that there are 4,200,000 automobiles in service in the United States, of which approximately 1,750,000 are in the hands of the farmer. It is safe to say that practically all these automobiles on the farm are used the greater part of the time for utility purposes. Even in cities probably 70 per cent or more are used for transportation uses, conveying people from one place to another on business or professional errands.

In view of these facts it is unfortunate that the automobile has been referred to as a pleasure car as though that was its chief use and that therefore its further manufacture during the period of the war should be seriously curtailed. Facts indicate on the other hand that in this country the automobile has become as big a utility as the telephone or electric light; that in place of its being manufactured largely for the use of the rich, 90 per cent of the output of the country has been represented in motor cars selling at less than $900.

Moreover, in these days when high wages for industries are making an appeal to the young man left on the farms and when food production itself has become the biggest war necessity, it is well to remember that the automobile has had much to do with the reconciling the young man to farm life and keeping the family together on the farm. In this sense even its occasional use as a pleasure car contributes materially to the farming industry.

## Are You Using Your College?

In your state there is an agricultural college, experiment station, demonstration farm and the like that you, as a farmer and citizen of the state, are helping to pay for. Whether you realize it or not, that institution is helping you in your farming problems, but is it helping you as much as it might? Are you accepting all that it offers you? If not, don't criticise it or the taxing authorities for taxing you to help support it. Don't criticise it for not doing more for you until you have accepted and put to use all the information that it offers you. Not only is it offering practical and full education to you or your sons and daughters, but it is making special effort to serve you with as little loss of time from your business as possible. It is offering winter schools of several weeks when your farm work is least confining; it is running demonstration trains to as many communities as possible; it is offering "farmers' week" for both men and women. In some instances, actual correspondence education is obtainable, and the heads of the various departments are always ready to answer your questions. It is likely that your own state college costs you only a few cents a year, yet it offers service worth hundreds of dollars to you. Are you accepting this service?

## Plan Your Gardens Now

There are always larger crops grown in the winter than at any other season of the year, and furthermore they are grown on paper by lamp light. But those grown on the soil are frequently the result in considerable part of the "paper" crop produced around the family table on winter evenings. This is especially true of farm gardens. The garden can not be grown successfully without a plan. One can not go out into the garden lot and plant a couple of dozen packages of seed, go away and forget it and have a garden. One must know the habits of vegetables—their planting times, their length of seasons, their soil and cultivation requirements. Now is the time to learn these things about the cabbage and turnips and beans and peas and many other things that should be grown in every farm garden. Now is the time to draw a sketch of the garden plot and lay it off in pencil rows. There never before was greater need for production of garden stuff than this year. A good garden means good meals and good health for the home family, and more wheat and meat for the soldiers of America and her allies.

Another "day" is to be added to the calendar, namely, Potato Day, if the food administration's plans are carried out. It is the aim of the administration to have potatoes served in every home in America every day. "An apple a day keeps the doctor away," says the old adage. Without depreciating the apple, let's quote the revised version: "Potatoes each day keep the kaiser away."

Announcement has been made that Argentina has contracted to the allies two and a half million tons of wheat and that this wheat will be made into feed and flour in the United States. This should have one advantage—the leaving of a considerable quantity of mill feed in this country.

## Washington Gleanings

An experiment recently undertaken by the poultry division of the state college at Pullman is to work out poultry-feeding rations dispensing entirely with meat.

Dr. Isa Tanimura, commissioner of live stock for the Japanese government, is in Seattle laying plans for the purchase of 10,000,000 head of sheep for his government.

A blue ribbon cheese donated by Manager Harry Doherty of the Hardwood cheese factory was put up at auction at the Red Cross rally at Harwood and brought in $61.70.

Byproducts factories in North Yakima, Kennewick and Selah have in 1917 paid farmers for fruit and vegetables over $300,000, and the value of the finished product will exceed $1,000,000.

J. H. Cronkite of Trinidad, who has six acres of bearing orchard, one-fourth Jonathans and three-fourths Winesaps, got a gross return of $3650, having sold his crop of 2300 boxes at $1.60.

The Northwest Livestock Conference and the Spokane Chamber of Commerce are joining in an effort to secure a reasonably full report on the livestock holdings of the Pacific Northwest before the second annual Northwest Livestock conference, to be held in Spokane on February 21, 22 and 23 of 1918.

The general welfare committee to work in conjunction with the government in solving farmers' problems has been appointed by President B. F. Brewer of the farmers' union at Walla Walla, with W. H. Kirkman chairman and A. C. Moore secretary. The first problem will be that of the bulk handling of grain.

The Utah-Idaho Sugar company has handled in the manufacturing season about to close approximately 65,000 tons of sugar beets, which represent the first crop grown in the Yakima valley. According to statements made by the company officials this is the largest crop ever handled by them in any territory.

The Methow valley has shipped 80 carloads of beef cattle this fall, valued at $160,000. It is stated that between 40 and 50 carloads are yet to be shipped between now and spring. Twenty-five cars of hogs, valued at $25,000, and 295 cars of sheep, valued at $737,000, have left the valley. The total output of the valley for 1917 is about $1,000,000.

Farmers have voted that they would do their utmost to insure the planting of 300 acres of sugar beets near Kittitas and 300 acres tributary to Ellensburg if the Idaho-Utah Beet Sugar company now operating at Yakima would agree to put in an automatic dump at each place and the Milwaukee and Northern Pacific railroads would agree to make a special connection between their lines near Kittitas.

## What Others Say

Farm and Fireside: This one fact we might as well realize, once and for all: The prices of farm produce—whether meat, corn, poultry, milk, or potatoes—can not consistently be lowered to any considerable extent until there is a gradual lowering of all prices, including shoes, machinery, and other manufactured products.

Rural New Yorker: Those who say that bread and meat will be cheap are either childishly ignorant or else demagogues trying to fool the people. Food will continue to be high, and there is just one hope for a fair and needed adjustment of society. That is to see that more of the consumer's price goes to the actual producer.

Kimball's Dairy Farmer: It is time for every one of us who has been permitted to remain at home to take a thorough inventory of his obligations, which are his opportunities, and resolve that he will begin today and with all the strength and knowledge he possesses increase his efforts and improve his methods in the one or two, yes, in the dozen or score, of instances where he finds a possibility exists for doing so.

Ohio Farmer: The efficient farmer is the one who seeks the reason as well as the best method of applying work to bring the result. He asks both how and why, but he makes sure of the how and exerts every effort to get the work done so as to have a crop to sell or to feed. He is the really practical, scientific farmer. He has the advantage of knowing what to do in case of emergency—when he is confronted with a new set of conditions—because he has studied why things should be handled in a certain way, as well as the method itself—the "how" of it.

# EDISON'S LIFE-LIKE PHONOGRAPH

*Model 50, Edison Diamond Amberola*

## THE *NEW* DIAMOND AMBEROLA

Don't miss this opportunity! We have made special arrangements with the Edison Laboratories, and have secured the personal consent of Thomas A. Edison, the master inventor, to offer you the use of one of Mr. Edison's 1918 Model New Diamond Amberolas and any twelve of the famous Edison Records in your home ON FREE TRIAL for a period of three days. The reproducer of the New Diamond Amberola is the genuine Edison Diamond-Point reproducer. The records we offer are the famous Edison Blue Amberol Records that are almost unwearable and unbreakable.

Don't hesitate one moment to mail the coupon at the bottom of this page and find out all about the

## ABSOLUTELY FREE TRIAL OFFER

which permits you to have Thomas A. Edison's marvelous invention, the New Diamond Amberola, on trial in your home without costing you one cent or obligating you in any way.

Once you have Mr. Edison's wonderful Diamond Amberola in your home you will never let it go out again, so real, so life-like are its reproductions. It is hard to believe that an invention can be so nearly human. When you come in from the fields or home from town all tuckered out, and when the evening meal has been cleared away, you go into the sitting room and put a record on the Amberola. At the first note of Anna Case singing "Annie Laurie," Albert Spalding playing "My Old Kentucky Home," or any other favorite melody, you settle down in your favorite chair for an evening of the keenest enjoyment. No need to go outside for entertainment—you can have your fill right under your own roof and it won't make any difference to you whether it is as cold as Greenland or whether there is a blizzard raging outside. You run the whole show to suit yourself. Why longer deny yourself this delightful, inexpensive entertainment and recreation?

### HOW TO GET THE AMBEROLA ON *FREE TRIAL*

Look over the list of dealers below, and pick out the name of the one nearest you. Fill out the coupon and mail it to him. He will send you the beautiful Amberola booklet, "A Master Product of a Master Mind," and the Blue Amberol Record Catalog, from which you may select the instrument you prefer and any twelve records for FREE TRIAL. If, after you have tried them, you feel that the enjoyment the Amberola gives you is worth more than the small amount you would have to part with to keep it, you may remit in cash or arrange convenient terms with the dealer. If, for any reason whatever, you do not care to keep the Amberola and records, simply notify the dealer, who will cheerfully take them back. You risk nothing, you do not obligate yourself in any way. RESOLVE NOW that you will not turn this page before you have filled out the coupon.

***You'll want the beautiful booklet, "A Master Product of a Master Mind," anyhow. It is FREE. Just ask for it.***

### Music You Can Have with the Amberola

Here are a few selections taken at random from the Edison Blue Amberol Record Catalog. They will give you an idea of what a treasure-house of music you will have to draw on when you get your Amberola.

**ACCORDION**
Amoureuse Waltz
Carnival of Venice—Variations
Italian Army March
My Sweetheart Waltz

**BAND**
American Eagle March
Aida March
Coronation March—Prophete
Father of Victory March
Gems of Scotland
Invitation to the Waltz
Jolly Fellows' Waltz
Loin du Bal
March Religioso
Medley of War Songs
Messenger Boy March
Sextet—Lucia di Lammermoor

**CONCERTINA**
The Butterfly
Catch Me If You Can, Dance
Merry Widow Waltz

**CORNET**
Bride of the Waves
Come Sing to Me
A Dream
Nightingale Song
The Rosary

**FLUTE**
Hear Me, Norma—Norma
Long, Long Ago

**HARRY LAUDER**
I Love a Lassie
Just a Wee Deoch and Doris
Roamin' in the Gloamin'
She's My Daisy

**MARIMBA BAND**
Blue Danube Waltz
Garden Dance
Messenger Boy March
Sari Waltz

**INSTRUMENTAL MEDLEYS**
Hawaiian Hula Medley
Medley of Southern Plantation Songs
Money Musk Medley—Virginia Reel
Selections from Red Mill
When it's Apple Blossom Time in Normandy Medley—Turkey Trot

**INSTRUMENTAL QUARTETS**
Dream of the Tyrolienne (Herd Girl's Dream)
Flower Song
Hearts and Flowers
Serenade

**OLD TIME SONGS**
Carry Me Back to Old Virginny
Just Before the Battle Mother
Killarney — Lost Chord
Love's Old Sweet Song

**ORCHESTRA**
Destiny Waltz
Every Little Movement—Madame Sherry
In the Shadows — Last Waltz

# West's Greatest Undeveloped Resource

## *Vast Area of Grazing Lands Now Known by the Name of "Public Range"*

By E. L. POTTER

The west has many undeveloped resources, but of all of these the one that by development would give the greatest returns at the minimum expense is the vast area of grazing lands now known by the name of "public range."

Approximately 2 1-2 per cent of the area of the west is now in crop. If the dream of our most optimistic boosters comes true this area will be doubled, making a total of 5 per cent in crop. In the meanwhile 85 to 90 per cent is used exclusively for grazing purposes and approximately one-third is free or public range. That is, it is land that still belongs to Uncle Sam, but which is used by whoever gets there first. Our government will not rent or sell it or otherwise dispose of it except upon homestead conditions. Our government does not use this land itself, but it does not prohibit any one else from using it. People can do as they please with this land so long as they do not attempt to fence it and thereby prevent others from using it.

**Such a state of economic anarchy exists nowhere else in the civilized world.**

The productive capacity of this land is constantly decreasing, and the system of live stock farming followed belongs in the barbaric age. These millions of acres have been in use for 40 years, yet they have no fences, wells, corrals, buildings or improvements of any kind. Nothing whatever has been done to improve the grass and nearly everything done to ruin it.

England is the world's greatest breeding ground for fine live stock, yet all of this improvement has come about in the last two or three hundred years, or since that great transformation known in history as "Enclosure." For centuries English grazing lands were held in common ownership, or, perhaps we had better say, lack of ownership. Each farmer turned his stock out on the "common" and all others did the same. Then gradually this common land passed into private ownership and was fenced, or, as the English say, "enclosed." Then, and not until then, began the live stock development that has astonished the world.

We are not advocating any one certain remedy for this serious condition in western America. There are a lot of remedies that will help. The chief drawback to all, however, lies in the fact that this land belongs to the United States government, and is, therefore, in the hands of congress, which in turn represents the mass of the American people, the very large majority of which live in the central and eastern states and know absolutely nothing about the conditions we have been describing. This lack of information on their part is entirely excusable, even though it may be of very great material detriment. Never before in the history of the world has there been any high degree of civilization established in a region of such low productive capacity as the range districts of the west. In fact, before the days of the railroad and the telephone civilization was impossible where the land would only support one inhabitant to the square mile. Now, however, these inventions, coupled with the automobile, have robbed range life of its dreaded isolation and has made living conditions equal, if not superior to, those of the average rural communities. There still remains, however, the economic anarchy which can not be ended until the American people are brought to realize that there are millions of acres in the west where from 2000 to 5000 acres are required to support a family, but where, given this amount of land, a family can be supported in decency.

**The average American can realize some of the causes which may make one acre worth $50 and another $200, but he has no comprehension of land worth from 50 cents to $5 an acre.**

He feels that land must either be entirely worthless of must have a farm land value, when the actual facts are that the productive capacity of range land is much more easily determined than that of farm land. We hope, therefore, to do our part in making people realize that a stock ranch in the range country must comprise a considerable acreage in order to support a family and that "cattle barons" do not grow on ranches of a few thousand acres, but only on ranches of hundreds of thousands of acres. The ranchman who owns or control the grazing on 3000 acres of range land is in the same class financially and otherwise with the 160-acre farmer in the humid farming districts. It should furthermore be remembered that the few great fortunes that have been built on the range cattle business have largely been based on the fact that these anarchic conditions have given the rich a great advantage over the poor.

## New Agricultural Agent

Not because he was a great football player, but because he was believed to be a practical demonstrator of up-to-date agricultural knowledge, Benton Bangs has been chosen as a county agricultural agent, soon to be placed in charge of the work in some county of the state.

Mr. Bangs, whose photograph is shown herewith in his football uniform, is a graduate of the state college at Pullman, where he specialized in agricultural subjects. He graduated from the regular course last June, but during the last half year has been taking post-graduate work at Pullman. During his college course he was a wonder on the football field, being recognized as one of the greatest players ever produced in the northwest. He is expected to put some of the same vim into his agricultural work that he put into his athletic sport.

## Farm Problems

### Walla Walla Man Wants Light

The Stubblefield Home, Walla Walla, Wash. To the Editor of The Washington Farmer: While our farm work is not very brisk just now it is a good time to consider a few of the farm problems that are going unchallenged.

The writer was raised in a corn country, and in his endeavor to raise the crop in this valley the greatest trouble that has confronted the grower here is the corn worm. Never had it entered our minds that the little pest could be such a nuisance.

Two years ago, after a winter in which we had 20 days of freezing weather with no snow, the pest was not at all troublesome. In fact, it was hardly noticeable. But this last season it has done the work for the kaiser. From an acre of fine corn that made 90 bushels the best that we could do was not more than half a dozen ears that were not damaged with the worm.

So far as we know one has offered a remedy for the trouble. Some have suggested spraying. But on a little reflection it is quite evident that spraying will not do. One would have to spray the entire stalk as they frequently go into the stalk and are found in the tassel.

We have noticed that the lady bug preys on the worm and will seek them out. But who will provide the lady bugs? Now it may be that some of your readers will know what to do and if they will let go of the information it will be very much appreciated.

Last season we planted some corn that came from Iowa. It was very prolific. Every stalk had at least two ears and many of them three. One had 10. Of course they did not amount to much. But there is the other problem. How can we make the stalk mature more ears? If we have a stalk with 10 nubbins how can we make the 10 nubbins 10 good ears? If some of your people know the answer to this question I will be glad to pay for that.

Maybe we should not ask too many questions in one paper, but it would be mighty pleasing to know why our mangels go to seed so badly. This last season we raised 50 tons per acre. It would be hard to say how many more there would have been had they not gone to seed so badly. It will be worth a lot to know the answer to this question. Any information that you can give me on these subjects will be appreciated. L. J. CAMPBELL.

## BULK GRAIN MEETING

### Session Will Be Held at Spokane

Plans are completed for the bulk grain conference at Spokane January 25 and 26, and experts along various lines will be present to assist in working out a system to meet the need of bulk handling methods in the northwest this season. Representatives of the government will be present, as will representatives of the farmers' organizations, warehouse companies, elevator companies and shippers and dealers.

The question to be debated is not: Shall the grain be handled in bulk? The question is: How can the northwest best prepare at once to get along without sacks. Sacks are declared to be, absolutely unobtainable, except at excessive prices, and then in insufficient quantities.

It is expected that a large delegation from all the wheat growing districts of eastern Washington and northern Idaho, and also some from Oregon, will be present.

### Favors Standard Grade.

S. C. La Riviere of the Moxee valley, Washington, is in favor of a standard potato grade. "If I produce a better spud than my neighbor I am entitled to better pay for it and the grade is the only way I know of that will bring that condition about," said Mr. La Riviere. "That, in my mind, is the long and short of the potato grading controversy."

**Strikes in Japan.**

The most notable social phenomenon in Japan is the prevalence of strikes. During the last year 180 strikes, involving 30,000 workmen, have taken place, which compare with 80 strikes involving 9000 workmen last year.

# We Must "Follow-Up"

The story of the Gallipoli withdrawal is a tale of inadequate support. Like Salamanders clinging to the red-hot bars of a fiery furnace, the boys of Australia and New Zealand clung to the slopes of Anzac. Desperately, heroically they clung. No troops under any circumstances ever displayed greater soldierly qualities or upheld more sacredly the best traditions of England's Army. But they had to withdraw because the "follow-up" was not there.

To some of us it has been given to march with the columns of troops that go to France. And to others it is given to wave God-speed. But he who marches and he who stays is equally a citizen of the world's mightiest republic and equally responsible for its success in this greatest of undertakings.

Then let us at home turn from our flag waving and consider how necessary we are, how useful we must be. Those who go to fight cannot hope to win by naked bravery and we cannot hope to win unless every individual at home does *all* he can. We must have no Gallipoli.

The Bell System is only one of the myriad great and small industries which are co-operating that nothing be left undone to keep a constant, efficient stream of men, guns, ammunition, food, clothing and comforts flowing to the front.

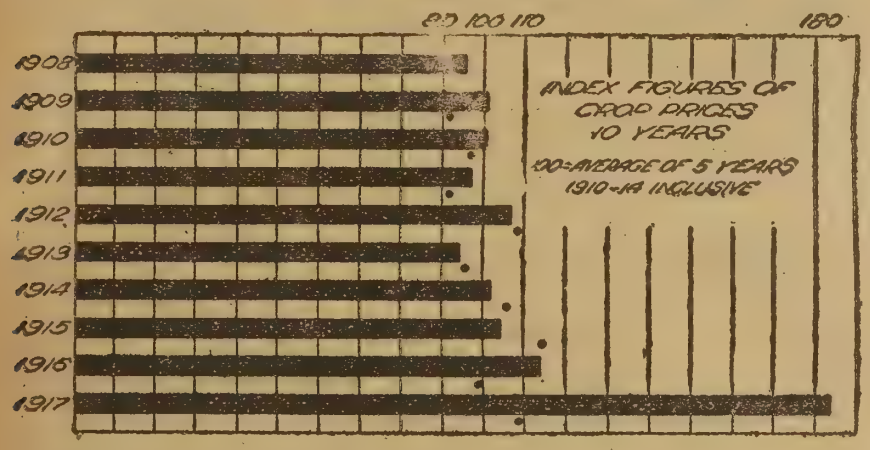
# Are Trying to Reduce Amount of Wheat Fed



Here are a few of the 1700 White Leghorns on the Tisher-Allen place.

One of the most up-to-the-minute poultry plants in the northwest is that owned by Charles and John Tisher and John Allen of Silverdale, Wash. The houses are of the most modern type, and are electrically lighted. As is commonly the case in the Silverdale district, no attempt has been made to breed show stock. Thrifty growth and productiveness are the standards applied to the flock of 1700 Leghorns.

In the matter of feeding, every effort is being made to spare the world's deficient wheat crop. Not more than 10 per cent as much wheat is being fed this year as formerly, oats, kale and roots being utilized as far as possible. Under these conditions production has been lessened somewhat, one of the partners estimating that the egg yield is about 50 per cent now, while last year at this time the birds were laying 80 per cent.

# Crop Prices and Production

In the accompanying chart the bars indicate by their length the yearly relative price to producers of the United States of 10 important crops. These crops are wheat, corn, oats, barley, rye, buckwheat, potatoes, hay, cotton and flax. Their combined acreage is nearly 90 per cent of the entire crop acreage of the United States, therefore their combined average price may be taken as representing the trend of all prices. The yearly average price of each product was reduced to its percentage of its average during the five years 1910-14, inclusive, and the percentages of all the crops were combined into a general average, due weight being given to the relative importance of the different crops.

It will be observed by an examination of the chart government monthly crop report that during the first eight of the 10 years the composite price ranged between 90 and 110 per cent of the 5-year average. In 1916 the price advanced to 114 and in 1917 to date the average has been above 180.

It is instructive to study the relation of crop prices with crop production. The dots in the chart indicate the relative size of the 10 crops combined (combined by the same method as the prices), 100 representing the average of the five years 1910-14. Under normal conditions increased production tends to decrease price, and vice versa, decreased crops to increase price. In the chart it may be noticed that until 1915 the composite of crop production of any year could be used to forecast approximately the average of prices during the following year. Thus it will be seen by the chart that the crop production in 1910 was larger than in 1909; therefore, prices in 1911 were lower than in 1910. Production in 1911 was smaller than in 1910; hence prices in 1912 were higher than in 1911. Production in 1912 was materially larger than in 1911; hence in 1913 prices were materially lower than in 1912. Production in 1913 was smaller than in 1912; hence prices in 1914 were higher than in 1913. Production in 1914 was larger than in 1913; therefore, prices in 1915 would normally be expected to be lower than in 1914, but they were slightly higher, a new factor—the war—counteracting the normal influence. Production in 1915 was larger than in 1914, therefore, prices in 1916 would normally be less than in 1915; but again the war had a greater counteracting influence. Production in 1916 was less than in 1915; therefore, prices in 1917 would normally be expected to be higher than in 1916; the long bar indicating prices in 1917 shows how truly they have been so. Here both factors, war and production, have been driving in the same direction.

Preliminary estimates indicate that production in 1917 will be larger than in 1916; therefore, under normal conditions prices in 1918 might be expected to be lower than in 1917; but in 1916 and 1917 the new factor affecting prices seems to have been stronger than the production factor. It remains to be seen which will be the stronger in 1918.

## Hope On.

Hope on! although the weary days seem dragging.
That lie between you and heart's desire,
Whose heavy hours with leaden-footed lagging
At times 'gainst faith and hope and love conspire.

Hope on and if at times your soul should falter
'Neath breaking heart and memory-maddened brain
In brave endurance read your daily psalter
Of resignation in the book of pain.

Hope on! Above the clouds your star is gleaming,
A beacon light to guide you on your way,
Look up and watch lest you should miss its beaming,
There's comfort for you in its cheering ray.

Hope on! The longest night is not unending,
The darkest hour is just before the dawn.
The giver of all good his strength is sending;
Keep up your courage bravely and hope on!

—Louise M. Berry in Atlanta Good Words.

THE OWENS SMUT CLEANER

The Most Successful Machine Ever Made for Treating Seed Grain. Will Increase Your Yield From 2 to 5 Bushels Per Acre.

Cleans grain of smut balls, wild oats, king heads, and all seeds light enough to float.

Every machine backed by a positive guarantee of satisfactory performance.

This machine is simple, inexpensive and insures clean, smutless seed. Let us tell you what it is doing for others in the Pacific Northwest. Write for full details.

Due to heavy demand on railroads for rolling stock, you are urged to place your order at once to insure delivery when needed.

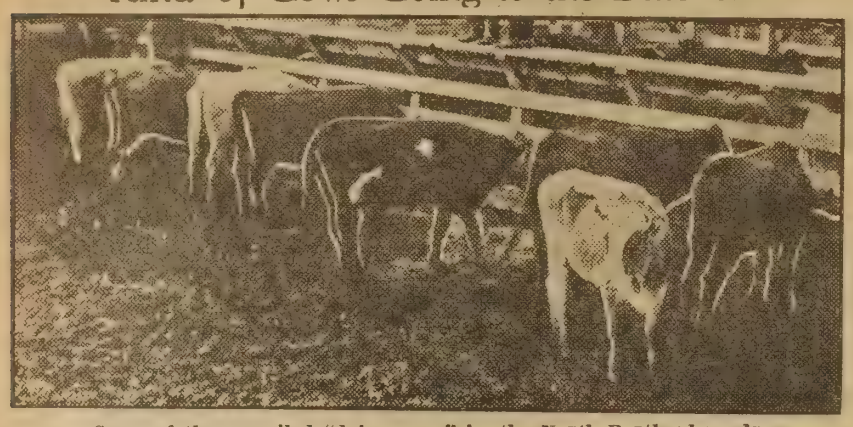
## MILK REGULARLY.

### Punctuality Will Add Revenues.



Successful dairymen agree that the more perfect the system employed in the work of feeding and milking the cows the more profit will result. Haphazard methods seldom pay in any business, and never pay in dairying.

This system should apply as effectively to the time and manner of milking as to the time and manner of feeding. It might be difficult to explain exactly why it is true, but it is proved without doubt that more milk is obtained when milking and feeding are done on exact schedule than when no schedule is followed. If milking is done at 6 o'clock in the morning, it should be done at 6 o'clock every morning, rain or shine, Monday or Sunday. Similarly in the evening. It never pays to be late, and being early loses its usual virtue when applied to milking the cows.

The dairy cow is a sensitive animal, and should always be treated as such. She has a personality as truly as her caretaker has and the latter should study the former in order to conform to her temperamental requirements. The dairyman is cutting off his nose to spite his face when he tries to make the cow conform to his own temperament and convenience.

It naturally follows, that it is best for the same person to care for the same animals day after day, for much more of the success of the dairy depends on the personal touch than is often supposed.

## Kind of Cows Going to the Butcher

Some of the so-called "dairy cows" in the North Portland yards.

By PAUL E. TRIEM.

From time to time vague reports filter in to the effect that the present selling movement of dairy cattle is far more extensive than the public realizes, and that the country is in fact, facing a veritable depletion of the herds upon which it must depend for butter and milk. It is a little difficult to get at the actual facts of a nation-wide situation, but a little investigation into what is occurring here in the northwest leaves the investigator reassured, rather than otherwise. Undoubtedly some profitable dairy herds have been sold because of labor shortage and the high cost of feed; but in the main, the cows going to the butcher should have gone there long ago. This was the belief expressed by Colonel George Gue at one of the recent sales, when he declared:

"The North Portland yards are full of dairy cattle, but among them you will not find any high producers. They are scrubs, and won't even make good sausage."

Superintendent McGee, of the North Portland yards, confirms this opinion.

"There are not many more cows going through here than is usual at this time of year," he commented. "And as to the ones that are being sold—go out and see for yourself; when a good dairy cow does come in here, she is resold for dairy purposes."

A dairyman who was sitting in the superintendent's office at the time this remark was made, nodded.

"Ninety-five per cent of these cows have been boarded at a loss by the farmer who owned them," he said.

An inspection of the stockyards confirmed these verdicts. There were plenty of so-called "dairy cows" in the pens, but practically all of them were obviously scrubs, constitutionally unthrifty and unproductive. Viewed from this angle, the severe competition for labor and the fruits of labor which the present world situation entails is bringing about much good.

## DEHORN THE COWS?

### Sometimes, but Not in All Cases.

The problem of dehorning cattle is one on which all authorities are not agreed, but if properly done the dehorning process in many cases will result in improvement. It is probably better to dehorn the calves than to wait until maturity, but if a cow is particularly troublesome in the herd, as they are occasionally found to be, they probably will suffer less from having their horns removed than the other members of the herd will suffer from allowing them to remain.

Dehorning should never be done hastily or without due care. It is dangerous for one to remove horns of a mature animal unless he knows how to do it, and under no circumstances should the operation be performed in very cold or in excessivly hot weather. Veterinary authorities should be consulted if dehorning is contemplated.

# Feed to Make Pork

"Why fatten hogs with corn and wheat when each of the following combinations will produce 100 pounds of pork?" is the pertinent question when reading over the following feeding summary made by Professor Fjeldsted of the Oregon Agricultural college:

1. 470 pounds barley, ground.
2. 400 pounds barley, ground, plus 20 pounds digester tankage.
3. 332 pounds barley, ground, plus 350 pounds skim milk or butter milk.
4. 246 pounds barley, ground, plus 123 pounds middlings, plus 220 pounds butter milk or skim milk.
5. 236 pounds barley, ground, plus 118 pounds middlings, plus 511 pounds garbage.
6. 320 pounds barley, ground, plus 160 pounds middlings.
7. 252 pounds barley, ground, plus 126 pounds middlings, plus 30 pounds digester tankage.
8. 209 pounds barley, ground, plus 209 pounds middlings, plus 20 pounds digester tankage.

The following combination should be kept before the hogs at all times:

One hundred pounds slacked coal or wood ashes, four pounds air slacked lime, two pounds common salt, one pound epsom salts.

Mix thoroughly and sprinkle over the combination the following solution:

Two pounds copperas dissolved in one quart boiling water.

# Percheron Society

At the annual meeting of the Percheron Society of America recently, President White in his opening address said that it is time for optimism, not pessimism, in the horse business; that the breeding of horses has been curtailed materially in the last few years, while the demands on our horse stocks have been greater than ever. Demands for food and for meat animals have reached unprecedented heights. These grain foods, and forage and grain, with which to feed meat animals, must necessarily be produced from the soil; and in tilling the soil efficiently no power unit has yet been developed which would equal the draft horse.

He urged all breeders to hold fast to their good stock, and exert themselves to produce more good Percherons, which will be urgently needed in the future as seed stock from which to build up our ordinary farm horses.

Secretary Wayne Dinsmore, in his annual report, directed attention to the great growth of the society in the last seven years. Seven years ago the society had about 2850 members and reserve funds around $34,000. In seven years the membership has increased to approximately 9000 breeders, and the reserve funds, in securities, are now in excess of $106,000. More animals have been recorded in the last seven years than in the entire 34 years preceding, eloquet evidence of the steadily increasing popularity of Percherons. He reported that in spite of the pessimism prevalent in some quarters, the society has enjoyed the banner year of its history, having handled more registrations and transfers than in any past year. Ten thousand five hundred and eight registrations were made during the fiscal year ended October 31, 1917; 10,314 of these were American bred, an increase of 1410 registrations in American bred animals—or a 15 per cent gain.

In the election of directors, E. B. White or Virginia, W. H. Butler of Ohio, and H. J. McLaughlin of Nebraska were elected for the ensuing three years.

In the election of officers by the board of directors immediately following the stockholders' meeting, E. B. White was reelected president; W. S. Dunham, now serving as a captain in the United States army, was elected vice president. The election of a treasurer was postponed for 24 hours. Wayne Dinsmore continues as secretary. W. S. Corsa was elected to represent the Percheron society on the National Society of Record associations.

# Veterinary

Dr. S. B. Nelson

**Cow Pox**—I bought a cow that has what seemed to be sore teats caused from the calf sucking, but have been unable to heal them. There seems to be lumps just beneath the skin on her udder just at the base of the teats and a scab forms over these. The cow that stands next to her in the barn seems to be getting the same thing on her udder. When I first noticed it I thought she had been stung, but the swelling has gone down now, leaving it just like the other cow.

H. B., Hillsboro, Ore.

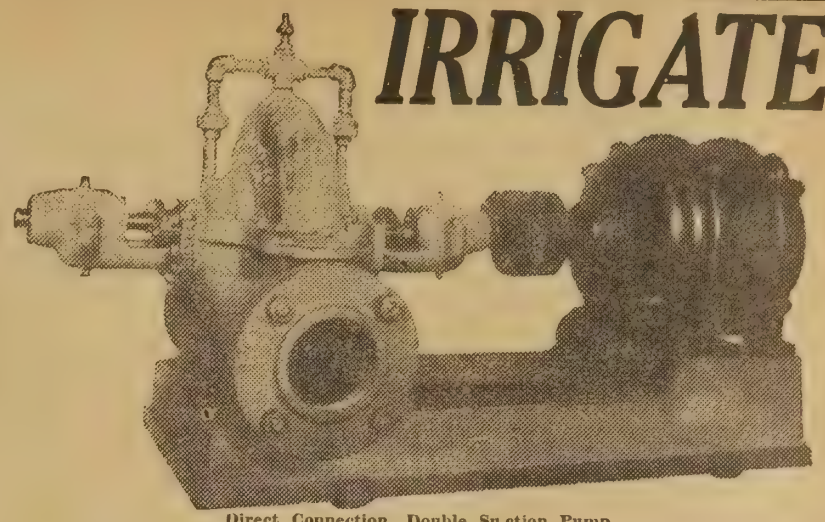
Your cows are affected with cow pox. Milk your two affected cows after you have milked all the well ones. Wash the udders of all the cows with a one per cent solution of lysol both before and after milking. This is a valuable preventive against the spread of the disease. After milking the diseased cows, apply a little of a benzoated zinc oxide ointment to the ulcers on the teats and udders. It takes from two to three weeks for the disease to run its course.

**Proud Flesh**—I have a horse that has a large growth on the hock joint caused from a wire cut over a year ago. He is not very lame. Is this proud flesh.

A. H.

Cle Elum, Wash.

It is quite possible that the large growth on the hock joint is composed of proud flesh. It may be that it is a special tumor of some kind. You might try the application of either dried alum to the part or sprinkle the part with arsenic. The latter is not the preferable treatment, as it is very painful. It would be much better, however, if you could have your local veterinarian see it and make a definite diagnosis from personal examination and then give you advice.



**Testing for Tuberculosis**—What is the state law for testing cows for tuberculosis? Does it hurt them for beef if they have had tuberculosis?

S. D. R., Ocosta, Wash.

The state of Washington through its commissioner of agriculture at Olympia will test cattle for tuberculosis at the expense of the state under certain conditions. Write to the commissioner for detail information regarding their regulations.

Generalized tuberculosis or where two organs are affected or where one organ is badly affected would cause the condemnation of the carcass for food. A carcass affected very slightly or with a small local leison of an organ may be passed for food under careful inspection. The passing of carcasses for food is based upon certain definite regulations issued by the bureau of animal husbandry of the U. S. department of agriculture for the guidance of their inspectors.

# IRRIGATE

Direct Connection, Double Suction Pump

## Our Eclipse Centrifugal Pumps

are recognized for their high efficiency and long life.

Made in either double or single suction types for direct connection or belt drive.

We carry a large stock of belt-driven pumps and can make immediate deliveries. Two to three weeks' time required on shipments from factory on all special pumps.

# Tried Cheaper Feed

To the Editor: As I am one of your patrons and much interested in your valuable paper, I will write a few lines on the poultry industry which perhaps you will consider worth printing.

I have been raising chickens in a small way for several years and experimented to some extent. I had 36 hens this summer; I kept them shut up in park from May 15 to November 15. Now, I hear many complaints about chickens not laying. I didn't try to raise many chicks this season on account of the high price of feed, only hatching 38, giving me 16 pullets. My 36 hens have laid since December 1, 1916, to December 1, 1917, 4841 eggs, and have received $154.48. Now, the eggs used in the family have not been charged up nor any account made of them, that is, in a financial way, using the eggs as we needed them.

The high price of wheat staggered me some and I commenced to think that I would have to dispose of them. I finally concluded to try a cheaper feed for a month and feed rolled oats and shorts in equal parts mixed into a stiff mash, feeding three times daily. I have fed no wheat since May 28 until November 1. Since that I have fed both corn and wheat in order to have them in good condition for the winter. Expenses for the year ended December 1, 1917, are $91.93, leaving me a profit of $62.85. I consider that pretty fair for 36 hens. Of this expense $2.25 was for repairs on house. My flock are White Leghorns and Minorcas.

J. H. D.

Hillsdale, Ore.

# A Boy's War Ration

To the Editor: I am a 12-year-old boy, a reader of the Farmer, and the poultry department absorbs my interest. Would your please tell me how to feed old chickens for profit when I have the following to give them. Shorts, bone, potatoes, beef scraps, corn, oyster shell and good straw in which to feed it? The chickens sing all the time. I just cured them of the roup, but lost two Rhode Island Reds. If possible I would like to feed them about 8 a. m. and 5 p. m. How much would I have to feed to get eggs and lots of them. They don't like to scratch if they can get out of it.

F. V. D.

Leavenworth, Wash.

If fed in a right way the feeds mentioned will make the hens lay fairly well. I would suggest the following method: Boil the potatoes and mix them with shorts, leaving a little of the water the potatoes were boiled with and mix as much shorts in as the moisture will take up and make a fairly crumbly mass. Salt it at the rate of about an ounce a day for 100 hens. Feed this about 7 o'clock in the morning. Eight is a little late. Give them all they will eat up in half an hour. If you are going to school and can not feed it later than 8, throw a little corn in the straw and cover it up so they will have to scratch for it. They should eat of this mash about an ounce per hen a day, weighed before the water is added to it. The morning feed of corn should be fed at the rate of about a pound for 20 hens. Just enough to keep them exercising in the straw for an hour or two. Five o'clock is too late to feed them corn or whole grain during the winter. It is getting dark about that time. They could not see to eat and they will not get the exercise they need. In midsummer 5 o'clock would be all right. If it is not possible to feed them about 3 o'clock feed them between 12 and 1 o'clock. Cover the corn deep in the straw. The straw should be about 10 inches deep and should be renewed often enough to keep it clean and dry. Plenty of good, dry straw is a fine help in the egg-making business. If no feeding can be done between 8 and 5 o'clock better feed the mash at 5 and the corn at 7 or 8. Give about a pound to seven or eight hens. Then give them all the mash they will eat up at night. Go back in half an hour and take away any that is left. Be sure they get all they will eat. Keep a hopper of meat scrap before them all the time, also a box of the bone. Never let the hopper get empty. There should also be oyster shell where they can help themselves at will, also grit. Charcoal is also a help. Green stuff should also be fed, unless they have range where they can get it in the fields. Keep them busy and give them all they will eat of the above, and they will lay eggs—providing always they are of the laying kind. Don't forget the water. Then another thing, feed regularly.

J. D.

# Tuberculosis; Soft Liver

To the Editor: Will you please tell how one is to know when fowls have tuberculosis? What is the matter with a fowl that has a soft liver?

MRS. M. P. Linnton, Ore.

Tuberculosis fowls are usually thin in flesh. After the first symptoms of droopiness appear they may live two or three weeks, during which time there is a gradual loss of flesh; sometimes a diarrhoea and sometimes lameness. However, these symptoms are not a certain indication of tuberculosis because fowls lose flesh, go lame and have diarrhoea from other causes. If these symptoms are observed a postmortem examination should be made, for it is only in this way that one can be certain of the disease. The liver is usually affected, and there will be yellowish spots, more or less numerous. The intestines are also frequently affected, showing many small tubercular growths. When a characteristic case is once seen there will be no difficulty afterward in identifying the disease. In some cases, however, the symptoms will not be very plain and only a bacteriological examination will determine whether or not the germs of the disease are present. The liver is often enlarged, due to the growth of the tuberculosis spots.

A soft liver may be caused by congestion and inflammation. It may also be due to wrong methods of feeding and care. Fowls that are heavily fed and have little exercise frequently develop this condition of the liver.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4661 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv

## "Pioneer" Incubator

# A Wonderful Invention

## Avery Gasifier—Turns Kerosene Into Gas

WE have discovered the way to burn kerosene more successfully than it has ever been done before in a tractor. Avery Tractors burn *all* of the kerosene instead of wasting part of it on account of it not being fully vaporized. Avery Tractors burn kerosene so successfully that we are able to use the lubricating oil over and over again instead of using it only once and then wasting it. Avery Tractors don't just run on kerosene—they burn *all* of the kerosene.

Avery Tractors are equipped with double carburetors. The motor is started on gasoline and when it warms up you pull the lever and switch over to kerosene without having to make a single adjustment of any kind.

But while a carburetor will mix gasoline with air and form a gas, no carburetor has as yet been designed which will successfully handle kerosene. We accordingly place on each cylinder head of an Avery Tractor our Duplex Gasifier, which takes the mixture of kerosene and air as it comes from the carburetor and so reduces the particles of kerosene and mixes them with the air as to form a gas that burns more successfully than kerosene has ever been burned before. Avery Tractors are the only tractors with double carburetor and duplex gasifier fuel system.

**The 1917 National Tractor Demonstration proved Avery Tractors to be real kerosene burners.**

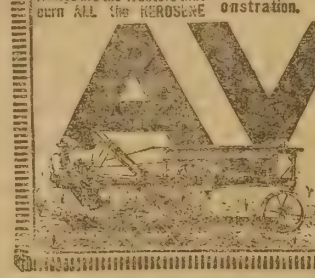
The rules of the demonstration were that a tractor which burned kerosene was allowed only 5% as much gasoline as kerosene for starting. Avery Tractors did more.

—They burned kerosene without calling for any more gasoline for starting during the entire week than the 5% allowed for the first day's filling of kerosene.

—They burned kerosene without a lot of black smoke coming out of the exhaust.

—Without kerosene passing the pistons and cutting the lubrication—the oil in the crank-case did not have to be changed.

—A couple of sizes Avery Tractors even burned distillate.



**Get all the Facts** There is a size Avery Kerosene Tractor to fit every size farm—six sizes, from 5-10 to 40-80 H. P. There is also a size Avery Tractor Plow and a size Avery Thresher to fit every size tractor. Write for a free copy of the new 1918 Avery Catalog and get *all* the facts. Address

## Selecting Varieties

In the planting of an orchard, or in top-grafting an orchard, it is of great importance to select varieties that will bring high prices in the market, that will bear heavily, bear every year, and therefore yield good profits above the cost of production.

Suppose the land on which the orchard grows is valued, when the orchard comes into good bearing, at $1000 per acre. Interest on this amount at 7 per cent is $70 per acre; on 10 acres, $700. We will suppose the average cost of irrigating water to be $1.50 per acre on 10 acres, $15. We will place the taxes at $7 per acre, on 10 acres, $70; we will estimate the cost of food for team, depreciation of the value of team, wear and tear of machinery, harness, etc., at $25 per acre, or for 10 acres, $250. This makes a total of $103 per acre, or $1030 on 10 acres. Now, suppose that the orchard yields 650 boxes of apples per acre, or 6500 for 10 acres. This will place the cost per box at 16 cents; then suppose we add the cost of spraying, labor and irrigating, picking, assorting, packing box materials, boxing and hauling to market. We have, according to general estimates, in these items of expense, about 47 cents per box. This, added to the 16 cents per box, which includes interest on land, water, taxes, etc., makes the cost of producing a box of apples 63 cents. The government estimates place it at an average cost of 79 cents per box. Generally the interest on land, taxes, etc., are not counted, because it is estimated that it furnishes the grower a home, a profitable place to work, etc.; but we estimate it because our purpose is to show the value of the selecting of good varieties instead of poor.

Suppose, then, an orchardist grows varieties of apples that sell for $1 per box. He has had interest on the money invested, has had pay for his labor, a place to live and work and 37 cents per box net profit, or $2405 on 6500 boxes.

Suppose he produced apples that yielded $1.50 a box; he has an additional net profit of $3250 with perhaps less than $250 additional expense.

Suppose he gets $2 per box; he has an additional net profit of $6500, or a total profit of $8900. Now, the difference between $2405 net profit and $8900 net profit is intensive farming, and the selection of good varieties.

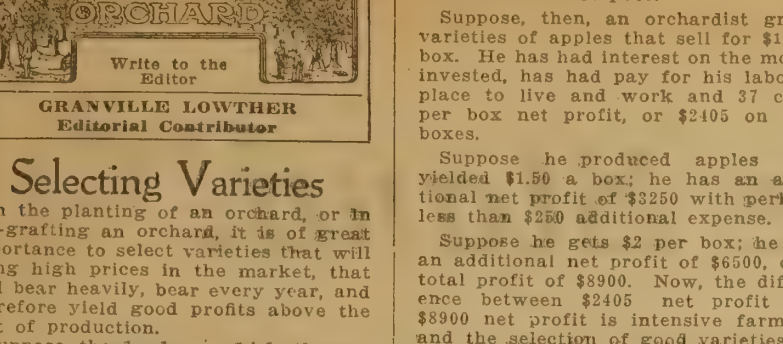
Again, suppose he grows the varieties that bring the highest prices, but grows them in such a manner that one-third of them are not marketable on account of lack of cultivation, lack of proper irrigation in countries where they irrigate, lack of proper spraying so that he has a great amount of scale, codling moth and other insect pests, or lack of thinning and pruning.

Suppose there comes a reactionary period, bad marketing conditions, or other unforseen events that depress prices as during the last year. In such a case the man with poor varieties has no profit and will probably have a loss.

G. L.

## Understanding the Tractor

### Strains Should Be Avoided.



No form of machinery on the farm is subjected to more severe strains than the tractor. Besides the heavy draft work it must do on the drawbar, it must also propel its own weight over uneven ground and in constantly changing positions. To bear up under this strain the tractor must be made exceptionally strong in all its working parts.

Most of the good tractors now in the market are equipped with the four-cylinder, four-cycle type of engine, with the oiling system incorporated in the crank case. The space for water for the cooling system should be ample, or even generous in size. Crank shaft and bearings should be studied carefully—this being of much greater importance than in the case of engines designed for lighter work. Don't get a tractor with an engine that is too powerful for it. Sufficient power for the work you wish the tractor to-do—with a reasonable reserve—is a vital thing to look for in a tractor engine.

A too powerful engine means strain and weakness, and in its way is worse than an engine that isn't powerful enough. Study well the engine of the tractor before you buy, just as you would examine a horse's teeth and joints.

Study the clutch, too, because this regulates the application of the power to the work. The life of a tractor depends very largely upon the clutch and its operation. To turn the full power of the engines, operating at top speed, suddenly loose against the transmission of a tractor will either strip the gear wheels of their teeth or prove a tremendous strain upon both engine and tractor connections. It takes a good deal of power to bring a few thousand pounds of metal into action and it is the mission of the clutch, properly handled, to effect this work without undue suddenness. Most clutches and the pinions they carry to engage the transmission gear are not fixed upon the main shaft of the engine, where they usually run, but only revolve with it when the toggles force the clutch blocks out firmly against the inside of the belt wheel's outer rim.

In next week's issue we will go briefly into the subject of the transmission system of the tractor.

## Can the Stranger Learn?

It is often a question whether the "newcomer" can learn the business of fruitgrowing successfully. He says, "there is so much to learn that I hesitate to undertake it." The man who feels that way will learn. The man who will not learn is he who knows nothing of what is to be learned, or the "old-timer" who, because he has "been in this country a long time," knows all about it.

As a rule, the poorest orchardists are the "old-timers." There are a few, very few, honorable exceptions. The best orchardists are the men from the east—from the cities, from the professions, or young men from the colleges. The men from the east know they have it all to learn, and study it. The men from the professions and colleges put brains as well as muscles into it, yet some of the saddest failures I have seen have been men from the east, educated, refined, cultured and industrious. These men do not easily adapt themselves to new environments. Some men who ought to have succeeded have been young men who did most of their spraying with beer and their smudge pots were pipes. They farmed around the hotel bars and pool rooms, expecting to pick gold nuggets off the trees and sell them for enough to enable them to live lives of indulgence while irresponsible hired men did the work.

Cream-Saving Machines

IF you are still setting your milk and skimming by hand, you are losing anywhere from one-fourth to one-third of your cream. If you are using a separator, and it is not one of the best, you are still losing an amount of cream that would surprise you if you knew it. Every farm loss or leak that can be stopped this year should be stopped. Buy a **Lily** or **Primrose** cream separator and stop the cream loss.

Don't imagine that cream left in the skim milk will fatten pigs and calves faster. It has been proved scores of times that stock thrives as fast on warm separator skim milk, when a little meal or flax replaces the fat. Cream in the skim milk is dead-loss cream!

**Lily** and **Primrose** separators get that cream. We can prove to you that they get it all, except about one drop in each gallon.

Besides that, they are well-known as simple, easy-running, easily-cleaned machines that last and do the same good work year after year. Buy a **Lily** or **Primrose**—it will pay back its cost in cream you may now be losing. See the local dealers who handle these separators, or, write us for catalogues.

Learn What Good Tractors Do
Send For Our Tractor Book

THE Bean TrackPULL Tractor—6 h.p. at drawbar—cultivates from ten to fifteen acres or plows from four to seven acres in ten hours, *without getting tired* like a team. It plows and harrows as *close up in the corners and as close to vines and trees as a team.*

In orchards it passes under branches only four feet off the ground. It pulls instead of pushes itself along. It "gees" and "haws" out of holes and soft places just as a team will do. Than it turns clear around in a ten-foot circle (5-foot radius) and pulls with its full power on the turns.

When it isn't at work in the field it runs stationery machinery up to 10 horse power.

The Bean TrackPULL weighs less and costs less to run than wheel-type tractors of same power. And it does things no other tractor can do like turning clear around in a 5-foot radius and pulling with full power on the turns, because of invaluable patents. Don't make a mistake. Don't be sorry, too late, that you didn't get a Bean.

Write now for the *free book* that tells all about it. Why spend 2½ hours a day in simply *caring* for horses when a *tractor will save* that time. You don't need more *land* to increase your earnings if you get the right kind of tractor. Send the coupon now. Learn what you can do with a Bean TrackPULL on your place.

# "United We Stand!"

THE main reason for the purchase of War Savings Stamps is because your country is at war.

Your country needs every penny which every man, woman and child can save and lend, in order to feed, clothe, arm and equip the soldiers and sailors of America and to win this righteous war in defense of American honor.

We today have an opportunity for service such as never before has been given to the rank and file of Americans. It is a service that must be shared by all who share the blessings of this great free land and who owe allegiance to its flag. America has taken up the greatest burdens that can come to the richest, strongest nation on earth. All of us, farmers, business men, professional men, women, boys and girls—all who are, first and last, Americans, must carry America's burdens and perform America's tasks. In us is America's strength and wealth. In us lies America's hope of victory.

If we are to win this war we must win it as a **United** People. The savings of all are necessary to hasten victory. **War savers are life savers.**

"The three things needed to enable the United States successfully to terminate this war are **money,** men and transportation," says the Secretary of War.

A dollar from each of a million men is far mightier than a million dollars from one man.

War Savings Stamps provide the means of enlisting the savings of the many in the service of our country.

Starting with a $4.12 War Savings Stamp, or even a 25c Thrift Stamp, every one of us can help to accumulate money for our country and at the same time teach ourselves and our children a lesson in thrift that will influence America for generations to come.

For War Savings Stamps GROW in value. The stamp you buy this month for $4.12 will be worth $5 on January 1st, 1923. The government guarantees its value.

With the first stamp you buy you will get a War Savings Certificate which has 20 spaces for stamps. When filled it is a $100 Government Bond, payable on January 1st, 1923. If you buy the stamps in January that Bond will cost you just $82.40. That is interest at 4 per cent compounded quarterly. No red tape, no worry, the certificate is yours. Safer to keep than money, because it is not transferable.

Buy all the stamps you can during 1918. As soon as you have filled one certificate, put it away and start another. You couldn't make a better investment, and should you need the money before maturity you can get it back at any time through your postoffice.

Thrift Stamps are 25-cent stamps for those who find it easier to begin saving with that amount. With your first Thrift Stamp you will be given a Thrift Card which has 16 spaces for stamps. When filled, this card is worth $4 in the purchase of a War Savings Stamp. Thrift Cards bear no interest; turn them into Savings Stamps as quickly as you get them filled.

**Help the government and help yourself at the same time. This is a service in which all may share.**

**W.S.S.**
**WAR SAVINGS STAMPS**
**ISSUED BY THE**
**UNITED STATES GOVERNMENT**

You can get War Savings Stamps and Thrift Stamps from any bank or other authorized agent, from the Postoffice, or right at home from your R. F. D. carrier.

# KATE AND KARL MEET A BEAR IN THE WOODS

# THE BOXING INSTRUCTOR WAS TOO QUICK

DEAR TOMMY: The boxing instructor is always making fun of Reggie's short reach, so I fixed up a scheme like this. We expected to fool Professod Slug, but he caught us trying it out. He pretended not to know about it, and when Reggie started for him he just ducked. It was lucky there was a big chair in the room! Yours, etc., WILLIE.

# Peace Move Balked

## *German Terms Do Not Suit Russia*

There is apparently little prospect of peace between Germany and Russia. When Germany made her offer of peace in definte form last week the Russian delegates to the conference balked, declaring that the terms offered were grossly inacceptable. The terms showed beyond a doubt that Germany still plans to make this a war of conquest, and that she proposes to retain possession permanently of a considerable portion of the Russian territory. What the ultimate result of the failure of the conference will be is problematical, but it is reported to have caused grave concern in Germany, where it was believed that the bolsheviki of Russia would jump at anything in the form of peace and accept almost any terms that Germany would make. The unhesitating refusal of the Russians to consider the terms startled German authorities. The Russians went so far as to threaten a resumption of hostilities unless more reasonable terms were offered. Further conferences are scheduled and the peace negotiations are expectd to continu indefinitely before resumption of fighting between the Germans and the Russians actually takes place.

### German Soldiers Revolt.

Reports from the Russian battle front are to the effect that about 25,000 German soldiers have revolted against their own army and have actually been making war on their fellows. It is claimed by them that the terms of the armistice between Germany and Russia prohibit the transfer of soldiers from the Russian front to the western front, and that they were ordered to the western front. They refused to go, according to the report, and entrenched themselves for warfare if force was brought to bear.

### Allied Terms of Peace.

One of the most powerful and open statements of the allied governments relative to the terms upon which peace would be considered was made in an address by Premier Lloyd George last week. He declared that there was no desire on the part of England and her allies to disrupt the German nation, but that Germany had to be conquered and made evacuate all occupied territory. The complete restoration of Belgium, Serbia and Montenegro, he said, would be required. Germany must withdraw from all French, Italian and Rumanian territory now occupied, and in all cases must repair the damages done in so far as such damages could be repaired. It was not a definite statement that indemnity would be required, though it apparently meant a reparation closely allied to indemnity. Perhaps the most significant portion of the premier's statement was that England was determined to stand squarely beside France until the latter country regained the provinces of Alsace-Loraine, which were taken by Germany at the close of the war of 1871.

### Government Controls Railroads.

The government is rapidly assuming full control of the railroads under the proclamation of the president of 10 days ago. The lines will continue to be operated in the main by the same officials and crews as at the present time, and the high officials are cooperating heartily with the government in making the movement a success. It is now announced that, in order to give more freight service for the handling of foodstuffs and war materials, passenger service will be greatly curtailed. On the eastern lines already a reduction of 20 per cent of the service heretofore given has been announced, and Director General McAdoo has issued an appeal to the people to travel as little as possible consistent with the judicious conduct of their business.

President Wilson addressed a joint session of congress shortly after its reassembling after the holiday recess last week. One of the significant parts of his address dealing solely with the railroads was the suggestion that government control would continue after the close of the war until such time as congress deemed wise to return the roads to private management. There is much talk that the roads probably never will return to private operation again, but will be taken over permanently by the government under complete government ownership. This could be done by payment to the present owners of their value.

### Vanderlip for Cabinet?

Reports are being circulated that Frank A. Vanderlip of New York, prominent in financial circles, is slated by President Wilson for the position of secretary of the treasury to succeed Secretary McAdoo. This is only rumor, and probably results from the recent appointment of McAdoo to be head of the railroads under government control plan as now under way. It is urged that McAdoo will have to give his entire time to the operation of the railroads. Mr. Vanderlip has taken an active part in the floating of the Liberty loan bonds, and is now head of the thrift and war savings stamp campaign of the government.

### Would Help Buy Seed.

Secretary Houston of the United States department of agriculture has called to the attention of congress what he deems a vital need of the farmers in the matter of seed for the coming season's crops. He recommends that an appropriation of $6,000,000 be made at once for the purchase and sale to farmers of seed at cost. Speaking of the matter the secretary said:

"There is urgent and immediate need for at least $6,000,000, and it is probable that an additional sum will be required in the near future," said the secretary. "The seed situation presents many difficulties. Two general areas have suffered severely from drought during the last season—the southwest, including a large part of Texas and a part of Oklahoma, and a considerable portion of the northwest, including large sections of North Dakota and Eastern Montana. These regions represent a large part of the grain producing area of the United States. The seed-corn situation in the north half of the corn belt is more serious than it has been for many years."

### To Buy Farm Loan Bonds.

Recently the federal farm loan board at Washington, D. C., urged congress to appropriate $100,000,000 to be used in the purchase of federal farm loan bank bonds if need be to stabilize the finances of that institution. The lower house of congress has already passed the bill which now goes to the senate for consideration. The land bank board requested the appropriation on the grounds that there are so many demands for money at this time in financing the war that private money may become tied up to such an extent as to jeopardize the bank bond market, which in turn would jeopardize the lending of money to the farmers. The money to be appropriated by the government will not be used except to take the bonds if private capital fail to do so. It is considered specially important that the farm loan bank be maintained at this particular time in full operation as a means of aiding in the production of foodstuffs through farm financing.

### Community Drainage District.

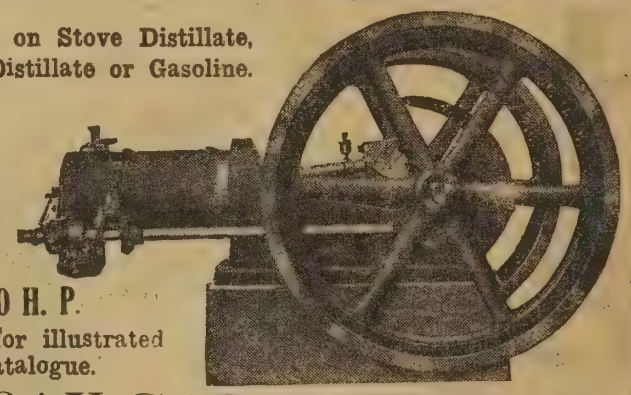
To the Editor of The Washington Farmer: I wish to report the formation of a community drainage district near Marysville in which 10 property owners have all signed an agreement through which they will construct a community main ditch for the drainage and improvement of 530 acres of valuable land for agricultural purposes.

The following men were elected as a board of supervisors for the improvement work. Jeffrey Hilton, E. M. Tompkins and J. E. DeuPree.

The contract for digging of the ditch was let to A. Amundson, who is one of the members of the district.

The Swans Trail district have decided not to vote for a district at this time, but instead all have agreed to put up $5 an acre to improve the old dike, which is in bad repair.

Drainage and diking are very important problems in Snohomish county and practically every farm in the county could be improved by some drainage. Many are putting in their closed drains with the use of cedar slabs. There is more activity in getting poorly drained land into proper shape for next year's crop than ever before. CHESTER C. FARR,
County agricultural agent.
Everett, Wash.



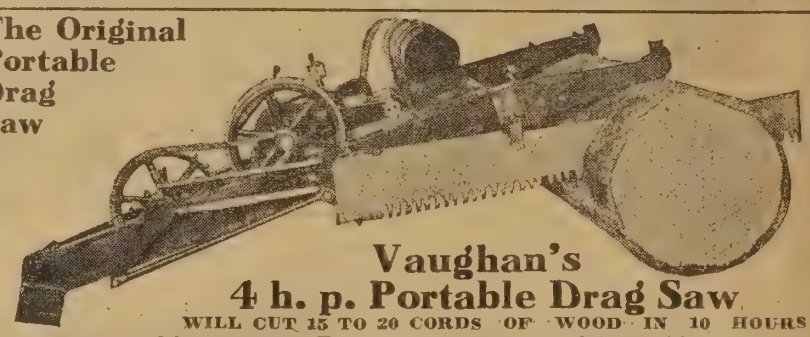
### Can't Sell His Beans.

To the Editor of The Washington Farmer: I raised a few beans last year and I can not sell them. I take them to the stores and I am offered 5 and 6 cents. At the same time I can't buy a pound of beans unless I pay from 12½ to 17 cents per pound. The merchants and dealers say they are waiting for Hoover, but will take long chances at 5 and 6 cents.

Washington has an ideal climate to raise beans, but we can not raise them for 5 and 6 cents per pound at the rate of wages. P. TOWES.
Wapato, Wash.

**DOAK ENGINES Simple, Reliable, Efficient**

Operate on Stove Distillate, No. 1 Distillate or Gasoline.



Made in Sizes 5 to 240 H. P.

Write for illustrated Catalogue.

**DOAK GAS ENGINE CO.**

503 H Market St., San Francisco, Cal.

**The Original Portable Drag Saw**

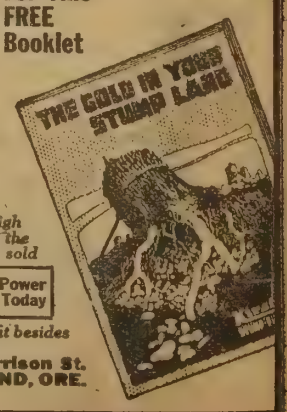
**Vaughan's 4 h. p. Portable Drag Saw**

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 4 H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $150 f. o. b. Spokane and common points. FOR SALE BY

**Washington Machinery & Supply Company**



S122 Monroe. SPOKANE, WASHINGTON

**Kirstin Out-Pulls 100 Horses**

30 DAYS TRIAL

Send Today For This FREE Booklet

**Clear Your Land Cheaper, Quicker and Easier With a Kirstin One Man STUMP PULLER**

*Put that slacker land to work. Prices on farm products are high and going higher—get ALL your land working and share in the increased profits. Mr. Jarish, of Oswego, Oregon, just sold the cabbage that he grew on a single acre of land cleared with a Kirstin and he got $150 COLD CASH for it. Your increased production will help win the war and net you a handsome profit besides*

We Also Sell a Kirstin Horse Power Stump Puller. Write Us Today

**TICKNOR & CO.** 332 East Morrison St. PORTLAND, ORE.

## A FREE LIBRARY.

Any of us can have a free library in the course of a few years, simply by the asking for books from time to time on subjects in which we are interested. You can not pick up a paper of any kind without finding in it offers of free booklets and catalogues—most of which contain really valuable information which has been prepared by experts.

There are catalogues that help solve building problems, others that help bring about a better understanding of farm machinery, soil analysis, irrigation, drainage—catalogues that are full of pointers, which, if followed, often save time, reduce work and increase output. If you are interested in fruit growing there are catalogues that can be had for the asking which give much valuable information on spraying, pruning, cultivation, etc.

Somebody has aptly said that if all the literature on farming were wiped out, it could easily be replaced from the reading matter sent out free by advertisers in farm papers—machinery, household conveniences, everything.

Advertisers are anxious to know where you read about what they have to sell. They as well as ourselves will appreciate it, therefore, if you will always mention this paper when you write any of them in answer to the advertisements appearing in our columns.

# Farm Labor Is Military Necessity

(Continued from page three.)

Pullman, vice president; and E. G. Shafer, Pullman, secretary and treasurer, of the 1919 convention which will meet at Pullman at the call of the president.

The board of directors is composed of W. H. Yenney of Walla Walla; S. A. Weipert, Reardan J. H. Roberts, Spokane; George Kunz, Creston; D. S. Wallace, Lewiston, and R. J. Stephens, Spokane.

Guy Wolfe of Moscow, R. J. Stephens of Spokane, and S. A. Weipert of Reardan, were appointed to cooperate with the grain commission in trying to secure elevators, warehouses and bins at interior points to handle bulk grain and to assist the grain commission in handling the grain crop.

Huston McCroskey, the new president, a son of R. C. McCroskey of Garfield, is a practical and extensive farmer and a graduate of Washington State college.

**Dr. Holland's Welcome.**

The convention opened at 1:30 Thursday afternoon with the singing of "America," with all standing and taking part in the song. Dr. E. O. Holland, president of Washington State college, delivered the address of welcome, which was full of power and instruction. He told of the great work the college and the experiment station and the farm extension departments are doing. He assured the convention that its annual visit to the college is looked forward to with pleasure and that "you get no more benefit from the college than the college gets from your presence here and your deliberations." He told of the vast sums spent by the state and the nation for the support of the college and the carrying on of its work, but made the statement that he believes that this state has received, in direct benefits, $20 for every dollar expended on the college and its allied work. He said that 90 per cent of the agricultural problems are solved by the farmers themselves, but that the other 10 per cent solved by the agricultural college is equally as important to the total net results as the 90 per cent that the farmers solve.

**President's Annual Address.**

R. J. Stephens of the Stephens-Smith Grain company, Spokane, president of the association, delivered his annual address, which was chuck full of food for thought and splendid encouragement to the men interested in the growing and handling of grain. He cited the fact that everything must give way to the winning of the war, but pointed out that the raising of a grain crop is equally important with the raising of a great army.

He asked every one to lay aside individual interests and do his utmost to help the United States and its allies in winning the war. He condemned the feeding of wheat to hogs in the Palouse country, but said there is some excuse for this in the Big Bend country where there was much 48 and 50 pound test wheat and wheat that had been frosted and was unfit for milling. He urged that farmers who have hogs to sell their wheat and buy barley to feed them. He stated that hog raising is as important as wheat raising but pleaded for the saving of wheat this year.

**Value of Different Wheats.**

One of the most interesting papers read was that of R. T. Lord, of Spokane, who used a blackboard to illustrate the difference in value of different wheats. He showed that wheat testing but 50 pounds per bushel yielded but 63.8 per cent of flour while wheat testing 60 pounds yields 77.4 per cent, and based on $1 per bushel for 57 pound test wheat, the 50 pound wheat yields but $0.899, while the 60 pound test wheat yields $1.0228. On a basis of $2 per bushel for wheat the difference would be twice as great. In other words with wheat at $1 per bushel wheat testing only 50 pounds would be worth a little more than 12 cents a bushel less than wheat testing 60 pounds and at $2 per bushel the difference in value would be 24 1-2 cents. This table had been worked out by millers and chemists in laboratory and milling tests and is accepted as standard wherever wheat is grown. This shows that the government grades, making 24 cents difference in price between 50 and 60 pound test wheat at a $2 per bushel price, is not far from right.

Mr. Lord showed that when wheat was worth $1 per bushel mill feed (bran and shorts) sold for $20 per ton while now, with wheat at $2 per bushel mill feed sells for only $30 to $32 per ton, showing that mill feed has not kept pace in price advance with wheat.

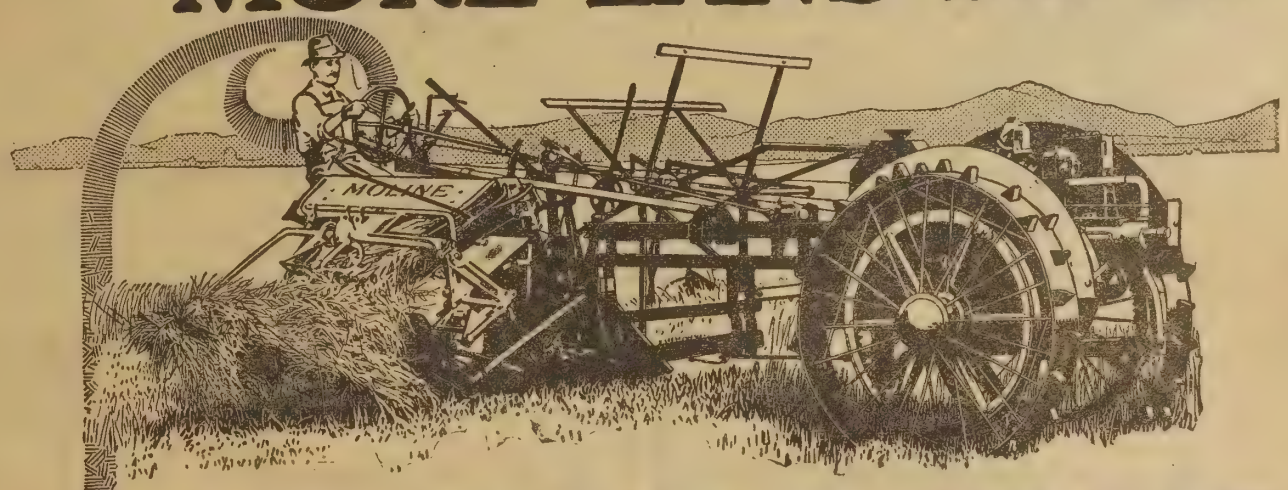
**Spring Wheat Discussion.**

President Stephens advised using an hour in discussing the best plans for increasing the yield of spring wheat, and this began, but soon developed into a discussion of higher prices and a number of speakers waxed warm in protesting against getting only $2 per bushel for wheat during the war. J. M. Reid of Pullman stated that if "the farmers were only organized as the labor unions are organized they would not stand, for a single minute, to get 66 per cent as much for their wheat (which means their labor) as the farmers of the middle west are getting." This brought R. J. Lord to his feet with the counter thrust that "if the 10,000,000 young men, the flower of American manhood, including my son and the sons of many others here, had organized they might have refused to obey the call of their country to go to the front and sacrifice their lives, if need be, to save democracy and freedom, and we might have had to fight the kaiser's troops on our own shores later or submit to his dictation." Mr. Lord was loudly cheered and the clamor for higher prices ceased.

**Wheat Farm Rotation.**

R. C. McCroskey told of his experience in alternating alfalfa and clover with wheat. He got 43 bushels of wheat from land that had been in alfalfa for several years, and last year (1917), one of the worst crop years this state has known, got 67 bushels of oats from the same land without summer fallowing it. Tillage of summer fallow was discussed interestingly by A. M. Richardson of Pullman. A concert by the college department of music closed the second evening's program, the attendance being large and the music appreciated.

Potato flour as a substitute for wheat flour and a mixture of corn meal with wheat flour was advocated by William T. Harshman, chemist for the Spokane Bakery company, who told how other grains or potatoes may be used in reducing the percentage of wheat flour and still give wholesome bread.



R. J. Stephens, retiring president of the wheat convention, wants it understood that he is not opposing hog-raising, but on the contrary regards pork production as almost equaling in importance increased production of wheat, but he believes that if farmers will use due diligence and care they can have barley for hog feed and save money and produce as much pork at less cost than by feeding wheat. He told of prices at which barley can be secured and urged that farmers raise more hogs, but that no milling wheat be fed to them.

It was brought out in the grain discussion that the college has propagated a new variety of wheat called "Triplet," and that it is a great yielder and a strong smut resister. Professor Gaines will be pleased to give the farmers information about this wheat and small quantities can be secured from the college for seed.

Professor M. K. Snyder of the engineering department of Washington State college, read an interesting and highly instructive paper on the building of grain bins for farmers. His plan calls for a crib bin, made of 2x8 dressed fir or pine spiked with 30 penny spikes, which go through three of the planks, and he gave detailed instructions on the building of such crib bins, their cost and saving to the farmer. He had made a study of the subject and in giving the cost had quoted the maximum in every case, quoting prices on No. 1, fir lumber at $27 per 1000 feet, and adding $3 for hauling. He stated that No. 2 lumber which can be bought for $20 will be almost equally as good.

Professor Snyder's paper will be given in next week's issue of the Farmer.

ONE MAN CAN FARM MORE LAND *with the*

MOLINE
UNIVERSAL TRACTOR
*"It Solves the Farm Help Problem"*

TWO MILLION MEN will be gone from the farms because of the war—strong, skilled, willing workers, only a small part of whom can be replaced by older men, boys and women. Yet production of food must be increased. There is only one way—equip the men left on the farms so they can do more work than ever before.

With the Moline-Universal—the original two-wheel tractor—*One Man* can farm more land than was ever before possible, because—

*One Man* has power at his command equal to five horses, capable of doing the work of seven horses owing to its greater speed and endurance. This power is always available for any farm work.

*One Man* operates the Moline-Universal Tractor from the seat of the implement to which it is attached, where he must sit in order to do good work.

*One Man* can start in the spring and go from one operation to another—plowing, harrowing, planting, cultivating, mowing, harvesting grain or corn, spreading manure, filling the silo, cutting wood, etc., doing all farm work from one year's end to another, independently of horses or hired help.

All these one-man operations with the Moline-Universal are possible because it is mounted on two wheels, all its weight is traction weight; it is powerful—pulls two 14-inch bottoms easily—yet it is light so that it does not pack the soil. The Moline-Universal attaches direct to the implement, making one compact unit.

One woman or boy operates the Moline-Universal as easily as a man. Miss Ruth Harding of Albion, N. Y., a proud owner of a Moline-Universal, writes: "I have never called a man from his work to assist me with the tractor in any way."

Thousands of Moline-Universal Tractors are now at work under every conceivable condition in all parts of the United States and in Canada, England, France, Sweden, Norway, Denmark, Russia, Italy, Spain, Mexico, Peru, Argentine, Brazil, Cuba, Gautemala, South Africa, Australia. Wherever a Moline-Universal Tractor is sold there is immediately a big demand for more.

The demand for Moline-Universal Tractors has far exceeded our expectations. We built an enormous factory which is devoted entirely to making Moline-Universal Tractors and three times have erected large additions to cope with the enormous demand. We now have the largest tractor factory in the world.

Moline sales and service branches cover the country. No purchaser is ever more than a few hours away from Moline service.

The Moline-Universal will solve your help and power problems. It is ready for you now. Write us today for free booklet giving full description of the Moline-Universal and name of nearest Moline dealer.

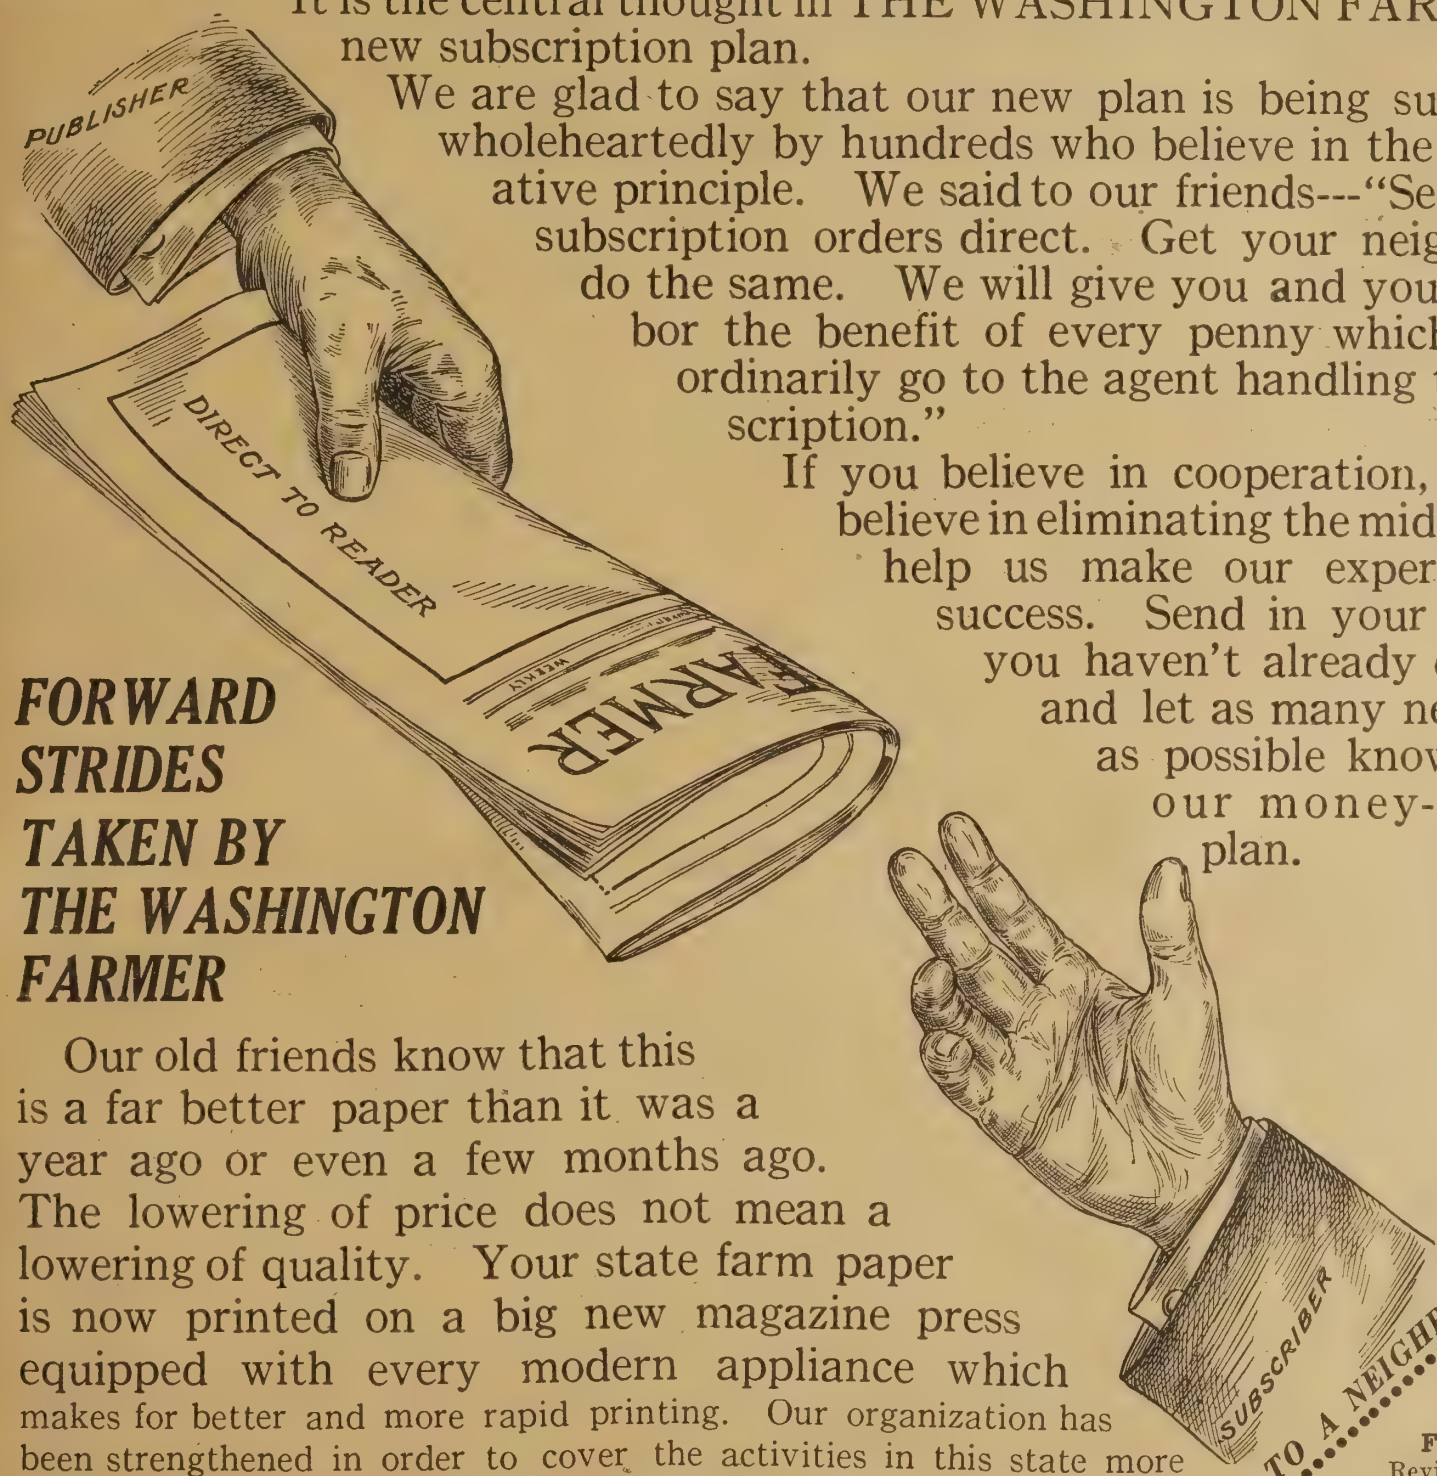
# UNLUCKY LOOIE IS STILL UNLUCKY

# BOOT GETS AWAY WITH THE PUP—ALMOST



# CUT OUT THE MIDDLEMEN!

That has been a slogan and rallying cry with farmers and farmers' organizations for many years.

It is the central thought in THE WASHINGTON FARMER'S new subscription plan.

We are glad to say that our new plan is being supported wholeheartedly by hundreds who believe in the cooperative principle. We said to our friends---"Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, if you believe in eliminating the middleman, help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

## *FORWARD STRIDES TAKEN BY THE WASHINGTON FARMER*

Our old friends know that this is a far better paper than it was a year ago or even a few months ago. The lowering of price does not mean a lowering of quality. Your state farm paper is now printed on a big new magazine press equipped with every modern appliance which makes for better and more rapid printing. Our organization has been strengthened in order to cover the activities in this state more thoroughly. The most popular type of fiction has been secured for our pages. The household department has been made more interesting and helpful. In fact there have been improvements all along the line. Through our cooperative plan you actually get this superior paper for a mere fraction of what it has cost in the past.

## A Real Saving

***Following Rates Now in Effect for Subscriptions to The Washington Farmer***

***25c FOR ONE YEAR***

***50c FOR THREE YEARS***

***$1. FOR FIVE YEARS***

IF YOU'VE ANSWERED PLEASE PASS TO A NEIGHBOR

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.**

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

## What Is the Law of Mendellism?

### *Great Development Has Resulted From Monk's Discovery*

It is not often that a priest or a monk, dedicated to "Holy orders," and consecrated to the work of the church, has time or even the natural tastes for physical studies and to become so well acquainted with nature as to discover one of her laws and to make his name famous among scientists all round the world. But in the city of Brunn, the capital of Moravia, an Austrian province, Gregor Johann Meandell, experimented in his cloister with garden peas, chickens, rabbits and guinea pigs until he discovered what has passed into history as "Mendell's Law." At the state fair, I met a man who is trying it out on fruits of different kinds, and while he has not gone far enough to announce any definite results, his experiments brought again to mind what seemed to me, when I first read of Mendell's experiments, one of the laws by which all farm crops, fruits, animals and all forms of life may be improved. However, we are treading on ground that may cause us some disappointment if we depend too much upon it. The reason for this I will announce later.

**What Mendell Discovered.**

Mendell discovered that certain characters of one parent would appear in the hybrids of the first generation to the exclusion of the contrasting characters of the other parent. The former he called the dominant, the other the recessive. In successive generations, of the self-fertilized hybrids, the recessive characters appeared, in the ratio of one recessive to three dominants. The recessive continued pure, that is, like its recessive parent. The dominants continued pure dominants on the ratio of one pure dominant to two mixed offspring. In general wherever there appears a pair of differentiating characters, of which one is dominant to the other, three possibilities exist: there are recessives which always breed true to recessive character; there are dominants that always breed true to dominant character, and are therefore pure; and thirdly there are dominants which may be called impure and which on self-fertilization (or inbreeding where the sexes are separate) give both dominant and recessive characteristics. These dominant and recessive forms, products of the third class, give their impure characteristics in the proporation of three dominant to one recessive.

**The Law Illustrated.**

We will illustrate by varieties of strawberries as follows: Clarke's Seedling has a fruit well adapted to our northwest conditions. It is medium in size, roundish to slightly conical, blunt, very attractive, crimson color, flesh red to the core, very firm, well flavored and of good quality.

Parson's Beauty: Are lighter in color than Clarkes' Seedling, flesh varies in color from scarlet to pink salmon, or salmon pink, has prominent greenish seeds extending out on the surface marring its beauty and selling qualities.

Now suppose these two varieties were crossed. According to Mendell's law, in the first generation of offspring if Clarke's seedling were dominant and Parson's Beauty recessive, the proportion would be as one recessive to three dominants.

In the second generation, allowing the strawberries to fertilize themselves the recessives, that is the Parson's Beauty would produce Parson's Beauty strawberries. The products of this generation would never produce Clarke's Seedlings; would never produce dominants.

When the dominants were examined, they were not all alike. There were pure dominants, Clarke's Seedlings, and mixed offspring, partly recessive and partly dominant. That is, they partook of the characters of both Parson's Beauty and Clarke's Seedling. The number of pure dominants would be as one dominant to three mixed. In other words 25 per cent would be Clarke's Seedling, and 75 per cent mixed. Through all the succeeding generations, the pure dominants will produce dominants, and the new variety, if any is produced, must come from the class of impure stock.

In the next or third generation of offspring, the cross breds partaking of the characters of both dominant and recessive, will follow the law of proportions namely, three dominant to one recessive.

In the fourth generation there will be two dominants and one recessive. The process of breaking up into the parent forms is thus continued in each succeeding generation and the same numerical law followed.

Why is it so?

The explanation is supposed to be in the purity of the germ cells—which are the units of heredity and which in the process of fertilization lose their individuality. In the result of cross mating, the young may show but one contrasting pair of parental characteristics. That is it may show the traits of one parent, but not the other. However the traits of the other are latent and may reappear in a succeeding generation. Those appearing are called prepoteat, those not appearing are latent.

If this be true, nothing that has ever appeared as a form of life can be annihilated until the species becomes extinct, for it may be latent and reappear in most unexpected environments.

I was very well acquainted with a man of light complexion, curly hair almost as red as that of the school boy whom his comrades will call "brick top," and who married a woman of dark complexion, black hair, but of pure Caucasian blood. The children were decidedly African in characteristics. When the first child was born, the father was about to obtain a divorce from his wife on the supposition that she had cohabited with their coachman. His father came to the rescue of the innocent life, and told him that the negro blood was in his veins and not in his wife. The husband was the son of a woman one-fourth negro. The father of the child, seeing the child was fair in complexion with light hair, adopted him and he and his wife brought him up as their own. In fact he was the child of the man who adopted him, but not of the woman. In other words the law of latent characters reappearing in succeeding generations runs through all the forms of animal and vegetable life.

**Reasons for Cure.**

There seems to be conflict of authority and perhaps it is true as it often is, that where two or more intelligent persons disagree about anything concerning which they are both familiar, there is truth on both sides because there is a larger truth that includes them both. Or as Herbert Spencer expressed it, they are both right in what they affirm, and wrong in what they deny.

Sir Francis Galton, regarded as one of the best authorities on heredity, claimed that offspring derive one-fourth of their ancestral inheritance from each parent, one-sixteenth from each grandparent, and one thirty-second from each great grandparent.

Charles Darwin in his "Origin of Species" claims that there are certain factors affecting hereditary tendencies and causing variation from the original type. Among these factors are quantity of food, quality of food, soil, climate, action of insects and other causes.

About 25 years ago, certain students of sociology and criminology in studying the laws of heredity in relation to environment, in order to ascertain the effects upon society of the saloon, brothel, bad housing, tenement conditions in the cities, etc., reached the conclusion that there are seven laws of hereditary descent.

The first is direct in which the offspring is like one or the other of the parents.

The second is reversional in which it is like one of the grand-parents, great-grand-parents, or great-great-grand-parents.

The third is co-equal, which maintains the equality of the sexes.

The fourth is collateral, in which it is like one of the uncles or aunts.

The fifth is prenatal in which it is affected by some circumstances after conception and before birth.

The sixth is pre-martial in which it is like the husband of a previous marriage in human heredity, but like the sire of a previous copulation in animals. This is evidently a psychic influence, or is supposed to be. Darwin relates the case of a young filly that was first bred to a buckskin colored horse with a dark stripe across his shoulders. The offspring had the characteristic marking of the dark stripe across its shoulders. The next year she was bred to a horse of a different color, without the dark stripe. However, her colt of that copulation had the dark stripe. Darwin thought it might have resulted from the fact that the first and second experiences affected the mind of the animal so as to cause the marking of the second colt.

The seventh law is initial and is illustrated in certain changes of habit in one or both of the parents. For instance, a man was brought up on a little farm in western New York state, married and had two children, strong, vigorous and that grew up to become good citizens. But after the birth of the two children he removed to New York city, engaged as a worker in one of the manufactories there, became dissipated, drank and indulged the habits common to that kind of life. Two other children were born, neither of which had the strength, physical, intellectual or moral, of the other two.

These sociologists give cases where men have been dissipated early in life, but seeing the bad effects upon their children have reformed and after a certain period of right living the hereditary traits have been improved. This is especially true where there are syphilitic tendencies and alcoholism. This is supported by Darwin's "Variation on Account of the Kinds of Food." This has furnished the opposers of the use of tobacco with their strongest arguments.

It is known to fruitgrowers that iron in the soil will give the apples a deeper color than soil without iron or some other coloring quality. Alkali colors fruits if it is not too strong. These are laws that must be studied if we would make the most out of life.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

## How Some Persons "Fake" Illness Without Meaning To

Dr. Hirshberg.

Just where truth ends and "faking" begins in these persons who think they are very sick and are not or who pretend they have a chronic illness which is not present, is not easy to define.

Acute seeming illness is often called "hysteria." It is probably due to some disorders of the glands, because it is associated with an emotional cause. Some kinds of epilepsy are of this emotional sort.

Another example of temporary malingering is "aphonia" or loss of voice due to an emotional "paralysis" of the vocal cords. This is generally called erroneously "nervousness." Certain kinds of suppressed feelings cause this.

These conditions are not "faking." The victim actually undergoes a temporary physical change of some kind, traceable, perhaps, to the thyroid, pituitary or other glands.

It is not a "will to do," but a lack of the will to do what is needed to counteract the symptoms and overcome the loss of physical stability. The patient is not "crooked," hypocritical or insincere, but is merely powerless to correct the twisted quirk into a real equilibrium or agreement between personality and the world.

**How to Distinguish.**

Discipline, education, training, knowledge and public opinion cause a lot of natural appetites, tendencies, inclinations, wishes, desires and motives to be concealed and suppressed. Their natural outlets are jammed with a consequent pressure of these torrents and Niagaras of feeling being turned aside to force their way out in some other direction. This discharge then occurs when there is some form of discipline or habit which prevents the emotions seeking ordinary expression. The potential energy which is not used up accumulates until it compels some kind of unreal, foolish or abnormal manifestation.

Malingering, therefore, is not to be blamed upon the patient whose wishes are clearly beyond control for the time being. Rather public opinion with its crocodile tears and the customs, laws and codes of society which cause hypocrites and concealment, suppression and repression of feelings—civilization socalled, is justly to be blamed.

Sympathy should go out to the "malingerer" and "hysteric," and some sort of resentment should be asserted against the machinery-made public opinion with its lack of human charity.

A workman employed by a public service corporation, which pays half-wages to those injured, suffered some damage to a leg. He became spineless and depressed, and lost interest in most things. He was a member of several sick benefit societies, and came in for something under the workmen's compensation acts.

There were no outward signs or any others to show that he was injured, although he had many "subjective" symptoms—symptoms are the things told of by the patient, signs are what the doctors and the experimental psychologists can find.

**Bring Out Hidden Cause.**

Upon adding up his society benefits, his half-pay and his compensation rights it was found that this man's income was actually greater when sick than when he was at regular work.

Yet the man did not consciously feign. He was unconsciously guided or forced by the obvious rewards into the staet of a malingerer. The overpowering motive of a better reward suspected his ordinary, normal activities for altered ones, just as the hypnotist uses similar suggestive motives to urge the mesmerized subject to carry out the former's will. Of course, the instant the motive is either removed or made to appear openly unworthy the malingerer usually begins to mend. Thereafter he is amenable to ordinary treatment.

## A Handy List

Figures giving the food supplies of the world tell us that in 1918 America will more and more be called on to share with a hungry world what she can spare from her own board. This can be done by substituting other foods not needed for shipping. Sometimes it is hard to think of that substitute. Why not prepare a list to hang on the kitchen cabinet to be used for ready reference when in doubt. Let the list below grow with your experiments.

| Meat Substitutes. | |
|---|---|
| Poultry | Bean loaf |
| Rabbit | Nut loaf |
| Fish | Bean soup |
| Eggs | Milk soup |
| Cheese dishes | Chowders |
| Baked beans | Milk |

| Wheat Bread Substitutes. | |
|---|---|
| Corn bread | Potato biscuit |
| Brown bread | Rye bread |
| Oatcakes | Potatoes |
| Buckwheat cakes | Rice |
| Hominy | |

**DARN THE OLD KAISER.**

My Tuesdays are meatless,
My Wednesdays are wheatless;
I am getting more eatless each day,
My house it is heatless,
My bed it is sheetless,
They're all sent to the Y. M. C. A.
The barrooms are treatless,
My coffee is sweetless,
Each day I get poorer and wiser,
My stockings are feetless,
My trousers are seatless;
My—but I do hate the kaiser!

**Inexpensive Fruit Cake.**

This southern recipe for cake is made without eggs, which is a decided advantage at the present price. Mix together one cupful of light brown sugar, molasses and butter, a pinch of salt, heaping teaspoonful each of cinamon, cloves and ginger, half a nutmeg grated, one teaspoonful of lemon juice and a teaspoonful of soda dissolved in a little hot water. Add two cupfuls of floured raisins, a cupful of currants, quarter cupful of citron cut in small pieces and the same quantity of chopped almonds. Mix all together thoroughly and add one cupful of boiling water and then add flour enough to make it so stiff that it will hold the mixing spoon upright and bake in a moderate oven for one hour.

## Devery's Plans Good.

The war department has accepted for consideration from former Chief of Police Will S. Devery of New York suggestions to help organize the force recently authorized by President Wilson to administer the alien enemy laws. Devery's photograph appears above.

Mr. Devery suggests the new force be called the national military police. This, with other recommendations, was transmitted to the war department in a letter written by the veteran police authority to the New York American.

Brigadier General J. McCarter, designated by Secretary of War Baker to devise means for raising the new force, said:

"Mr. Devery's suggestions will be very helpful. They represent precisely the character of advice we desire and must have. Undoubtedly many of the recommendations which can be made to conform with the existing laws will be adopted."

## SYNOPSIS.

Gale, trader, of Flambeau, has a beautiful daughter, Necia, and two half-breed children. Alluna, a squaw, is their mother. Lieutenant Burrell is sent to Flambeau to establish a military post. He and Necia become close friends. "No Creek" Lee, an unsuccessful miner, strikes a vein of gold. Stark comes to Flambeau to grubstake the miners and start a saloon. Runnion, a desperado, is his assistant. Stark's presence in the camp causes Gale and his squaw great uneasiness. Lee, Stark, Runnion, Gale and Poleon, a Frenchman, leave for the claim secretly so as to prevent a stampede. Necia hears of it, and, longing for riches so she may be as others girls, persuades Burrell to accompany her on a shortcut to the claim. Burrell, who is unpopular in Flambeau, chooses this means of beating the men at their own game. That night by the campfire Necia, realizing her peril, cautiously awakens in the lieutenant his slumbering conscience. They reach camp before the others the next morning and Necia stakes three claims. While Stark, Runnion and Poleon are locating Runnion makes some insinuations about Necia and Burrell. Poleon, who loves Necia, swears that either Runnion or Burrell will pay for them with his life. That night as Star is telling Necia a story a shot rings out and Gale jumps across the room shouting "My God! I've killed him." But the bullet misses Stark by inches. When Alluna hears of the affair she tells Gale that Stark is bullet-proof and gives him a knife, begging him to kill Stark as soon as possible. Burrell knows that he loves Necia, but, thinking she is a half-breed, he is afraid to marry her on account of what it would mean to his family, his position and his honor. One day as Necia is alone in the store Runnion tells her that he is willing to marry her, even if the lieutenant has thrown her over and the story is being told on the street. Later Necia acknowledges to Poleon that while Burrell has sworn his love for her he has never spoken of marriage. She declares that she has never been unmaidenly, but that since the men are talking she will be married by Sunday, and that it may as well be to Poleon as anybody. They send for Burrell and Necia hides so that she may hear his answer for herself

When Burrell enters Poleon wastes no time but asks him if he means to marry Necia. Maddened by the lieutenant's hesitation, Necia rushes out declaring she has played with him long enough, and that she is to marry Poleon on Sunday. Locked in his room through long hours of struggle Burrell finally realizes that Necia's love means more to him than all else. He finds her dressed in the black ball gown, her bare arms and neck gleaming in their whiteness. Not until after he has asked her to marry him does the revelation come to Necia that love means sacrifice. She refuses to spoil his future.

Gale decides that for the sake of Necia's happiness, he will go to Burrell and tell him his story. Grief-stricken, Necia flees from the store, to spend her anguish alone in the darkness. Stark finds her sobbing and takes her to his cabin. There he learns that she is Merridy and uses the knowledge to further his plan for revenge on Gale and burrell. He persuades Necia to go to the mission and tells her that he will provide a man to take her there. When she has gone he takes out his six-shooter and, with his face set in exultant cruelty, leaves the cabin.

## CHAPTER XV.

### And a Knot Tightened.

A day of shattered hopes is a desolate thing, but the night of such a day is desolate indeed. In all his life Poleon Doret had never sunk to such depths of despondency, for his optimistic philosophy and his buoyant faith in the goodness of life forbade it. Therefore, when darkness came it blotted out what little brightness and light and hope were left to him after Necia's stormy interview with the lieutenant. The arrival of the freight steamer afforded him some distraction, but there was only a small consignment for the store, and that was quickly disposed of, so, leaving the other citizens of Flambeau to wrangle over their private merchandise, he went back to his solitary vigil, which finally became so unbearale that he sought to escape his thoughts, or at least to drown them for a while, amid the lights and life and laughter of Stark's saloon. Being but a child by nature, his means of distraction were primal and elementary, and he began to gamble, as usual with hard luck, for the cards had ever been unkind to him. He did not think of winnings or losings, however—he merely craved the occupation; and it was this that induced him to sit at a game in which Runnion played, although ordinarily he would not have tolerated even tacitly such a truce to his dislikes. As it was, he crouched in a corner, his hat pulled down over his brow, his swarthy face a darker hue beneath the shadow, losing steadily, only now and then showing a flash of white teeth as he saw his money go. What mattered loss to him? He had no more need of money now than Necia had of his love. He would spend the dollars he had eked and scraped and saved for her as she had spent the treasures of his heart, and now that the one had brought him no return he wished to be rid of the other, for he was shortly to go again in search of his "New Country," where no man needs gold half so much as a clean heart. It would be a long journey, far to the west and north—a journey that none of his kind had ever fared back from, and he wished to go light, as all good adventurers go.

Runnion annoyed him with his volubility, for the news of his good fortune had fired the man with a reckless disregard for money, and he turned to gaming as the one natural recourse of his ilk. As the irony of fate would have it, he won what the Canadian lost, together with the stakes of various others who played for a time with him and then gave up, wagging their heads or swearing softly at the cards.

It was shortly after midnight that Stark came into the place. Poleon was not too absorbed in his own fortunes to fail to notice the extraordinary ferocity and exhilaration of the saloon keeper, nor that his face was keener, his nostrils thinner, his walk more nervous, and his voice more cutting than usual when he spoke to Runnion.

"Come here."

"I'll be with you when I finish this hand," said the player, over his shoulder.

"Come here!" Stark snapped his command, and Runnion threw down his cards.

"I'm right in the middle of a winning streak. You'll break my luck, Ben."

But the other only frowned impatiently, and, drawing the reluctant gambler aside, began to talk rapidly to him, almost within earshot of Poleon, who watched them, idly wondering what Stark had to say that could make Runnion start and act so queerly. Well, it was their affair. They made a bad pair to draw to. He knew that Runnion was the saloon keeper's lieutenant and obeyed implicitly his senior's commands. He could distinguish nothing they said, nor was he at all curious until a knot of noisy men crowded up to the bar, and, forcing the two back nearer to the table where he sat, his sharp ears caught these words from Runnion's lips:

"Not with me! She'd never go with me!" and Stark's reply:

"She'll go where I send her, and with anybody I tell her to."

The Frenchman lost what followed, for a newly dealt hand required study. He scanned his cards, and tossed them face up before the dealer; then he overheard Runnion say:

"It's the only one in camp. He might sell it if you offered him enough." At this Stark called one of the men at the bar aside, and the three began to dicker.

"Not a cent less," the third man announced, loudly. "There ain't another Peterborough in town."

It was Poleon's deal now, and when he had finished both Stark and Runnion had disappeared, also the man they had accosted, which pleased the Canadian, for now Runnion was eliminated from the game he might win a little. A steady, unvarying run of bad hands is uninteresting, and does not occupy one's mind as well as an occasional change of luck.

Outside Runnion was saying again to Stark:

"She won't go with me, Ben: she don't like me. You see, I made love to her, and she got mad and wanted me killed."

"She'll never know who you are until it's too late to turn back," said the other, "and you are the only man I can trust to take her through. I can trust you—you owe me too much to be crooked."

"Oh, I'll act square with you! But look here, what's all this about, anyhow? Why do you want that girl? You said you didn't care for her that way; you told me so yourself. Been having a change of heart, or is it your second childhood?" He laughed disagreeably.

"It's none of your business," said the gambler. "I want her, and that's enough. All you have to do is to take her to St. Michael's and keep her there till you hear from me. She thinks she is going to the Mission, and you needn't tell her otherwise until you get her aboard a steamer; then take her, no matter what kind of a fight she puts up. You've got a light-rowing skiff, and you'd better keep going till you're overtaken by a downriver boat. I want her as far away from here as possible. Thert's going to be some hell in this camp. Now, hike, and get yourself ready."

"All right! But I ain't the safest kind of a chaperon for a good-looking girl."

Stark laid a cold hand on Runnion's shoulder, close up to his neck.

"Get that out of your mind. She belongs to me."

"You said just now——"

"Never mind what I said. She's mine, and you've got to promise to be straight with her. I've trusted you before, and if you're not on the level now, say so. It will save you a lot of trouble."

"Oh! All right;" exclaimed Runnion, testily. "Only it looks mighty queer."

He melted into the darkness and Stark returned to his cabin, where he paced back and forth impatiently, smiling evilly now and then, consulting his watch at frequent intervals. A black look had begun to settle on his face, but it vanished when Necia came, and he met her with a smile.

"I was afraid you had weakened," he said. "Everything is ready and waiting. I've got the only canoe in the place, a Peterborough, and hired a good oarsman to put you through, instructing him to make as fast time as he can, and to board the first steamer that overtakes you. Too bad this freighter that just got in isn't going the other way. However, there's liable to be another any hour, and if one doesn't come along you'll find enough blankets and flood in the skiff, so you needn't go ashore. You'll be there before you know it."

"You are very kind," said the girl. "I can't thank you enough." She was clothed in her simple everyday dress, and looked again the sun-colored half-breed girl with the wide, dark eyes and the twin braids of crow-black hair.

"You didn't run into anybody, eh?"

She shook her head. Then he led her out into the darkness, and they stumbled down to the river's bank, descending to the gravelly water's edge, where rows of clumsy hand-sawed boats and poling-skiffs were chafing at their painters. The up-river steamer was just clearing.

Stark's low whistle was answered a hundred yards below, and they searched out a darker blot that proved to be a man's figure.

"Is everything ready?" he inquired, at which the shadow grunted unintelligibly. So, holding Necia by the arm, Stark helped her back to a seat in the stern.

"This man will take you through," he said. "You can trust him, all right."

The oarsman clambered in and adjusted his sweeps, then Stark laid a hand on the prow and shoved the light boat out into the current, calling softly:

"Good-bye, and good luck."

"Good-bye, Mr. Stark. Thank you ever so much," the girl replied, too numb and worn out to say much, or to notice or care whither she was bound or who was her boatman. She had been swept along too swiftly to reason or fear for herself any more.

Half an hour later the scattered lights of the little camp winked and twinkled for the last time. Turning, she set her face forward, and, adjusting the cushions to her comfort, strained her tired eyes toward the rising and falling shadow of her boatman. She seemed borne along on a mystic river of gloom that hissed and gurgled about her, invisible but all-pervading, irresistible, monstrous, only the ceaseless, monotonous creak of the rowlocks breaking the silence.

Stark did not return to his cabin, but went back instead to his saloon, where he saw Poleon Doret still sprawling with elbows on the table, his hat pulled low above his sullen face. The owner of the place passed behind the bar and poured himself a full glass of whisky, which he tossed off, then, without a look to right or left, went out and down toward the barracks. A light behind the drawn curtains of the officer's house told that his man was not abed, but he waited a long moment after his summons before the door was opened, during which he heard the occupant moving about and another door close in the rear. When he was allowed entrance at last he found the young man alone in a smoke-filled room with a bottle and two empty glasses on the table.

For at the sound of his voice Gale had whispered to Burrell, "Keep him out!" and the lieutenant had decided to refuse his late visitor admittance when he lighted on the expedient of concealing the trader in the bedroom at the rear. It was only natural, he reasoned, that Gale should dislike to face a man like Stark before he had regained his composure.

"Go in there and wait till I see what he wants," he had said, and, shutting the old man in, he had gone forth to admit Stark, resenting his ill-timed intrusion and inquiring brusquely the cause of it.

Before answering, Stark entered and closed the door behind him.

"I've got some work for you, lieutenant."

"I guess it can wait till morning," said Meade.

"No, it can't; it's got to be done tonight, right now! You represent the law, or at least you've taken every occasion to so declare yourself, and to mix in with little things that don't cut much figure; so now I've come to you with something big. It's a serious affair, and, being as I'm a peaceful man, I want to go by the law." His eyes mocked the words he uttered. "You're mighty prompt and determined when it comes to regulating such affairs. You seem to carry the weight of this whole community on your shoulders, so I'm here to give you some information."

Burrell ignored the taunt, and said, quietly: "It's a little late for polite conversation. Come to the point."

"I've got a criminal for you."

"What kind?"

"Murderer."

"You've had a killing in your place, eh?"

"No, I've just made a discovery. I found it all out by accident, too—pure accident. By Heaven! You can't tell me there isn't a beneficient Providence overlooking our affairs. Why, this felon has lived here among us all this time, and only for the merest chance I never would have recognized him."

"Well, well! Go on!" snapped Burrell, impatiently.

"He's a friend of yours, and a highly respected party. He's a glorious example to this whole river."

The officer started. Could it be? He wondered. Could knowledge of this affair have reached this man. He was uncomfortably aware of that presence in the back room, but he had to know the truth.

"Who is the man?"

"He's your friend. He's——" Stark paused, gloating over his enemy's suspense.

"Go on."

"He's everybody's friend. He's the shining mark of this whole country. He's the benevolent renegade, Squaw-man Gale."

"John Gale?"

"Gaylord is his name, and I was a fool not to know it sooner."

"How did you discover this?" inquired Burrell, lamely. "What proof have you?"

The disclosure had not affected the

# Using Skimmed Milk

Skimmed milk is usually so abundant on the farm that its value in the diet is overlooked, says a bulletin of the U. S food administration. Quart for quart it contains a little more protein and a little more milk sugar than whole milk, but much less fat. Because of the lack of fat it can not be used in place of whole milk for children. It is, however, a most valuable adjunct to the diet of meatless days, and the cheapest protein food for the farmer's table.

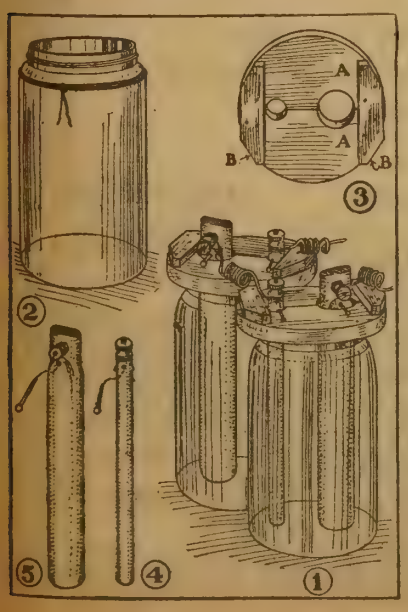
Aside from its food value skimmed milk adds much to the quality and flavor in cooking, and is a first aid in converting leftovers into palatable dishes. Milk used in bread in place of water adds as much protein to a pound loaf of bread as there is in one egg. It gives a softness of texture to bread that adds particularly to the palatability of graham or bran bread.

Cereals cooked in milk instead of water gain in flavor and food value. A particularly nourishing dish is prepared by cooking down 10 to 12 parts of skimmed milk to one of rice, oatmeal or other cereal. Where this is to be served for a dessert use one-fourth cup of rice and one-fourth cup of sugar to three cups of milk. Cook until thick. This can be used in place of cream with stewed fruit.

Milk soups or purees are made with skimmed milk and the pulp of beans, peas, onions, potatoes or celery. Fish chowder made with milk is a most substantial meat substitute. A few oysters or a little meat stock will suffice to lend flavor to a milk soup.

Skimmed milk thickened with flour and served hot on hard stale bread or toasted biscuit makes a comforting cold weather dish for breakfast or supper.

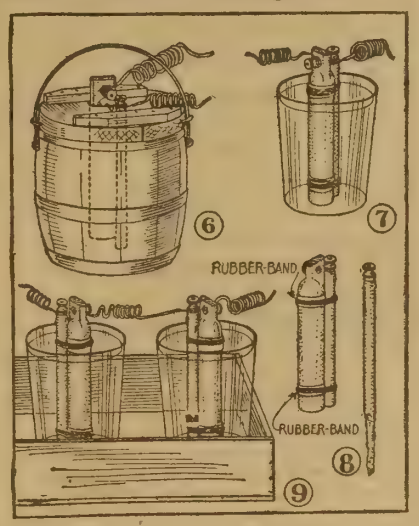
White sauce or cream dressing can be used with bits of meat to make attractive dishes, or with warmed over vegetables. Cheese added to the sauce gives another variation. This can be served on rice, macaroni, hominy or cauliflower.



# Handicraft For Boys

By A. Neely Hall.

## Electric Battery Cells.



Every boy can make his experimental electric batteries. In this article I show several simple home-made cells. There are two general classes—those used for "open circuit," work, where the current is used for short intervals, and those made for "closed circuit" work, where there is a steady drain upon the current.

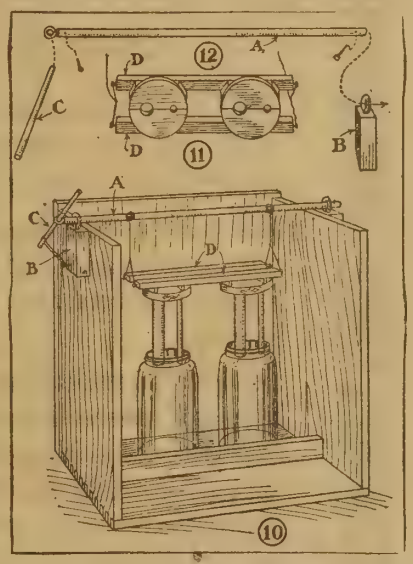
The simplest of the open-circuit type is the salammoniac battery. Mason fruit jars make good receptacles. Fig 1 shows a pair used for cells. If you want a wider mouth to the jars, wind cotton wrapping twine around them, just below the neck, saturate the twine with alcohol, light the cord, and when the alcohol has burned out, quickly dip the jars into cold water. if properly done the glass will crack along the line of the twine.

## Cover for Cell.

Fig. 3 shows the cover for the fruit-jar cell. To save boring holes for the battery "elements" to stick through, the top can be made in two pieces (A, Fig. 3) with one-half of each hole cut in their edges, and the pieces joined with a pair of cross strips B). The "elements" of a salammoniac battery are zinc and carbon. A zinc pencil (Fig. 4) can be obtained from an electrical dealer, and the carbon (Fig. 5) can be taken from a worn-out dry battery. To support the zinc and carbon, drill a small hole through each near

the top, and run a nail through each hole (Fig. 1).

Salammoniac can be purchased from an electrical dealer. Mix it in the proportion of eight ounces to one quart of water.



Two cells will give double the "voltage" of one, when connected in "series"—that is, with the carbon of one cell connected with the zinc of the other (Fig. 1).

Fig. 6 shows a cell with a small paint keg for the receptacle.

A glass tumbler may be used for a small cell (Fig. 7), but it will be necessary to connect several in series to obtain the voltage of the fruit-jar cell, because of its small size. Fig. 8 shows how to bind together the carbon and zinc for the glass tumbler cell. Place a wad of cardboard between them to keep them separated.

## Bichromate Solution.

A "bichromate" battery solution is more powerful than the salammoniac, and is the kind to use for small motors

and other "closed circuit" work. This solution is made up of the following:

Four ounces of bichromate of potash, four ounces of sulphuric acid, one quart of water.

In mixing, be sure to add the acid to the water—not the water to the acid—and pour the acid slowly, because the combination creates a great deal of heat, and if the heat forms too quickly the glass bottle will split.

When the solution has cooled, add the bochromate of potash. Label the solution bottle "Poison."

The bichromate solution attacks the zinc even when the cell is at "rest," so this element should be removed after use. The plunge battery (Fig. 10) provides a simple arrangement for raising and lowering the elements of a bichromate battery. A soap box with one end removed forms the case. The raising device consists of drum A, which turns in screw eyes in the blocks B nailed to the ends of the box; handle, C, which fits snugly in a screw eye in one end of drum A, and a pair of sticks D, which connect the tops of the cells and are suspended from the winding-drum.

# Just One Thing After Another

By E. A. BRYAN.

The loyal citizens may expect just one thing after another. You have had the food conservation pledge drive, the Liberty loan drive and the Y. M. C. A. drive. The Red Cross membership drive is at hand. By and by there will be the third Liberty loan. And so it goes, and so it will go all winter and next summer and as long as the war lasts. And the loyal citizen will not be annoyed or grow weary of this. On the other hand, he will be awakened. He will enter on each new week's work with new enthusiasm—new consecration. He will cease to growl or criticize. He will help to organize and direct public opinion in the service of the nation. We are beyond the point of argument as to the proper policy for the nation to pursue. We are in the war up to the neck, and the only way through is to fight it through. The Christ said: "He that is not with me is against me." So might the nation say. If you are loyal, work every day and all the time.

# Patterns

1917—Ladies' dressing or house sack. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 44-inch material for a 36-inch size. Price, 10 cents.

1927—Girls' dress, with or without bolero. Cut in four sizes: 2, 4, 6 and 8 years. It requires 3 1-4 yards of 27-inch material for a 4-year size, with three-quarters yard for the bolero. Price, 10 cents.

2174—Girls' dress. Cut in four sizes: 2, 4, 6 and 8 years. It requires 2 1-2 yards of 27-inch material for the dress and 1 1-2 yards for the guimpe, for a 4-year size. Price, 10 cents.

2186—Infants' set, consisting of a cap, a sack, a night gown and a dress. Cut in one size: For the dress of flouncing it will require 1 3-4 yards of 36-inch material with 1 1-4 yards of plain material for yoke and sleeves. Of nainsook or lawn 36 inches wide it will require 2 1-4 yards. The gown will require 2 1-2 yards of 24 or 27 inch material. The cap half yard of 18-inch material. The sack requires seven-eighths yard of 27-inch material. Price, 10 cents.

2188—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5 3-8 yards of 44-inch material for a 36-inch size. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

2293—Ladies' apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 3 5-8 yards of 36-inch material. Price, 10 cents.

2297—Ladies' house or porch dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 7 yards of 36-inch material. The skirt portion measures about 2 1-2 yards at the foot. Price, 10 cents.

2303-2299—Ladies' costume. Waist, 2303, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt, 2299, cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 6 1-4 yards of 44-inch material for the entire dress. The skirt measures about 3 3-8 yards at the foot, with plaits drawn out. Two separate patterns, 10 cents for each pattern.

2306—Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. Size 12 requires 6 yards of 36-inch material. Price, 10 cents.

2315—Boys' coat. Cut in five sizes: 4, 6, 8, 10 and 12 years. Size 10 requires 2 3-8 yards of 54-inch material. Price, 10 cents.

2316—Juniors' dress. Cut in three sizes: 12, 14 and 16 years. Size 14 requires 5 5-8 yards of 44-inch material. Price, 10 cents.

2318—Ladies' dress: Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5 3-8 yards of 44-inch material. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

# Help Red Cross

## Each Week New Ideas Are Born

Every week gives birth to new ideas for helping to fill the coffers of the Red Cross, according to a bulletin issued by the American Red Cross.

In Seattle, the Union Savings and Trust company has originated the idea of a Red Cross account, in which depositors are urged to open a savings account, allowing the principal to stand, but donating the accruing interest each May and November to the Red Cross.

In another part of Seattle Professor X. Koucherence is giving instruction in the Russian language twice weekly, and turning the tuition fees over to the Red Cross for the period of the war.

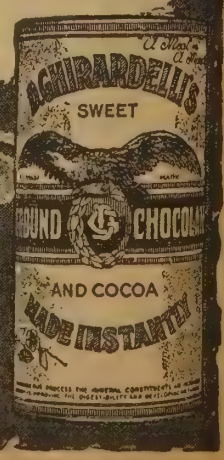
At Vancouver, Wash., the blind children of the state school gave an entertainment on December 19, at which an admission of 25 cents was charged, and the proceeds turned over for Red Cross work. In the same city an auction sale was scheduled as a Red Cross benefit.

# After a Hard Day's Work—

WITH the chores done, the stock 'tended to, everything ship-shape and air-tight for the night—

It's pretty nice to settle down to supper with a steaming cup of Ghirardelli's at your elbow. Pretty nice and warm and comforting!

And in the morning—up early (what with help so scarce!) and a hundred and one things to do—it's right comforting to know that Ghirardelli's will be there at the breakfast table to greet you.



A delicious, sustaining food-beverage—drink it every day for health and economy.

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.

Since 1852 San Francisco

Ghirardelli's Ground Chocolate

# Calf Problem Is a Serious One

(Continued from page two.)

farmer ought to have at least $15 per ton for his hay in the stack. The profit on feeding it would be small, as follows One and one-half tons for feeding cow with calf, one ton feeding calf first winter, one and one-half tons second winter, $60 for raising steer until he is 2 years old, sold in August the second year, weighing 1100 pounds, meat worth 7 cents per pound, totals $77. This leaves $17 for taxes and pasture on reserve and feeding. I have not tried out any new methods of feeding, but for feeding stock cattle it is hard to beat good, clean hay in a sheltered place, stringing it out from a sled, where they all get a chance at it. Ten farmers' sons have gone from here into the army and navy service. The effect on the home is that the father has to get in and work double, and it is absolutely necessary to slight a great deal of the work. Where the son has had a farm it is all but abandoned. CHARLES GRANT.

### Beets, $12; Carrots, $8.

NEPPEL, Grant County, Wash., Dec. 14.—There was but little seeding done here, as there was not sufficient rain to guarantee a good starting of fall wheat. Most of the seeding done was rye. So far there has been no losses from cold or other causes. Farmers here are not Hooverizing as they should on account of the difference of opinion and nationalities, but some are certainly doing their part in production and economizing. Small potatoes, sugar beets and carrots, with a little bran and shorts, are the substitutes for wheat for hog feeding, and it is a good one. There are plenty of hogs now, although small in this territory. A double-deck car was shipped to the middle east today and the local price paid for stockers was 13 cents. The sugar beets planted here this season were a fair yield according to the season and are proving a valuable feed and are retailing to wheat ranchers in ton lots at $12 and carrots at $8. These are used as rations with straw as horse feed through the winter, thus effecting a good saving of wheat headings that is usually fed. Alfalfa baling is all finished. The Moses lake country here produced 500 tons for export and alfalfa is going to be the main crop in this locality in the future.

MARTIN PENHALLICK.

### Labor Problem Important.

CHIMACUM, Jefferson County, Wash., Dec. 28.—The most important problem in our community to solve at present is to get help enough to get the land in shape for next year's crops. People here are taking a great interest in the Red Cross and army Y. M. C. A. and have subscribed liberally, in most instances whole families have taken out Red Cross memberships for next year. So far we have had one of the mildest winters on record. Young stock are out on pastures yet and the milch cows have eaten very little hay and it looks now as if the live stock will winter well with very little cost.

JOHN VAN TROJEN.

### Need Stable Markets.

NEWPORT, Pend Oreille County, Wash., Dec. 27.—Price regulation should be carried to the point that some assurance could be given the farmer that he would not be obliged to grow his products at a loss. I believe the farmer generally is just as patriotic as the manufacturer and is willing to accept a price under which he can operate on the same profit basis as the miller or packer. Stabilization of market conditions for staples will bring forth all the farm products desired by the government if reasonable assurance of protection is given. The small farmer feels that he has been the prey of the packer and manufacturer until he has lost faith in any statement or promise not backed by the government. The small farmer, rather than the large one, is the factor to be reckoned with in the production of foodstuffs other than cereals. The mildness of the winter has enabled farmers to carry their stock thus far on a great deal less forage than they had figured on, and indications are now that many who were well stocked with feed will have hay to carry over or sell. As to price of hay: Under present labor conditions clover or alfalfa hay should bring $10 to $12 and timothy $15 to $18 in the stack if it is to yield any profit at all to the producer. The present hay market is higher, I think, than is justified by conditions. I sold baled hay recently for $30 per ton. Stock can not be fed on this valuation without loss.

The drafting of farmers' sons will naturally reduce production of all farm products. Many small herds of stock are being disposed of where farmers' sons are being called to the front, as the fathers do not care to trust its care to strange or incompetent help.

CHARLES M. TALMADGE.

### Surplus of Potatoes.

Declaring that there was a surplus of at least 40,000,000 bushels of potatoes in this country, A. D. Wilson, state food administrator for Minnesota, urges everybody to eat more potatoes and thereby not only save them from loss, but at the same time save foodstuffs for exportation to the allied armies.

### Cuban Sugar Is Coming.

The first of the sugar crop of the present season is beginning to arrive from Cuba, and is expected to relieve the reported sugar shortage.

Don't throw away that old stiff harness. Eureka Harness Oil will give it new life - takes the place of the natural oils that have dried out. Your harness is then ready for months, perhaps years more of faithful service. Eureka keeps harness jet black.

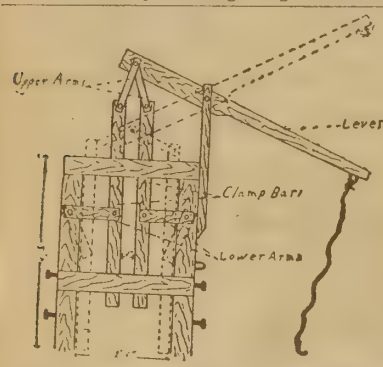
# Dehorn the Cattle for Feed Lots

## *Will Give Each Animal More Nearly Equal Chance at the Feed Trough*



All horned cattle intended for the feed lots next winter should be dehorned as soon as the weather will permit so that the wounds will heal before the cattle are put on full feed.

There are advantages in dehorning cattle that the cattle feeder can not well afford to overlook. It makes the

**Front view of dehorning chute with sloping side, showing clamps closed. Dotted lines show open position.**

cattle more easily and safely handled in the feed lot, and each animal is assured of a more nearly equal chance at the feed trough. Also it avoids the bruised condition of the flesh and torn hides caused by cattle goring each other

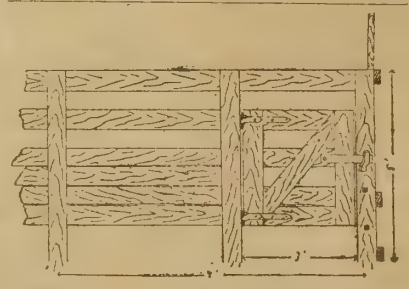
**Front view of dehorning chute with clamps closed. Dotted lines show open position.**

in the feed lots and in transit to market, as well as excessive shrinkage in transit.

### Best Tools to Use.

The most common method of dehorning cattle is to saw the horns off, and for this purpose an ordinary meat saw can be used, though there are saws on the market that are specially designed for the operation. By this method a good, clean job can be done on any type of horn, and the wound is left in a condition to heal readily.

The use of dehorning clippers is becoming more common, especially where be used for vaccinating, branding and castrating, as well as for dehorning.



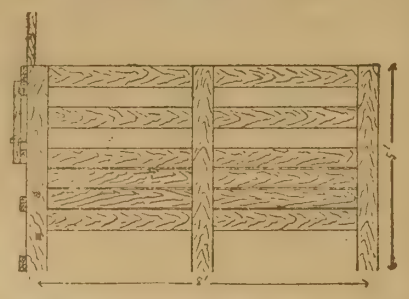
### Care of Wounds.

Cattle should never be dehorned during warm weather, when there is danger of the wound becoming infested with screw worms. The best time to dehorn is in late fall and early winter or during the cool weather of spring. If the weather is sufficiently cool there is very little danger of the wound be a large number of cattle are to be dehorned before the horn becomes hard and brittle. The chief objection to dehorning with the clippers is that thin or hard horns are sometimes crushed or splintered, resulting in a wound that heals slowly. This objection is partly overcome by using clippers that are constructed with two V-shaped blades, which, when pressed together bring four cutting edges against the horn, lessening the tendency to crush or splinter the horn.

### Dehorning Pens.

A number of methods of restraining animals during the dehorning operation have been practiced. Where only a few head are to be dehorned the quickest way is to throw the animal to the ground and hold it or tie it securely until the horn is taken off.

When a considerable number of cattle are to be dehorned it will pay to construct a dehorning chute. Plans of a chute that has proved very satisfactory for this purpose are given herewith. This chute is made narrow enough so that the animal will not have room to struggle a great deal, and with a stanchion-shaped head clamp at one end for holding the animal's head. After an animal is in the chute and the



**Side view of dehorning chute showing gate.**

head clamp closed a noose should be placed around the neck with a loop over the nose. The head can then be snubbed down to the peg indicated on the side post. This forces one horn forward, so as to make it easily removed. After one horn is removed the head should be snubbed to the other side for the removal of the other horn. A chute of this kind can be constructed at very low cost by using scrap material about the farm. However, material of sufficient strength to hold the animal should be used. This chute can coming infested with screw worms. However, it is best to apply some fly repellent, such as pine tar or one of the coal-tar products to the wound, especially where the cattle are to be turned out on the range and where close attention can not be given to them. If the wound becomes infested with screw worms they should be removed. The worms can be killed by inserting into the wound a piece of cotton that has been saturated with chloroform or by pouring gasoline into the horn cavities. This will kill the screw worms, after which they may be removed with the forceps or a probe or by forcing the animal's head to one side and allowing them to drop out.

Some animals bleed profusely following the dehorning operation, but ordinarily this need cause no alarm, as a clot soon forms and no great amount of blood is lost.

The accompanying plans show the construction of two types of simple and satisfactory dehorning chutes. The dotted lines in both types of chute show the head clamps when open, and the lever in both cases is used for closing the head clamps after the animal's head is in position. The sides that are

**Side view of dehorning chute without gate.**

shown in the plans can be used for either type. The gate is convenient for letting the animal out of the chute and also for branding and vaccinating.

# Trapping

## Must Study Nature of Fur Bearers

**By George La Rue.**

Trapping as well as other pursuits and occupations has undergone many changes, and whereas there were a few trappers in years gone by and very few of them shipped the furs they caught, now there is an army of trappers and nearly every trapper is a shipper. A great many farmers and their boys devote part of their time during the winter to trapping, both for pleasure and profit. In order for us to make a success of any line of business it is necessary for us to first become interested in that particular line.

If we win out at trapping we must study the nature of the fur-bearers and acquaint ourselves with their habits, and veteran trappers will continue to learn new stunts and methods as long as they are able to run a trap line. Some trappers use scent to lure the animals and some animals are easily taken that way. I will give a recipe for making the best scent that I have tried for lynx, fisher or marten. Use equal parts oil of anise, oil of rhodium and beaver castoreum, and put in enough alcohol to cut the oils so they will combine. The scent is very attractive to a great many fur-bearers. In a great many instances a good set for a lynx is a good one for marten or fisher. If either of the above-mentioned animals is hungry and finds a trail with fresh blood scattered along they will follow the trail sometimes for miles. We have known them to come across a trail made by dragging a deer down the mountain side and follow to one end of the trail. So one of our best methods of trapping them is to drag some kind of fresh meat behind us when the snow is on, and when we find a leaning tree or log that will protect the trap from the deep snow we will cut off a chunk of the meat and leave it for bait and make a set. When a fisher or marten finds a chunk of meat or carcass they will usually stick around until they have consumed the meat or got caught or have been frightened away. They are easily outwitted and it is great sport as well as considerable profit to catch them.

Twisp, Wash.

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

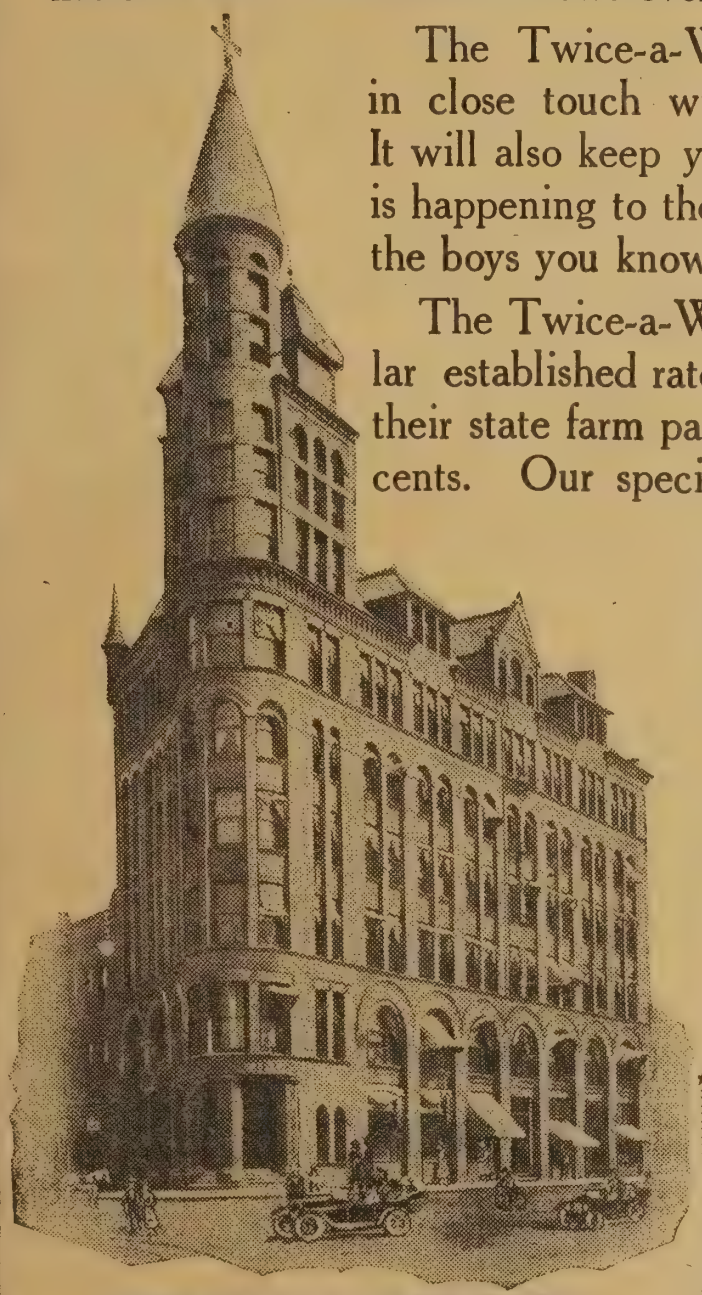
# UNUSUAL CLUBBING OFFER



## Twice-a-Week Spokesman-Review, 1 Year The Washington Farmer 3 Years--Both for $1

THIS clubbing offer is meeting with a big response. Most of our readers need no introduction to The Twice-a-Week Spokesman-Review. It is an old established semi-weekly newspaper which brings a complete, condensed and thoroughly reliable review of local, state, national and international news every Tuesday and Friday.

The Twice-a-Week Spokesman-Review will keep you in close touch with neighborhood and Northwest news. It will also keep you posted regarding the great war; what is happening to the boys "over there"; what is happening to the boys you know.

The Twice-a-Week Spokesman-Review is sold at a regular established rate of $1 per year. As our readers know, their state farm paper can be secured for three years for 50 cents. Our special clubbing rate of $1 for both publications is therefore seen to be extremely liberal. With everything else going up in cost we are glad to offer you such a material saving on your reading matter.

It is also worth your while to note that clubbing offers of this kind are rare; and with the steady increase in publishing costs bargains of this kind are being generally withdrawn. It is to your interest to act at once.

**HOME OF TWICE-A-WEEK SPOKESMAN-REVIEW.**

**Above is a picture of the Review Building, Spokane, Wash., built, owned and occupied by the Spokesman-Review. It is the home of a great news gathering organization; the center of world-wide activities in securing reports of important events for Spokesman-Review readers.**

**THE WASHINGTON FARMER, Spokane, Washington.**

Gentlemen:

I desire to take advantage of your special clubbing offer. Enclosed is $1 in full payment for one year's subscription to The Twice-a-Week Spokesman-Review and three years' subscription to THE WASHINGTON FARMER.

Name .....

Town .....

R.F. D. ..... State .....

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I will be 12 years old in August. I am in the fifth grade. My teacher's name is Lillian Bloomer. I like her very much. I have one brother and his name is Bernhard. I like to read the letters very much and I hope my letter will be in print, too. Now I will tell you about school. There are two rooms. In the room that I am in there are four grades.—Dora Anderson, R. 3, Box 57, Mt. Vernon, Wash.

**Eveline's Third Corner Letter.**

Dear Aunt Nellie: I have written to the Children's Corner now three times. I am a little girl 11 years old. I would like to correspond with Verda Muffat, Hunters, Wash. I would also like to correspond with Gladys Slusser, Waterville, Wash., if they will write to me. We had a Christmas program at our schoolhouse. I had to speak a piece. Aunt Nellie, I think all of the cousins will try and help win the war. I'm sure I will. I have to milk the cow Saturday and Sunday mornings. I have two sisters whose names are Violet and Delma and five brothers whose names are Anton, Fred, Carl, Melvin and Richard. I will write more next time.—Eveline Vida Dahl, Grangeville, Idaho.

**Rides Horseback to School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and I am in the fourth grade. I am living on a farm. We have 160 acres and we have 45 head of cattle and 13 horses. I have a cow and a calf and a horse. I have lots of fun riding horseback to school. I have three brothers and three sisters. Two of my sisters are married. My brothers' names are Harold and Orin and Mervil and my sisters' are Grace and Zelva and Faye. I can't think of anything more to say. —Wilma Little, Miles, Wash.

**Likes History and Reading.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 10 years old and in the fifth grade. There are 12 children in our school. I have one brother and three sisters. Their names are Velma, Dorothy, Bessie and Lawrence. Our teacher's name is Miss Ford. We like her fine. I like to go to school and have two miles to go. I like history, spelling and reading. I like on an 80-acre farm. We milk four cows and have three little calves. I have one yearling of my own.—Mary Healy, Box 134, Quincy, Wash.

**Soon Ready for High School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters. I am 14 years old. I will be 15 the 20th of March. We have two cows and three calves. I have a pony and her name is Lady. I live on a 200-acre farm. I am in the eighth grade in school. I want to pass the eighth grade in January then I am going to high school. I hope to see my letter in print. I have a light complexion and dark hair. I weigh 108 pounds. If I have a twin I wish they would please write to me.—Pearl Burnett, R. R. 6, Box 76, Spokane, Wash.

**Jack Is Their Riding Pony.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 10 years old and in the fourth grade. I have a sister and one little brother. Their names are Lena and George. We have three horses. Their names are Bill, Queen and Jack. Jack is our riding pony. He is a bay. We have 30 head of cattle. We have 18 head of sheep.—Edna McKune, Box 22, Winlock, Wash.

**Eight Pupils in Vern's School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We have 17 horses and five cows and a lot of chickens. I have to walk two and one-half miles to school. I am in the sixth grade. I am 11 years old. My birthday is the 25th of October. Have I a twin? If I have I would like to have her write to me. We take the Farmer and I enjoy reading the Children's Corner very much. —Vern Forrey, Soap Lake, Wash.

**Live Near the Ocean.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I enjoy reading the letters and would like to see mine in print. I am 14 years old and in the eighth grade. Have I a twin? If so please write. My birthday is November 28. We have a farm of 160 acres. There are ducks, turkeys and chickens on the farm. We live near the beach. During summer we take the rowboat and go out rowboat riding.—Grace Buttman, Box 31, Oak Harbor, Wash.

**Clara Belongs to the Junior Red Cross.**

Dear Aunt Nellie: I haven't written to the Children's Corner for a long time. I thought I would write again. I am 12 years old and will soon be in the seventh grade. I go to Central school and I ride on a bus. I live on a berry ranch. It is two miles from Puyallup and seven miles from Tacoma. We have three cows and one calf, three kittens, about 50 chickens and one horse. I have joined the Junior Red Cross up at school. I am going to learn how to knit. Then I will knit for the soldiers. I have two brothers and one sister. One of my brothers is in the draft age. He has not been drafted yet—Clara Haida, R. F. D. 3, Box 164, Puyallup, Wash.

**Ella Lives On a Ranch.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We have two cats and one dog. My name is Ella and my brother's name is Frank. My birthday is the seventh of April. Frank's birthday is the sixth of April. My father has one cow and one horse. We live on a ranch. My cats' names are Muff and Toots. Our dog's name is Boots. I go to Sunday school. I go to the public school, too. My teacher's name is Miss Hurst.—Ella Napier, Sprague, Wash.

**Candy for the Soldier Boys.**

Dear Aunt Nellie: This is my second letter to the Children's Corner. I was very pleased to see my letter in print. We have all been out of school with the whooping cough, but we are better now. I am going to school in January. I helped mother get ready for Christmas. One day we made 10 pounds of candy for the soldiers. I think we all ought to do something for the soldier boys. I will have to close now with love to Aunt Nellie.—Ida Jones, R. 2, Box 17, Tumwater, Wash.

**Hopes the Corner Will Grow.**

Dear Aunt Nellie: I have been reading the Children's Corner for some time and I thought I would write also. I am in the seventh grade at school. My teacher's name is Miss Anna Fornifiest. I live about one mile from school. I am 12 years old. I will be 13 December 29. Have I a twin? If I have I would like to hear from them. I have four brothers and two sisters. Three of them go to school. I hope the Corner will grow larger each time.—Viola Marguerite Tarbert, Ruote 1, Box 56, Deer Park, Wash.

**Soldiers Are Fighting Our Battles.**

Dear Aunt Nellie: I received the book and I am reading it. It is very interesting, and I thank you very much for it. My subject is about the Red Cross. Some people say that the soldiers are fighting the Germans for their own good. We must not look at it this way, but say, "They are fighting our battles, and we should save." I hope all the cousins will live up to all the things that are asked of us. You will be helping win the war and keep our own government. Don't you think so?—Dorothy Jones, Route 1, Florence, Col.

**Seems Almost Like Summer.**

Dear Aunt Nellie: I have written to the Corner before. I like to read the Aunt Nellie stories. I read them every night. It seems just like summer all except snow on the ground and now that even is thawing off. I am 7 years old and I am taking music lessons. I have three sisters. I have three little kittens, one is Big Tiger, one is Baby Tiger and the other is Cutie. I wish you and all the cousins a happy New Year.—Florence June St. John, 1245 Miller street, Worthington, Minn

# THE BARRIER

(Continued from page twenty-two.)

soldier as Stark expected, and his anger began to lift itself.

"That's neither here nor there; the man's a murderer; he's wanted in California, where I came from; he's been indicted and there's a price on his head. He's hidden for 15 years, but he'll hang as sure as I stand here."

Disclosures of a complex nature had so crowded on Burrell in the last few hours that he saw himself the center of a most unfortunate and amazing tangle. Things were difficult enough as it was, but to have this man appear and cry for justice—this man above all others!—it was a complication quite unlooked for—a hideous mockery. He must gain time for thought. One false step might ruin all. He could not face this on the spur of the moment, so, shrugging his shoulders with an air of polite scepticism, he assumed a tone of good-natured raillery.

"Fifteen years? Murder? John Gale a murderer? Why, that's almost—pardon me if I smile—I'm getting sleepy. What proof have you?"

"Proof!" blazed the gambler. "Proof! Ask Gaylord! Proof! Why, the woman he murdered was my wife!"

It was Burrell's turn now to fall incoherent, and not only did his speech forsake him, but his thoughts went madly veering off into a wilderness where there was no trail, no light, no hope. What kind of a coil was this? What frightful bones were these he bared? This man was Bennett! This was Necia's father! This man he hated, this man who was bad, whose name was a curse throughout the length and breadth of the west, was the father of the girl he loved! His head began to whirl, then the story of the trader came back to him, and he remembered who and what the bearer of these later tidings was. He raised a pair of eyes that had become furious and bloodshot, and suddenly realized that the man before him, who persisted in saddling upon Gale this heinous crime, was the slayer of Necia's mother; for he did not doubt Gale's story for an instant. He found his fingers writhing to feel the creature's throat.

"Proof!" Stark was growling. "How muck proof do you need? I've followed him for 15 years. I've tracked him with men and dogs through woods and deserts and mining-camps. I've slept on his trail for 5000 miles, and now do you think I'm mistaken? He killed my wife, I say, and robbed me of my little girl! That's her in his house. That's her girl, do you understand?—and I'll have his life."

It was hate that animated him, and nothing more. He had no joy in the finding of his offspring, no uplifted thought of justice. The thirst for revenge, personal, violent, utter, was all that prompted this man; but Burrell had no inkling yet of the father's well-shaped plans, nor how far-reaching they were, and could barely stammer:

"So! You—you know?"

"Yes! She wears the evidence around her neck, and if that isn't enough I can furnish more—evidence enough to smother you. My name isn't Stark at all; I changed it years ago for certain reasons. I've changed it more than once, but that's my privilege and my own affair. Her name is Merridy Bennett."

"I don't suppose you know I'm going to marry her," said the Kentuckian, irrelevantly.

"No," replied the other, "I wasn't aware of the fact."

"Well, I am. I'll be your son-in-law." He said this as if it was the statement of an astonishing truth, whereat Stark grinned, a mirthless, disquieting sort of grimace, and said:

"There's a lot of things for you and me to settle up first. For one think, I want those mines of hers."

"Why?"

"Well, I'm her father, and she's not of age."

"I'll think it over."

"I'll take them, anyway as her next of kin."

Burrell did not follow up this statement, for its truth was incontrovertible, and showed that the father's ill-will was too tangible a thing to be concealed; so he continued:

"We'll adjust that after Gale is attended to; but, meanwhile, what do you want me to do?"

"I want you to arrest the man who killed my wife. If you don't take him the miners will. I've got a following in this camp, and I'll raise a crowd in fifteen minutes—enough to hang this squaw-man, or batter down your barracks to get him. But I don't want to do that; I want to go by the law you've talked so much about; I want you to do the trick."

At last Burrell saw the gambler's deviltry. He knew Stark's reputation too well to think that he feared a meeting with Gale, for the man had lived in hope of that these 15 years, and had shaped his life around such a meeting; but this indirect method—the Kentuckian felt a flash of reluctant admiration for a man who could mould a vengeance with such cruel hands, and, even though he came from a land of feuds, where hate is a precious thing, the cunning strength of this man's enmity dwarfed any he had ever known. Stark had planned his settlement coldly and with deliberate

(Continued on page thirty-one.)

# For Animal Relief

(Continued from page four.)

ican army would be 4000 miles from Washington, while the British army was only 200 miles from London.

This war calls for continuous supply of nearly 5,000,000 horses and mules. An infantry regiment requires one horse for every four men, and every horse that is killed must be replaced by one from America. Veterinary surgery and care for animals has never in the history of world warfare reached such a high state of efficiency as in the present war. Although the number of horses killed in France is sometimes as high as 5000 a day, the number of sick and wounded animals cured and returned to service is one of the wonders of the campaign.

The Royal Society for the Prevention of Cruelty to Animals, working with the British forces in France, has built hospitals for 12,000 horses, hospitals which would compare with those created for the wounded soldiers. The British people have voluntarily subscribed $700,000 to pay for this work, and its efficiency is such that close to 80 per cent of the animals treated in hospitals are cured and sent back to the front.

# Federal Farm Loan System Is Sound

(Continued from page five.)

stigate a call for a report of the condition of the 12 federal land banks."

The secretary declares that this demand is palpably unreasonable and unfair. The system, he explains, is in process of building, and its initial expenses are necessarily high. The various land banks had to buy office furniture, stationery, etc., to organize their office forces and to employ and pay appraisers to appraise the farms of the applicants for loans. They were also required to create a legal department to examine the titles of applicants. For at least six months they were paying out money continually, with scarcely a dollar of receipts.

"On November 1 they had to pay six months' interest on the bonds they had sold. They are now just beginning to receive the first payments on the loans they have made. Under these conditions each bank necessarily shows what is technically called 'an impairment of capital. The average impairment,' so-called is 6 per cent, but this does not actually impair the strength or the solvency of the banks, particularly as they have received from farm loan associations subscriptions to additional stock in excess of $1,500,000, so that their actual capital is about $1,000,000 greater than it was when they started. Everybody knew that this would be so.

"On the other side, it should be remembered that they have assets which do not appear on their books, made up principally of two items. The first of these is the large amount of interest accrued, but not yet due upon the loans they have made. The second is the charges for appraisement and determination of title, payable by borrowers when their loans are closed. They have made appraisements and examinations of title on loans to the amount of over $100,000,000, of which only a little over $30,000,000 have been closed to date. They are therefore entitled to reimbursement of these charges on the $70,000,000 of business which has been examined and approved, but not yet closed."

Mr. McAdoo illustrates the unreasonableness of the people who are demanding that the system shall show a profit-earning capacity at this time by asking what would be thought of the fair-mindedness of a person who criticized a farmer who had bought a farm in October because he could not show profits from the operation of that farm in the following May.

Commissioner Norris of the farm loan board also makes a strong point when he reminds the country that this system is needed now more than it was ever needed before. Mr. Norris says:

"In addition there is the fact that lenders of money on farm mortgages are now either withdrawing from the farm loan field or greatly curtailing their operations, and the sale of farm mortgages to those who have been in the habit of investing in them has to a great extent ceased. It may therefore confidently be anticipated that the demands upon the farm loan system will be vastly greater than has been foreseen. These conditions are almost altogether owing to the fact that we are at war and to the effects upon the investment market of the financial operations of the government of the United States. It is a war emergency."

Mistakes may have been made in the management of some of the farm loan banks. Possibly some of them have not been managed as economically as could be desired. On these phases the Farmer is not now prepared to express an opinion. There should be, of course, a vigilant auditing of their accounts, and friends of the system will welcome any honest and well-meant demand for congressional oversight. But that movement should be of constructive, not destructive, spirit.

The principle on which the system is built is sound, and the war is testing its credit just as the war is severely testing the credit of the strongest railroads in the United States and making difficult the sale of their securities. The government is coming to the support of the railroads, and it must, in justice, reason and protection of its own institution, help to tide over the farm loan banks in the sale of their bonds.

## Another Liberty Loan Coming.

Unofficial announcement has been made that the third Liberty loan will be made shortly after February 1. The amount and the rate of interest have not yet been announced.

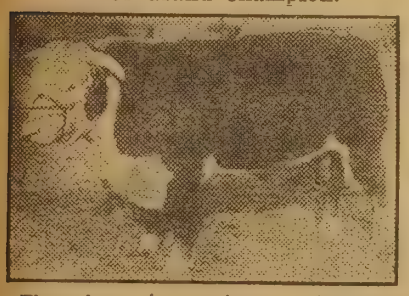
**Raise Minimum Wage.**

Owing to the increase of living cost, it is the expectation of the Washington state minimum wage commission that an increase of wages to women workers will be necessary. The average minimum is now about $10, and it is expected that the increase will bring it to about $12.

# News for Breeders

## Bull Sells at $31,000.

The auction sales of both Herefords and Shorthorns at the Chicago International developed sensational prices. With two millionaires and other wealthy men bidding, the Hereford bull Ardmore went to W. R. and W. A. Pickering of Kansas City for the record price of $31,000, while Walter L. Yost of the same city, who sold the bull, paid $10,000 for Maples Lad 61st, to replace him. Top price for cow was $3150, paid for the yearling heifer Paragon Dore. Fifty-eight animals were sold for an average of $1774.



The Shorthorn sale had not quite such a sensational single price, though top for bull was $9000, Mount Victoria Stamp, 2 years old, going at that figure to Walter J. Hill of Great Bear Lake, Wis. Verbena of Oakdale, one of the great cows of the breed, with heifer calf at foot, went to W. B. Aylor, Grandin, N. D., for $4800. The average for 53 head was $1090.

The Aberdeen Angus top was $3050 and the Galloways $1200. H. A.

## A Community Proposition.

The Rogue River Valley Berkshire Breeding association has about 20 farmers in Josephine county breeding registered Berkshires. It is a community or cooperative proposition, and all the foundation stock is from F. R. Steele's Winona farm. Mr. Steele does the advertising and selling. He began breeding Berkshires in 1913 and began advertising heavily in 1914. Mr. Steele has in the short time since then made himself famous, has shipped Berkshires practically to every part of the United States and has been the means of making nearly all the hogs in his home county of Josephine, Berkshires. By his plan of community breeding he is spreading breeding farms all over southern Oregon. H. A.

## Junior Grand Champion.

The above is a picture of Prince Rupert 80th, that was junior and grand champion Hereford bull at both the Northwest Live Stock show at Lewiston, Idaho, and the Pacific International at North Portland at this winter's show. He won similar honors as a senior calf last year and promises to do as well again next year. H. A.

## Richly Bred Jerseys.

Emery T. Smith of Myrtle Creek, Ore., has a richly bred herd of 16 Jerseys, some of Island some of American breeding. Stockwell's Unknown Girl, an imported-in-dam daughter of J. B. Stump's grand champion cow, Stockwell's Dahlia, is considered the best cow in the herd. She is a real show cow and while she has no official record is a good producer. For the month of May, 1916, she produced 50 86 pounds of fat or 59.83 pounds of butter. Her feed bill, including a charge of $1 for roadside pasture, was $793. Raleigh's Jolly Nobelman, the senior herd sire, traces 21 times to Golden Lad and 54 times to Sultane, the two greatest foundation animals of the breed. Fairy Boy of M. L. P., the junior herd sire, is a great grandson on the top line and a grandson on the lower line of Raleigh's Fairy Boy. Both are showy individuals. H. A.

## Washington Steer Good.

The pure-bred Shorthorn steer Hercules, owned by Day & Rothrock, Sprague, Wash., that was shown at the Chicago International, won second in his class of senior calf in a class of 16 of the best individuals the exhibitors of the middle west were able to bring together. He was beaten only by an entry of Purdue university, Ind. Hercules won grand championship at the Lewiston show, but was beaten for the purple ribbon at Portland by the California university entry, Roan Marvel. While the Washington steer did not carry off a championship at Chicago, Day & Rothrock and the state of Washington have reason to be proud of the place he won. H. A.

# Breeders' Department

## HOLSTEIN CATTLE

### A Rare Opportunity

To secure some thoroughbred Holstein male calves, described as follows:

No. 1—Born Feb. 19, 1917. Sire, Segis Walker Hartog, No. 162423; dam, Buckeye Grace Morley, No. 99452.

No. 2—Born Jan. 23, '17. Sire, Segis Walker Hartog, dam Naiad Jewel Netherland, No. 124102.

No. 3—Born April 14, '17, Sire, Segis Walker Hartog, dam, Buckeye Grace Morley. No. 248417.

No. 4—Born Jan. 11, '17. Sire, Segis Walker Hertog, dam, Susie De Kol Pauline 2d, No. 245999.

No. 5—Born Feb. 19, '17, Sire, Segis Walker Hartog, dam, Mary De Kol Stony Brook, No. 248416.

No. 6—Born March 26, '17. Sire, Hazelwood Sir Ormsby, No. 148496, dam, Queen Gerben Josephine Michtilda, No. 146519.

Application for registry for all the calves have been sent in. For further particulars, prices, etc., address The Intermountain Institute, or

**E. A. PADDOCK, Pres., Welser, Idaho.**
R. F. D. 1.

### Registered Holsteins

Young calves, born last July and later; also 1 30-lb. bull, ready for service, whose sire, dam and sire's dam have all been grand champions at one or more state fairs, and full brother to his sire and full sister junior champions at a state fair. Here is production and type we hear so much about. Could also spare a few cows.

**H. R. BOOMER, New Plymouth, Idaho.**

## POULTRY

### Trap Nested Barred Rocks

All hen-hatched and hen-raised. Every hen on the place trap nested. My first pen has, I believe, for the past two years, the highest Barred Rock average egg record in the world. All other pens are practically the same blood lines. A few last fall cock birds and cockerels, from $5 up, according to pedigree and quality.

Eggs from first and second pen, $5 per 15. Others, $3.75 and $2.50. No day-old chicks.

**Irvine P. Gardner**
**Riddle, Ore.**

### S. C. White Leghorns

Head your pens with cocks and cockerels from selected, trap-nested stock, with known records. We are also booking orders for day-old chicks and hatching eggs. Write for price list.

**HORN'S EGG FARM, Maple Valley, Wash.**

### Rhode Island Reds and Whites

Rose comb and S. C. blue ribbon winners. Utility and show stock. 100 cockerels at $3 up. Bronze turkeys and Toulouse geese. Blue ribbon stock. Registered Airedale bitch at a bargain if taken at once.

**Highland Fruit and Poultry Ranch.**
J. NONNENMACHER,
R. F. D. 3. NORTH YAKIMA, WASH.

### Heavy Laying Strain

S. C. White Leghorns, hatching eggs, baby chicks and stock.

**MT. ANGEL COLLEGE POULTRY RANCH.**
St. Benedict, Ore.

### Blooded Bronze Turkey

20 years' Blue Ribbon Winner, mated last year with a Golden Back tom from the Panama Fair Winners. Geese, Ducks, Guineas, Chickens and Poland China Hogs.

**E. A. KRUSE. Roseburg, Ore.**

### 365-Day Holsteins

24,667 lbs. milk—1026 lbs. butter—is the s. o. advanced registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
**WESTERNWOLD RANCH.**
Prineville, Ore.

**REGISTERED HOLSTEINS**

Bull calves for sale with good A. R. O. backing.

**BEEBE BROS., R. F. D. 2, Rupert, Idaho.**

## SHORTHORN CATTLE

### Hercules Shorthorns

For particulars write
**DAY & ROTHROCK**
Exchange Bank Bldg.
Spokane, Washington.

### CEDARHURST FARM

SHORTHORNS.

Am offering a number of richly bred young bulls, fit for service, also a few females. For particulars write

**JOE TURNER, Meyers Falls, Wash.**

### For Sale

25 registered red, white and roan Shorthorn bull calves and yearlings.

**WM. MULHALL. Fenn, Idaho.**

### Shorthorn Bull for Sale

Inquire

**FRANK SCHUSSMAN, Clarks Fork, Idaho.**

## JERSEY CATTLE

### Registered Jerseys

One senior 2-year-old bull. One bull calf, 4 months old; one junior yearling heifer, bred; two senior yearling heifers nearly ready to freshen; two cows, one four, one five years old; one senior 2-year-old ready to freshen, second calf; one 10 months calf; all in splendid condition.

**F. A. NORTON, Breeder, Grandview, Wash.,**
R. D. 2.

### Waikiki Farm Jerseys

We offer several young bulls and heifers of exceptional breeding. Send for descriptions and breeding.

**WAIKIKI FARM, R. 7, Spokane, Wash.**

**JERSEY BULL FOR SALE.**

Year old, good individual, priced reasonable. Dam gave 45 to 50 lbs. of milk a day, test 4.8. Sire, Island bred.

**MRS. J. F. PEFFER. Dayton, Ore.**

### BATTEN'S S. C. REDS

I have 50 of the best cockerels that I have ever seen in one yard that I am offering at low prices, quality considered, in order to move them quickly to make room for younger stock. Prices range from $5 to $15 and can give you good selection if you will write me your wants. Can spare a few good pullets at $2.50 each. Let me hear from you.

**E. F. BATTEN, HOOD RIVER, ORE.**

In answering advertisements please mention this paper.

## DUROC-JERSEY SWINE

### Ioka Farm Durocs

The big type, with quality. The kind that wins in the show ring. Offspring of the great sire Golden Rod and other best Duroc strains.

**DOERFLER BROS., Silverton, Ore.**
A. N. DOERFLER, Manager.

### DUROCS

Bred and open gilts of the best breeding and individuality.

**G. O. SWALES. Johnson, Wash.**

**DUROCS.**

Boars and open or bred gilts of excellent breeding.

E. E. PRICE, CABINET, IDAHO, OR
**JAMES N. PRICE. YAKIMA, WASH.**

**OTTO'S DUROC JERSEYS.**

Founded on the basis of making Duroc history in Idaho. Won 4 championships and two grand championships at Southern Idaho State Fair.

**L. S. OTTO. Filer, Idaho.**

**IDAHO CHAMPION DUROCS**—At state fair of Idaho our Durocs won more prizes than all other exhibitors combined. Stock of all ages for sale.

**Richards Live Stock Co., Virginia, Idaho.**

**AVONDALE STOCK FARM.**

Registered Duroc-Jersey hogs. Inspection invited. Corespondence solicited.

**H. C. POLLY. Route 3, Burley, Idaho.**

## POLAND CHINA SWINE

**GREENLEAF STOCK RANCH.**
Big type Poland Chinas, either sex, for sale at all times.
**Wilson Bros., A. L. Wilson, Mgr.**
Greenleaf, Idaho.

**BIG TYPE POLAND CHINAS.**
Herd headed by Sammy (79,833), Correspondence Solicited.
**Fruitland Stock Farm, C. Royston, Mgr.**
Payette or Fruitland, Idaho.

## BERKSHIRE SWINE

### BERKSHIRE HOGS

Gilts of any age, bred or open; can also furnish young boars, from the best of strains and prize winning parentage.

**EARL WOOD, Silverton, Ore.**

## TAMWORTH SWINE

**ROUND KNOLL RANCH NO. 3.**

Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.

**Bliss, Idaho.**

## YORKSHIRE SWINE

### FALL PIGS

Both boars and gilts of best breeding. Now booking orders for spring pigs. Can furnish pairs or trios.

**WM. NEUENSCHWANDER, Gaston, Ore.**

## HAMPSHIRE SWINE

### Registered Hampshire Swine

A famous forage hog, great rustlers, fine mothers, quick growers.

**TUTTLE BROS., Asotin, Wash.**

## ABERDEEN ANGUS

### Aberdeen Angus Cattle

**A. H. EAGLESON & SONS.**
Boise, Idaho.

## HORSES

### Registered Clydesdale Stallion

3 years old in spring. Excellent breeding and conformation and will make horse weighing 1900 to 2000 pounds.

**O. I. TRICE, Grandview, Wash.**

Breeder of Registered Clydesdales.

**REGISTERED PERCHERON HORSES.**
E. O. WALTER, AUCTIONEER.
**Walter Bros.**
Buhl and Filer, Idaho.

### WHAT IS THE A. B. C.?

**Audit Bureau of Circulations.**

This is an association, nation-wide in its scope, not conducted for profit. Every publisher having membership in this organization pledges himself to sell circulation as a commodity, both as to quality and quantity. Advertisers using our columns are safguarded. They know that we give all the circulation we offer.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Jan. 7.—Storm conditions affecting the railroads tended today to uphold the corn market. Prices closed steady at the same as Saturday's finish to 1-8c off, with January at $1.27 1-2 and May $1.25 5-8. Oats gained 1-4c to 1-2c and provisions 15c to 42c.

Corn prices hardened a little at times as a result of the fact that owing to train blockades the arrivals of corn here showed a much smaller total than had been looked for. It was the general belief, however, that a material quickening of the crop movement would not be long delayed and there were numerous reports that empty cars were being furnished freely to rural shippers. A further handicap to bulls was the knowledge that to comply with the views of the food administration the board of trade directors had refused to disturb the present maximum price limit on future deliveries.

Provisions advanced because the supply of hogs was less numerous than had been expected.

**Chicago Futures.**

| | Open. | High. | Low. | Close. |

Sheep—Receipts, none; market steady. Prime lambs, $13.25@14; good lambs, $12@12.75; prime yearlings, $11.50@12.25; prime wethers, $11.25@12; best mutton ewes, $8@10.

## The Wool Market.

BOSTON, Jan. 4.—The annual canvas of the unsold stocks of wool throughout the country made by the Commercial Bulletin as of January 1 shows total stocks in dealers' hands of 89,510,827 pounds, compared with 78,805,484 pounds of January 1, 1917. The Boston stocks in dealers' hands were 34,960,130 pounds, in addition to 1,234,596 pounds of tops and 2,544,101 pounds of noils this year, compared with total stocks last year of 44,099,484 pounds.

BOSTON, Jan. 4.—The Commercial Bulletin will say tomorrow:

"Business in wool has been very dull during the last week, every one waiting for the wool auctions, which occurred on Thursday. Except for the auction sales little has been done in private trading. What has been sold has been at unchanged prices and manufacturers report no change worthy of note."

Ohio and Pennsylvania fleeces: Delaine washed, 83@85c; Delaine unwashed, 75@76c; half-blood combing, 77@78c; three-eighths- blood combing, 77.

Michigan and New York fleeces: Fine unwashed, 63@64c; Delaine unwashed, 73c; half-blood unwashed, 75@76; three-eighths unwashed, 76@77c.

Wisconsin, Missouri and average New England; half-blood, 70@72; three-eighths blood, 75@76; quarter-blood, 74@75c.

Virginia, Kentucky and similar: Half-blood unwashed, 77@78c; three-eighths-blood unwashed, 78@79c.

Scoured basis:

Texas fine, 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California: Northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon: Eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory: Fine staple, $1.80@1.85; half-blood combing, $1 75@1.80; three-eighths-blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled: Extra, $1.80@1.85; AA, $1 70@1.80; A supers, $1.60@1.65.

## Seattle Market.

SEATTLE, Jan. 4.—Jobbers today lopped 10 cents off the selling price of Yakima Gems, quotations being $1.50 per sack, against $1.25@1.35 for Puget sound stock.

Culling out of apples in storage, particularly with regard to orchard run and all jumble packs has been started. It is admitted that cheap fruit must be moved before vitality can be put into the market for fancy and extra fancy fruit, and holdings of cheap fruit are heavy.

Butter is firm. Jobbers are of the opinion that as long as the weather remains mild an advance in prices would not be tenable.

**Purchasing Prices.**

Eggs—Local ranch, 47@48c per dozen; pullets, 37@38c per dozen.

Butter—Fresh dairy, 36c per lb; butter fat, 58c per lb.

Poultry—Live hens, fat, 4 lbs. and over, 23c per lb; under 4 lbs, 23c per lb.

**LINSEED.**

DULUTH, Minn., Jan. 5.—Linseed, $3.52 1-2@3.64 1-2; January, $3.52 1-2; May, $3.45 1-2 bid; July, $3.37 1-2 bid; October, $3.30 nominal.

**HOPS.**

NEW YORK, Jan. 5.—Hops easy; state medium to choice 1917, 48@55c; 1916, nominal; Pacific coast, 1917, 22@25; 1916, 15@18c.

**METALS.**

NEW YORK, Jan. 5.—Bar silver, 90 1-8.

## Portland Market.

PORTLAND, Ore., June 7.—The demand for mill feed continues in excess of the output of the mills, though the latter are running practically full time. It was thought that when prices were fixed on a definite basis the demand would slow down, but such has not been the case. Further advances in coarse grains are the probable cause of the heavy buying of bran and shorts.

Very little oats or barley are being offered by holders here or in the country.

A moderate wool turnover is reported by warehouse men here. The prices are not made public, but it is believed the prices are on a level with previous sales. Wool men do not believe that the Boston auction of Australian wools has changed the domestic situation in any way. According to wires received here, the best fine combing fleeces at Boston sold at $1@1.05 in the grease. These are wools that will shrink only about 45 or 50 per cent.

The potato market is still balanced and shippers are not offering over $1 at country points. Several cars of onions have gone south, the first to be shipped in about six weeks. The association price is now established at $1.75.

City creameries have advanced print butter prices another cent and this has strengthened the cube market. The buying price of butterfat has not been changed.

Eggs are coming in more freely, but the supply is not excessive and as storage stocks are nearly exhausted the market for fresh ranch is quoted steady.

The high prices to which the poultry market climbed in holiday week have been maintained. Country dressed meats are also high.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $59 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $54; brewing, $57; rolled, $58@60.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $23.50; grain, $24.

Eggs — Oregon ranch, case count, 45c per dozen; candled, 46@50c.

Poultry—Hens, 23@24c; ducks, 20@25c; turkeys, live, 25@27c; geese, 15@18c.

Butter — City creamery, prints, 52@54c per pound; cubes, extras, 49 1-2c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats — Veal, 17 1-2@18c; pork, 19@19 1-2c.

Hops—1916, nominal; 1917 crops, 14@16c.

Potatoes—Oregon, buying price, $1 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon white, 9@9 1-2c; colored, 8@9c.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.40 box; Wageners, $1.25 box; Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.60 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 21@22c lb; broilers, 24@25c lb; old roosters, 11c lb; ducks, 20@23c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Hide Quotations.**

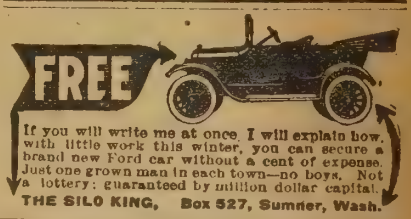
**Green Cows and Steers**—25 lbs and up, 15c; salted cured, 17c; green bulls and stags, 12c; salted cured, 15c; kip, 15 lbs. to 25 lbs, 20c; calf skins up to 15 lbs, 28c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 10 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

## Butter and Eggs.

PORTLAND, Jan. 5.—Butter—Prints extras, 52@54c; cubes, extras, 49 1-2c; prime firsts, 49c; daily, 34c.

Butter fat, Portland delivery No. 1 sour cream, 56@57c.

CHICAGO, Jan. 5.—Butter unchanged. Eggs higher; receipts, 1702 cases; firsts, 55@56 1-2; ordinary firsts, 52@54c; at mark cases included, 50@55c; refrigerator firsts, 41c.



SAN FRANCISCO, Jan. 5.—Butter—Extras, 51@53c; prime firsts, 50@51c.

Eggs—Fresh extras, 62c; fresh extra pullets, 55c.

**TURPENTINE AND ROSIN.**

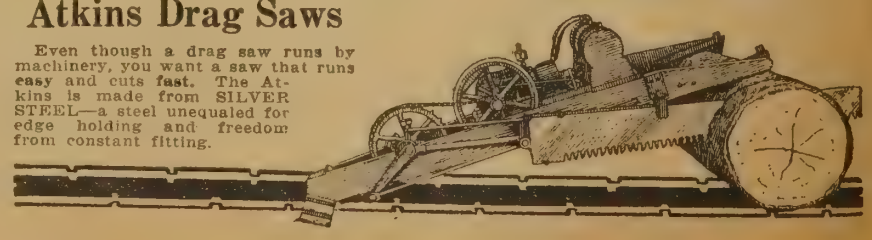
SAVANNAH, Ga., Jan. 5.—Turpentine firm, 43 1-4c; sales 182; receipts 10; shipments 109; stock 26,900.

Rosin firm; sales 1,086; receipts 792; shipments 300; stock 87,282. Quote B, D, E, F, G, H, I, 6.10; K, 6.80; M, 7.00; N, 7.20@7.25; WG, 7.40@7.45; WW, 7.50@7.65.

ATKINS
SILVER STEEL
SAWS

*Will Help You Save Time, Labor and Material*

These days time and material are more valuable than ever—and you're interested in using tools that waste neither.



The Atkins crosscut saw has proved itself a time, labor and money saver. It's the kind of saw that turns loss into profit on the farm, in the shop, or in the logging camp. The Atkins cuts quicker, more accurately and easier than other crosscut saw. It stays sharper and requires less fitting than other saws. Buy the best crosscut you can get—an Atkins—and accomplish more and better work on your timber land or farm.

Go to your dealer today and ask to see the Atkins line. The genuine Atkins saw ALWAYS has our name on the blade.

**E. C. Atkins & Co., Inc.**
*Makers of Silver Steel Saws*
**Indianapolis, Indiana**

**Atkins Drag Saws**

Even though a drag saw runs by machinery, you want a saw that runs easy and cuts fast. The Atkins is made from SILVER STEEL—a steel unequaled for edge holding and freedom from constant fitting.

# THE BARRIER

(Continued from page twenty-eight.)

malice; moreover, he was strong enough to stand aside and let another take his place, and thus deny to Gale the final recourse of a hunted beast, the desperate satisfaction that the trader craved. He tied his enemy's hands and delivered him up with his thirst unsatisfied—to whom? He thrust a weapon into the hand of his other enemy, and bade this other enemy use it; worse than that, forced it into to strike the man he honored—the man he loved. Burrell never doubted that Stark had carefully weighed the effect of this upon Necia, and had reasoned that a girl like her could not understand a soldier's duty if it meant the blood of a parent. If he refused to act, the gambler could break him, while every effort he made to protect Gale would but increase the other satisfaction. There was no chance of the trader's escape. Stark held him in his hand. His followers would do his bidding. It was a desperate affair. Was it impossible, the lieutenant wondered, to move this man from his purpose?

"Have you thought of Necia? She loves Gale. What effect will this have on her?"

"Damn her! She's more his brat than mine. I want John Gaylord!"

At this a vicious frenzy overtook Burrell, and he thought of the man behind yonder door, whom he had forgotten until these words woke something savage in him. Well! Why not? These two men had stalked each other clear into the farthest places, driven by forces that were older than the hills. Who was he to stand between these passions? This was ordained, it was the course of nature, the clash of elements, and this was a fair battleground, so why should he undertake to stop a thing decreed?

The gambler's words rang in his ears—"I want John Gaylord"—and before he knew what he was doing he had answered: "Very well. I'll give him to you," and crossed quickly to the door of his bedroom and flung it open. On the threshhold he paused stock-still. The place was empty; a draught sucked through the open window, flirting with the curtain and telling the story of the trader's exit.

"If you're looking for your coat, it's here," he heard Stark say. "Get into it, and we'll go for him."

The lieutenant's mind was working fast enough now, in all conscience, and he saw with clear and fateful eyes whither he was being led, at which a sudden reckless disregard for consequences seized him. He felt a blind fury at being pulled and hauled and driven by this creature, and also an unreasoning anger at Gale's defection. But it was the thought of Necia and the horrible net of evil in which this man had ensnared them both that galled him most. It was all a terrible tangle, in which the truth was hopelessly hidden, and nothing but harm could come from attempting to unravel it. There was but one solution, and that, though fundamental and effective, was not to be expected from an officer of the law. Nevertheless, he chose it, for Ben Stark was too potent a force for evil to be at large, and needed extermination as truly as if he were some dangerous beast. He determined to finish this thing here and now.

Meade went to his bureau, took his revolver from the belt where he had hung it, and came out into the other room. Stark, seeing the weapon, exclaimed:

"You don't need that; he won't resist you."

"I've decided not to take him?" said Burrell.

"Decided not to take him?" shouted the other. "Have you weakened? Don't you intend to arrest that man?"

"No!" cried the soldier. "I've listened to your lies long enough; now I'm going to stop them, once for all. You're to dangerous to have around."

They faced each other silently a moment; then Stark spoke in a very quiet voice, though his eyes were glittering:

"What's the meaning of this? Are you crazy?"

"Gale was here just before you came, and told me who killed your wife. I know."

"You do?"

"I do."

"Well?"

"It's pretty late. This place is lonely. This is the simplest way."

The gambler fell to studying his antagonist, and when he did not speak Burrell continued:

"Come, brace up! I'm giving you a chance."

But Stark shook his head.

"Don't be afraid," insisted the lieutenant. "There are no witnesses. If you get me, nobody will know, and your word is good. If not it's much simpler than the other." Then, when the gambler still made no move, he insisted, "You wouldn't have me kill you like a rattlesnake?"

"You couldn't," said the older man. "You're not that kind—and I'm not the kind to be cheated, either. Listen! I've lived over 40 years, and I never took less than was coming to me. I won't begin tonight."

"You'll get your share——"

"Bah! You don't know what I mean. I don't want you; it's him I'm after, and when I'm done with him I'll take care of you; but I won't run any risk right now. I won't take a chance on losing what I've risked so much to gain, what I've lived these 15 years to get. You might put me away—there's the possibility—and I won't let you or any other man—or woman either, not even my girl—cheat me out of Gale. Put up your gun."

The soldier hesitated, then did as he was bidden, for this man knew him better than he knew himself.

"I ought to treat you like a mad dog, but I can't do it while your hands are up. I'm going to fight for John Gale, however, and you can't take him."

"I'll have his carcass hung to my ridge-pole before daylight."

"No."

"I say yes!" Stark turned to go, but paused at the door. "And you think you'll marry Necia, do you?"

"I know it."

"Like h—— you will! Suppose you find her first."

"What do you mean? Wait—"

But his visitor was gone, leaving behind him a lover already sorely vexed, and now harassed by a new and sudden apprehension. What venom the man distilled! Could it be that he had sent Necia away? Burrell scouted the idea. She wasn't the kind to go at Stark's mere behest; and as for his forcing her, why, this was not an age of abductions! He might aim to take her, but it would require some time to establish his rights, and even then there were Gale and himself to be reckoned with. Still, this was no time for idling, and he might as well make certain, so the young man put on his coat hurriedly, knowing there was work to do. There was no telling what this night would bring forth, but first he must warn his friend, after which they would fight this thing together, not as soldier and civilian, but as man and man, not for the law, but against it. He smiled as he realized the situation. Well, he was through with the army, anyhow; his path was strange and new from this time henceforth, and led him away from all he had known, taking him among other peoples; but he did not flinch, for it led to her. Behind him was that former life; tonight he began anew.

Stark traced his way back to his cabin in a 10 times fiercer mood than he had come, reviling, cursing, hating; back past the dark trading post he went, pausing to shake his clenched fist and grind out an oath between his teeth; past the door of his own saloon, which was alight, and whence came the sound of revelry, through the scattered houses, where he went more by feel than by sight, up to the door of his own shack. He fitted his key in the lock, but the door swung open without his aid, at which he remembered that he had only pulled it after him when he came away with Necia. He closed it behind him now, and locked it, for he had some thinking to do; then felt through his pockets for a match, and, striking it, bent over his lamp to adjust the wick. It flared up steady and strong at last, flooding the narrow place with its illumination; then he straightened up and turned toward the bed to throw off his coat, when suddenly every muscle of his body leaped with an uncontrollable spasm, as if he had uncovered a deadly serpent coiled and ready to spring. In spite of himself his lungs contracted as if with the grip of giant hands, and his breath came forth in a startled cry.

John Gale was sitting at his table, barely an arm's length away, his gray-blue eyes fixed upon him, and the deep seams of his heavy face set as if graven in stone. His huge, knotted hands were upon the table, and between them lay a naked knife.

(To be continued.)

# Everything That Counts for Your Profit and for the Future of Your Family Is Moving at Motor-Car Pace and Radius

**You can't shut your eyes to that. Are you going to stick to horse-pace, one-fifth the pace of motor cars, and to horse-radius, one-fifth the radius of motor cars?**

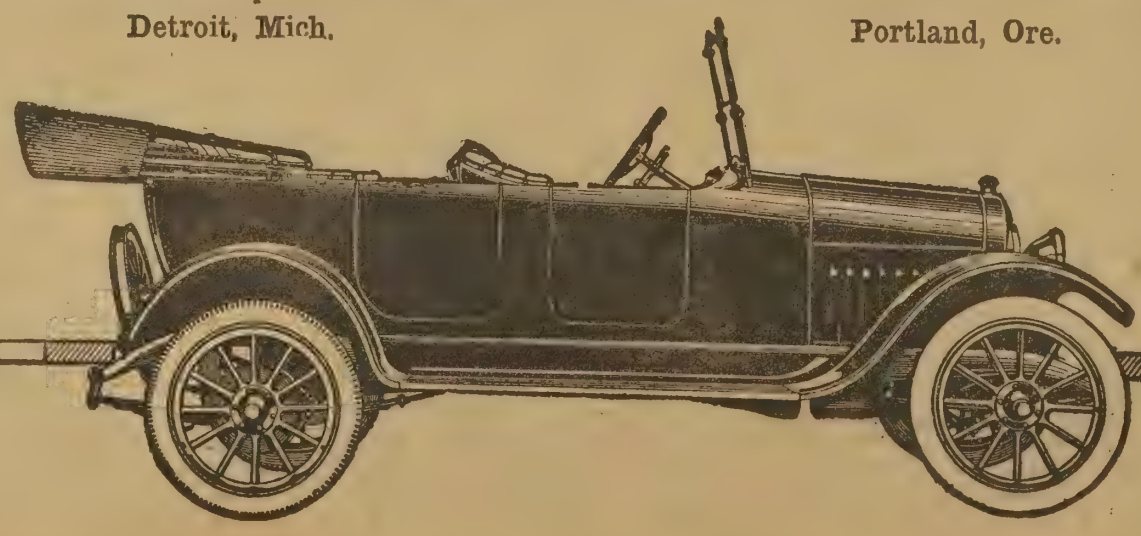
**Are you content to see others seize the golden chances that are offered now and the untold chances that are coming in the next few months? Or will you join your neighbors who are moving at motor-car pace?**

**A little delay now may have results that all your future cannot repair.**

**Take this up now. Be fair to yourself, to your girls and boys, to your wife. Look into the changes of the last few months which have placed the whole question of motor-car service vs. horse service in an entirely new light. We say—**

**1. Motor cars are now cheaper to use than horses for all work that a motor car can do.**

**2. Of all the motor cars giving maximum service the one that costs least to run and use is the Maxwell.**



**That ought to make you think. We don't expect you to act on it until we have proved it to you. We can prove it to you. For the sake of your own work and profits, for the sake of your girls and boys and wife, take this up now. Send us a letter today. Make your decision while these cars of greatest efficiency and economy are still procurable. We will send you the name and address of the nearest Maxwell dealer.**

# Cut Out Useless Business

## Men Occupied in Unproductive Business in the Cities Should Be Put to Work Farming, Declares a Writer From the West Side

CHEHALIS, Lewis County, Wash., Jan. 3.—From a farmer's point of view, the most important problem in Lewis county for solution at the present time is the labor problem. The big shipbuilding industry of Portland and the Sound cities constantly draws workingmen from this community, and the lumbering industry of western Washington is using every obtainable man. The army and navy have taken their full share of men from the farms, and yet the farmers are asked to speed up and produce more food. Just how they will do it is more than I can tell. One firm has sold this winter 18 milking machines, and several small tractors have been placed in Lewis county, but machinery alone can not do the work. It takes men at seasonable times of the year. There are dozens of men running needless jitney lines. If the government could cut the number of these lines, as it has the number of railway trains, it would help. If the government could take the time and go still deeper and reduce the number of useless businesses in the towns and require every able-bodied person not regularly employed in a useful line to perform some manual labor on the farms during the year at the seasons when help is needed, and if the farmers knew they could depend on securing help when needed, they might succeed in speeding up, but under present conditions not much can be expected in the way of producing a surplus of food. There can be only one great problem which the communities of the United States can help to solve until the war is finished. The sooner we begin to use our every energy and every resource to help finish the war, the better it will be for us. The winter has been favorable for live stock. We have had no cold weather and no snow. During the last two weeks it has rained a great deal, but now it is past the turn of the year, and there is little chance for any protracted spell of cold weather. Farmers were so busy this winter that the local agricultural schools put on by the college authorities did not attract the usual attention. Neither are the special winter courses at Pullman or Puyallup going to draw much attendance from this community. J. C. BUSH.

### Keep Tab on Public Money.

STEVENSON, Skamania County, Wash., Jan. 2.—The rainfall has been incessant for the last month and the weather very mild with no frost. Grain is still growing beautifully and buds are swelling on some trees and vines. Should this condition continue I fear bad results when cold weather comes. As mid-winter approaches crop prospects for 1919 are, in my estimation, very favorable. Feed conditions are better than expected earlier in the season, as the grass is very good and stock is doing well and in better condition than last year, but there is not quite the same amount of stock on hand as last year. I know of no one in our community who is interested in the winter courses or demonstrations at the state college or university as no farmers are attending the same from here. I consider the clearing of stump land and the settlement of same, one of the most important problems confronting this section, so as to produce more hay and grain. Our principal resource has so far been timber products and as the years go by the timber of necessity is becoming less and land should be made productive. A more vigilant watch kept on the expenditure of public money in all departments would prove a big benefit to this locality as well as all others.

W. T. JACKSON.

### Some Are Impatient.

TWISP, Okanogan County, Wash., Dec. 31.—In some respects the price regulation by the government on wheat is satisfactory. Farmers are confident they will get the price promised by Uncle Sam by holding their grain until the government gets ready to handle it. Some of the farmers are getting impationt and are beginning to complain, but they are not pressed hard enough to offer their wheat below the standard price. I have heard no complaint about the fixed price on flour. I see no reason why we wouldn't be greatly benefited and considerably encouraged by a fixed price on corn, cotton, beef and the necessary articles we have to buy. It is my opinion that the time should be limited to the duration of the war or one year after, for the present fixed prices. The mildness of the early part of the winter has been very favorable to the farmer that was short on hay and some farmers will pull their stock through with very little hay. Speculation on hay has ceased for the present and the surplus hay is held at $15 per ton. Considering the price of labor and machinery and the present rate of taxes, the farmer should have $12 for hay to make a fair profit on it. While the dairyman is getting 50 cents and up, per pound, for butter fat, beef steers bringing 10 cents per pound, and button and wool high, with good fortune and proper management, good profits should come to the feeders of $12 hay. I know of no special methods of feeding or preparation of feeds practiced here. I can think of about 12 farmers' sons of this neighborhood that have gone into the navy or army.

GEORGE LA RUE.

### Should Regulate Everything.

COLVILLE, Stevens County, Wash., Dec. 28.—In this community it can hardly be said that any appreciable effect can be noted due to the interference of the government with the ordinary course of the markets. Government regulation does not appear to reach remote corners distant from central markets. Trading is almost entirely local, farm products being consumed at home. Public opinion is undoubtedly behind any attempt at regulation, and the only complaint is the delay and dilatoriousness of the administration in taking hold of some of the flagrant abuses which it is believed can only be controlled by government action. The action of the state food controller and the price-fixing commission is being closely watched, with some degree of criticism. It is difficult to understand why there should be such extremes between the prices charged the consumer and those quoted as being paid by the retail as well as the wholesale merchants. In other words, the difference between the prices received by the producer and those paid by the consumer is entirely too great. The farmer would be willing to stand for complete price fixing, even on all articles of food produced by him, provided he was protected in the things he had to buy. In this region early snows have complicated the feed situation. Every care is being taken to conserve the supply. Owing to the large number of teams required for hauling for the mines and lumber mills, as well as the pole and post industry, the local consumption of hay is very great. The prices of hay and feed have not increased with the progress of the season, but have remained stationary. Most of the farmers seem to have been careful to estimate the amount needed to carry their stock through the winter, and the prices secured at public sales would indicate that feeders felt safe in view of the available supply. Farmers are not inclined to experiment with the feeding problem, but are avidently eliminating waste in every direction.

The labor problem has not yet become acute. There is not the same clogging of work at certain times that prevails in many parts of the country, as farm work is better distributed throughout the year. Doubtless the pinch will come after the next draft call. No need, so far as noted, has compelled girls or women to don the overalls and go to the fields. A shortening of the school year by cutting out holidays and holding sessions on Saturdays is to be undertaken and thus let the children home to help out with the labor problem. At least one extra month will be gained by this speeding up and the operation of the school will be carried on more economically. E. E. ELLIOTT.

### Can't Do the Impossible.

MEAD, Spokane County, Wash., Jan. 3.—There is no fault found by the farmers here in regard to price fixing by the government, except that they think the fixing of prices on things they buy such as hardware, farm machinery, clothing, etc., should keep pace with the fixing of prices on the produce they have to sell. I should say public opinion rather favors more price fixing if it can be done more quickly on a more uniform level. The mildness of the season, so far, has resulted in a great saving of feed as stock of all kinds are still rustling much of their feed in the fields. If warm weather continues prices of hay and straw will probably go lower. The average grower has made no money selling hay this year at $25. Dairy men can not pay that much and come out whole. Some are going back to the old plan of cutting all fodder and mixing with ground feeds. Nearly half of the farm boys have gone to war. Unless some measures are taken to replace many of those where there was only one or two on the farm, the places must be short cropped and the production will not equal that desired by the government. Much is being said about help from the cities, but 90 per cent of those available know but little about farming and many nothing at all. They are absolutely ignorant when it comes to hitching up a four, six or eight horse team, or the use of modern machinery on the farm. The farmer will do his best, but he can not do the impossible.

GEORGE HINGSTON.

### Not Increasing Hogs.

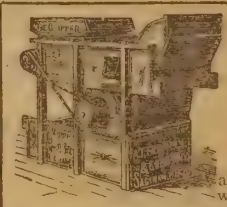
GREAT FALLS, Cascade county, Mont., Nov. 15.—No losses due to cold or other causes since harvest set in. Our losses were all before harvest on account of drouth. I do not think there is much Hooverizing because there is little room for it among farmers generally, who are now and have been for years Hooverizing. Potatoes and turnips are being fed to hogs no more than heretofore. Farmers are not increasing their hog herds to any great extent. ALLEN PIERSE.

OLDS' Seed Book

and Packet Flower Seed FREE

FOR 30 years I have sold reliable seeds. Thousands of customers testify to this. My seeds not only grow, but produce big yields. They must make good or I will. 31st annual catalog now ready. Write for copy.

Lists All Kinds of Farm Garden and Flower Seeds



The best arranged, most comprehensive and easiest catalog to order from ever issued. A few specialties are:

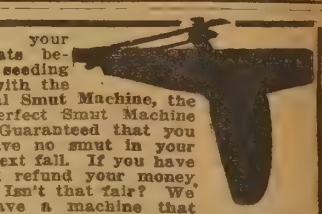
Certified Seed Potatoes
Wisconsin Grown Seed Corn
Pedigreed Oats and Barley
Wheat, Spelts, Rye, Buckwheat
Northern Clover and Alfalfa
Tested Garden and Flower Seeds

Send postal today. Mention this paper. Will include packet flower seeds.

L. L. OLDS SEED COMPANY
Drawer 60 MADISON, WIS.

Olds' 1918 Seed Book

Clean Your Seed



and grade it by weight.

Clipper Cleaners

will do it as well as though you weighed each individual kernel.

Let us show you. Nine-tenths of the seed houses use Clipper Cleaners. Why?

Spokane Seed Co.
Spokane.

Treat your seed oats before seeding again with the Imperial Smut Machine, the only perfect Smut Machine made. Guaranteed that you will have no smut in your grain next fall. If you have we will refund your money in full. Isn't that fair? We also have a machine that takes wild oats out of tame oats for seed, and the best cleaner and grader for all grades. All machines trial guaranteed. Write us.

MINNEAPOLIS SEPARATOR CO.

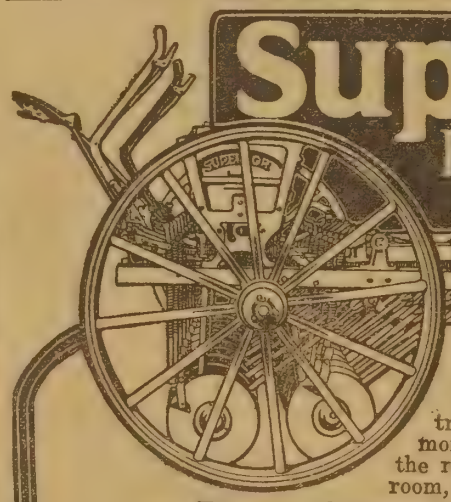
GOOD SEEDS



GOOD AS CAN BE GROWN
Prices Below All Others

I will give a lot of new sorts free with every order I fill. Buy and test. Return if not O. K.—money refunded.

Big Catalog FREE

Over 700 illustrations of vegetables and flowers. Send yours and your neighbors' addresses.

R. H. SHUMWAY, Rockford, Ill.

Superior Four Inch Grain Drills

Are made for the farmer who wants to Sow his grain closer together. Superior 4 Inch Drills distribute the seed more evenly, with more rows per acre and less seed in the row, giving each plant more root room, and a chance for sturdier growth.

Bigger Crops—Fewer Weeds

It has been proven that a greatly increased yield is obtained, some claiming as much as one-third more than by the old method of seeding. The discs are so closely spaced that a highly cultivated seed bed is obtained with an almost total elimination of weeds.

Superior 4 Inch Grain Drills are made in two sizes, plain and fertilizer styles. Operate perfectly under the most severe conditions. The heavy angle steel frame will stand up to all strains encountered in field work. The famous Superior Disc Bearings are guaranteed against wear. Positive force feed for both grain and fertilizer.

Ask your Dealer for further information, or write us for descriptive pamphlet.

# Labor Is Big Orchard Problem

## *Subject Engrosses Growers at Agricultural Convention at Kennewick*

By RAY W. FELTON

Labor problems confronting northwest fruit growers in 1918 occupied a place of prominence at the 14th annual convention of the Washington State Horticultural association, which was held at Kennewick, Wash., January 3, 4 and 5. While this subject had been discussed more or less by groups of growers in hotel lobbies and during recesses, it was not until J. Curtis Robinson, traffic manager of the Northwest Fruit exchange, read a paper by Dr. Henry Suzzallo, chairman of the state council of defense, that the topic became one of absorbing interest.

Dr. Suzzallo pointed out the urgent need of making early preparation to meet the situation and made various suggestions along the line of cooperation and coordination. The convention voted to refer the matter to the executive committee, which will meet with the state council of defense and look after labor matters affecting the fruit industry of the state.

**Make Conditions Attractive.**

C. F. Stephens of Nampa, Idaho, who operates orchards approximating 400 acres, told of the way in which he kept things moving during fruit harvest. The Idaho man seems to have done just what other employers of labor are gradually coming to. He made living conditions attractive. He invested $1200 in tents which the pickers were privileged to use. He provided free fuel, and for those who came out from town each morning he arranged for state passage. He also served hot coffee at noon.

J. L. Dumas of Dayton declared it is certainly necessary to consider the personal comforts of the pickers and packers. Warm lunches, stage passage and other comforts were provided the workers at the Dumas orchards this year, and Mr. Dumas declared the amount of money required to provide these things proved an investment worth while.

Flood interference with railroad schedules severely curtailed the attendance at the convention. It was stated that 60 persons at Yakima turned back at the station Friday morning when they learned just what the situation was with respect to high water. A similar fear prevailed among Wenatchee growers.

But in spite of the comparatively small attendance the convention was one of great benefit. The program was replete with topics of a timely nature, both as to culture and marketing problems.

Secretary Luke Powell was given credit for much of the success of the meeting. Mr. Powell is horticultural inspector for Benton county and he is an untiring worker. Mr. Dumas paid glowing tribute to Mr. Powell and his most excellent work.

Lee E. Lampson, agriculturist for Benton county, with headquarters at Kennewick, is another person who gave much time and energy to preparing plans for the meeting and looking out for details after the delegates arrived.

The Kennewick Commercial club, whose members have always proved themselves alive and alert, saw to it that the visitors were well cared for. A pelasant automobile trip about the valley on a warm, sunshiny afternoon was one of the commercial club's hospitable acts.

Every delegate had an opportunity to partake of the juice of the grape when the Church Manufacturing company took the visitors to its plant and presented each with a bottle of grape juice.

A. R. Gardner of Kennewick delivered the address of welcome Thursday morning. President J. F. Sugrue of Cashmere held the attention of his audience with his most interesting address. Mr. Sugrue, who is manager of the Skookum Packing association, is an old-time Alaska "sourdough." He mushed over some of the worst passes known in the Klondike and finally left the Dawson country and came down to the States, later locating at Cashmere, where he is an extensive grower and shipper. As an executive officer he is difficult to excel. His good nature, ready wit and his skill as a parliamentarian kept things right side up and in smooth running order. As a collector of annual membership fees he and Commissioner E. F. Benson are neck and neck.

Following President Sugrue's address came the report of the treasurer, after which Professor George A. Olson of Pullman read a paper on "Economical Cereals in the Home." Commissioner Benson's paper, "Magnitude and Importance of the Horticultural Interests of the State," was decidedly interesting, but many missed it because of late trains.

A. H. Harrison, field representative and entomologist for the Kentucky Tobacco Products company of Louisville, Ky., manufacturers of "Blackleaf 40," gave the convention a most instructive paper on "Control of Aphis on Apple and Truck Crops."

C. Joseph DeVise, directing manager

(Continued on page seven.)

## Club Workers Meet

### Session in Conference at Pullman

Three district boys and girls' club leaders of the state of Washington, two specialists, the state club leader and her assistant, four county superintendents of schols and others who are interested in club work are holding a two-weeks' conference at the state college at Pullman.

George E. Farrell, deputy in charge of boys and girls' club work from Washington, D. C., is presiding and taking charge of the conference. His plan is, first for the proper organization of the county for developing and instituting club work, followed by the discussion of the relations between the different divisions of extension work as conducted by the state college, their relation financially and socially with the community factors such as the county, the state, the school and the home, and with that of the church and other organizations.

The conference had under consideration the construction of the state law as applied to the operation of club work and the salary of county club leaders for the purpose of carrying on the work. They plan to finish the outlining of the requirements for membership in the different club projects, such as the corn clubs, the pig clubs, the potato clubs, the sewing clubs, canning clubs and all the rest of the 14 different kinds of clubs in the state.

Some time was spent in the arrangement for contest work in communities, counties and state fairs, the celebration of a festival day and the making of a county program for each individual county for the entire year.

This week is being devoted mainly to the discussion along the lines that the clubs play in the county agricultural campaigns of the different counties in the state, and their relation to the proposed farm work as enlarged by the United States department of agriculture.

Among those in attendance are:

Miss Mazie Wilson, district club leader of the eastern division of the state; Lucien N. Jones of the central division and F. L. Audrain of the west side division; B. E. Smead, pig club specialist; W. K. Whitaker, poultry club specialist; Mrs. Elizabeth Jones, state club leader; Miss Josephine Arnquist, assistant state club leader; H. A. Horn, Spokane county club leader; W. E. Dudley, Clarke county school superintendent; H. R. Cox, Pierce county school superintendent; W. E. Delplain, Pierce county club leader; J. R. Shinn, Spokane county agricultural agent; Miss Jeanette Donaldson, Spokane county school superintendent; O. S. Fletcher, assistant county agricultural agent of Spokane county; Mrs. Nagel, assistant state school superintendent; Mrs. Henrietta Lycette, Spokane; Miss Margaret Boyle, Butte, Mont., and Miss Jessie Koontz, Spokane.

## HOLDS POULTRY SHOW.

### Good Birds Seen at Walla Walla.

Walla Walla staged a mighty good poultry show during the week of January 7-12. The number of entries was equal to the 1917 show and the quality ranked higher. There was a good representation of nearly all breeds, the Leghorn varieties looming large as usual with an exceptionally fine showing of Buff Orpingtons. Barred Rocks were very much in evidence, as were other types of meat-producers, showing a tendency to some extent to breed for war meat demands.

W. F. Sheets of Walla Walla took first on a S. C. White Leghorn cock, which Judge Keeney pronounced a bird of very unusual qualities. Sheets also displayed a Buff Cornish Indian Game cock and hen, which attracted much attention.

From the state game farm at the penitentiary was sent a splendid collection of game birds.

"Casey's Side Show" was an interesting feature. Casey and Sons, well-known breeders of S. C. White Leghorns at Waitsburg, were on hand Monday morning with a brood of day-old chicks. They were fine specimens, and they seemed perfectly at home in their quarters made warm and cozy by a coal-burner hover.

There were 18 varieties entered in the sales class and a large number of purchases were made.

The show was held in large, commodious quarters at Main and Fifth streets. It had the loyal support of Walla Walla business men. The energetic work of Superintendent I. D. Casey and Secretary J. A. Levy kept things moving in good shape. Judge Keeney added to the interest of the occasion by his willingness to give generously of his knowledge and experience. This proved especially true when Superintendent W. M. Davis of the College Place public schools took 10 of his boys, who are studying agriculture, to the exhibit that they might learn some of the fine points of practical poultry judging. The boys who made the trip were: Ray Tomlinson, Myron Harmon, Sumpter Thorington, Raymond Kilberg, Frank Nelson, Ralph Nelson, Angelo Criseuoli, Earl Hauck, Harry Beischoff, Douglas Arnold.

The agricultural class of the Walla Walla high school also spent part of a day at the show, studying the birds and observing the judging.

## Talk Bulk Grain

### Session Will Be Held Next Week

Beginning at 10:30 Friday morning, January 25, the bulk grain conference announced some time ago will open its two-day session in Spokane. The session will be an important one, and will probably result in the solution of some of the vital problems of grain handling by the bulk method.

The first main question at the afternoon session will be under the head of "Handling the 1918 Grain Crop of the Inland Empire." The first division will be "Price and destination—Shall the surplus go east by rail, or shall it go west and through the Panama canal?" This subject has been assigned to M. H. Houser of Portland, agent in the northwest for the federal food administration, and who has handled the grain situation. The next division is "The grain sack situation—Available supply and prices." This will be discussed by representatives of Ames, Harris & Neville and of the Bemis Bag company, which two concerns do a large business in the handling of grain bags. The last division of the main subject is "Necessity of bulk handling," to be discussed by a number of men.

"The Present Storage Situation, and the Available Storage at Coast Terminals for 1918" will be discussed by G. B. Hegardt, engineer and secretary of the commission of public docks at Portland.

The next general subject is "Increased Food Production a War Necessity."

(a) "Need for Increase of Meat Production," Charles Hebberd, federal food administrator for Washington.

(b) "Retaining Dockage on the Farm for Feed," M. W. Harris.

(c) "Appeal for More Meat Production," E. E. Flood.

Other subjects to be discussed are: "Rules and Regulations Governing Grain Grading." "The Farm Labor Situation." "Handling and Storing Bulk Grain on the Farm" and "Elevator Construction."

Friday evening a dinner will be held, following which a part of the program will be carried out.

Persons attending should ask their ticket agents for certificates upon which they may secure a reduced fare if sufficient numbers attend the convention.

## Hillyard Poultry Show.

Hillyard, the railway town near Spokane, has created for itself an enviable place in the poultry world. A year ago the Interstate Poultry club of that town pulled off a good show. This year it has jumped into a prominent poultry position. There were entries this year of more than 600 birds from outside points, Reardan, Wenatchee, St. Maries, Ritzville and Walla Walla and elsewhere. Oscar Nelson judged the birds.

**Rim Rusting.**

When a rim has had some of its paint knocked off take the precaution of applying some graphite paint at once, not only for the looks sake but to prevent the formation of rust.

# Fruit Men Must Have Storage

## *Adequate Equipment Would Prevent Rush to Market*

Leaving out of consideration altogether the frostproof warehouses of the ranches (and these warehouses are numerous), there is in the Northern Pacific and O.-W. R. & N. shipping district from Selah to Kennewick, in the Yakima valley, common storage for 5840 cars of apples and cold storage for 2075 cars. These figures are not hard and fast, since storage warehouses are constantly under construction and refrigeration is now considered an essential in all progressive districts. The development of this phase of the fruit industry is not generally remarked but is one of the most essential and important tendencies.

Unfortunately the Walla Walla, Wenatchee, Chelan and other districts are not as well provided with storage as is Yakima and are not indeed yet adequately provided. This situation, however, rectifies itself in each community with the passage of years, particularly since each district with storage recognizes that the best protection it can have is storage elsewhere in competing districts to counteract the tendency to sacrifice fruit by rushing it to market.

Railways themselves are among the most active agencies in urging this storage. Railroad officials recognize that it is an utter impossibility now, and the difficulty is increasing, to furnish all the rolling stock and motive power needed to transport in a few weeks the entire crop of any district. Transportation and marketing must be spread out, both as a physical problem and as a matter of good business.

**Storage Is an Investment.**

Frostproof storage on the ranch is keeping pace with the development of the silo. Ranchers generally recognize the argument and the merit of the investment. The farmer is preserving his crops just as his wife for years has preserved in cans, jars and bottles that portion needed for home consumption until another year's supply was available. The cheapest and most effective system is the home storage, supplementing the cold and community warehouse storage. In this respect one important part of the state has become almost independent. Other sections particularly as they diversify their crops, will do likewise.

It is an old saying that price makes the tonnage. It is impossible, almost, to tell what crops are stored in a district that has developed its facilities for carrying its yield where it will be reasonably safe from frost and decay. It is a fact, however, that the Yakima valley, when the price advances, is always able to bring out from its storage apples, potatoes, meats, eggs onions and other money bringers, until one is compelled to wonder where these supplies were produced.

Statistics of the Yakima valley for the last season show shipments of 480 cars of mixed fruit, which, at an average value of $775 per car, is a total of $372,000. This business is in its infancy. It has been made possible by the storage, especially the cold storage which, at the same time, has made possible the shipments of straight cars of fruit such as apricots, grapes, cherries, melons, etc., that at one time could not be held.

**The Mixed Car Business.**

Authorities differ as to just how much the mixed car business is a development of the storage and how much is natural because of the development of the country. The fact remains, however, that the cold storage has been the means of conserving to the individual rancher an immense aggregate of fruit that was formerly wasted. In these days of the household automobile, the odd lots of peaches, berries, apricots, unusual varieties of pears, etc., of which every home had a few, became a commercial article. It is not necessary to hire a team to haul the little lots to town, and it is not necessary for the shipper to sacrifice them before they have a chance to spoil. They can be held for an accumulation and shipped under insulation. In this way the single tree of early apples becomes an asset instead of a liability. In this way the back lot and the orchard corners become remunerative.

This small item is touched on merely to illustrate one of the by-products of the storage development. The mixed car business will grow, however, into a very important phase of the fruit business. The storage plant will be the handmaiden of the grower, the shipper and the processing plant. This last, where waste is eliminated, is where the "velvet" is to be found in the fruit business for the grower, and it is the only place, if at all.

There were in the Yakima valley, when the figures above and herewith given were compiled, 23 shipping points that had commercial common storage and 13 that had commercial cold storage. The grower had his choice of 79 common and 13 cold storage plants. The figures are changing constantly and by another season the proportions will be greatly changed and the aggregate much increased. It is easy to figure, however, what these facilities mean, especially for the smaller districts which before were compelled to eat up a large proportion of the profits of the crop in hauling to a more or less distant shipping or storing point.

The fruit business of the territory in question is figured for the year 1917 to be $12,268,850, not to mention another million dollars of processed by-product. It is, perhaps, unnecessary to point out that the benefit of this storage reacts on other crops, so that the value is not to be measured by the fruit business alone. Potatoes, vegetables, eggs, butter, cream, cheese, can be and are handled and held until the time to realize on them has arrived.

This little story is given for just what it is worth. It is significant that an agricultural section of the state that is undergoing the most rapid development and that this year produces a commercial crop of a value almost twice that of the total fisheries of the state, has storage out of all proportion to other agricultural sections of the state and, excepting, of course, the cities. Construction of this storage, in the orchard and on the ranch, as community warehouses and as a commercial undertaking on railroad tracks, is based on experience and is paying handsomely, every citizen participating in the benefits.

## Chehalis Cow Testing.

B. C. Wright, official tester of the Chehalis District Cow Testing association, declares in his December report that dairymen should market their own culls or surplus stock. "If there is not a carload," he says, "ship cooperatively—even a mixed load. Every time you sell to a cattle buyer who comes to your farm you deliver a blow at the open market as found at the stockyards where buyers congregate and bid for what they get. A traveling buyer is either a representative of one of the big packing establishments who seeks to buy at a lower figure than that found on an open market where competition prevails, or he is buying on his own hook and will make his profit on the margin he will obtain at the yards over what he paid at the farm."

Mr. Wright backs up his statement by declaring that early in December Bouchard Bros. shipped a carload of "border" cows for which they received $180 more than the price the buyer laughed at on the farm. Three cows in the association during December produced over 60 pounds of butterfat, each of them a Holstein. The highest cow was owned by G. Salzer, which produced 1626 pounds of milk, making 76.422 pounds of butterfat.

**Eat Fatless Meats.**

The food administration is working out a plan to have nearly all the fat removed from meat at the bucher's or packing plant before it is offered for sale in the markets. This is for the purpose of conserving the fats that are so much needed in the armies.

# Cost of Arsenate of Lead Spraying Is Shown

The cost of spraying an orchard with arsenate of lead, measured in terms of acres or boxes of apples, was one of the interesting subjects at the horticultural convention at Kennewick last week. Especially interesting was the discussion of the subject by S. W. Foster of the General Chemical company, supplemented by a detailed table illustrating the facts given. The table is given herewith.

Almost equally interesting was a smaller table showing the loss in boxes per acre when worms destroy varying percentages of the fruit. In discussing the tables Mr. Foster said in part:

"Take for example an orchard sprayed four times, using 300 gallons per acre at each application and using five pounds of paste lead to each 100 gallons of water, or 60 pounds per acre. Suppose the acre produces 500 boxes of apples. Two per cent of the crop at $1 a box will more than pay for all the arsenate of lead used. If the orchard produces only 300 boxes per acre, about 3 per cent of the crop will be required to pay for the lead used in 1918.

"Then consider the large trees requiring 600 gallons of dilute spray per acre, or 2400 gallons for four applications. Less than 4 per cent of the crop will pay for the lead used if the orchard produces 500 boxes per acre. If the orchard produces 700 boxes per acre, less than 3 per cent of the crop will pay for all the lead used.

"The man who thinks that he may omit one or more of the late applications to save money should carefully compare the cost of the application with loss of apples, if, by omitting the application any of the apples become wormy. When we remember that 1 per cent of the crop will pay for the arsenate of lead used for one application it is dangerous business to try to save expenses when the loss at the other end may be many times the amount supposedly saved. The difference between three and four applications is only about $1.80 per acre for lead costs."

### LOSS FROM WORMS.

This table was presented by Mr. Foster to show the loss from worms in boxes of apples per acre. The three columns of figures are for orchards producing 700 boxes, 500 boxes and 300 boxes per acre, respectively.

| Wormy. | Boxes lost per acre. | | |
|---|---|---|---|
| 1 per cent | 7 | 5 | 3 |
| 2 per cent | 14 | 10 | 6 |
| 3 per cent | 21 | 15 | 9 |
| 4 per cent | 28 | 20 | 12 |
| 5 per cent | 35 | 25 | 15 |
| 10 per cent | 70 | 50 | 30 |
| 15 per cent | 105 | 75 | 45 |
| 20 per cent | 140 | 100 | 60 |

### ARSENATE OF LEAD COSTS FOR SPRAYING APPLE ORCHARDS.

Comparison of costs in paste and powder forms at average price in 1917 and at anticipated prices for 1918. Showing cost per acre and cost per box according to production for three and four applications each season.

| | Gals. of spray per acre each application | No. of applications | Total gals. spray per acre | Amount of lead: Per 100 gals. | Amount of lead: Per acre | Form | Price per lb. | Cost per acre | Boxes per acre and cost per box: 700. | 500. | 300. |

# Field Notes

Harry Van Horn of Richland, Wash., is one of the first settlers of that section, now noted for its early berries and fruits, besides being a district where diversified farming is profitably practiced. Mr. Van Horn lived for years in the Richland district before the town was established and his was one of the few ranches bordering upon a great desert of sand and sagebrush. But even in that state the country appealed to "Van," as he is popularly known, and he has lived to see the country developed into its present high state of cultivation. Both Mr. and Mrs. Van Horn have been active in educational work in their district.

R. D. Inman of Grandview, Wash., wished to breed a bird with the laying qualities of the White Leghorn and the meat of the White Rock type, and says his experiment has proved successful. In breeding, he selected the U. R. Fisher strain of White Rocks for the hen. The cock used was a Rose Comb White Leghorn of the Snowball strain. Mr. Inman says the cross makes a desirable market bird, but still possessing the laying qualities of the Leghorn breed. The hybrid will run four to six pounds. In 1915 Mr. Inman's flock netted $1.52 per hen. In 1916, due to "too many irons in the fire," as he puts it, his flock fell down to a fraction over $1.40. He has not made an accounting for this year. "My bids have kept me going," said M. Inman. "They have paid me when my cows fell down. But, as all poultymen know, no flock will poduce desied esults unless given the most caeful attention possible."

# To Prepare Rice Powder

To the Editor of The Washington Farmer: As rice contains more nourishment than wheat it should be used far more than it is at present. Rice flour is so easily prepared and bread made from it is so delicate that everyone likes it.

To prepare rice flour use any cheap grade of rice. Wash and soak in cold water two or three hours. Drain and run through the food chopper, using the nut butter grinder. The rice must be drained fairly dry to grind well.

The flour is rather coarse and damp so whatever is not used at once must be spread on a cloth and laid on the warming shelf of the kitchen range to dry. Stir occasionally to prevent its drying lumpy. Do not sift it as small lumps will disappear in baking.

To make bread use one pound of rice flour to three of wheat flour. Mix and treat the same as wheat bread. Use the bread dough for all kinds of rolls as you would wheat bread dough. To make doughnuts, take a lump of the bread dough twice the size of your fist, one cup sugar or honey, one cup warm milk and a little shortening, wheat flour to mix stiff as bread dough. When light, roll out and cut into doughnuts. Put them on a floured cloth to raise. When light fry like any other doughnuts.

These do not take as long to fry as other doughnuts and absorb very little grease. They are good hot or cold.

By adding one cup sugar or honey and a pound or more of raisins to an ordinary family baking of rice flour bread, a delicious sweet bread is obtained.

Use one-third rice flour in your baking powder or soda biscuits and in muffins and save half your shortening. Use it in custards and puddings as you would corn starch cookies.

Use one pound of oatmeal or cornmeal to three pounds of wheat flour. One-third of either rye or graham to two-thirds wheat flour and equal parts of barley, graham and wheat flour for war bread.

Pour boiling water on the cornmeal to make a thick mush. Let stand in a warm place over night closely covered. In the morning add your sponge or yeast and proceed as for wheat bread, using any method you are accustomed to in making all wheat bread. Use no shortening. Oatmeal should be cooked five minutes and treated the same as corn meal. Makes fine toast. This bread dough can be used for all kinds of rolls, also doughnuts, by treating like the rice flour bread dough.

Make barley flour by running pearl barley through the food chopper dry, using the nut butter grinder. Sift and use the coarse particles for soup or breakfast food.

MRS. W. F. STECHER.

Pullman, Wash.

# Food Production Problem

## *What Farmers of the State Are Planning to Raise During 1918*

Here is another instalment of answers from Washington farmers as to their utmost in food production for the year 1918. Reading over the products of which they propose to raise more, as well as those of which they plan to raise less, will give one an encouraging glimpse of the patriotic attitude of the farmers of the state.

**To Increase Poultry Flocks.**

To the Editor of The Washington Farmer: I am filling out your "What Is Your Utmost" blank and returning same herewith. Might say in explanation that I specialice in fruit and poultry and have heretofore made no effort to raise any other crop—not even feeds. However, feed is high and land and labor, so far, are comparatively cheap; so I have purchased a small tract near me and will raise a little corn, wheat and mangels. I have always felt a little guilty in feeding so much wheat to my poultry and believe my conscience will rest a little easier if I raise part of what I feed. Concerning poultry, I consider it not only our patriotic duty, but also mighty good business to increase our flocks to the extent of our ability to take care of them. Consequently I will practically double the number of my layers by the first of next October. As I am carrying 1000 layers now this increase will be quite a substantial one. I know feed is considered high, but the price is practically set, and we know just what our hens will cost us for maintenance—there is no gamble on that end of the business. Eggs are high, also, and will surely remain so for a long time. A heavy producing flock will make more money net now than it did two years ago. It is only the man with the scrubs, mongrels and poor layers that is losing money at the present time. The poultry man that will care for his flocks properly, cull them severely and when adding new stock be very careful to secure it from a pure-bred, heavy laying strain—that man is safe. He will not only make money for himself, but will also be doing his duty to his country and to humanity. A few years ago the man that dared admit that his flocks were utility fowl; that his main object as a poultryman was to produce eggs and meat—that man was openly ridiculed and belittled by the so-called "fanciers" and the public in general. But the times have changed since then, and also public opinion. Now the man that can show that his flocks have made money from market eggs and meat is considered a good citizen and a good business man. The fancier that can show only "pretty feathers" is the one that is crying "hard times" and bewailing the "high cost of feed." I honestly believe that the poultry business is a safe insituation, and I am also just as firmly convinced that the level-headed, patriotic "business hen" poultry men and women will do their "utmost" this spring and geratly increase the country's wealth of poultry products. Truly "now is the time for all good men and true to come to the aid of their country." E. R. WELLS.

Prosser, Wash.

**Bigger Machinery.**

To the Editor of The Washington Farmer: In regard to farm labor, men are scarce. I am going to run bigger machinery and drive eight and 10 horses myself and do all I can and won't figure on any hired help. In harvest we are planning to help one another and exchange work. The women could raise poultry and help milk and help with the chores.

ED TIEDT.

Soap Lake, Wash.

**To Help the War Out.**

To the Editor of The Washington Farmer: I am trying to raise everything to help the war out. We have more wheat and everything else.

E. J. EDWARDS.

Eureka, Wash.

**Extra Cultivation.**

To the Editor of The Washington Farmer: I am not increasing normal acreage. Intend to raise more by extra cultivation. If labor is so high that I can not afford a man I will therefore produce less, as I have farmed for 12 years now and while I have increased improvements, stock, etc., and kept up my interest, my original debt remains the same. F. F. WOLLENBERG.

Hartline, Wash.

**Neighbors Exchange Work.**

To the Editor of The Washington Farmer: Farm labor was scarce and very expensive last summer, men asking from $2.50 to $3.00 per day, and it looks like conditions would be worse in that respect the coming summer. Neighbors exchange work to quite an extent, thereby lessening the expense of hiring a good deal.

A. E. RANDALL.

Meyers Falls.

The tendency of crop production is shown by the following summary of the coupons received during the week:

(Continued on page sixteen.)

### THE RAINIER APPLE.

**Said to Be World's Best Keeper.**

While the Yakima valley of Washington has long claimed credit for growing as fine flavored, as highly colored and as profitable apples as are produced in the nation, it has remained for the United States department of agriculture to officially declare that an apple, not only grown, but originated in the valley, is the world's best apple when keeping qualities are considered.

W. W. Scott, a well-known orchardist of the Fruitvale section, near North Yakima, is the originator of the "best keeper," the Rainier apple. For several years it was known as the Scott apple, and was by many persons confused with the Hubbardston Nonesuch, which it somewhat resembles. Mr. Scott, who insisted that his apple had distinct points of difference from the Hubbardston, finally submitted the fruit to the United States department of agriculture.

Appropriately enough, since the Scott ranch where the apple originated looks on two snow-capped peaks, the apple was given the name of the larger of the two, and became the Rainier apple. A number of orchardists, attractd by the apple's splendid flavor, color and firmness, have set out orchards, now coming into full bearing, of the new fruit. The Rainier apple bids fair to become as much of a commercial favorite as the Delicious, Winter Banana or other standard variety.

The official report regarding the keeping qualities of the different apples, says: "The experiments showed the Rainier apple to be the best keeping variety. It remained in prime condition for market until May or later."

According to the report sent out by the department of agriculture the other leading keeping varieties among the apples grown in the northwest are: Arkansas Black, May; Winesap and Yellow Newton, last of April; Rome Beauty, middle of April; Delicious, last of March; Ben Davis, Winter Banana and White Permain, first of March; Spitzenberg, last of February; Stayman Winesap, middle of February; Jonathan, first of January, and Grimes, middle to last of December.

# Use Strongest Men to Push Food Production Campaign

Copies of the recent telegram to President Wilson, urging the immediate appointment of the strongest available man in the country as national war time food production administrator, were sent to persons in different parts of the country asking them to push the movement if it met their approval.

(From the telegram to President Wilson.)

"Some way must be found to better labor conditions and hold young men on the farm with a patriotic consciousness of honor and dignity. The crisis demands the immediate appointment of the ablest available man in the country as national war-time food production administrator, who will fire the imagination of all the people, consumer as well as producer, to the supreme necessity of increased food production, and who will establish far-reaching cooperation with the agricultural department, agricultural colleges and farmers in all sections of the country in meeting their war-time food production difficulties, just as Hoover has brought home to every family the need of food conservation, and just as the Red Cross campaign has swept the entire nation under the leadership of Davidson."

**Labor Problem Most Vital.**

With regard to this C. P. Norgord, state commissioner of agriculture in Wisconsin, writes:

To the Editor: Replying to you letter of December 29th with regard to the farm labor situation, permit me to state that I have considered all the time, since the beginning of the war, that the labor proposition is the most vital one with which we have to deal, more vital, indeed, than the seed situation.

Your appeal to President Wilson, I believe, is seconded by all of those who know the food situation, and the present prospects for the coming crop. I believe that we must use the very strongest men, and those in the most effective official positions, to start the increased food production campaign for the next year. We must get all of the governors behind the movement as well as the national and state councils of defense, and they must all speak in positive proclamations regarding the great need of the most effective stimulus possible to the production of the needed acreage of crops for the coming year.

The bad weather of last fall has prevented many states in the Union, including Wisconsin, from getting in the acreage of winter grains that would have been put in had the weather been more favorable.

I believe that the farmers throughout this state, and other states, are ready to work to the limit to produce the needed crops, if the matter is properly brought to their attention.

C. P. NORGORD.

Madison, Wis.

**Suggestion Appeals Strongly.**

Wallace B. Douglas of St. Paul has been attorney general of the state of Minnesota as well as associate justice of the supreme court. At present he is a member of the Minnesota state forestry department and is practicing his profession in St. Paul as the head of the firm of Douglas, Kennedy & Kennedy. Mr. Douglas wrties:

To the Editor: I am today in receipt of your favor in the matter of the appointment of a "National War-Time Food Production Administrator."

Your suggestion appeals to me strongly and I have just taken up the subject with Judge McGee, a member of the commission of public safety, and requested that he invite consideration and action by the board.

W. B. DOUGLAS.

St. Paul, Minn.

**Close Unnecessary Business.**

J. N. Hagan, commissioner of the department of agriculture and labor in North Dakota, writes further:

To the Editor: Your letter of December 29, with enclosure of copy of telegram to President Wilson, received, and I agree with you that it is very necessary that everything be done to maintain the young men on the farms as far as it is possible, as the available supply of persons competent for agricultural work is becoming very limited, owing to the great demand for military service and also the factories in the east have taken a great many competent young men from the farms.

As food is of prime importance during this emergency, it occurs to me that pressure should be brought to bear to enforce the closing out of all unnecessary business during the period of the war. I notice that in many of the cities and towns that there are many men engaged in running pool halls, bowling alleys, soda fountains, candy kitchens, etc., that, to my mind, might be eliminated as unnecessary during this military emergency.

Men engaged in unnecessary occupations should be compelled to either enter agricultural pursuits or be automatically placed into the army; we would then be conserving a great deal of human energy that would contribute something toward the accomplishment of winning the war. J. N. HAGAN.

Bismarck, N. D.

**Idea New to Him.**

One of the big agricultural associations of Iowa is the Corn Belt Meat Producers' association, of which A. Sykes is president and organizer, as well as chairman of the executive committee. Mr. Sykes writes:

To the Editor: I am just in receipt of your letter containing copy of telegram sent to President Wilson urging the immediate appointment of a national war-time food production administrator, and beg to say in reply that the suggestion is entirely new to me and I confess that I had not given the subject any thought whatever from the standpoint of having a special administrator appointed to supervise the production of foodstuffs during the period of the war, but I am free to admit that the plan looks feasible and appeals to me as one that might work out, providing the right party was secured, for a great benefit to our own people and our allies as well. However, before I take any definite action in regard to this matter I am submitting your letter and telegram to H. C. Wallace of Des Moines, who is secretary of the Corn Belt Meat Producers' association and editor of Wallace's Farmer, for him to pass upon the matter and see what his idea is as to whether we should get behind such a movement as this or not. Mr. Wallace is also a member of the animal industry board and is quite closely in touch with Mr. Hoover and Mr. Cotton of the food administration department, and I feel that he is in a much better position to pass upon this matter than I would be myself. If Mr. Wallace is favorably inclined toward the proposition I will be only too glad to lend any support that I can. A. SYKES.

Ida Grove, Iowa.

**Millions Voted for This.**

Dr. Van Hise, president of the University of Wisconsin, writes:

To the Editor: You letter of January 3, relating to a national war-time food production administrator, is received.

As you are doubtless aware, an appropriation was made to the United States department of agriculture, amounting to several million dollars, for this very purpose. The matter is therefore in the charge of Secretary Houston. I know that Secretary Houston is thoroughly alive to the situation and will do everything in his power to further food production; indeed, the department of agriculture is devoting a large part of its energy to this, and already a definite program has been worked out.

However, I am sending your communication to the chairman of the Wisconsin State Council of Defense, in order that he may take such action as he thinks wise.

CHARLES R. VAN HISE.

Madison, Wis.

**Worried Over Labor Situation.**

Charles W. Paine, secretary of the California State Agricultural society, writes:

To the Editor: In answer to your letter will state we in California are very much worried over the labor situation. Our crops have been abundant and everybody is doing what he can to increase the production. The only drawback seems to be a scarcity of labor.

I do not care to suggest a remedy, as I think the matter is being taken up by the several councils of defense and I am quite sure they will find some method to recommend to the proper authorities. CHARLES W. PAINE.

## *Cattle Feed vs. Human Food*

Recent statements of certain eastern publicists have led people to inquire whether our beef cattle might not be competitors of the human race for food material, and in that manner depriving the human race of more food than they were furnishing. It has even been suggested that the number of beef cattle might be profitably curtailed and the feed used for human consumption. It has been stated that a steer requires 1000 pounds of grain to produce 100 pounds of growth, and that only 50 to 60 pounds of this 100 is suitable for food.

Now these statements are in a general way true, but they are of little application since there is very little grain fed to steers in proportion to the total amount of beef produced. In the western states there is practically no grain fed whatever. Any discussion of how much grain it takes to make 100 pounds of beef is very much beside the question. The question may be enlarged to ask whether there is any food material used by beef cattle that may be more profitably used directly for human food. The very large proportion of the beef of the entire world is made from grass grown on land unsuitable for tillage. This feed is, of course, unsuitable for human consumption, and the land which grows it is unsuited for the production of cereals, vegetables, fruits, or other human foods. In winter, however, these cattle must have hay, usually at the rate of about one ton per head each winter. While this hay, of course, has no value as a human food, in some cases the land upon which it is grown could be used for other purposes, but this is not usually the case since a very great deal of hay land is poorly, if at all, suited to the growth of other crops. Furthermore, this small amount of hay makes it possible to utilize the vast acreage of grass land which would otherwise be not used on account of lack of winter feed.

A great increase in the number of beef cattle in the west would doubtless be at least partially at the expense of land and produce that could be used more directly for the support of the human race. A decrease, however, would not have the contrary effect since our cattle are not now using to any appreciable amount, cereals that might be made directly into human food, or even land that might be devoted to growing products suitable for direct manufature into human foods.

The production of the amount of beef which we are now raising, and perhaps even more, is not at the expense of other food material. Eighty-five per cent or more of the area of the west can be made to produce human food only by using it for the raising of sheep and cattle.

## *Kicking Up a Dust*

A New York daily newspaper quotes "a prominent food packer and distributor" to this ranting effect:

> "In 1913 the farmer sold his wheat at 77½c per bushel and made a profit. In 1914 he sold his wheat at 84c and made a profit. In 1915 he sold his wheat at $1.02½ and made such a profit that he could hardly stand it. His wife and children stood at the crossroads, not knowing which way to turn to go to the big city to spend his money. He bought short skirts for the ladies, collars for the boys and a limousine for himself. Those who were afraid of the electric lights consulted their mail order catalogues daily and blocked the railroads with immense orders, not wanting to be outdone by their brave neighbors. In 1916 and 1917 they dictated to the public what they must pay them for their products. What will they do with $2 wheat, $8 beans, etc.? Of every dollar you spend in the bakery nowadays, the "poor" farmer receives 40c. Is this fair?"

If farming is such profitable business, and packing and distributing are carrying the men in those lines down to poverty and ruin, why do they keep out of the rich agricultural pastures? Why don't they quit packing and go in for producing? The packing business takes big capital and farmers generally are unable to get into it; but no such obstacle interferes with the packer's desire to go into farming. The field is as big as all out-doors. Why don't they go to it?

The packer's statement is stuffed with misstatements and fallacies. If soil exhaustion, equipment depreciation and fair wage allowance are considered, it is doubtful if the American wheat growers extracted real profits from 77 cent wheat in 1913.

But 1913 is not 1918. Bewildering changes have come in these momentous five years. Labor has gone up and become more independent and less productive. Prices of all commodities that enter into farming have gone sky-rocketing. The farmer's cost of living has advanced.

Another point that is generally overlooked: The farmer's visible profit at present prices is largely fictitious. Suppose that his books show a seeming profit of $1000 in 1917, as against $500 in 1913. It looks double, but is not double, because money is inflated and the purchasing power of the dollar is impaired. That is the chief reason why the prices of farm lands seem to have gone upward in recent years. But the hard economic fact remains that the proceeds of a farm sold in 1913 at $40 an acre would buy substantially as much then as the proceeds would now bring if the same farm were sold at $60 or $70 an acre.

So much for the misstatements in the packer's communication. Now for the downright falsehood that in 1916 and 1917 the farmers "dictated to the public what they must pay them for their products."

The shoe was exactly on the other foot. The public, by act of congress, dictated to the farmer what he should be paid for his 1917 wheat crop. It put the price arbitrarily at $2.20 for No. 1 northern delivered at Chicago, which works out at an average of about $1.85 in the Inland Empire.

That is, the government stepped in and made a price arbitrarily below that which surely would have ruled if the market had been left open to the law of supply and demand. In all probability the farmer would have received $3 or better for his wheat if this action had not been taken.

In patriotic spirit the growers accepted that reduction, although it meant reduced profits in every instance and actual losses in thousands of cases.

These are the facts, and farmers are justly indignant when men like this New York packer, on the inside of big business and standing in with special interests that right now are under governmental investigation for profiteering practices, kick up a dust to divert public attention and expect the farmer to swallow that dust without protest.

Secretary McAdoo of the United States treasury, has expressed the belief that the federal farm loan bank system is sound in every detail, and that its enemies will fail in their threatened attempt to wreck it. The system is one long needed in this country, and its operation for the first ten or so months has seemed to justify its existence many times over. Technicalities, if such exist, must not be allowed to interfere with the valuable and just service this institution is rendering.

As a means of speeding up agricultural production in France that country is importing from America 1500 tractors in time for spring plowing. This is made necessary not only by the demand for speed in cultivating large acreage, but by the actual shortage of horses as a result of their having been commandeered for war service. It is said that the war demands a constant supply of some 5,000,000 horses in military service of one kind or another.

## *Washington Gleanings*

If 1000 acres of potatoes can be guaranteed in Clarke county the Beaverton (Ore.) Starch company will build a factory in Vancouver.

The Dayton mill of the Portland Flouring Mills company is experimenting in the making of barley flour. The first day's run netted 27 sacks.

W. B. Martin and son, E. L. Martin, have bought the W. F. Seagraves farm east of Tekoa on the Benewah road. The farm is well improved and the consideration was $3000.

A Walla Walla Farmers' union committee will take before the food administration a petition to have the price paid for wheat apply at the place of production rather than at some other point.

Forty stockmen will lease 20,000 acres of grazing land from the reclamation service in the Yakima region. The leases are for periods extending from 18 to 24 years. Prices range from seven cents an acre to 75 cents an acre.

A committee of Yakima wool growers probably will appear before the district exemption board of Kennewick and ask that wool growers, sheep raisers and herders be put in a lower classification, to insure their continuing in business.

To encourage the immediate purchase of brood sows, now going on the market, with a view to stimulating hog production in the Inland Empire, the Exchange National bank will lend the farmers near Spokane money to buy a sow without security and on easy terms.

E. T. Marchetti, field agent for the U. S. department of agriculture, has issued his last report for 1917, in which he estimates the acreage of fall-sown wheat in eastern Washington at 422,000 acres, which is 46.1 per cent of the normal fall sown acreage of 914,725 acres.

That the Sunset highway through Snoqualmie pass may be open to travel from six weeks to two months earlier next spring as a result of the warm Chinook winds and rains melting the snows in the pass is the prediction made by George F. Cotterill, chief engineer for the state highway board.

The report of Dr. Willis Wilson, Yakima meat inspector, shows 80,120 pounds of meat by-products put up in that city in December. This includes 34,210 pounds of meat, 12,000 pounds of smoked meat, 8000 pounds of lard, 12,000 pounds of compound, 6000 pounds of tallow and 10,000 pounds of sausage.

## *What Others Say*

Farmers' Mail and Breeze: The world can never be safe with the Hohenzollerns in power.

The Rural New Yorker: The latest figures show that it costs $34 per year to feed the average dog.

Kimball's Dairy Farmer: Now is a good time to begin building up the farm flock by securing eggs that will hatch chickens of the most approved breeding for meat and egg production.

Successful Farming: There must be no class of favorites in this country. The financiers and captains of industry are very important in a time like this; and so are the farmers and laboring men in the factories.

Wallace's Farmer: One of the best results of the work of the county agent is cooperative action by the farmers of the county. Through the county agent they learn how to buy and sell cooperatively, and after a while learn how to do other things cooperatively.

# Sheepmen and Dairy Workers

## *Gov. Lister Calls Attention to Labor Shortage*

In a circular letter sent out the first of the month Governor Ernest Lister desires to invite the very earnest consideration of district boards to the food production situation in the state of Washington and to particularly emphasize the fact that in the consideration of claims for different classes based on the grounds of agricultural occupation the definition of the word "necessary" as given in the classification of rules and principles has a special and pertinent application to the state of Washington. Since the new regulation became effective the various agencies in the state which are charged with the responsibility for maintained and increased food production including the federal food administrator, the state council of defense, the county councils of defense and the state commissioner of agriculture have made a survey of what was accomplished during 1917 and have found indisputable proof that voluntary enlistments and the first draft by taking men from agricultural pursuits actually did reduce food production by crippling and in some instances causing the discontinuance of agricultural enterprises which had been producing an appreciable amount of agricultural products over and above what was necessary for the maintenance of the persons residing on such farms.

Governor Lister appreciates that in passing on agricultural claims during the first draft district boards were sorely handicapped by the lack of any standards of measurement or by previous experience, but these handicaps have now been largely removed. Reversals of some of their decisions, made by the president have demonstrated to the district boards that in the stress of the hour and the urgent need for the first national army they gave the army the benefit of the doubt and sought to hold men for military service who in some instances should have been left on farms. The governor wishes it pointed out here that no reflection whatever is intended on the judgment of the district boards, for their work during the first draft was a splendid tribute to their patriotism and intelligence. The scanty population of many agricultural sections of the state, even in normal times, produces a very special condition of affairs viewed in the light of the sustained and increased food production demanded by federal and state agencies charged with responsibility for such matters and which production will, without argument, be conceded a fundamental necessity

The survey of the situation, made by the agencies herein referred to, shows that in connection with food production in the state sheepmen and dairy workers, especially milkers, are the two classes of agricultural labor that have been hardest hit by voluntary enlistments and the first draft. Attention of district boards is particularly directed to these two classes of agricultural labor, particularly in the light of the definition of essential principles governing classification in respect of engagement in agriculture.

The two particular classes of farm labor herein referred to are not, of course, the only classes to which special consideration and attention should be devoted by district boards. They happen to be the two classes, however, in which there is and has the last year been the most pronounced shortage, and there is no indication at present of an improvement in the supply.

In his letter to the editor of The Washington Farmer enclosing the above circular Governor Lister says: "I beg to acknowledge receipt of yours of December 31 enclosing a copy of the telegram sent to President Wilson after the conference recently held in Spokane, also a copy of your article published in the Washington Farmer of December 27. I may say that I have gone over this matter carefully with Mr. Benson, the commissioner of agriculture, since his return to Olympia and will do everything I can to assist in the handling of the problems which face us. I am herewith enclosing a circular that I had prepared and sent to the district boards of review in the state in relation to agricultural exemptions. Copies of this circular were also sent to all of the local boards. This circular was prepared and sent out for the purpose of calling to the attention of the boards the great need of care by them in the handling of the agricultural cases that may be presented. I hope this circular will be of some assistance."

# Apples in Baskets

Eastern apple consumers bought Yakima valley apples in bushel baskets this year for the first time in the history of the apple industry in this state. The experiment was tried by a few shippers in North Yakima, among them the Thompson Fruit company and J. M. Perry & Co. Speaking of the innovation Mr. Perry said:

"Of course most of us know that apples have been shipped and sold in bushel baskets in the east for many years. This sort of receptable is new here, however, and we are very well pleased with the experiment in so far as we conducted it. The saving comes in the pack. No wrapping is required and very little pains is required in the packing, as long as the weight is up to standard."

Each basket is covered and the baskets are so filled that the familiar "swell," giving the brimful appearance, is in evidence. R. W. F.

# Why Raise Sheep?

## Expert Gives a Score of Reasons

In discussing "Sheep on the Oregon Farm" Professor O. M. Nelson of Oregon Agricultural college, says that 20 sheep are needed for each soldier sent abroad. One million men require an army of 20,000,000 sheep to clothe them. Referring to the immense amount of wool needed and the impossibility of increasing the number of sheep on the range to any extent, he showed an increase of a few sheep on every farm would go far toward meeting the ned. He submitted the following 29 reasons for keeping sheep in the farm:

The initial investment in foundation stock is small.

Expensive buildings are not necessary.

Expensive machinery is not required.

Less productive land can be utilized.

Sheep will eat and relish almost every class of weed.

For cleaning out the fence rows sheep destroy the winter protection of many injurious insects.

Due to the fineness of the mastication of their food very few weed seeds are found in the sheep's droppings.

Sheep are of great value in clearing brush land.

Sheep are dual purpose animals.

Crop yields are increased by the constant and uniform distribution of rich manure.

The excreta of sheep is rich in nitrogen and potassium.

Less plant food is removed from the soil by sheep than by grain crops.

The cost of maintenance is small.

Sheep make profitable use of the stubble left in fields after the crop is harvested.

Sheep can be made marketable without grain.

Wool and lambs are more easily transported than grain crops.

Rapid and frequent monetary returns.

Reasonably large percentage of profit under normal conditions.

Wool and mutton advanced in price before the war, and a sudden drop in value is not to be expected.

Less labor is required on a sheep farm than on a grain farm.

Labor on the farm is more evenly distributed throughout the year.

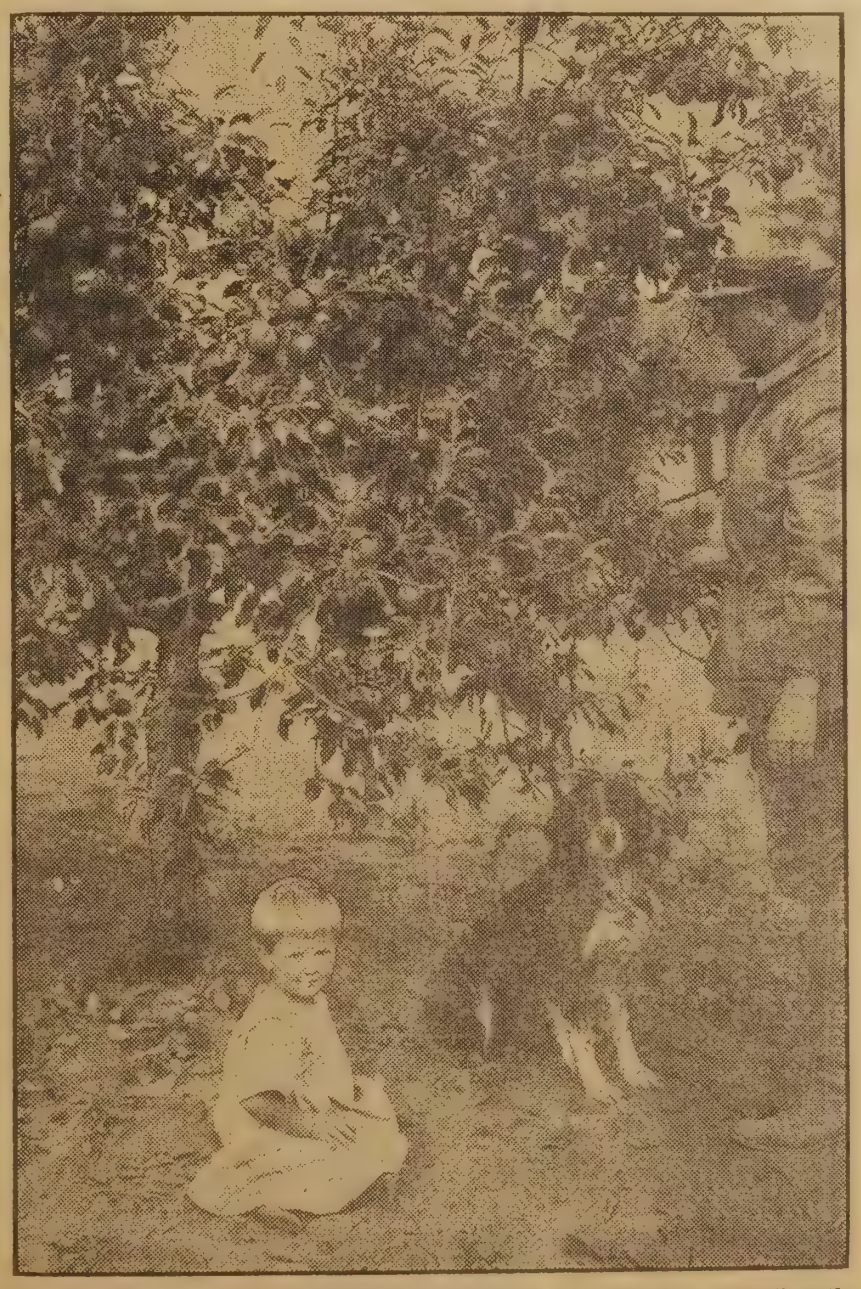
Sheep require little care except during the usual slack period.

Children as a rule like sheep, and this is a good time to develop future shepherds.

A flock of sheep on the farm furnishes a fresh supply of meat at any time of the year.

Because of the comparatively low cost per animal sheep are more easily improved than most other kinds of live stock.

Sheep are more prolific than horses and cattle.



The western sheep ranches are rapidly disappearing, and it is up to the small farmers to make up the deficiencies.

The population of the United States is increasing, while the number of sheep is steadily decreasing.

As a patriotic duty in the present world crisis we must produce more wool and mutton.

### Farmers Holding Potatoes?

It is reported that farmers of many middle west sections are holding their potatoes for higher prices. They claim that they can not get anything like the price that the dealer is charging the consumer and that they will not sell until a more equitable price is paid.

A scene quite common in the orchards of Washington. The man inspecting the fruit is C. J. Webb of the Spokane Fruit Growers' agency.

# Labor Is the Big Orchard Problem

(Continued from page three.)

of the Northwest Rex Spray companies, read a carefully prepared paper on lime and sulphur solution.

### The Byproducts Question.

"What a Community Can Do to Bring in a Byproducts Plant" was a subject ably handled by Robert C. Paulus of Salem, Ore. Mr. Paulus' paper caused no small amount of comment in view of the dosastrous results of some byproducts plants established in the northwest. Mr. Paulus emphasized the fact that it is a comparatively simple matter to put up the byproducts pack, but it is another job to sell it at a profit.

Transportation problems affecting the fruit industry were discussed in a most interesting and helpful manner by J. Curtis Robinson, traffic manager of the Northwestern Fruit Exchange, Seattle.

S. W. Foster, entomologist for the General Chemical company, San Francisco, submitted a comprehensive table showing costs and efficiency of arsenate of lead spraying.

Professor O. M. Morris of Washington State college read a paper on pruning stone fruit. Another splendid paper and chart talk on the pruning subject was given by Professor V. R. Gardner of Corvallis, Ore.

P. S. Darlington, Wenatchee, gave the convention some of his experiences and observations on some phases of alfalfa as a cover crop.

M. L. Dean, chief of the division of horticulture, state department of agriculture, told what efforts are being made to put the horticultural inspection work on a business basis.

### Favor Land Settlement.

F. A. Wiggins of the Washington Nursery company, Toppenish, Wash., read Dr. Elwood Mead's paper on "Colonization—Australia Versus America." Dr. Mead gave this address in person at the last meeting of the Washington Irrigation institute at Yakima. Mr. Wiggins presented it in an able manner, and one of the resolutions adopted by the horticultural convention asks that steps be taken to provide a land settlement board for Washington similar to that established in California. The California plan is similar to that in effect in Australia.

Professor Gardner of Corvallis gave a lecture on pollenation of sweet cherries and Tragedy prunes.

"Ten Years' Experience With San Jose Scale" was the subject of a paper, illustrated by charts, which Dr. A. L. Melander, entomologist at Washington State college, read.

W. C. Quick, U. S. department of markets, with headquarters at Yakima, read a paper on "Essentials of Air-Cooled Storage Houses." Storage facilities have been greatly added to in late years and many more warehouses are in prospect, in consequence of which Mr. Quick's address, illustrated with samples of wall construction, proved decidedly profitable.

F. E. Allen, also of the department of markets, spoke on "Picking the Apples for Flavor and Keeping Qualities." Other numbers on the program included a paper on "Handicap to Successful Marketing," P. R. Parks, manager Spokane Fruit Growers' company; "Banking the Fruit Crop," J. J. Rouse, cashier Fidelity National bank, Spokane; "Abuses of Water on Fruit and Trees," D. T. Fisher, U. S. bureau plant industry, Wenatchee; "Some of the Most Difficult Fruit Problems to Solve," M. S. Middleton, provincial horticulturist, Victoria, B. C., and an illustrated lecture on potato diseases by Dr. F. D. Heald, Pullman.

Officers were elected as follows: President, F. E. Williams, Opportunity; first vice president, J. F. Sugrue, Cashmere; second vice president, F. A. Wiggins, Toppenish. Directors were elected as follows: For the one-year term, Luke Powell, Prosser, and J. Howard Wright, Yakima; for the two-year term, H. G. Craig, Deer Park, and M. L. Dean, Olympia; for the three-year term, O. M. Morris, Pullman, and J. L. Dumas, Dayton.

The directors elect their own secretary and treasurer. The place for the next meeting has not been decided upon.

# Congress Backs Federal Land Bank

## *Big Appropriation Is Made to Insure the Sale of Farm Loan Bonds*

Congress has passed the appropriation bill setting aside $200,000,000 as a reservoir fund for the purchase when necessary of federal farm loan bank bonds. Half of this amount is to be available for 1918 and the remaining half for 1919.

This is one of the most important acts of congress in recent months from the viewpoint of the farming industry, as it guarantees the stability of the farm loan bank unless the whole system is overthrown, which seems wholly improbable. It is known that financial interests opposed to the farm loan system have considered attacking it in the United States supreme court on the ground that the act creating it was unconstitutional. This vigorous action on the part of congress and President Wilson in the making of the large appropriation in the face of these threats probably will do much to deter the opponents of the system from making the attack.

Owing to the unprecedented demand upon financial interests during the present war period the sale of farm loan bonds became for a time uncertain. The central board of the bank at Washington, D. C., asked congress for the appropriation to be used to stabilize the sale of the bonds. Without delay the appropriation has been made.

Under the provisions of the law borrowers give the farm loan bank first mortgages on their property. These mortgages in turn are used by the bank as security for the issuance of bonds. The sale of these bonds brings in more money to be loaned to the farmers, who in turn give other mortgages to be used as security for more bonds. Thus the more money is loaned the more the system will ultimately have to loan.

When the federal farm loan act was passed The Farmer said that time and experience would probably show the need of some amendments, as it would be almost miraculous if congress should launch a vast new system of this complicated character without making some errors of judgment.

The law has now been upon the statute books for 18 months, and the system has been in operation for nearly a year, but only minor changes are recommended in the first annual report of the federal farm loan board.

This report, which is signed by Secretary of the Treasury William G. McAdoo, ex officio chairman; George W. Norris, farm loan commissioner; Herbert Quick, W. S. A. Smith and Charles E. Lobdell, members, urged upon congress the importance of authorizing the secretary of the treasury to purchase farm loan bonds during the coming year to the extent of $100,000,00 if necessary, these bonds to be resold to investors as the demand for them develops. The board urged this step as a means of providing the basic industry of the United States with the capital needed to increase food production during the war; to stabilize interest rates and to encourage the purchase of the bonds by relieving purchasers of the fear that the bonds may be pushed for sale at unpropitious times.

Briefly, the other recommendations contained in this annual report are:

That the cooperative farm loan association or borowing group provided under the federal loan act be given another year on trial before any consideration be given to amending the act to make the method of borrowing more direct.

That the maximum loan limit permitted to the individual borrower be increased from $10,000 to $25,000.

That the denominations of farm loan bonds be changed from $25 to $20 and from $50 to $40 to eliminate the fractional cent in the computation of semi-annual interest.

That the provision enabling a borrower to pay all or any part of his indebtedness after it has run in five years, in multiples of $25, be amended to enable him to pay all or any number of annual amortization payments on any interest-paying date. These mortgages are retired by fixed annual payments and limiting advance payments in indebtedness to the size of these fixed annual amortization instalments would eliminate bookkeeping.

That the provisions governing joint stock land banks be amended to allow such banks to operate in more than two states; to increase their limit of bond issues to 20 times their capital stock instead of 15, and to raise the authorized rate of interest from 6 to 6 1-2 per cent. This is not to be confused with the authorized maximum rate of 6 per cent allowed the federal land banks.

An interesting feature of the annual report is the discussion of the cooperative national farm loan associations and the acceptance of the principles of cooperative borrowing by the American farmer. It is pointed out that up to December 1, 1917, 1839 of these cooperative associations had been chartered by the federal farm loan board; applications had been filed for $219,750,740 of loans; the 12 federal land banks had approved loans amounting to $105,136,529, and loans had been actually paid out to farmers amounting to $29,824,655. In addition to the 1839 associations actually chartered 1985 such associations were in process of organization, getting ready to be chartereed.

Another important phase of the annual report is the discussion of land titles and their investigation. It is pointed out that the federal land banks, in line with all conservative farm mortgage operators, have required each borrower to furnish an abstract of title. The cost per loan for abstracts averages not less than $10 each, which, on a basis of 50,000 loans to be closed during the first year, aggregates at least $500,000. The examination of these abstracts by the federal land banks costs $3 each, or another $150,000, making a grand total of $650,000 expended to eliminate hopelessly defective titles. One federal land bank found only two incurably bad titles in 1056 examinations. The board cites this as an economic waste, which should be eliminated if it can be done with entire safety, and promises to make further investigation and submit recommendations at a later date.

# Phillip W. Cox

## Death Removes Pioneer Stockman

By J. E. NESSLY.

Phillip Walter Cox, one of the most widely known and influential pioneers in the northwest, died at Long Beach, Cal., January 11, age 76 years.

In the death of Mr. Cox the live stock industry of the northwest lost one of its most active supporters and successful operators. Mr. Cox was a pioneer in every sense of the word. Crossing the plains with his father with an ox team in 1845, his entire life was spent in the west, which he did so much to develop. His father was one of the very earliest settlers of Albany, Ore., where Phillip Walter Cox grew to manhood. He left Albany and came to what is now Waitsburg, Wash., in 1861 and remained there a few years, dividing his time between his stock ranch there and mining interests in the Florence, Idaho, district, where he worked in the winter time. A hard winter wiped out all of his live stock excepting one cow and left him stranded. The Waitsburg country became too thickly settled for this pioneer and in 1869 he went north into what is now Whitman, but was then Stevens county, and laid the foundations for the fortune which was built up with hard work and careful attention to his business.

At one time Mr. Cox owned 60,000 head of sheep, but sheep were worth but little then and wool was scarcely worth shearing, sacking and hauling the long distances to market. But he never lost faith in sheep. He later engaged in farming on an extensive scale, in raising purebred and high grade horses, in hog raising and cattle raising, but he said to the writer, after having given all a fair trial covering a period of years:

"I have raised cattle, horses, sheep and hogs and I have made money with all of them, but taking one year with another, or taking any 10-year period that I have known Mr. Sheep will bring more clear profit to the man who takes care of him and stays with him than any other animal that can be raised in the northwest."

Mr. Cox believed in action. He was a strong advocate of many socialistic ideas, but he never let these beliefs interfere with his business. He wanted to "know" and tried experiments. He and his two oldest sons, Anderson and Arthur, owned 7800 acres of land in southwestern Whitman county. His purebred, registered black Percheron horses took first and sweepstakes prizes throughout the northwest for many years. He raised corn on his summer fallow land and one year had 450 acres of corn and made big money by "hogging it off" and selling several carloads of hogs. When the ranges in Washington were converted into farms he took his sheep to Montana and ran them on the ranges there.

Mr. Cox was one of a line of rugged pioneers who blazed the trails and laid the foundation for the great Inland Empire of which he was so proud. A few days before he left for California on what proved to be his last journey, he spent several hours with the writer and gave a complete history of his life, the struggles and privations of the pioneer days, but through all of which he never lost faith that this was destined to become one of the greatest agricultural districts of the northwest. The writer had been working at odd times on this history, the notes for which cover 40 pages, when word came of Mr. Cox's death. He had not lived to see it published.

### Feed More Barley.

There is a distinct tendency for farmers to feed more barley to hogs than in the past, owing to the great need for wheat conservation. The movement may result in the development of barley as a great hog feed like corn is in the middle west.

## ORGANIZING GRANGES

### Master Bouck Works Abont State.

William Bouck, who is serving out the unexpired term of the late C. B. Kegley as master of the state grange, is active in the work of the order throughout the state. He has recently visited both the northwest and the southwest portions of the state and also the central portion. The latter part of the month he will visit in the north central portion of the state. Master Bouck is not only working for the stimulus of locals already organized, but is cooperating in unorganized localities for the formation of granges.

While in Spokane last week Master Bouck, discussing the nonpartizan league movement, expressed the opinion that the members of the state grange were favorable to the league. "Personally I am in sympathy with the league's principles," said Master Bouck. "The members of the grange are in sympathy with it, though it has not formally indorsed it. The grange is not a political organization."

That there is division of sentiment in the grange on the subject was indicated, however, when members of the Spokane county branch took exception to Master Bouck's statement. C. H. Weeks, an active member, said: "There is no place for any politics with us now or at any other time. There are questions of more vital importance before the farmers than the nonpartizan league." George Hingston, another member, said: "There will be speakers at the local meetings in this county who will explain this movement to the farmers in such a way that they will not want to have anything to do with it."

The Spokane county grange at its recent quarterly convention adopted a number of important resolutions, among them being the following:

"That the federal government, for the purpose of grading wheat, fix a market point somewhere in the Inland Empire and in each other wheat-growing center of the country.

"That a primary terminal market be established at some point on the Pacific coast.

"That all food produce be graded under a national market law, such as has been outlined by the agricultural department of the Washington State college, placing each produce in a class with a fixed market.

"That congress be commended for its action in passing the national woman suffrage and national prohibition measures."

# Will Teach Tractor Engineering

At this time of needed increased crop production and the serious shortage of labor much attention is being directed to the possibilities of power farming equipment.

It is now generally realized that one of the greatest factors in influencing the success of farming with the aid of a tractor is the ability of the farmer to correctly operate the machine. The very general use of the automobile and the farm gas engine has helped materially in familiarizing the public in general with the fundamentals of motor operation. It is generally felt, however, that a thorough study of the practical care of engines and tractors is needed by many of the men who are to use this modern farm machinery.

Throughout the United tates various tractor companies are holding courses of instruction for the owners and operators of their machines. This work will be of much value to the country in that the tractors will be much more effectively operated and many more farmers will be convinced by this successful work that they themselves can use tractors to advantage.

The agricultural engineering division of the state college of Washington, at Pullman, has announced that the annual gas engineering short course will be held this year from February 18 to March 9. Last year this course was given for the first time, and with few announcements the attendance was over ninety. This year a much larger enrolment is indicated. This is in keeping with the marked interest in tractors now being shown. Some of last year's students have signified their intentions of returning this year for a review and to become familiar with the new tractors which will be there. The course will be held three weeks this year instead of two, as last year. Half of each day will be spent in the classroom, attending lectures and demonstrations on the principles of gas engine operation, carburetion, ignition, lubrication, care and types of construction. Special lectures will be given by factory representatives and engineers on various phases of the tractor, gas engine and motor truck. The remaining half of each day will be spent in practical work in the repair shop, on the farm gas engines, in the ignition department and on the tractors and motor trucks. The tractors will be studied in detail and run in the belt in the large enclosed building. If the weather conditions permit, the machines will be operated on the road to some extent.

The tuition will be $5, the college announces, for the purpose of covering the incidental expenses incurred by the college. Eight differest makes of tractors for use during the course have already been guaranteed by tractor firms, and several more are expected.

### WHAT IS YOUR UTMOST?

Are you planning to raise more or to raise less of wheat, oats, barley, rye, corn, potatoes, peas, beans, sugar beets, vegetables, fruits, hay, horses, beef cattle, dairy stock, sheep, swine, poultry, or for feed carrots, mangels, rutabagas, turnips, artichokes, silage?

Please fill out this coupon, sign your name and postoffice address and mail to the Editor of The Washington Farmer, Spokane, Wash. Your name will be held in strict confidence if you so request.

I am planning to raise this coming season:

# U. S. Terms of Peace

## *President Wilson States War Aims*

Following closely upon the heels of Premier Lloyd George's declaration of the purposes and aims of Great Britain in the present war, President Wilson last week addressed congress in a formal statement of the purposes and aims of the United States. His purpose as in the case of Lloyd George's statement, was to leave no possible doubt as to the objects of the allies in the further prosecution of the war against Germany and Austria. The president's message was a great declaration of the principle of world-wide democracy. In 14 divisions that must be effected before peace can be agreed upon. The following are the conditions in the exact words of the president:

"1—Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind, but diplomacy shall proceed always frankly and in the public view.

"2—Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole and in part by international action for the enforcement of international covenats.

"3—The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

"4—Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

"5—A free, open minded and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

"6—The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests and of their intelligent and unselfish sympathy.

"7—Belgium, the whole world will agree, must be evacuated and restored without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act, the whole structure and validity of international law is forever impaired.

"8—All French territory shall be freed and the invaded portions restored and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly 50 years, should be righted in order that peace may once more be made secure in the interest of all.

"9—A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

"10—The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

"1—Rumania, Serbia and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea, and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

"12—The Turkish portions of the present Ottoman empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations, under international guarantees.

"13—An independent Polish state should be erected, which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

"14—A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

### Bolsheviki Still Talks Peace.

Though for a time it looked as if all negotiations between Germany and Russia were broken off because of the unreasonable terms offered by Germany, negotiations have been taken up again. Germany has withdrawn her terms so far as the other allies are concerned and is negotiating for a separate peace with Russia.

### Plenty of Labor.

United States Secretary of Labor William B. Wilson says that there is plenty of labor in the United States and that the problem is solely one of distribution. He says that the war will not take more than three per cent of the country's labor the first year.

### Woman Suffrage Gains.

The house of representatives of congress has passed the Susan B. Anthony amendment to the Constitution granting to the women of all states of the Union the privilege of voting. The vote was exactly the two-thirds of the members necessary to carry the amendment. The measure will next be voted upon by the senate. If the senate passes it it will then go before the legislatures of the states for ratification. If 36 of them (three-fourths) ratify the amendment, it becomes a part of the Constitution and women will be entitled to vote in all the states. If this amendment passes the senate it will mean two big constitutional amendments before the legislatures of the states, the other being the national prohibition amendment.

### Storm Grips Middle West.

What is claimed to be the worst storm in the last 50 years in the middle west has held that section in its grip for the last week or 10 days. The storm has covered the distance from Hudson bay, in the northeastern part of Canada, to the Gulf of Mexico. Heavy snows have fallen. Temperatures in many places have gone as low as 25 to 35 degrees below zero. Chicago has been buried under two to three feet of snow, badly drifted.

### Submarines Play Havoc.

One of the most disastrous weeks of submarine warfare has been reported, showing the loss of 21 British ships, of which 18 were over 1600 tons carrying capacity. Reports are not made officially of the losses to other countries.

### Military Payroll Large.

It takes $100,000,000 to pay the salaries and wages of the soldiers and sailors of this country monthly. Secretary of War Baker, who has been undergoing a cross-examination before the investigating committee of congress, says that this country now has approximately 1,500,000 men in training or in actual service in the army.

### Mississippi Votes Dry.

The legislature of Mississippi has already ratified the national prohibition amendment to the Constitution. This is the first state to vote on the subject.

# Takes Education to You

## *College Spends $600 Daily in Rural Districts*

By ANNA BUCHANAN

Some idea of the growth of the extension work of the State College of Washington during the last two years was shown by Professor W. S. Thornber, who is at the head of the department, at the housekeepers' week at Pullman, January 7 to 12. Professor Thorber said two years ago there were five workers reporting to the extension office. Today there are 81, and during the summer there were 101, so it is seen that almost half the faculty is out in the country, with the country people. Over 2400 meetings have been held in the state this year, with an attendance of 177,000, whereas two years ago there were held 70 meetings. Two years ago $40 a day was expended in carrying on work in rural communities; now there is an average of $600 a day, and the increase in correspondence has grown accordingly.

One of the new features of extension work is that of the eight emergency home demonstration agents. The state is divided into eight districts, with an agent in each district. They are: Miss Mary E. Sutherland, state leader; Mrs. Grace Coulter Scott of Pullman; Miss Della Delvin, Wenatchee; Miss Elizabeth Jacobson, Mount Vernon; Miss Myrtle Boone, Olympia; Miss Elmina White, Puyallup; Miss Olga Grizzle, Everett, and Miss Inez J. Arnquist, Spokane. These women were all active workers at Pullman during housekeepers' week.

The attendance at housekeepers' week was large, the interest keen, the speakers well chosen and the program especially arranged to fill the wartime needs.

Many, however, from the west side of the state, who intended to be at Pullman for the week, were prevented by the washouts on the railroads. Some were delayed and arrived a day or two late, and telegrams were received in large numbers asking to have places reserved in the classes in which they were especially interested. Others wired to ask if the series of meetings could not be postponed, but, as this could not be done, Professor W. S. Thornber, director of extension service of the state college, promised that, if the demand is great enough, which he thinks more than probable, the same program will be repeated on the west side of the state some time before the end of the year.

Miss Mary E. Sutherland, state leader of emergency home demonstration agents of the Washington State college, who arranged the program and who has the management of the week in charge, is greatly pleased with the results.

One of the noticeable features of the week was the presence of a large number of women, who came not merely for the purpose of getting all they could for their own use, but with the idea of going back to their home towns and telling and teaching others what they had learned.

Professor Thornber, in his talk Tuesday afternoon, said that one of the good things about farmers' and housekeepers' week was the getting together of all the extension workers (the only time during the whole year that they all assembled at the college) when they exchanged ideas and experiences, as well as help those women who attend the meetings and classes.

Some idea of the growth of the extension work of the state college during the last two years was shown by Professor Thornber. Two years ago there were five workers reporting to the extension office.

During the week there were laboratory periods each day, from 8:30 to 10:20, at which were taught the different subjects of interest to women in the home. In one room Mrs. Lottie B. Smith and Miss Della Delvin held a millinery class, where women were invited to bring either new or old material, and they were shown how to make a hat—frame, covering, trimming and all, at a small cost. This class was so popular that evening sessions had to be held, some of the women taking advantage of it to fit themselves out with hats for spring. Others made over their winter hats, of which they had grown tired, and still others made hats for children.

There was the room where Miss Edna Walker taught how to remodel garments to make them look like new. Here also the women brought their own material, old dresses, old suits, goods which they had perhaps had in the house for years and were unable to make use of, and they were shown how to combine the materials and make them into attractive garments.

Miss Elizabeth Jacobson held a class each day in simple house-dress making. This also proved a popular class.

Perhaps, though, the class which drew the greatest number of women was that in which was taught "Food Substitutes in Time of War," under the direction of Miss Myrtle Boone and Miss Inez J. Arnquist. In these classes the general principles of cookery were taught, rather than the giving of recipes, and the idea was brought out of the great necessity of thinking when cooking.

Another department of no small importance was the nursery, in charge of Mrs. H. G. Winans, which enabled the mothers of small children to attend the meetings.

The war bread contest was another interesting feature, entries coming from all parts of the state.

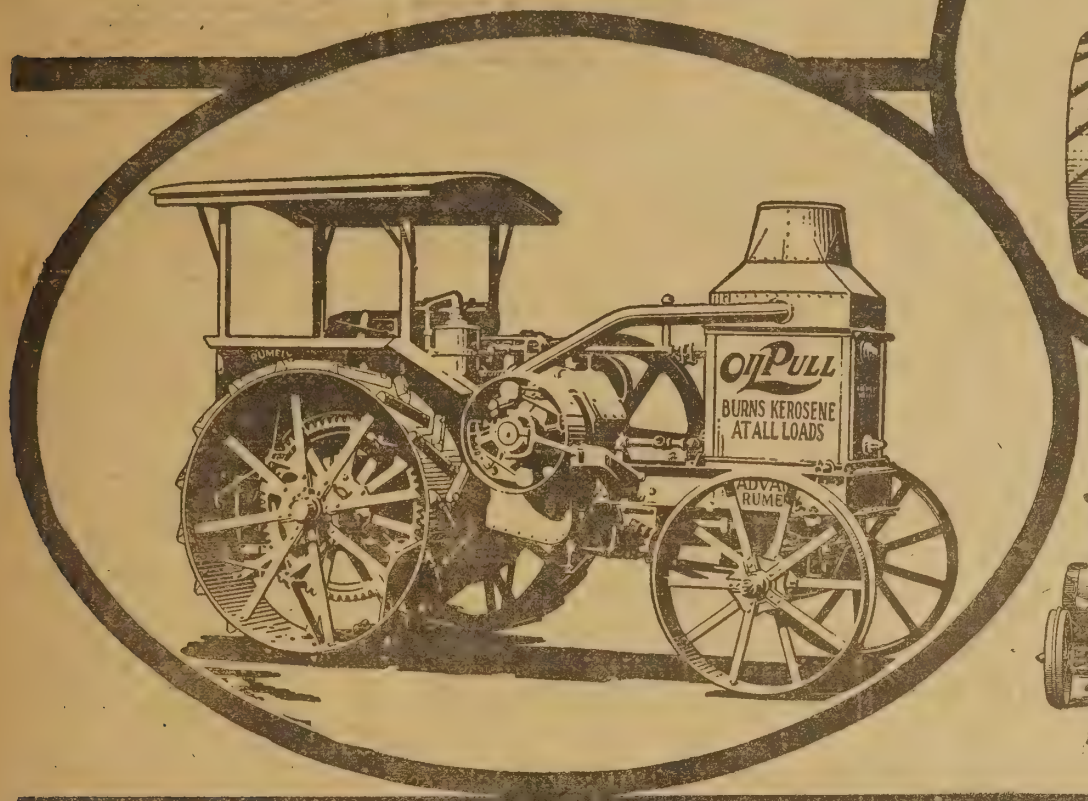
In this contest the home breadmakers of Washington were invited to contribute their skill and experience in devising the best loaf of bread, in point of palatability, wheat saving, and nutrition closed with the final day of housekeeper's week, and resulted in the award of the first prize to Mrs. Grace Guernsey of Pullman, second to Miss Georgia Stamp of Reynolds Hall, Walla Walla; third to Mrs. C. Nommensen of Olympia.

The judges were George A. Olsen, chemist of the state experiment station; H. M. Beck, proprietor of the Model bakery of Pullman; and Miss Leila W. Hunt of the home economics department of the state college.

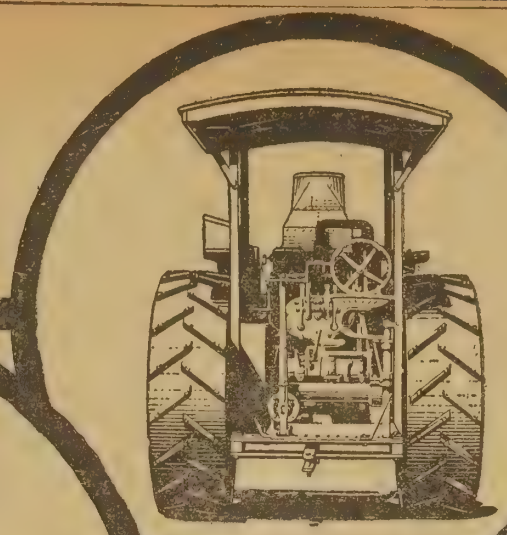
The judges stated that on any other than a war basis of judgment, in which wheat economy was a prime consideration, the third prize loaf, baked by Mrs. C. Nommensen of Olympia would have been first. Mrs. Guernsey's loaf won for the wheat it saved without sacrifice of palatability, digestibility or nutrition.

Important speakers, outside of the college faculty, were: George E. Farrell, assistant national club leader, Washington, D. C.; Miss Anna Barrows, professor of home economics, Columbia university, who is also well known as a Chautauqua and government lecturer and demonstrator. Her talks and demonstrations were mainly on the use of the perishable and neglected foods. Mrs. J. G. Gawler, national chairman of home economics department of the federation of women's clubs of Yakima, told of the big work being done by the women's clubs throughout the country and the advantages such a membership is and how these clubs cultivate the community spirit and makes women realize their individual responsibility. E. T. Coman, president of the Exchange National bank of Spokane, and regent of the State college, spoke on "Household Finances." Mrs. E. W. Thorpe of Pullman told of the work of the Pullman auxiliary of the Red Cross. Miss Helen Louise Burr, dean of women, Whitman college, spoke on "The Economic Function of Women." Mrs. Lou Diven, state traveling librarian, spoke on "Making Use of the Traveling Library." Dr. E. H. Lindley, president of the University of Idaho, gave an address Friday afternoon.

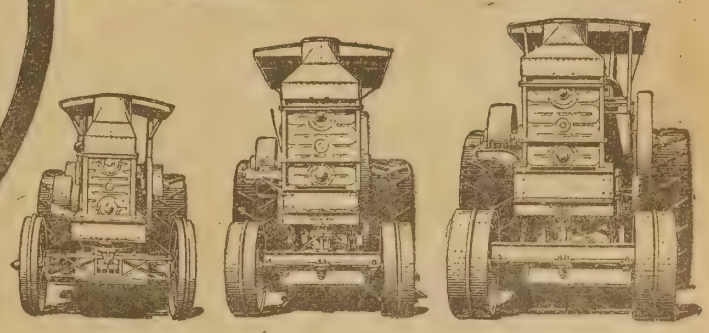
Interesting and helpful talks were given by the following members of the state college faculty: Miss Leila W. Hunt, Miss Saide Swenson, Dr. E. O. Holland, Miss Doris Schumaker, Miss Agnes Craig, Miss Rhoda M. White, Mrs. Elizabeth Deitz Jones, Miss Doris A. Daniels and Professor F. O. Kreager.



A few of those attending from outside of Pullman were: Mrs. Anna Morell, Acme; Miss Jessie Koontz, Spokane; Miss Elsie K. Dickson, Seattle; Mrs. A. B. Nystrom, Chehalis; Mrs. Edmond Reed, Nine Mile Falls; Mrs. Ellen Sebring, Spokane; Miss Alleta Callahan, Mount Vernon; Miss Claire Fiske, Granger; Miss Chloe Buffington, Colfax; Mrs. C. J. Hutchinson, Everett; Mrs. Carol Jensen, Waterville; Mrs. F. S. Shinkle, Colfax; Mrs. George Dills, Colfax; Miss Mary Gilliam, Walla Walla; Mrs. D. F. Harney, Pasco; Miss Bixton of the Queen Anne high school, Seattle.



## Much Orchard Information Coming



While the present issue of the Farmer is devoting much space to matters of orchard interest, especially that growing out of the state horticultural convention at Kennewick recently, there is much valuable matter withheld for lack of space. This will be given in subsequent issues, as will also other horticultural articles. From time to time during the next few weeks vital extracts from addresses and discussions at the fruit growers' conference at Spokane during the recent apple show will be published. One of the ever-present problems of the orchardist, especially the learner, is that of sprays and spraying. This subject will receive comprehensive treatment in early issues of this paper.

RUMELY OILPULL TRACTOR LA PORTE IND.

# "14-28"

14-28 H.P. 18-35 H.P. 30-60 H.P.

*A Size OilPull for Your Size Farm*

# Here it is—the same guaranteed OilPull in a smaller size—14-28

That's the first thing you want to know—that the 14-28 is 100% Rumely OilPull. And that is just what it is—a smaller edition of the famous oil burning, oil cooled, OilPull tractor. The *guaranteed* efficient and economical performance on kerosene and lower grade fuel oils—the *automatic* regulation of speed to every change in load—oil cooling system—strength of construction and long life—ease of handling and simplicity of operation—ability to handle all your drawbar and belt jobs—every good feature that the name OilPull stands for is built into this new, light weight, *big power* 14-28. It answers the plea of farmers in all parts of the United States and Canada—"Give us the same OilPull in a smaller size."

## —as to fuel

Like every OilPull tractor the 14-28 is *guaranteed in writing* to *successfully* operate on kerosene, distillates and other low grade oils *at all loads, under all conditions, at any altitude, in any temperature. It burns the fuel that is cheapest in your locality.* And it gets *all* the power out of every gallon—no waste—full motor efficiency every minute—no matter what kind of work it is doing. And our *written guarantee* makes it certain—with no time limit whatever.

## —as to design

The 14-28 is light weight—only 8700 lbs. *Lighter than six good horses, it has the pulling power of twelve.* The motor is two-cylinder, horizontal, valve-in-head, designed especially for oil fuel and built in our own shops. Frame and wheel construction is the strongest that can be built—transmission is completely enclosed and running in oil—has Hyatt bearings—is oil cooled—special ignition system for burning oil—positive lubrication and all parts easy of access.

## —as to capacity

We guarantee the 14-28 to pull up to and including 5 fourteen inch plows—on the belt it will handle a 24 to 28 inch cylinder separator, fully equipped. It is made equally efficient on draw-bar or belt by a patented shifting device—*the greatest basic improvement made in tractor construction.* Read about it on page 28 of the 14-28 catalog. Then there is the low platform, full control from the driver's seat, air starter and short turning radius—a real *one-man* outfit.

# Keep Calf Comfortable

I have often said that the capacity to produce milk that any cow possesses is one thing that comes with her from birth. I mean by this that the highest point of production is fixed at the time of birth. Yet it is doubtful that any cow ever reached this production when she finally came to be a producer.

We can charge a considerable amount of this inability to get results to our methods of feeding and management of the producing cow, but many of us fail to see that no small amount can and should be charged to our method of handling the animal when she was a calf.

It has been said that every time a child has a disease or is sick in any way and then recovers, that child's life is shortened by a few days, weeks, or even years. So it is with calves. Every time a calf gets "off feed" or is exposed to severe weather and gets sick, it shortens the life of usefulness of the animal and to no small degree decreases her efficiency as a milk producer. The calf must be kept growing all the time. Just the slightest check in growth will result in a decreased production later in life.

Many times have I seen dairymen who take good care of their producing herds leave the calves exposed to cold rains and sleet. Others have compelled the little ones to stay in dark, damp and even wet quarters, little realizing the effect it will have on the full grown animal.

A well lighted, airy, clean and well bedded box stall or shed where the caves can be under cover when it rains and be out in the open air when the weather permits is an absolute essential to successful calf raising. And now when it is so important that we raise high producing cows these points must be considered.

I have always been a firm believer in the advantage of a large cow over a small one; not comparing breed, but within a breed. One thing that will help to get big cows is to keep the calves growing all the time. This can be done only when they are comfortable all the time. A. B. N.

# Understanding the Tractor

## Heavy Transmission for Plowing

There is room for considerable difference of opinion with reference to the tractor. The main difference is frequently as much a personal matter as it is mechanical. One tractor operator will work along nicely week in, week out, with gearing that another would strip in a day.

The tractor that is to be used for plowing needs much heavier transmission gearing than an engine that is to do stationary work only. It is estimated that the relative strain placed upon an engine used for threshing and one used for plowing is about 30 to 70. If this is correct then the plow engine should be equipped with a main gear approximately twice the strength of the main gear of the stationary engine.

No test to which the tractor is subjected is as hard as the plow test. Practically all of the reliable tractors now manufactured are built expressly for plowing, with heavy duty engine and transmission gearing that may be expected to take care of any reasonable conditions.

It is not safe to assume to say, just because there are dozens of good, substantially built, reliable tractors nowadays, that all tractors are good for all farms. It is safe to say, however, that if you wish to adopt machine power farming, you should be able to find a tractor to "fit your farm" from among the various types and sizes of well constructed tractors now on the market.

Questions regarding the tractor will have prompt reply if addressed to the editor of this paper, Review Building, Spokane, Wash.

"How To Feed Silage" FREE

Send for 36-page birds-eye on handling silage—a chapter from "Modern Silage Methods." 1917 edition of this book 25c. 264 pages. Answers all silage or silo questions. Ohio Silo Filler Catalog FREE.

# Cow Makes Money

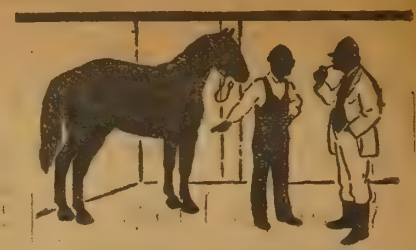
By W. S. Trimble.

S. O. Pool of Wenatchee, Wash., has a purebred Jersey cow that is yielding him a net income of $1 a day. Mr. Pool has kept accurate tab on the cost of the cow's keep and the receipts from the sale of her milk. He finds that since October 1 the cow has given 3800 pounds of milk, which sold for slightly less than 4 cents a pound, making the total receipts about $125. He spent 32 cents a day for mill feed for the animal, amounting in the 90 days to $28.80. In addition to the grain feed the cow consumed about 20 pounds of hay a day, or approximately a ton in the 30 days. Calling it a ton and allowing $30 as its cost, the total bill for the upkeep of the cow was $58.80, for the 90 days, leaving a net profit of $93.20 in three months. During October and November the cow cleared $52 a month for its owner. Mr. Pool considers this convincing proof that high grade stock is profitable. He has three other cows that are doing almost as well, all of them purebred stock. The animals cost more than the common stock, but they yield far better returns in the long run he is convinced.

## Refuse $5000 for Cow.

On December 27, Pickard Brothers refused an option of $5000 for Viva La France and $10,000 for the three cows, Viva La France, Old Man's Darling II., and Lady Silken Glow. The offer was made by O. M. Plummer, who for years was secretary of the Portland Union Stock Yards and general manager of the Pacific International Live Stock show, until this season. Mr. Plummer will make no statement further than to confirm the fact of his asking for the option, but it is generally believed it was for a wealthy breeder in the east.

It will be remembered that Viva La France recently made a new world record of butter production for the Junior 3-year-old Jerseys of 1050.15 pounds butter in a year; Old Man's Darling II., came close to a world's record as a junior 2-year-old, and Lady Silken Glow has an almost equally creditable record. Mr. Plummer admits that the Messrs. Pickard were wise in refusing the offer and that the cows will yield many times that amount through their offspring, in the next few years.



It is another instance of the value of Oregon Jerseys beginning to be realized. And as long as Oregon breeders have the wisdom to refuse such offers for their best animals, we may expect Oregon cows to continue to make world records.

# More Silos in Clallam

Within the last year the number of silos in Clallam county, Wash., have been increased by nearly one-half, according to the report of O. T. McWhorter, county agent. The high prices commanded by eastern Washington hay making it almost mandatory that dairy feeds be produced at home, and the desire on the part of the dairyman to provide suitable feed for winter use, accounts largely for an increased use of the silo in Clallam county. The silo also furnishes crop insurance by providing a means of caring for hay during seasons of heavy rainfull for many of the dairymen.

In one locality of the county a few farmers have discontinued using the silo. At that place the soil is very fertile and produces enormous root crops, 50 tons per acre being a common yield, while a much larger yield has been often reported. There is in this instance some argument for root crops in place of silage.

Farmers in other parts of the county are not so fortunate in producing large yields of roots and are therefore supporters of the silo, because it assists in providing suitable and economical feed.

Spavin Gone For Good

*"Last Winter," writes John W. Neal of Clifton, W. Va., "I used Save-The-Horse on spavin. Have waited some time to see if lameness would come back but the horse is fine and I would not take the price of a full bottle for what I have left."*

SAVE-The-HORSE
(Trade Mark, Registered)

—the greatest of all remedies, is sold with a *signed* Guarantee to return money if it fails on Ringbone, Thoropin, SPAVIN or Shoulder, Knee, Ankle, Hoof or Tendon Disease. Every year for over 22 years, thousands of stubborn and supposedly incurable cases are cured by Save-The-Horse after all other methods failed. Be prepared! Write today for FREE 96-page horse BOOK, sample of guarantee and expert veterinary advice — all FREE. Always keep a bottle on hand for emergency.

TROY CHEMICAL CO.
18 State Street, Binghamton, N. Y.

*Druggists everywhere sell Save-The-Horse with Signed Guarantee or we send it direct by Parcel Post Prepaid.*

Healthy Udder —Good Milker

The milk flow will be easier and more generous if the udder is free from sores, cuts, chaps, bruises, cracks, bunches or inflammation. Bag Balm, the great healing ointment, is used in thousands of the best dairies for all udder troubles, cow pox, and any exterior wound or hurt. Caked Bag is quickly removed by Bag Balm; its great penetrating qualities soothe and soften the tissues and hasten normal healing. Keep Bag Balm on hand always.

Sold in big 50c packages by feed dealers and druggists. Write for free booklet, "Dairy Wrinkles."

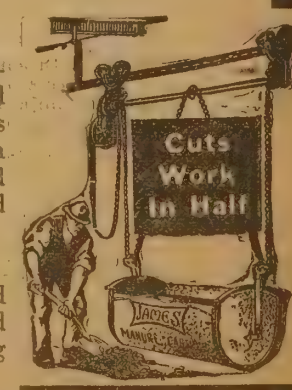
KEEP KOWS KLEEN

Cleaner Stalls
Less Labor
More Milk



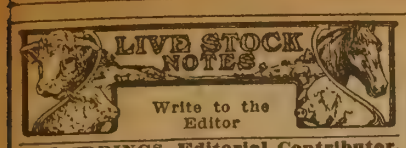
Every progressive dairyman should have his barn fitted with

James Sanitary Barn Equipment

You can keep your stalls and your cows clean with half the labor—save time and feed, have healthier cows, better milk and more milk and greater profits if you have your barn equipped the James way.

Steel Wood-Lined Stanchions

Even if you are not ready to buy COMPLETE sanitary barn equipment don't hold back on the stanchions. James stanchions by themselves in any barn, old or new, can be immediate money makers for you, and this is the practical, sensible first step toward owning complete barn equipment.



James Litter Carriers

can be installed in almost any barn, old or new. They eliminate 75% of the hard labor and time ordinarily used in cleaning stalls.

JAMES BARN BOOK FREE—316 pages. Completely describes all the equipment. Full of illustrations and barn plans. Send for it.

# Barley for Hogs

## Thinks It Best Feed for Northwest

To the Editor: I would like to say a few words in regard to the feeding of hogs, that may be of interest to some of your readers in the northwest. Too much emphasis has been placed on the feeding of corn and selling the wheat, as if these are the only two grains suitable for hog feed. I have read two or three letters in one of our daily papers, to the effect that farmers have gone to town to sell their wheat and buy corn for their hogs, and on finding corn considerably higher than wheat, took the wheat back home and fed it. The government should put a price on corn, oats, barley, potatoes and farm machinery, etc., so that we shouldn't have the anomalous condition of the biggest crops of these things and prices for them away out of reason in relation to the value put on wheat. Corn is the hog feed of the middle west, and barley is the hog feed of the northwest, and where we have the price of pork left to the speculators, the same as the price of coarse grains has been left to them by the government, it is up to us pork producers to use every kind of cheap food available. With that in mind, as I buy tons of feed every month, I study feed prices and their analysis and buy what figures the cheapest.

At present I am making my main feed as follows: I have a large cooker into which I put six sacks of cull spuds and boil until mealy; all 20 pounds tankage, 10 pounds oil meal, about two pounds salt, 60 pounds shorts and 50 pounds ground barley. Mix thoroughly, put down the lid and fed the next day. The pigs all relish this feed and my whole herd is in beautiful condition.

I am starting a bunch to fatten on this and will know more about it as a fattening feed later, but it certainly is a cheap growing and maintenance ration.

Figuring about $12 a ton, the cull spuds cost me $4 a ton, the barley 3 cents a pound, shorts 2 cents, tankage 5½ cents, oil meal 4¾ cents and salt 1½ cents per pound.

Another thing to consider is the use of old heavy boars now. They are consuming feed and will continue to do so until the next breeding season, without any increase in size. By altering now and fattening, they will make 600 to 800 pounds of pork and lard, and bring the owner $75 to over $100, and he can buy a purebred fall weaned boar for $25 that will gain for every pound of feed given him and be ready for service in the spring, thereby increasing the pork production and improving the quality of the herd.

This month I sold a big type Poland China stag that weighed 840 pounds for 14 cents a pound, bringing me $117.60, which is some money when you look back to the time when you could hardly give them away. I don't doubt other farmers have good feed mixtures, and I would certainly like to hear of some, in fact they must have or there would not have been the enormous demand we have had for breeding stock the past year. My entire crop of February, March and April pigs were gobbled up by July so I had no bred gilts for sale this winter, and I am now shipping fall weaned pigs and had to turn down over $1200 in orders this summer that I couldn't supply, so the past year has been a good one for the hog breeder.

GEORGE W. BUCK.

# Veterinary

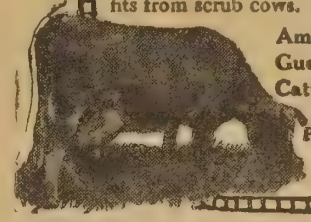
Dr. S. B. Nelson

**May Work the Horse**—I have a 4-year-old gelding whose sheath is swollen the size of my fist. He has been running in the pasture lately and is kept in the barn at night. Would he do to work in this condition? I have been using some liniment, but it does not seem to do any good.

H. I. M., Tuscor, Mont.

While your statement in regard to the swelling is not very definite, if it is just a common swelling of the sheath, I would advise you not to use any liniment on it, but to wash out the sheath by making half a bucketful of bran mash, scalding it and letting it partly cool. Then wash out the sheath with handful after handful of this mash, afterward rinsing the sheath with pure white water. Do not use anything in it at all. I think that work would be good for the horse. If the swelling is of the character of a growth, then it may be that you need the personal service of a veterinarian to see what kind of a tumor it is, and whether or not it should be removed surgically. Until such time you might apply to the growth tincture of iodine once daily, or every two days.

**Butter Tastes Bitter.**—What is the trouble with my cows? We let the cream rise in pans and by the time it is churned the butter tastes bitter and smells old. We have been troubled this way for three or four years, but only in the winter. We are milking young cows with their first calf, fresh in October, and they are all in good condition. I feed oat hay and 12 to 15 pounds of carrots once a day. My barn is not modern, but is warm and has an opening two inches wide at the top of the wall for ventilation. I have concrete floor and I curry my cows, so they are clean, and I am careful not to get any dirt in the milk when milking. I use plenty of bedding and pile the litter well back of the cows, hauling it out about every three or four days. Is there such a thing as their udders getting infected with some disease that would cause this trouble? We scald all vessels the milk is kept in. S. M. P., Rathdrum, Idaho.



The condition you mention is generally caused either by a bacterial cause or by a disturbance caused by the feed. In this case, judging from the history you give, I am of the opinion that it is due to bacterial invasion. For temporary relief heat the milk, which is said to remove the odor from the milk. Then I would advise you to disinfect your stable at regular intervals, say of two weeks, with a 2 per cent creolin or any of the coal tar disinfectants, or a 1 to 1000 solution of bichloride of mercury solution. Do this very thoroughly. Wash the udder of each cow before and after milking with a 1 per cent solution of lysol. It would also be advisable if you do it to divide your herd into groups and keep the milk and cream separate and gradually separate the cows not affected from those affected so that you can give the latter closer attention.

**3½ Lbs. Butter A Day From A Grade Guernsey**

This cow produced in one month 93.9 lbs. butter fat, equivalent to 109.5 lbs. of butter—over 3½ lbs. daily—and 1,566.1 lbs. milk testing 6% fat.

**Use a Guernsey Bull**

Guernsey grades are the cows for profit. They are the most economical producers of butter fat. It has that wonderful natural yellow color. Write for book showing how to make more profits from scrub cows.

"I'll Guarantee This Spreader to Pay for Itself in One Year."

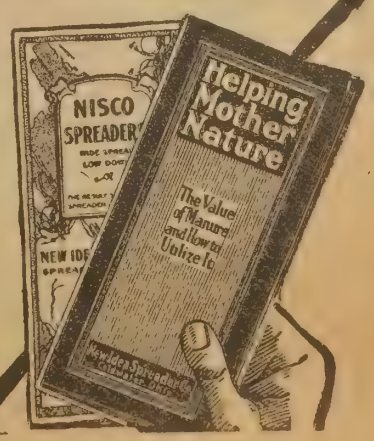
B. C. Oppenheim

I've been in the spreader business so long that I know what I'm talking about. Take my word for it, when I signed that guarantee I knew I was taking no chances.

Here! Take your pencil and let me prove it.

Suppose, for argument's sake, that you keep but six cows, 4 horses and a few hogs or sheep. They will make--according to Cornell Experiment Station reports--approximately 120 tons of manure per year. When these reports were made the chemical value of fresh manure figured out $3.31 per ton, and piled or stored manure at $2.55 or less, depending on the length of time it has lain. Nobody knows what the potash and nitrate are worth now at war time prices. Anyway, fresh manure is worth at least three-fourths of a dollar more than old; and when you add the hard extra labor involved in hauling, piling and hand spreading, it's safe to make the figure *twice* that. Many other Experiment Stations and the U. S. Department of Agriculture support these figures, and some make them even higher.

Now you can see from this why, on any farm of 80 acres or more, I am willing to put my reputation squarely behind the above remarkable guarantee on the



**NISCO**

*The* Original Wide Spreading Spreader

A farm implement which pays for itself in one year is a 100% dividend payer ever afterwards--a fact that thousands of successful farmers have learned concerning the Nisco. Why shouldn't you get this dividend?

The Nisco was the *first* spreader to embody the wide-spread idea and maintains this supremacy to this day. It operates with an everlasting chain sprocket wheel drive that minimizes breakage and saves wear. Has a tight bottom and an endless chain conveyor that brings all the load to the two beaters. Handles a load 30 inches high as readily as any other does an even box full. A convenient lever allows spreading any quantity desired--3, 6, 9, 12 or 15 loads per acre. Back of the money-making Nisco Spreader is my guarantee that means the best in material, construction and operation. You don't gamble when you buy a Nisco because I will even make good any breakage from *any* cause within one year.

I want you to read our immensely interesting booklet "Helping Mother Nature" and will gladly send it on request. Also our handsome catalog. If you want to make or keep your land fertile this will pay you. Send today. Address me at Box 203

See the machine at the Nisco dealer's. If you don't know him, we will send you his name.

# Combat Chicken Lice

To the Editor: I want to know how to combat chicken lice. I have 35 chickens and have done nothing during the summer to kill them, excepting to keep the chicken house fairly clean. I have a rooster apparently sick and in a drooping condition. I looked him over and found a great many lice on him. Do you know of any way I can kill the lice on the rooster without killing him. There are a great many lice in the cracks of the roosts, but I think the coming cold weather will kill them. How should I treat the hens to kill the lice on them. I desire to use some remedy which is being used by some practical poultryman and which is known to give good results. J. D. N.

Hagerman, Idaho.

To kill the body lice use an insect powder. These powders may be purchased at the poultry supply stores, also at drug stores, and other places. The powder should be rubbed well into the root of the feathers, especially around the vent and under the wings. These dust powders are all more or less effective. Probably the most effective dust treatment is the sodium fluorid, described in The Farmer of the issue of September 27.

Another treatment which is effective is to apply blue ointment or mercurial ointment. The method is described in a bulletin of the Connecticut experiment station. "The cheapest method is to buy mercurial ointment and mix it with vaseline at home, using one part of the ointment to one or two of vaseline. Place these ingredients on a pane of glass and work them together with a case knife. Be sure that the mixing is thoroughly done so that a smooth ointment is obtained. Place in a receptacle and be sure to label. An ounce is sufficient to treat about 75 fowls.

The method of application recommended is to take an amount of this ointment about the size of a pea and rub it on the flesh just below the vent. In the case of badly infested fowls it may be better to apply the ointment also under the wings.

A good home-made powder for lice may be made as follows: "Two and a half pounds plaster of paris is spread in a shallow pan or tray, one-fourth pint of crude carbolic acid is poured into a receptacle, and into this is poured three-fourths of a pint of gasoline. The mixture of gasoline and acid is poured over the plaster of paris and thoroughly mixed. It is then rubbed through a wire screen on a piece of paper and allowed to stand for from one and one-half to two hours or until thoroughly dry. It must not be placed near a flame or any heat. The powder should be kept in a closed can or jar where it will retain its strength for a long time. If it should happen that the powder should not be perfectly dry, more plaster of paris should be added. When dusting, the fowl should be held over a tray or a bucket, so as to prevent waste of the powder. It may be necessary to repeat the treatment in 10 days or two weeks

The lice spoken of in the cracks of the roosts is a different insect. It is the mite. The mites do not stay on the fowls, only at night when they suck the blood from the fowls and return to their hiding and breeding places in the cracks. Spray the roosts with coal oil and repeat in 10 days. A paint brush may be used instead of a sprayer. All sides of the roost must be treated. A better treatment is some coal tar preparation, such as zenoleum, creosote. Crude petroleum is very effective. Crude carbolic acid also makes a good paint for mites. J. D.

## Turkeys Have Colds.

To the Editor: A few weeks before Thanksgiving I penned up all my turkeys to fatten them. Since then the ones I kept have been roosting in trees. The last few days some of them have come down with the roup or something similar. Their eyes and heads are swollen and whenever they sneeze or cough, as you might term it, water comes from their mouths. I would be very glad to receive any information or suggestions for the cure of their condition. W. A. Y.

Hubbard, Ore.

The turkeys are probably suffering from simple catarrh or colds. Try rubbing the swollen parts of the face with kerosene and inject a little up the nostrils. Also swab the throat out with a feather dipped in the oil. Another remedy is to take a 2 per cent solution of permanganate of potash and dip the head of the fowl in it, holding it there a few moments, or as long as the fowl can stand it without strangling. Changing the turkeys from the outdoors to the closed pens probably accounted for the colds. P. D.

## Successfully Raises Capons.

Dr. C. H. Bailey of Roseburg, Ore., elected president of the Oregon State Horticultural society at its late meeting at Salem, is not only an orchardist, but for the last five years has been successfully growing capons. Dr. Bailey, who is a breeder of Barred Rocks, has used them for his capons, but this year is trying out some R. I. Reds and Buff Orpingtons to see which will take on the most flesh.

The advantage of a capon is that it not only grows heavier but its flesh is higher flavored than that of a rooster. Capons should be marketed under a year old. Dr. Bailey has them at eight and a half months that weigh six and a half pounds. The profit in growing capons depends in finding a market that appreciates them and Dr. Bailey sends all his to a public market in San Francisco, where they retail at 40 cents a pound. There is practically no loss in caponizing if carefully done. H. A.

### May Make Bigger Loans.

A movement is on foot to allow the federal farm loan bank to make loans of $25,000 to one borrower, instead of the maximum of $10,000 as under the law as it now stands.

# All-Northwest Contest

The second egg laying contest at Pullman has started out well. The report for the first month, November, shows high egg records. The 20 best pens and the number of eggs of each were as follows:

Hollywood farm, Hollywood, Wash., White Leghorns, 126; D. Tancred, Kent, Wash., White Leghorns, 119; N. Otto, Greenacres, Wash., White Leghorns, 117; G. H. Numsen, Centralia, Wash., White Leghorns, 114; F. W. Frederick, Phoenix, B. C., R. I. Whites, 113; Paul B. Towne, Tekoa, Wash., White Leghorns, 111; E. R. Wells, Prosser, Wash., White Leghorns, 110; Ill-a-Hee Co., Grants Pass, Ore., Barred Rocks, 110; Oscar A. Velz, Snohomish, Wash. White Leghorns, 109; C. F. Williams, Salem, Ore., White Leghorns, 109; J. A. Hanson, Corvallis, Ore., White Leghorns, 107, B. O. Longsdorf, Lebanon, Ore., White Minorcas, 104; C. G. Coolidge, La Grande, Ore., White Leghorns, 102; Mrs. Monona Van Cise, St. Maries, Idaho, White Leghorns, 102, Mt. Angel College, St. Benedict, Ore., White Leghorns, 101; K. Hammerbacher, Grants Pass, Ore., White Leghorns, 101; L. E. Harris & Co., Missoula, Mont., White Leghorns, 101; F. C. Park, Hermiston, Ore., White Leghorns, 97; C. K. Olsen, Houlton, Ore., White Leghorns, 97; H. J. Kingsbury, Twin Falls, Idaho, R. I. Whites, 97.

In individual records, first place was won by a hen entered by C. F. Williams of Salem, Ore., with 29 eggs; second by D. Tancred of Kent, Wash.; H. Otto, Greenacres, Wash.; Mrs. Monona Van Cise, St. Maries, Idaho; J. R. McRate, Milwaukee, Ore., and F. W. Frederich, Phoenix, B. C., with 27 eggs each.

## The Storrs Contest.

At the Storrs, Connecticut, contest, a pen of Oregons from the Oregon Agricultural college won first place in the fourth and fifth weeks, their record being 48 eggs for each week. In the full period of five weeks they were second among all entries, a Massachusetts pen being first. J. D.

Make This Your Money Year

POULTRY and eggs are going to be the big money-makers this year. Hoover is beseeching little and big poultry raisers to double—triple—quadruple their products. We should raise twice as much poultry and eggs as we did last year. And prices will remain high—and go higher. The demand will take care of that. Why, New York City alone consumed annually One-Half Billion More Eggs than the greatest egg-producing state in America yielded last year! Get wise. Get hatches started quick! Plan for bigger hatches of better chicks. Get a hatch-increasing wonder—a

1918 X-Ray Incubator

Combines 20 Exclusive X-Ray Features. Completely hatches on only one filling oil during entire hatch. Duplex Central Heating Plant—directly underneath, gives natural, moist mother hen heat. X-Ray Automatic Trip regulates flame—no chilled eggs — no overheated sides. Read all about its 20 remarkable hatch-increasing, labor, time and money-saving features—and, remember, it is shipped prepaid.

# Pecans in Northwest

I have received an inquiry with reference to the growing of pecans in the northwest, and the inquirer asks, "Can they be successfully grown for commercial purposes?"

Personally I have not sufficient information to answer that question. In Texas and other southern states where I have traveled the pecan is a very profitable crop when properly grown and when proper varieties are planted. Even the native pecan, if cared for, will produce a more profitable crop than almost any other crop which they grow in the southern states, but the improved varieties are exceedingly profitable. At the present time I would say that they yield greater profit in proportion to the money and labor expended in their production than do oranges in California or apples in Washington, Oregon and Idaho.

Besides the pecan orchard is a long-lived orchard. I saw pecan trees in the south which were said to be 500 or 600 years old and were bearing good crops of nuts. That means an investment for the future generations as well as the present. Also they require less care for pruning and spraying.

However, as I approached the north in the states of Pennsylvania and New York and inquired of the forestry departments in the universities there I found that New York was supposed to be the northern limit where the pecan could be grown successfully and that there it was not grown for commercial purposes. It grows in the Mississippi valley as far north as Iowa, but I have no knowledge that it is grown either in Iowa or Illinois for commercial purposes.

I have made inquiry of persons I supposed knew something about the matter in the state of Washington. I inquired of the forestry department of the state university and I found that they had pecan trees growing in the nursery, but had none that had been brought into bearing. I found a pint or quart of nuts at the state fair in North Yakima, but they were not very well developed. I am not prepared to say under what conditions they were grown because I have not been able to see the producer. I have planted a few in my own orchard, but they have had only one season's growth. I am of the opinion that the trees will grow successfully, but are not sure that the nuts can be grown successfully for commercial purposes. G. L.

# Orchard Motors

I am in receipt of an inquiry in reference to the utility of orchard motors to take the place of horsepower and of the fully adapted machinery that is sometimes used in the orchard. There is no question as to the necessity of something that can be used instead of horses among the heavily loaded fruit trees, because it is impossible to cultivate, spray and do other orchard work with teams without more or less injury to the tree and loss of fruit. I have not had experience personally in the use of motors, therefore, can not say with certainty.

I am acquainted with one man who had a 35-horsepower gasoline engine which he had used with a hay baler but who fixed is so he could attach plows to it and now he plows 12 acres per day of alfalfa land, 16 acres per day of sagebrush or fallow land. For plowing the alfalfa land he charges $4 per acre, making an income of $48. The cost per day is $4 for gasoline, $4 for help and $2 for the wear and tear of his machine, making $10 per day, entire costs, leaving $38 per day net profit. He charges a little less per acre for plowing sagebrush, but plows enough more acres so that he makes about the same net profit.

I am satisfied that we are on the eve of changes that will be greater to the advantage of the orchard industry in adapting mechanical power to orchard work rather than horsepower. Thousands of people are now using machinery of different kinds, such as bicycles, motorcycles and automobiles for travel. In this way they have greatly increased their capacity for traveling long distances in a given time. It is probably costing them for automobile travel more on the average than horses would cost. Nevertheless, where time is an important factor it is claimed that they can be used at a profit as compared with horses. I am persuaded that we are approaching a period when the same will be true of mechanical power in orchards. It will be more difficult to adapt it to orchard work than it will be to open field work, but it is being done and will continue to be done in a greater degree and each succeeding year will improve the machinery for that purpose. Here is an open field for the inventor and whoever can take an ordinary traction gasoline engine and adapt it to orchard work will be doing a good thing for that business. G. L.

## Trees

We offer a few choice prune, pear and cherry trees, select Vrooman Franquette walnut trees, and other first-class nursery stock at special low prices. Order today.

BENEDICT NURSERY CO.
185 E. 87th St., N., Portland, Ore.

## Profits in Dried Prunes.

The territory about Riddle, Myrtle Creek and Canyonville, Ore., for the year 1917, produced two and a quarter to two and a half million pounds of dried prunes. They returned in cash to the growers $125,000 to $150,000, after packing and freight charges were paid. Labor of picking and drying is generally estimated to cost one-third of the selling price. As there are but 50 to 70 prune growers, large and small, new orchards and old, it is readily seen that the growers are making a nice profit. These towns also have heavy shipments of eggs, poultry and other farm produce.

### Will Register All Germans.

During the week of February 4-9 the federal department of justice will conduct a registration throughout the entire nation of all unnaturalized Germans. This registration will probably include women.

## THE PRICE FRUIT SORTING AND SIZING MACHINES

### Operated on the Tossing Principle

which has proved to be the only method of accurately sizing fruit, so the packers do not have to do the sizing. Our machines are used for sorting and sizing apples, peaches and pears. Unlike other sizers, the fruit weighs itself and makes its own proper distribution without the use of belt carriers. Fruit can not be sized accurately by measurement, owing to its irregular shape it must be weighed. Our machines have passed the experimental stage. They were given highest award at the Panama exposition and they are used by representative fruit growers throughout the northwest. If you would save yourself time, expense and trouble give our machines an investigation. If you will fill in the enclosed coupon and send it to us today, we will send you illustrated descriptive matter and the names of fruit growers who have proved to their own satisfaction the merits of the Price Sorter and Sizer.

C. Ackerman, Spokane: MORE wheat, oats, potatoes, peas, beans, vegetables, hay, dairy cattle, swine, carrots; LESS poultry.

Walter Gietzen, Dayton: MORE wheat, potatoes, beef cattle, swine.

Lon Mobray, Montesano: MORE oats, rye, peas, hay, swine, carrots, mangels, rutabagas; LESS wheat, potatoes, dairy cattle.

H. E. Robinson, White Bluff: MORE corn, fruits, hay, horses, sheep; LESS potatoes, beans, beef and dairy cattle.

## FUTURE IS BRIGHT.

### Orchardists Express Optimism.

Rosy prospects for the fruitgrower were painted by various persons engaged in th industry during informal lobby discussions at Kennewick, when members of the Washington Horticultural association met in annual convention, January 7 to 12.

Consensus of opinion among growers is that more general and more thorough distribution is one of the chief factors contributing to the improved outlook. Such a condition as this was predicted years ago by Dan Lesh, well known farmer and business man of the Yakima valley.

"Of course," Mr. Lesh remarked at that time, "there is always danger of overproduction in almost any line. But when better distribution is made possible the apple will take its place among staple food products and will be found in the homes of people in all parts of the world, because it will have a food value which few other products of its nature do, when prices are taken into consideration."

We seem to be approaching such a condition. Apples are to be found in the homes of thousands who, in years gone by, considered it more of a fancy food than a staple.

"To me the fruit outlook looks mighty promising," said J. F. Sugrue, retiring president of the state association and manager of the Skookum Packing association of Cashmere. "Better distributing agencies have been established, transportation is being made easier and storage facilities have been provided in such number and of such a character that growers are more able to get their product on the market at times most advantageous to them.

"In the case of the growers represented by the Skookum Packing association they have found ready market for their apples by means of a well organized and systematic publicity campaign. During the year just closed we spent approximately $45,000 for advertising space in papers and magazines with national circulations, and we are planning a similar if not more extensive campaign this year. The results we secured were most gratifying. We established an advertising agency in New York, and the consequent demand for the 'Skookum' apple was remarkable.

"There is no reason why the apple should not be given the same amount of publicity as is given the orange or the raisin, or any other food product of this nature.

"Educational campaigns of this nature will open the way for an increased output hardly dreamed of before."

### Government to Buy Flour.

The federal food administration has announced that it will buy from every flour mill in the country not to exceed 30 per cent of such mill's output. This flour is for the use of the American and allied armies, but a reserve will be held, so that any emergency need in the United States might be met at once.

### Loomis Stockmen Elect.

The Loomis Stock association at its annual meeting elected the following officers:

R. G. Bernard, president.
Will J. Ford, secretary-treasurer.
C. W. Adair, vice president.

### One Killed Each Day.

The industrial insurance commission of Washington reports that there is an average of one person killed or fatally injured daily in the hazardous industries of the state.

### Will Mill Corn.

A corn-products mill will be built in the immediate future at Spokane, Wash., according to announcement made by incorporators of a $100,000 plant.

# Your Help Will Mean Much to the Man "Over There"

Do you know that every dollar you put into War Savings Stamps is a help to our men "over there"?

They look to us to help, not only with money but with **united support.** Of far more importance than the sum to be raised by the War Savings Plan is the stimulus to cooperation among our people. That our men at the front may know that we are **all** behind them in the fight for free government.

**We have pledged the honor of our country and our people to fight this war to our last dollar and our last man if necessary. America does not break her word.**

It is the privilege and duty of every American to do his part to redeem that pledge, whether he has sprung from the free soil of America or has been transplanted from other soil to flourish here. Every man, woman and child in America should realize that every cent they put into War Savings Stamps is actually doing a personal part to shorten the war and to **save the lives of our soldiers and sailors.**

Remember that each War Savings Stamp you buy is the promise of the strongest treasury on earth to pay you $5 five years hence (January 1st, 1923). You can buy that this month for $4.12 or in February for $4.13, and your money will begin at once to earn 4 per cent, and the interest is reckoned every three months. Each month for five years your money grows and you can always get it back in full if you need it.

See that each of your children has a Thrift Card. It has 16 spaces for 25c Thrift Stamps and, when filled, is worth $4 in exchange for a War Savings Stamp.

War Savings Stamps are simply little government bonds, safe to keep because the Certificate is not transferable, a badge of patriotism as well as a gilt-edge investment.

# Build Grain Bins for the Future

## *Saving One Dollar to Spend Two Later Is Poor Policy*

The Farmer is glad to publish the address of Prof. Snyder on the building of bulk grain storage facilities, delivered at the grain convention at Pullman, Wash., Jan. 4. It is given in full herewith.

**By M. K. SNYDER.**

The bulk grain storage plan is a new one in this country so far as its practice is concerned, and we are apt to think that all those things that replace the hands in the handling of grain are a dead loss or waste, forgetting that you have lost the money paid for your sacks twice over; that you had their weight docked from your wheat weights, sent your sacks to the mill where the grain was emptied out of them and cleaned and the miller kept the sacks and the cleanings.

Suppose that you were raising 160 acres of grain with an average yield of 25 bushels per acre—4000 bushels—requiring 2000 sacks at 10 cents, with dockage of one pound on a sack that weighs seven-tenths of a pound, and how much did you get back?

Leaving the wages paid to the sack sewer and the usual warehouse charge to cover the cost of hauling from the machine to your own storage bins, we still have something like $200 per year to pay interest on the money invested in the bin and to ultimately pay for the bin.

**Cost of a Bin.**

One square crib bin made from 16-foot material and 25 feet high, or two adjacent crib bins built of 14-foot material 16 feet high, will hold slightly over 4000 bushels. The two cribs could be built as a rectangle 14x28 feet, outside measurement, with a single partition wall, forming two cribs with interior dimensions very closely 13x13x16 feet each. Building these under the same requirements as for elevators at shipping points, setting them up on posts so that loading for market would consist of opening a gate at the bottom and letting the grain run until the wagon box was full, providing a wagon dump of concrete of sufficient capacity to hold 100 bushels, constructing a bucket elevator, taking the grain from the bottom of the wagon dump and discharging it into bins at the top, I find that material at the prices prevailing at Pullman can be delivered for about $900. Four men working eight hours a day ought to build the structure easily in 10 days, and, allowing them $6 per day (skilled carpenters' wages), the total cost is about $1200. At $200 per year saved in sacks, the whole is paid for, including interest at 8 per cent, in 10 years, and there is a margin of $10 per year for repairs. There is a very slight margin in favor of the single bin 16 feet square and 25 feet high. The life of such a bin should be 15 to 20 years.

A single circular steel bin 17 feet in diameter and 25 feet high would have the same capacity. This would require, so far as lateral strength is concerned, only No. 19 gage United States standard steel plates. But, since the vertical lead, due to the friction of the grain against the side of the bin, amounts to about 2600 pounds to the square foot of circumference, it is evident that a bin built of this material would crumple up like paper unless stiffened vertically with angle irons or Z bars at frequent intervals. Also, when empty, such a bin would collapse even under a moderate wind, so that it would require stiffeners at frequent intervals horizontally. The floor system and underpinning would be identical with that of a wooden bin. The steel tank would require expert labor in its construction, while the wooden bin could be built by ordinary unskilled labor assisted by possibly one skilled carpenter.

For the man with a small quantity of grain, 40 to 100 acres, the problem is more difficult. The cost of elevator system and some other items change very little in passing from a 1000-bushel to a 10,000-bushel storage, so that the relative cost of the storehouse for the small amount of grain is much greater than for the larger. In the problem given the cost of the warehouse is between 30 and 40 cents per bushel capacity. For the smaller quantity of grain stored with the same conveniences for handling, the cost would be between 40 and 50 cents per bushel capacity.

**Deep Bins Are Cheaper.**

Since the cost of roof, elevator system and floor system will be very small, it is plain that it is more economical to construct deep bins than shallow ones.

Coming back to the small grain raiser, I have seen several bins built on side hills with the upper side deep in excavation in the side hill and an embankment thrown up so that it was possible to dump directly from a wagon into the top of a bin from 10 to 12 feet deep, thus the filling of the bin was done rapidly and easily, and at the time of filling speed is usually essential. In removing the grain from the bin, the grain was taken from an opening near the bottom of the bin and elevated into the wagon box by hand with baskets or boxes. I am not so sure but that a piece of leather or canvas belting with sheet iron buckets riveted to it would form an improvised elevator that would have given better service than the baskets.

To avoid raising the grain bin up on high posts, as suggested, it would be comparatively easy to arrange the outlet so that it would discharge into the wagon dump and then use the same elevator or a portion of it, if of link construction, as a loading elevator. There would be a slight saving in cost in favor of the loading elevator, say about $75.

**Possibility of Concrete.**

Probably the best material for the construction of storage bins is concrete. It is fireproof, is not subject to rust or rot, is sightly and of extremely long life. The cost will be slightly in excess of wood. At the present time it seems that steel is almost out of the question. A rough calculation tends to show that a concrete bin of the capacity given above will cost about 10 to 12 per cent more than the wooden bin. If only one were built in a neighborhood the difference in cost would be slightly more than this, as the forms for a concrete bin cost about $100. The concrete bin, if set on the ground, would not be very different from a concrete silo, except that a little more care should be taken to make it damp proof.

If you are looking for something cheap (and cheap things usually are cheap indeed), a wood stave grain bin may fill the bill. I have not been able to secure figures on these bins, but so far as strength is concerned, the usual 1 5-8 to 1 7-8 staves with 3-8 rods 7 inches or 1-2-inch rods spaced 12 inches will give sufficient strength even at the bottom, where the stresses are highest. If the rods are fitted with shoes as in the making of stave pipe and are kept tight, the staves painted thoroughly on the edges before being assembled and the structure painted and kept painted, it ought to have a life as great or greater than the stave silo. But you know what happens to the stave silo with the summer shrinking.

I believe that the thing to do is to keep in mind that the cost of sacks has not been less than 5 cents per bushel per year, or, counting the dockage in weight, about 7 cents per bushel per year. Then, with your eyes wide open, don't be afraid to put 30 to 50 cents per bushel of storage capacity into a structure that is good, not for one year, but for you and your children and your grandchildren. Remember that 5 cents per bushel per year pays 30 cents a bushel in 10 years, including 8 per cent interest, and 7 cents per bushel will do the same thing for over 40 cents per bushel of storage capacity. Dollars are dollars all right, but to hang onto one dollar now to spend $10 under compulsion is not good sense.

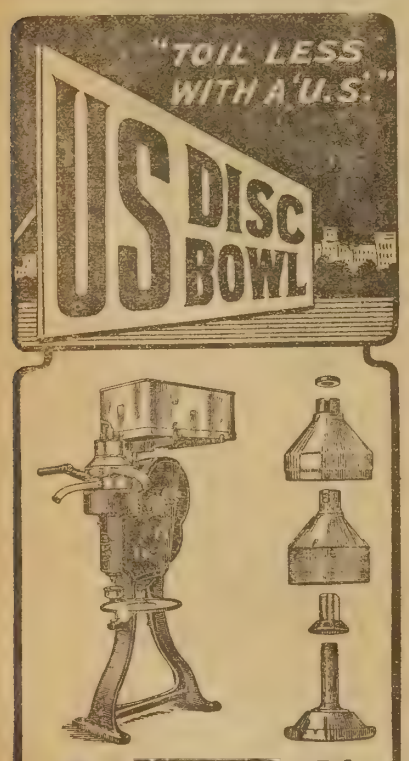
## Office of Farm Markets.

Producers, dealers and consumers—and that includes nearly everybody—are interested in the question of marketing. Every one is concerned with the price of foodstuffs, and so, indirectly, in methods of marketing. Marketing has become a public function rather than a private one. Realizing this, the last legislature created the office of farm markets with power to investigate and promote economical and efficient distribution of farm products. The office is cooperating with the state college, the state department of agriculture, and the United States bureau of markets, thereby unifying all state and national marketing efforts for the state of Washington.

One of the projects of the office is to furnish the people with information on marketing matters. "Where can I find a market for peas? Where can I buy alfalfa in carload lots? How shall I pack my products in order to get the highest price?" These are some of the questions asked of the office. Whenever the information is not at hand, by writing to the United States bureau of markets, other state marketing agencies, or people in the trade, the office will attempt to get first hand information or put the person making the inquiry in touch with the proper party.

Fuller information may be had concerning the above work by writing to the office of farm markets, Pullman, Washington.

**Many Marry at Vancouver.**



The little town of Vancouver, Wash., just across the Columbia river from Portland, is in the limelight as a marrying center. Couples by the score cross the river to secure their licenses. Last year 2116 couples secured licenses in the little town.

**Cut Off His Own Fingers.**

In order to escape military duty, a logger in a western Washington camp placed his fingers before a buzzsaw and cut three of them off, according to reports from the camp. The injured man has since been sent to an insane asylum.

**Large Number of Automobiles.**

During the year just closed the secretary of state of Washington issued more than 100,000 motor vehicle licenses, including autos and trucks and motorcycles.

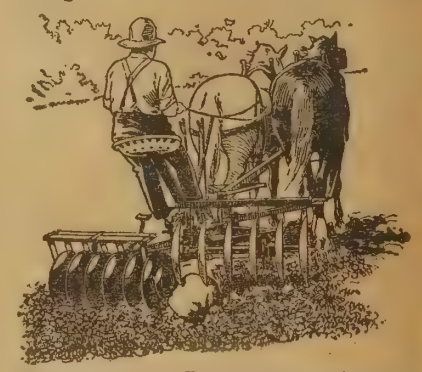
MOLINE Tillage Tools

No matter what your tillage requirements may be there is a Moline Harrow just suited for your work. For orchard or field, with horses or with tractors, Moline Harrows do thorough work, give long, lasting service, are easily operated and light in draft.



Moline Spring Tooth Harrow

Built for hard usage. Two-inch channel bars, heavy tubular steel tooth bars and teeth of finest spring steel, hardened in oil, give exceptionally strong construction. Furnished either with runners or wheels in 1, 2 or 3 sections.

Moline Reversible Low Down Disc Harrow

Just the harrow for orchard work. Wide or narrow frame extensions can be provided for harrowing under overhanging branches. Disc gangs can be easily reversed or tilted. Can be equipped with guards to prevent injury to overhanging branches. Well constructed with dust proof bearings.

Moline Three-Lever Disc Harrow

An extremely flexible, deep penetrating, light draft disc harrow. Frames so constructed that the gangs do not bump or ride. Pressure of the disc gangs is regulated by a lever. Difference in pressure between gangs is perfectly equalized. A tandem attachment can be furnished to make a double cut harrow. A great variety of sizes with round or cut-out discs can be provided.

Moline Engine Disc Harrow

A heavy, powerful disc harrow built especially for use with heavy tractors. Pull is direct from three large, dust proof bearings on each gang—the only correct method. Heavy springs take up end thrust of the gangs. Extreme flexibility between disc gangs.

You cannot go wrong in selecting from the Moline Line of tillage tools; they are correctly designed and built in the best possible manner.

*See your nearest Moline dealer, or write us for illustrated folders. Address Dept. 60*

# FLORA FLIRT MEETS AN ATHLETE

Flora Flirt on a sunny day
To the country took her way.

Down a pretty lane she turned,
When her eyes a man discerned.

Athletic he, and tall and brave
Flora's eyes will not behave.

He smiles and says, "How do you do?"
Flo's heart flutters, she smiles, too.

Just then they heard an awful row.
Down the lane there rushed a cow.

O'er the fence, see the coward fly.
Flora faints as the cow runs by.
*The Moral:* Now, dear girls, to flirt with sense
Get on the right side of the fence.

# Washington Leads in Apples

## *Produced 54 Per Cent of Boxed Crop in 1917*

Summarizing the apple crop for the state of Washington Leon M. Estabrook, chief of the bureau of crop estimates of the United States department of agriculture, says: "Washington has harvested its apple crop and in the 1917 production is the leading apple state in the United States by a wide margin. This year Washington produced 19 per cent of the commercial crop of the United States and 54 per cent of the boxed apple crop." Washington apples, however, were reported under normal size and worm injury is reported worse than usual, which is another point that, with all its advantages as an apple growing state, Washington growers can not afford to show any lapses in the matter of thorough infection of his fruit from insect or fungus diseases.

According to the revised apple estimates of the United States department of agriculture for the season of 1917 the apple crop of the country reached a total of 174,608,000 bushels, as against a total production in 1916 of 204,582,000 bushels.

The commercial crop of apples in the United States, or apples sold for consumption as fresh fruit, reached a total of 20,595,000 barrels in 1917, as against 25,069,000 barrels in 1916. A barrel of apples contains three bushels.

The apple crop of the state of Washington in 1917 reached a total of 17,897,000 bushels, as against 14,858,000 bushels in 1916.

Thus it will be seen that while the apple crop of the United States fell 30,000,000 bushels, as compared with the crop of 1916, the apple crop of Washington shows an increase of over 3,000,000 bushels, as compared with the crop of 1916.

Another interesting fact is that 70 per cent of the apple crop of Washington is boxed, or commercial apples, only two other states surpassing Washington in the percentage of boxed apple production, Utah with 80 per cent and Idaho with 85 per cent. It is to be remembered, however, that the combined boxed production of Utah and Idaho only reached 741,000 barrels, as compared with a total of 4,176,000 barrels produced by Washington.

The total apple production of Washington was also larger than that of any other state in 1917, nearly 4,000,000 bushels larger than New York, over 5,500,000 bushels more than Missouri and nearly 6,000,000 bushels more than Pennsylvania, the three largest producing states in 1917. In 1917 Virginia produced 10,000,000 bushels of apples; Kentucky, a little over 9,000,000; Illinois, 7,500,000; Ohio, 6,636,000; North Carolina, 6,156,000, and West Virginia nearly 5,994,000 bushels and other states in lesser amounts.

The only states not producing apples in sufficient quantities to be reported in the government summary are Florida, Louisiana and Wyoming.

As has already been stated, Washington produced in 1917 by far the largest amount of commercial apples of any state in the Union, 4,176,000 barrels or 12,528,000 boxes. Of the other big apple producing states 50 per cent of New York's crop, or 2,380,000 barrels, is included in its commercial outlook. Only 28 per cent, or 1,555,000 barrels, of Missouri's crop was sold as commercial fruit and only 22 per cent, or 911,000 barrels, of Pennsylvania's apples were sold as commercial fruit.

Oregon's apple crop in 1917 reached a total of 3,500,000 bushels, of which 76 per cent, or 650,000 barrels, were commercial fruit. Idaho's apple crop for 1917 was 1,995,000 bushels, of which 85 per cent, or 567,000 barrels, was commercial fruit. Montana's apple crop for 1917 was 911,000 barrels, of which 24 per cent, or 74,000 barrels, was classed as commercial fruit.

Another interesting feature of the report is the percentage of late varieties raised in the different states. Of the Washington apple crop 85 per cent is of the late varieties; 74 per cent of New York's crop, 72 per cent of Missouri's crop, 70 per cent of Pennsylvania's crop, 58 per cent of West Virginia's crop and 48 per cent of North Carolina's crop.

In 1917 Washington's crop sold for an average of $1.25, Oregon's crop for $1.05, Idaho's crop for 95 cents, Montana's crop for $1, New York's crop for $1.32, Pennsylvania's crop for $1.26, West Virginia's crop for $1.22, Ohio's crop for $1.50 and Missouri's crop for $1.06.

## Caught on the Run in Yakima Valley

W. P. Sawyer is more than a Yakima county legislator. He is also an authority on pear growing and marketing. The Sawyer pears are as well known on the New York auction markets as they are in their home valley and this year, as for several years previously, topped the market on different occasions. Mr. Sawyer explains his success by saying that he never packs his fruit till it has cooled off after being picked and that he is careful not to ship fruit which is so ripe it will not hold up.

Edwin Ballard of the Fruitvale section of the Yakima valley holds the valley record for the lowest cost in handling peaches. He harvested his 9722 boxes at a cost of $1697.25 for taking the peaches from tree to box, or 17.3 cents per box. This price includes the picking, hauling, shed work, boxes, paper, nailing and packing.

W. L. Wright, who is the owner of one of the older orchards of the Yakima district, has long been inclined to cut out the few odd trees which surround the house on his home orchard. They are soft fruit trees, peaches, plums and prunes. After his experience this season he is inclined to forego his talk of grubbing them out, as from the six trees in question he sold, direct and with no cost of handling, $205 worth of fruit.

G. W. Vaughn is the owner of five acres of fruit land near Yakima, the land serving as his home site as well as orchard property. This year he cleared, net, $3000 from it, due, he says, to the fact that he made an effort to produce quality fruit, free from pests and of good color and size.

Henry Lombard is one of the many Yakima commuters. He lives on a four-acre tract which adjoins a street-car leading from Nob hill into the city, to which he comes every day to attend to his business interests. From the plat he this year picked 6500 boxes of Elberta peaches, an average of 1625 boxes to the acre.

Joseph Feser, one of the old-timers in the Yakima valley, has 20 acres of prime apple trees from which he this year harvested 15,000 boxes of fancy apples. He sold the crop at a price of approximately $25,000. From the two remaining acres of his place he took 1500 boxes of fancy Elberta peaches.

M. A. Chandler, one of the retired business men of Yakima, who is now a "little lander," has two acres of Winter Nellis pears on his home grounds. From these trees he picked 1100 boxes, all of which sold at good prices.

## Thrifty Hamsters

The hamster belongs to the rat family and is a native of temperate Europe and Asia. It has a body a little larger than that of the ordinary rat short legs and a tail one and a half inches long covered with hair. The head is thick, the ears oval and round and the mouth is supplied with internal cheek-pouches in which grain and seeds are carried to its underground abode. The fore feet are four toed and the hind feet are five toed, all furnished with strong claws fitted for digging. The fur, which is fine and long, is usually reddish-gray above and black below. It is sometimes entirely black. The feet are generally white. The hamster digs burrows three to six feet deep with a large living chamber at the end and with one or more store rooms to hold grain for winter use. The entrance tunnel is always perpendicular and so straight sometimes that one can thrust a cane into it, but it turns below before leading to the sleeping chamber. The latter, which is built with soft grass, is connected with the storeroom

The Hamster.

by a sloping tunnel. Old hampsters sometimes construct four or five storerooms, each one capable of holding a peck of grain. In the summer the hamster's food consists largely of small birds, mice, lizards, worms, snakes and insects, but in winter, when it is partly dormant, it lives chiefly on vegetable food. As soon as the crops are ripe it begins to gather and lay up its winter supplies, working usually in the first half of the night and in the early morning before sunrise. It gathers peas, beans and various grains. It does much harm to grain fields and causes the farmer to wage relentless war against it. In some parts of Europe hamsters are hunted for the grain they lay up which is washed, dried and ground like other grain. The skins, too, are valuable for fur and in some countries the flesh is eaten.

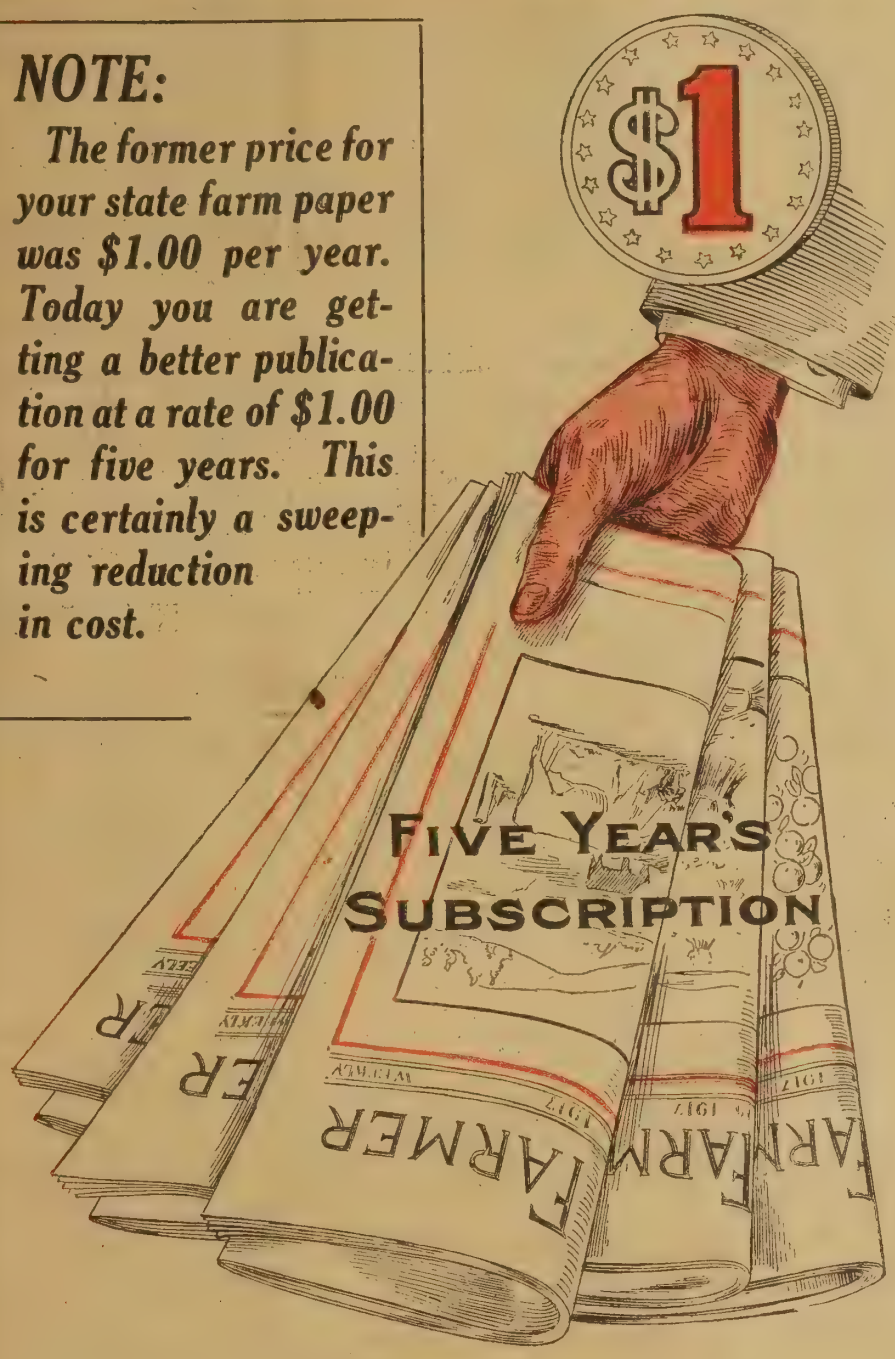
# In These Days of High Prices

## a BARGAIN Is Doubly Welcome

***With prices for almost everything mounting steadily, the advantages to be gained through the elimination of the middleman are more apparent than ever.***

The plan of this paper to cut out its force of agents so far as possible came at just the right time. It offered a means for putting the principle of cooperation into actual practice.



We said to our friends: "Send your subscription order direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription. Moreover, many men will be released to serve in lines where help is badly needed."

Thousands of readers have taken advantage of our offer and have passed the news of the saving along to neighboring households.

If you believe in cooperation—if you believe in eliminating the middleman—help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

***NOTE:***

***The former price for your state farm paper was $1.00 per year. Today you are getting a better publication at a rate of $1.00 for five years. This is certainly a sweeping reduction in cost.***

## *A Paper for the Entire Family Circle*

**Your state farm paper aims to have every issue of interest to each and every member of the family. There are departments devoted to live stock, dairy, poultry and orchard. Perplexing questions are answered. A splendid pattern service is maintained. Clean, fascinating fiction by popular authors is secured. Articles of timely interest are prepared. Today you are getting a better paper than ever before for less money than ever before.**

**25c PAYS FOR THE WASHINGTON FARMER FOR ONE YEAR**

**50c PAYS FOR THE WASHINGTON FARMER FOR THREE YEARS**

**$1 PAYS FOR THE WASHINGTON FARMER FOR FIVE YEARS**

One of the means adopted to improve the paper is finer facilities for printing it. This paper is now printed on a high-speed magazine press with every modern facility and appliance. This press has an hourly capacity for printing, folding and stapling 30,000 twenty-four page papers. Think how this cuts down the time between the occurence of something important and the hour you hear about it in your state farm paper!

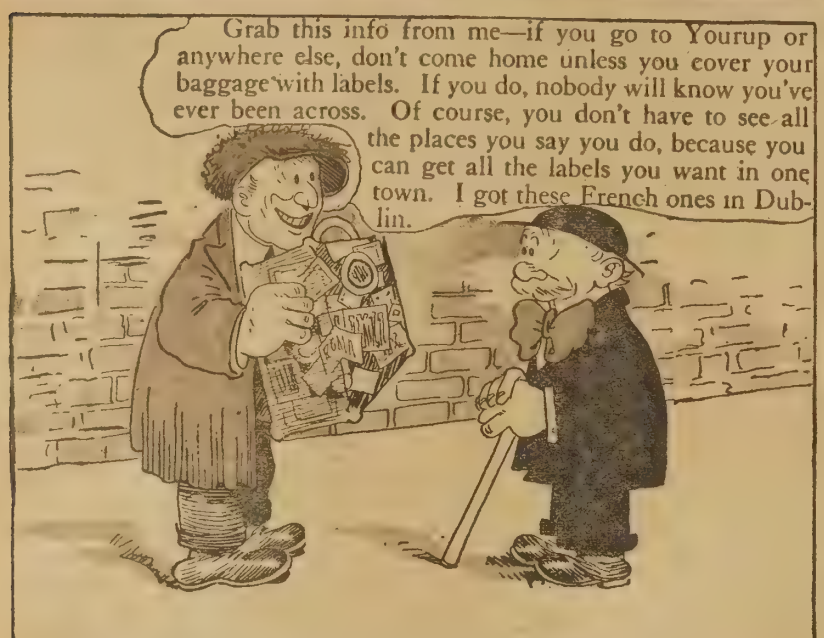
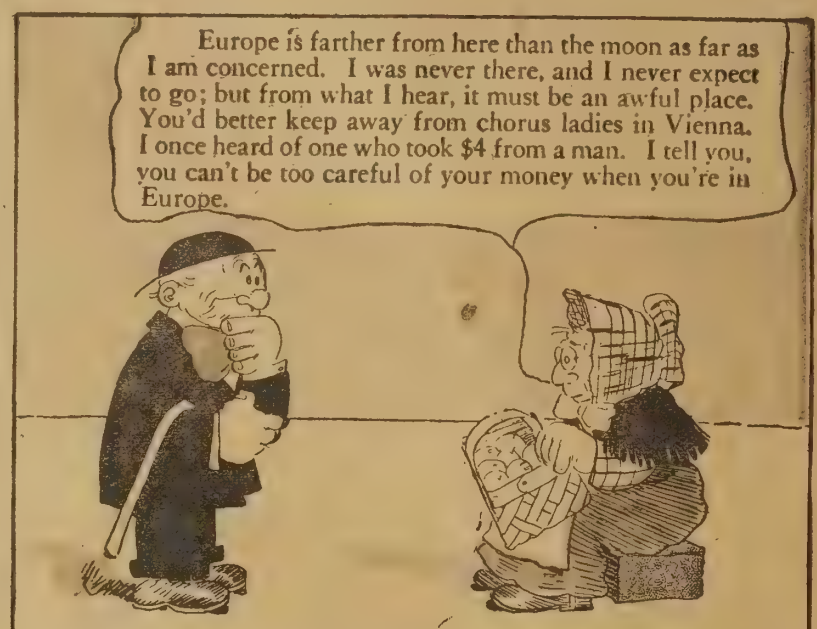
# JERRY MACJUNK STARTS FOR EUROPE AND GETS ADVICE

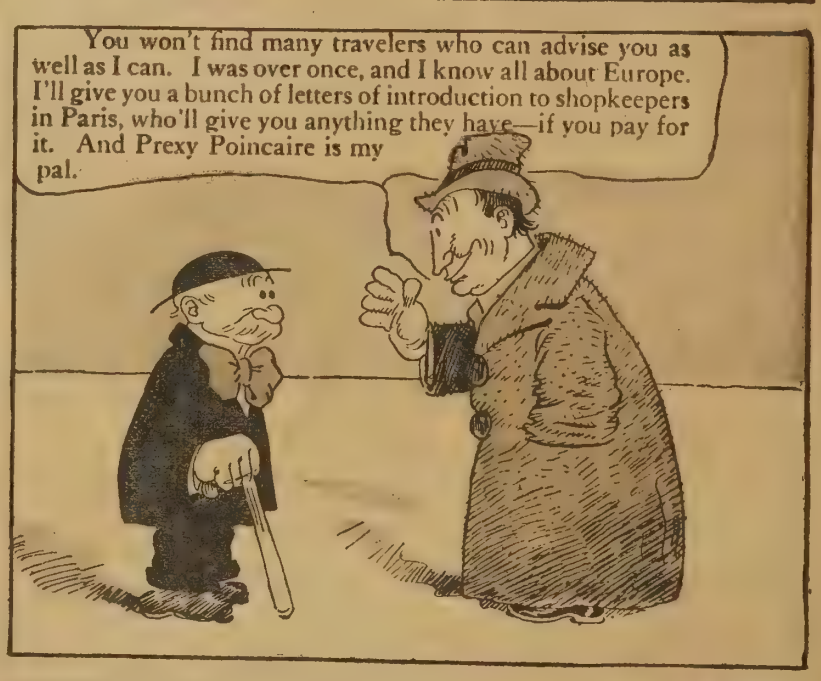


Gosh—I've read so much dope about Europe that I know more about it than the guy who invented the place. Now I'll scoot over to the gentlemanly agent's joint and drop a bunch of dough for transportation and such, for is not tomorrow the day for the big getaway?

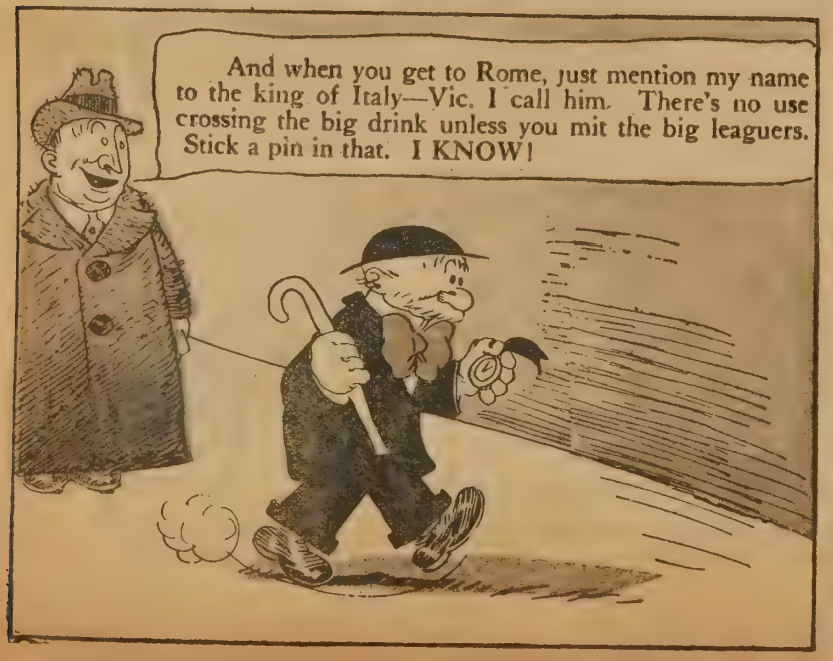


The night bartender around at Cholly's tells me you're leaving our fair country for foreign shores. Well, let me slip it to you straight—I've been over a few times myself and I never got the old mal de mer. Why? Simply because I drank 30 cocktails before every meal and took a quart or two of Burgundy with my meals.

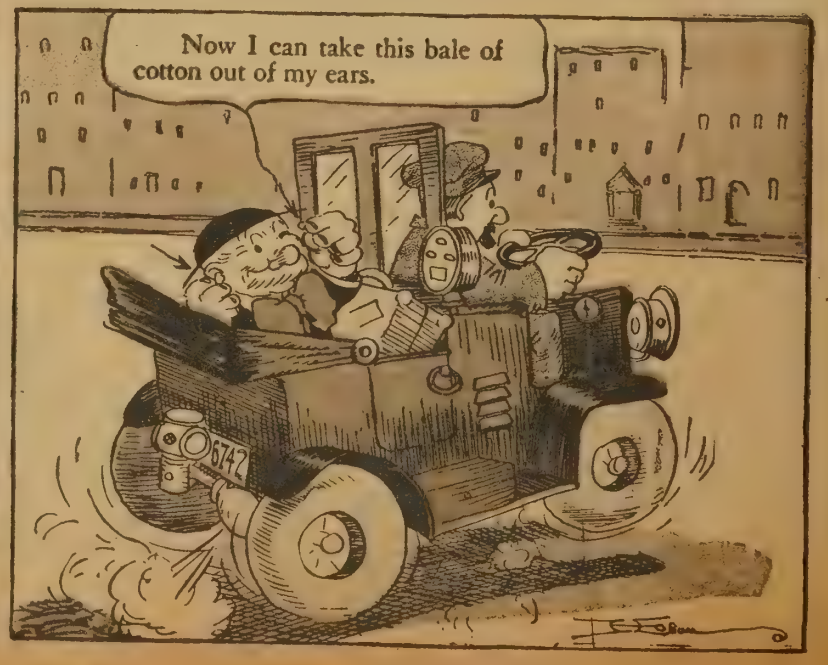
Grab this info from me—if you go to Yourup or anywhere else, don't come home unless you cover your baggage with labels. If you do, nobody will know you've ever been across. Of course, you don't have to see all the places you say you do, because you can get all the labels you want in one town. I got these French ones in Dublin.



Europe is farther from here than the moon as far as I am concerned. I was never there, and I never expect to go; but from what I hear, it must be an awful place. You'd better keep away from chorus ladies in Vienna. I once heard of one who took $4 from a man. I tell you, you can't be too careful of your money when you're in Europe.



Ooh! I was told you are going abroad—and I must tell you about the pastry shops in Paris. Don't miss Rumpelmeyer's place on the Boulevard des Italiennes. They have the most delicious fishcakes in the world. As soon as you strike Paree, go to Rumpelmeyer's.



You won't find many travelers who can advise you as well as I can. I was over once, and I know all about Europe. I'll give you a bunch of letters of introduction to shopkeepers in Paris, who'll give you anything they have—if you pay for it. And Prexy Poincaire is my pal.

And when you get to Rome, just mention my name to the king of Italy—Vic, I call him. There's no use crossing the big drink unless you mit the big leaguers. Stick a pin in that. I KNOW!

Now I can take this bale of cotton out of my ears.

# Facts and Figures on Apple Growing

It is difficult to get people to read much now except war news and related subjects. Statistics are always considered dry except when a man is figuring up his bank account with a good balance to his credit. Government reports are dryer still, for there is no effort on the part of the average government employe to popularize his writing. Notwithstanding all these, I have found something published by S. M. Thompson, scientific assistant, and G. H. Miller, assistant agriculturist, on the cost of producing apples in the Wenatchee valley, Washington, Hood River, Oregon, and western Colorado, that every apple grower should read, reread, study and digest, until by the process of assimilation it becomes part of himself.

This is related to the war in the fact that as a war measure there is a tendency on the part of many to make exorbitant profits, and on the part of the government to so control prices as to give a fair profit to producer, manufacturer, distributor and common carrier, but to stop speculative piracy. Farmers and wage workers have been clamoring for this for a generation, but it is only since the government becomes a large purchaser that the real question has begun to filter through, into the minds of the majority of our political representatives. However, perhaps we too are to blame, for if a majority of the farmers and wage workers had seen it and organized to bring about the desired reforms, we would have had them long ago.

This subject is also related in a most practical way to the fixing of the prices of apples, provided the government concludes to determine the prices that shall be paid for food products.

Will apples be classed as food in the same catalogue with wheat, corn, potatoes, beans, etc.? If so, what shall be paid for them? In other words, "What is a fair profit?" That, of course, depends on what it costs to grow them, and Messrs. Thompson and Miller, in Bulletin No. 500, have given the most complete and exhaustive answer to this question I have ever seen. For years I tried to get reliable statistics, but there was nothing available that gave such reliable information as this report.

I am now wondering if I can so condense and summarize it as to make it readable, and at the same time arrange my figures so as to make just comparisons.

The first item is the cost of land, with interest on the investment. Then there is cost of equipment, taxes, insurance, water, manuring, cultivation, pruning, brush handling, irrigation, thinning, propping, spraying, boxes, hauling box shooks, making boxes, picking, hauling to packing house, sorting, packing, paper, nailing packed boxes, stamping, waiter for packers, foreman in orchard and packing house, hauling to town, or storage and miscellaneous expenses. Remember the comparisons are between Wenatchee, Hood River and western Colorado.

**Cost of Land.**

In the Wenatchee valley the cost of land per acre was $1925.

In the Hood River valley the cost of land per acre was $990.74.

In Colorado the cost of land was $751.56.

In Colorado, estimates were made in three counties, Mesa, Delta and Montrose. Mesa is the county in which Grand Junction is situated, Delta is further east up the Gunnison river, Monrose is south of Mesa and Delta.

It should be borne in mind that these estimates are based on averages; not on the most successful, nor the least successful, but the average man producing the average crop and these averages obtained by adding a considerable number of crops together, and dividing by the number of orchards. In Wenatchee, the number of orchards estimated, was 87; in Hood River, the number was 54, in western Colorado, 125.

The sizes of the orchards in the different districts are: Wenatchee, 11.4 acres; Hood River, 12.4; Colorado, the average size is not given, but of the orchards tabulated, there were 35 over 10 acres, 47, 6 to 10 acres, and 22, 1 to 5 acres inclusive.

The average yields of the orchards are: Wenatchee, 593 boxes per acre, or 7.3 boxes per tree. Hood River the average yield is 222 packed boxes per acre, or 3.08 boxes per tree. It is noted that in 30 orchards given clean cultivation, the average yield is 218 boxes per acre, while those with mulch crops of clover, alfalfa, etc., the average is 228 boxes per acre. Further, in the orchards with mulch crops, the fruit was of better quality. The labor cost of caring for an orchard with a mulch crop is slightly higher than by the clean cultivation method, but when the value of the hay is considered, the difference per acre in favor of the mulch crop is $6.21 for clover and $10.89 for alfalfa. The average yields in the Colorado districts are 284 boxes per acre, or 3.8 boxes per tree.

The average ages of the trees estimated are: Wenatchee, 11 years; Hood River, 12 years, and Colorado, 17 years. The time of the survey covered a period of six years.

**Prices Received.**

Wenatchee not given; Hood River the average returns f. o. b. Hood River, for the years 1910 to 1914 inclusive, $1.11 per box. The averages by years are $1.52 for 1910, $1.41 for 1911, $0.77 for 1912, $1.23 for 1913, and $0.63 for 1914.

In western Colorado "the grower must get $0.844 per box in order to pay all costs and make 8 per cent interest on his investment. When all grades are considered it is seldom of late years that the grower receives $1 per box f. o. b. on his apples and the average is usually considerable less."

**The Costs by Items.**

Interest on the investment is figured at 8 per cent. This investment is for land and equipment. By equipment is meant machinery and other articles necessary to the orchard business, but does not include horses, harness, packing houses, etc.

In Wenatchee the cost of equipment was $444 per orchard, or $47 per acre. In Hood River equipment was $491.87 per orchard, or $39.587 per acre. Colorado the equipment was $653.47 per orchard, but since the average size of the orchards is not given, we have no means of knowing the cost per acre.

**Labor Costs.**

In Wenatchee labor is paid from $35 to $50 per month, depending on the privileges given. In Hood River, the range is from $25 to $60 per month. In Colorado, $30 to $60 per month is paid for labor.

**Cost of Pruning.**

Wenatchee, $3 to $3.50 per day, is paid to expert pruners. The average cost per acre, $10.08. In Hood River the average cost for pruning is $5.48. In Colorado the cost for pruning is $18.78.

Hauling brush—Wenatchee, $4.927; Hood River, $2.36; Colorado, $3.77 per acre.

**Cost of Spraying.**

This includes the cost of labor and material, and when the spraying outfit is hired, it is charged at the rate of $1.50 per hour for man with team and sprayer, the orchardist furnishing the spray material. In Wenatchee the cost for the lime-sulphur spray is $8.89 per acre. First arsenate of lead spray, $2.15; second arsenate of lead, $2.02; third arsenate of lead, $1.91; fourth arsenate of lead, $2.24. Total spraying, $17.21.

Hood River—The labor cost for spraying is $8.83; cost for materials, $8.69 per acre. Total spraying, $17.52.

Colorado—The cost of lime-sulphur spray is $9.91 per acre, and all the arsenate of lead sprays, $4.37. Total per acre, $14.18.

These estimates do not include the cost of special sprays for certain pests and diseases, such as the Bordeaux for powdery mildew, and tobacco for aphis and other pests.

**Cost of Cultivating.**

In Wenatchee the cost of cultivation is reckoned at $14.75 per acre. In Hood River the cost of cultivation is $8.49, in Colorado $8.70. The costs of the va-

Genuine Iwan Augers and hay knives wholesaled by: Whiton Hdw. Co., Seattle; Morse Hdw. Co., Bellingham; Hunt & Mottot Co., Tacoma; Holley-Mason Hdw. Co., Spokane, Wash.

USE THE WESTERN
PULVERIZER, PACKER AND MULCHER
3 MACHINES IN 1

for preparing your seed bed, will increase your crops 25% whether you raise wheat, barley, sugar beets, beans, potatoes, alfalfa or any other crop. A perfect, well pulverized and firm seed bed is as important for one crop as for another. The Western pulverizes and packs as deep as plowed and leaves a loose mulch on top to protect the moisture; saves 1-3 of expensive seed and time, labor and horse power in preparing a seed bed. It is especially adapted for breaking crust and cultivating winter wheat in the spring, or for breaking crust on sugar beets or beans either before or after they are up without injury to the plants.

MADE IN 12 SIZES, FOR HORSES OR TRACTOR USE, IN 1 AND 3 SECTIONS

1918 crop will bring war prices; make it a record breaker in size by using the Western. Send for our free illustrated catalog, giving full description of the machine and its work, also dealer's name and much other valuable information.

Western Land Roller Co., Box 300 Hastings, Neb.

IRRIGATE

Direct Connection, Double Suction Pump

Our Eclipse Centrifugal Pumps

are recognized for their high efficiency and long life.

Made in either double or single suction types for direct connection or belt drive.

We carry a large stock of belt-driven pumps and can make immediate deliveries. Two to three weeks' time required on shipments from factory on all special pumps.

Before buying, get our quotations.

# Fruit Problems Will Be Solved

## *Labor and Transportation Seem Able to 'Swing Themselves'*

By JOHN V. ELLIS, North Yakima, Wash.

Washington has been able, to this time, to handle the labor problems arising from its fruit industry without any serious inconvenience. There have been times when the labor question has been a source of worry, but there has never been lost in the harvest a material proportion of the crop, though individuals annually suffer in this, that or the other district. This, however, is the problem of the human equation.

Heretofore the bulk of the fruit has been produced in territory contiguous to numerous small towns and along trails where labor has been accustomed to seek employment. Also, along with the increased production has come from the south the efficient army of those who "follow the crop" just as the wheat harvesters have followed the ripening grain northward to the last fields. Annually this group, or these groups, dependent upon the fruit harvest for their income, is growing. The business is building up its special labor field and supply. There are those workers who year after year return to the same orchards and employers. This is a growth from the circumference and has at times shown signs of being very rapid in its development.

**Can't Book Labor Ahead.**

Some fruit producing sections where the acreage is large, the permanent population small and the difficulties of travel and housing not yet overcome, will probably suffer before the adjustment. Extra orchard labor can not be booked ahead. Labor will not wait for the weather and the ripening of the crop. This fact has led to some changes in the method of handling the apples, which are the largest of the fruit crops of the state. Time was when the apples were sorted and packed as they were picked. That day is passing or has passed.

The wise apple grower today picks his crop and gets it under cover. The sorting, grading and packing are not fraught with the haste that must attend on the harvest in a state where the crop is large, the labor inadequate and the demands on that labor varied sufficiently to draw away at all times, for steady if not pressing development, hands that otherwise could be utilized to tide over the vital three or four weeks of the fall.

Necessity for housing the crop speedily to protect it from the advancing winter has led to the development in the more progressive sections of storage warehouses of a community character supplemented in large part by home ranch storage sufficient to take care of that portion of the crop that can not reasonably be hauled to warehouse during the harvest.

Incidentally it may be said that there is here a pretty illustration of the matter of interdependence in the fact that those fruit districts where there is the greatest diversity of farm crops have the best and most adequate storage. The humble potato and the lowly alfalfa, in other words, have assisted in building proper receiving places for their more lordly brother, the apple. Also, it must be remarked that the development of the auto truck has done much to speed up the task of getting the fruit "under cover."

**Skilled Labor Gone to War.**

Skilled labor has gone to war. This is a fact. The organized craftsman of the city, ready as has been his response to the call to arms, has been no whit ahead of his skilled brother of the farm. It is equally true that four untrained hands are as inadequate on the farm to replace the two that have taken up arms as they are in the city. In Washington the taking from the agricultural sections of thousands of swift and true apple handlers has worked a hardship. The competition of the shipyards, and of the spruce harvest for the airships, the more general adoption of women into industrial lines and similar tendencies have worked a still further hardship. There are some saving features. Much fruit handling is by the piece and energetic young men and women, seeking an education and anxious to earn in a short time money to carry them the balance of the year at school, turn their attention to it. More and more, also, fruitgrowers find themselves able to use families and give employment to several wage earners in a single family. More and more, also, mechanical means are devised for handling by power some of the routine that formerly was done by men and women.

It may be that before the cities of this state reach that degree of development when they will be able to furnish thousands of short-term workers for the harvest it will become necessary to dignify the apple harvest by making it an annual festival, as has been done in some of the European countries with their harvests. In this event the clergyman and the banker, the editor and the craftsman will close their respective places of business, take their families and go into the orchard to work, for a week, or two, or three. In this event there will be no labor problem. It may for a time come to this. Already an approach has been made. In some sections of the state the schools have been made to wait upon the apple crop, business has recognized that it depends upon the success of the rancher and all have gone out to help, permitting other needs to lie in abeyance. This, however, has been done as a grim necessity, not as a joyous opportunity. It may be that gladness and not dull determination will accompany and escort the lay brethren and sisters into the harvest fields when Washington's apples are ready for the picker and the packer.

Federal attempts to assist in the labor problem have met with great success. As much can not be said, so far as apples are concerned, of the state harvesters' league of recent memory. A positive forward step, on the other hand, is the more general adoption of the county agent idea and an increasing recognition of the merits of those officials. The federal department of labor is doing the most effective kind of work. It is filling out the crews; it is making possible the success of the harvest where otherwise it would be but a partial crop that would be brought to the commercial stage. Federal labor agents have taken up the task of making effective the work, in a labor way, of the county agents, and have kept the stream of labor flowing in one channel and prevented cross currents and backwaters.

**Statistics Tell the Story.**

Statistics tell their own story to those who can read them. From the 1917 records of Federal Labor Agent Wilson at North Yakima are taken the following figures of fruit handlers sent out to ranchers the last season:

| | Men. | Women. |
|---|---|---|
| July | 124 | 33 |
| August | 168 | 9 |
| September | 740 | 75 |
| October | 730 | 131 |
| November | 35 | 6 |
| Total | 1797 | 253 |

"These were "fruit workers" only. During the same period he supplied to ranchers scores of drivers, farm laborers, cooks, berry pickers and various other kinds of workers who either assisted directly in the harvest or released others for that task.

Pear picking began in 1917 early in August. It was followed by the peaches and these in turn were followed by the apples. Many families which by experience had learned of this progession of crops were on hand, with camping outfits, in anticipation of the season. These came from various parts of the northwest. Then there was the before mentioned army of "swifts" from the south who were following the harvest and the labor north and to these must be added the ever growing number of people in each farming district who devote a portion of each season to the higher wages that a swift worker can get by following the piece system of the apple harvest and handling.

The wage base of the last season was $2 to $2.25 per day and board or $3 a day without board where the work was not by the piece. Pickers, sorters and graders were paid $3 per day, warehouse packers received four to four and a half cents a box and orchard packers six cents. Truckers and warehousemen received $3 per day. This, as stated, was the basis of the wages. What was actually paid varied with every part of the state and every subsection of each district. In many sections there was a strong demand for camping parties that could board and lodge themselves. Some wanted straight crews of men, some were willing to take mixed crews. The harvest was the first consideration.

**Workers From the Cities.**

One of the weaknesses of the State Harvesters' league was that those who, through patriotism, volunteered to assist in the work were in large part not only unskilled but "soft." The average rancher is willing to take any kind of laborer provided he is seasoned to toil. Those who are without either skill or the ability to carry the speed for the distance, as the runners say, are a handicap rather than a help, especially if the balance of the crew is dependent upon them for supplies "coming up." Then, too, fairly or unfairly, the volunteers of the State Harvesters' league were considered to be a superior lot of citizens who were looking for a vacation with wages. Easy going, as he generally is, the average farmer shrunk from biting into that pudding.

District agents, organized by the county agents, did good work in many sections, the value of this feature depending largely upon the efficiency of the district representative of the county agent. These men unified the needs of their territories, so far as the federal labor agent was concerned. They kept in touch with the employers in their respective territories and succeeded in large part in keeping labor within the district by shifting it from one employer to another as each task was finished, and prevented it from drifting away to jobs elsewhere. The effect of this in favored districts was that the labor on hand was retained, there were constant accessions and the supply grew steadily until there was neither worry nor need for worry as to the harvest.

A steadily increasing number of the resident population capable of handling fruit from planting to shipping and a growing army of expert workers following the crop from lower latitudes northwards will make a base on which can be superimposed the drifting and seasonal laborers who more and more, as the years pass, the federal bureau of labor will be able to divert to the apple producing sections.

**Processing Plants Help.**

Development also of the processing plants will have a tendency along this line. It is figured that this year in the Yakima valley, where the processing industry has had its greatest development in Washington, that the commercial value of the product is of a value of $1,055,000. Canned and evaporated fruit, cider, vinegar, grape juice used in 1917, 20,160 tons of apples and 2805 tons of other fruits. In addition they used up 835 tons of vegetables. These plants are holding permanently some families that expected to be but seasonal laborers and they are enlarging and solidifying the base on which the fruit industry may be reared. When it is considered that the state is shipping annually some 16,000 carloads of commercial apples and 8000 carloads of other fruits, not to speak of berries, it will be seen that the by-product industry is but touched.

**Car Situation Handled.**

It was not in the labor department alone that assistance was rendered the fruitgrowers and shippers by the federal government. Its handling of the car situation the last season was another item of activity, allied to labor, that was a life raft to the state. It was not always possible to maintain the supply of refrigerator cars, but so much was accomplished in this direction that the refigerator car shipments were, throughout the season, ahead of shipments of a like kind to corresponding dates in preceding years. But while keeping up to its highest possible point the refrigerator car supply the government saw to it that the shippers were offered boxcars for a proportion of the crop.

Boxcars made a further call upon the labor supply, but it was not altogether a rush call in its character. Boxcars needed a false flooring, to be insulated by paper protection against variations in temperature and to be accompanied on their trip by tenders who would keep up the individual heating plants in case of extreme cold weather. This gave further occupation to those laborers who know fruit and are sympathetic in its handling.

In some respects the government assisted in the box and paper difficulties, but its work in this field is more in prospect than in fact. Present indications are that paper for insulation, for box linings and for wraps will be cheaper the coming season than in that which has passed. The box problem, the government says, will be in part solved if users will now anticipate their needs and order at once instead of delaying until the final moment and then asking the manufacturers to meet their needs in a short time. In any event, it seems that government intervention will stabilize the situation.

Yakima shippers, by organization of a traffic association, have taken the most vital step to the industry that has been recorded in recent years. This association is a voluntary organization of shippers, which has as its manager an experienced railroad man, L. F. Sainsbury. The association undertakes to render a wide service to its members by attending to the entire car situation and including a messenger service accompanying cars, not only to protect them en route, but to determine the character of the contents upon arrival at destination in case of rejections, etc. In this field, however, the shippers are receiving great assistance from the federal food administration, which is standing between the shipper and the purchaser who has a tendency to refuse shipments simply because he has changed his mind as to the deal.

**"Buyers" Sometimes Caught.**

Shippers tell of the rejection of a car of prunes which the buyer had never seen. Instead of arriving, they were in "the ditch" because of a railroad wreck. They tell, also, of rejections of two carloads of apples within recent date that did not arrive at their destination until after the shipper, hearing of the rejection, had taken train east and himself arrived to ascertain the difficulty. His cars were not in the yard and did not come for several days. When he explained the situation to the federal authorities they had the fruit inspected by the federal inspectors, now located at all important points, and he received ample redress when the government said to the buyer, "You take these two cars or lose your license."

The messenger service, especially in these days of an increased tendency to use ordinary instead of insulated cars, is a vital feature. It is the first application to the northwest apple business of a practice that in tropical and semi-tropical fruits has proven to be an essential business development and a splendid insurance. The traffic association manager works hand in hand with the federal officials in his field as the shippers in theirs work with the federal bureau of markets. The industry has already felt the benefit of the advantages obtained.

Problems of labor and of shipping remain up to the grower and the handler of the fruit crop. The government aims merely to assist and to rectify. The person vitally interested must anticipate and plan. If is easy to see that under present international difficulties the fruit industry might readily find itself in a serious way in the harvest as it is now in the matter of export. So far, however, the labor and transportation problems have been able to swing themselves. It would seem that they will continue to do so.

ACKNOWLEDGMENT

The Farmer wishes to acknowledge the courtesy of the Spokane Chamber of Commerce in lending to it the photograph reproduced on the first page of this issue. It is one of scores of scenic photos taken by Frank Palmer of Spokane, and was selected for this issue as typical of the transformation of once barren land into beautiful and productive orchard farms.

## Where Your Dollar Goes.

What becomes of the dollar which is invested in government bonds? Here is the course it takes as visualized by Secretary of the Treasury McAdoo in his annual report to congress.

"First, it goes to the government as a loan for the war.

"Second, it is expended by the government for food, clothing and ammunition, which go directly to a gallant soldier or sailor whose fighting strength is kept warm by the clothing, and whose enemy is hit by the ammunition.

"It has not been expended in the purchase of needless food and clothing for the man at home, and is therefore released for the use of the soldier; it is saved wealth to the man at home and can be loaned to his government at interest with resulting benefit to himself and to his government."

## New Dairy Leader.

Announcement has been made from Pullman that Professor E. G. Woodward of the University of Nebraska has been appointed head of the dairy division of the state college. Professor Woodward succeeds Professor A. B. Nystrom, who resigned some time ago to accept the position of county agriculturist of Lewis county.

## Do You Know That

Many insect pests may be destroyed by late fall plowing?

# Culls No Longer Merely Food for Swine

## *Women "Corner" Market and Manufacture Delicacies of Farmer Waste*

By S. I. Anthon

When poets sing of the dearth of new things under the sun they show themselves entirely unacquainted with the 1917 developments of the apple industry of the state of Washington. At least two new things have come to the front in it. One is the presence of women as an active factor in the apple game, whether from the buying or the by-products end of the business, and the other is the amazing variety of apple products which are being turned out from the once-scorned apple cull. Indeed, so great was the demand for cull apples, once commonly relegated to be feed for such hogs as did not turn up their snouts in disdain at them, that cull apples were the center of the prettiest little buying contest which the state saw.

At least two women entered the apple game in sober earnestness and, inexperienced as they were, beat their masculine competitors at it. One slender slip of a woman, Mrs. Peter V. Davis of Seattle, with true feminine willingness to try a new thing and go the limit in the trying, entered the cull market and, before the close of the season, purchased some 300 cars of cull fruit in the hottest buying competition the Yakima valley has ever known. Her partner, Mrs. William E. Meyers, who is likewise from Seattle, did some small share of the buying, but devoted her energies more to the operation of the Yakima Evaporated Fruit company's plant, where she "bossed" a crew of 45 men and women, did her full share at the manual labor, which must be done in even the most up-to-date by-products plant, and learned for the first time in her life, all the ins and outs of the different apple varieties.

### Gave Tips to Competitors.

When Mrs. Davis first became interested in fruit she did so by way of a five-acre peach orchard, which her husband purchased and turned over to her. During the last three years she has taken full charge of the harvesting and selling of the peach crop and, however low the market sagged, always managed to dispose of her fruit at the psychological moment when there was a demand and a good price. "Davis' luck" became a byword on Produce Row, where experienced peach jobbers were not unwilling to accept tips from their feminine competitor.

Cull apples first interested Mrs. Davis during the last season. Till this year a cull apple was a cull to her, and nothing more: Now a cull apple stands for slices of evaporated apple, for dabs of apple butter, for canned apples, for jelly stock and for pectin, the gelatinous matter which is used to stiffen the juices of fruit which frequently fail to "jell" properly. Seeing the cull apple in its new possibilities, what more natural than that she should trust to her feminine intuition and establish a near-corner in it?

Bold speculators on the larger exchanges have at different times tried to corner various foodstuffs. It has remained for Mrs. Davis to corner the cull apple supply of an entire valley. She began early. In her trusty little Ford, which she drives herself on occasions and otherwise turns over to a small boy, she covered the Yakima valley from Prosser to Ellensburg for culls. Growers with several carloads of culls received as much attention as the farmer with but a few wagonloads—and no more. Culls were culls. Mrs. Davis wanted them all. By the time her masculine competitors awoke to what was happening, the woman buyer had secured contracts for over 200 carloads of the stock. She had also gotten so wide an acquaintance with the growers that she had but to say "Got any culls to sell?" to be met with "Oh, you're Mrs. Davis. Sure, you can have all I've got."

### Price of Culls Goes Up.

At the opening of the season, first-class cull apples could be readily purchased at $5 the ton, delivered at any desired plant. By the time the other buyers awoke to the new game of "Culls, culls, who's got any culls?" they found themselves unable to purchase them at the former figure. Later in the season, while Mrs. Davis was smilingly thinking of the steady stream of cull apples which were coming into the plant in which she is interested, the establishment of the Yakima Fruit Evaporation company, other buyers were scouring the valley to offer as high as $10 a ton for culls. Some few sales were made at $12 a ton for products which last year were used as so much farm waste in nine cases out of 10.

Mrs. Peter V. Davis, who taught the Yakima valley the "cull apple" business.

Many and weird experiences fell to the lot of the first woman buyer to enter the commercial field in this state. There were farmers who plainly doubted her ability to pay on delivery—but it did not take long for her reputation of living up to her promises to spread far. Other orchardists tried a bit of camouflage regarding the variety and quality of their culls only to find that the little woman, properly attired in a tailor-made suit of great becomingness, knew a trifle more about apples than they could tell her. Many growers were willing enough to sell their cull fruit, but unwilling or unable—in the rush for labor and rapid harvesting—to gather it and bring it to the plant. In such cases Mrs. Davis bought the stuff "on the ground" and, quite as a matter of course, hired crews, usually men, to gather and sort her purchases. Harvesters who plumed themselves on being engaged to work under a "woman boss" quickly found that their hopes of extra-soft berths were premature. Mrs. Davis knew what she wanted and when and how she wanted it. By the use of her magic smile, at times backed by an iron determination, she got it.

On one occasion the plant needed a truckload of apples. There were no men to drive the truck, standing loaded in an orchard. Mrs. Davis, in the early dusk, started the truck. While on the road she struck a piece of soft road, the machine settled on one side and lurched over. Her first remarks on regaining consciousness after the bump were about the fruit and the possibility of getting it in that night. It was safely delivered.

### Drafts Tramps Into Service.

Car shortages did their share to educate the feminine buyer into the true inwardness of the apple game, but it must be granted that she ordinarily got her desired cars. At one time she received peremptory orders from the railroad higher-ups to unload a car of fruit which was standing on a siding and to see that it was done "instantier." Unable to spare any of her regular crew she hired some tramps who were trying the tie route to the Sound, and, by setting the example of working herself, got the car emptied in record time.

Mrs. Meyers' work, though it began considerably later in the season, is no less remarkable. She purchased an interest in the Yakima Evaporated Fruit company, in which Mr. and Mrs. Davis own much of the stock, and at once, inspired by the example of her fellow-owner, determined to get into the game. She made some trips to purchase culls, but decided she could be of greater service at the plant itself.

Books? Certainly Mrs. Meyers could audit and keep books—and did. Direct the peelers, who place the apples on spindles to start them on their journey from the bins to the drying kilns? Assuredly; what if they were 15 women with as many opinions as to the manner in which they should be handled. Tact is not a possession of diplomats alone. Speed up the men engaged in the task of keeping the plant heated and packing the evaporated fruit? Why not? Skirts are no handicap if one can deliver the goods, as Mrs. Meyers could. "Boss" the yard crew, engaged in unloading the fruit brought to the plant or in loading the boxes of evaporated apples to start off to market? Quite as easily as leading the conversation in the proper channels at a tea party. Dicker with salesmen, buyers, important railway officials of fractious purchasers? Never did ball bearings work more smoothly than the woman director. The "Women's plant" has been the envy of men who operate similar establishments because it has speeded production so much and has avoided the labor troubles which for a time threatened to close down several plants. The hand that rocks the cradle may rule the world, as the axiom says, but it is equally sure that it is highly efficient when it comes to ruling a by-products plant.

### Save 20,000 Tons of Apples.

This year, according to the best and most conservative estimates obtainable, 20,160 tons of cull apples from the Yakima valley alone were transformed into apple by-products valued at $1,055,000 or approximately $520 worth of products from each ton of culls. These by-products include evaporated apples, canned apples, apple butter, apple jelly stock, vinegar, cider and pecten. So great was the competition for cull stock that the apple peelings and cores, formerly regarded as waste by the evaporator plants, were this year sold to the vinegar plant for further processing. And by-products made from the Yakima valley apples will not only be found on the shelves of practically all the grocers in the United States, but will follow Uncle Sam's armies into the trenches.

During the last 12 months there has been a great growth in by-products plants in the Yakima valley, and particularly in the region vicinal to Yakika. Libby, McNeill & Libby were first in the field and erected an $80,000 cannery, in which canned apples, apple butter, jelly stock and pectin were made this year. Several hundred tons of apples were canned and almost as many transformed into apple butter, which is truly reminiscent of the kind turned out during one's childhood days on the old New England farm. The jelly stock and pectin were treated largely as an experiment, but the trial proved so successful that a large quantity of fruit will be so handled during the coming season.

Four evaporator plants were erected. The Washington Evaporated Foods Products company, backed by local capital, put up the first large evaporator, but went largely into the business of handling evaporated vegetables instead of apple evaporation. The California Packing corporation, with headquarters at Sebastopol, Cal., and the largest evaporation interest in the country, started a modest plant with which its backers were so pleased they enlarged it three times during the season. The plant handles 35 tons of fruit daily, which means a return of about one-eighth of the tonnage in the form of evaporated fruit. The Selah Evaporation company, an organization formed mainly to handle the cull apples of the Yakima Fruit Growers' association, handles almost as much fruit daily, and the Yakima Evaporation company's plant, the "Women's plant," does a little better.

Not content with the regulation apple products, there is also a great increase in the amount of cider and vinegar being manufactured. The Hecox Processing company this season doubled its plant and is making superior cider and vinegar. The new Jones Bros.' plant, a branch of the Jones Bros.' California establishments, makes 40,000 gallons of apple juice into either cider or vinegar daily. The plant was put up late and its manager found considerable difficulty in securing enough cull fruit to run it at full capacity, but expects to enlarge the plant next season and have a six-months' run.

Everybody picks fruit when necessary in Washington.

## USE MACHINERY.

### Labor Shortage Is Demanding It.

Labor shortage brought on by the war has caused unusual distress among northwest horticulturists. In a paper read before the recent convention of the Washington Horticultural association Chairman Henry Suzzallo of the state council of defense urged the use of every practical labor-saving device in order that this contingency may be met. Unusual conditions prevailed last picking time and it is predicted that next year's harvest may be even more difficult to accomplish.

Anticipating this, manufacturers of equipment are preparing to meet the demanad. The capacity of the Price Fruit Sizer company's plant at Yakima will be greatly enlarged. This company has a large plant in its present shape, but when the improvements now planned are completed it will be able to turn out a great many more machines than is now possible.

It is a most interesting sight to watch the sizer in operation. Apples are automatically graded and by means of a device which computes the actual weight of each apple the fruit is picked up and tossed into a conveyance so delicately arranged that the fruit is not damaged, even though tossed several feet.

The Cutler Fruit Grader company has moved its plant and place of business from Hood River, Ore., to Portland and has greatly enlarged its plant. Both the Cutler company and the Price company have established means of distribution so that they are extending their trade territory not only to various sections of the northwest but to fruitgrowing districts in the extreme east.

Fruit-handling equipment was a subject which was much discussed by growers at the recent horticultural meeting at Kennewick.

### War Payroll Is High.

The monthly war payroll of the United States army and navy is now about $100,000,000 a month.

# Reminiscences of Pioneer Days in Bunchgrass Land

By Ida C. Young.

A few years after we had settled in Douglas county, Washington, a new family moved in and camped about half a mile from us. To be neighborly mother called upon them as soon as was suitable. On her return home all of us, as was natural, asked questions about them. For quite a while mother was silent or noncommittal. But we felt some way that there was something which did not meet with her approval.

At the supper table it came out. The new neighbor woman was most emphatically sick of the country. She had been used to better things. "Why, I can't even give my children pie!" mimicked mother in disgust. That settled it; any one who could not live without pie had small chance for popularity at our house. The term "pie face" would have been in high favor with us at that particular time. Happily it was unknown and the people moved away shortly after. I don't know where, but I hope they found pie.

There was really very little loneliness or homesickness among those early settlers. John Henry Smith had a period of discouragement during the second summer. It was strong upon him early in the spring at planting time. He rode by our place while father was plowing and planting potatoes. Coming from Missouri, of course the light volcanic ash looked like poor soil to him, and his comments on wasting perfectly good potatoes in that bed of ashes were not encouraging. However, father went on planting and that fall we had a good crop of potatoes and other vegetables. The next spring Mr. Smith plowed and planted with the rest of us, and as the years went by he became one of the well-to-do farmers of that community. He often referred to those early days and dwelt upon the fact that it was a lucky thing he had no money to take him out of the country or he surely would have gone back to Missouri.

Of course, the grownups were all so very busy with the absolute necessity of keeping alive that there was little time for pining or regret. Even the winter days brought their share of activity for the men at least. Firewood had to be hauled for the year's supply and we lived on the road that led to the canyons which opened into the Grand coulee. Here there was plenty of fuel, but the pine trees had to be cut and sawed up into shape to drag them out and made ready to haul three, six, 10 or 15 miles as the case might be. Our grindstone drew its share of this particular activity and we made the acquaintance of people coming and going whom we would not have known any other way.

There were long winter evenings that might have meant loneliness to some, but to us they meant a chance to read and we read a great deal. About once a month some one of the neighbors made a trip on skees to Brentz postoffice over in Lincoln county about 30 miles away. Nearly always there was a big roll of story papers and magazines for us sent by relatives in the east. Neither Ed nor I ever went through the process of learning to read, we just read. I also read my first book that winter. It was an old-fashioned Sunday school novel "Fanny Grant Among the Indians." It certainly did lay down the lesson of the sin of stealing and the virtue of honesty. I read it several times; in fact it was a standby for several years; whenever we ran low on reading I dug up Fanny Grant and was happy for several days.

When F. H. Bosworth was elected one of the first commissioners of Douglas county that second autumn he moved to Okanogan, the temporary county seat. This happened in the spring after his election. Then Lincoln postoffice, which had been established at his place just before or after the election, I'm not sure which, was turned over to us and we had more reading.

I can not vouch for the quality of all our reading, but the quantity was all sufficient as there were continually sample copies coming to the postmaster. Mother provided an antidote in the shape of the Youth's Companion and a little religious paper and let us alone. We read everything from the Chicago Police Gazette to the Heart and Hand. The Police Gazette was printed on very pink paper and was profusely and furiously illustrated. The Heart and Hand was a mongrel-looking little matrimonial publication, but we got more thrills out of it than out of the other. We grew quite proficient in picking out the winners among the great collection of lonely hearts and loving dispositions. We were also quite frank and unfeeling in our criticism of them all.

I can not see that we were in any way harmed by this indiscriminate reading. Perhaps the very fact that we were not watched and fretted over gave kind providence a chance to turn away from us any reading that might have been really harmful. Any way, we all turned out fairly well.

During those first few years sister Frances sort of lost out in the reading. She was always so busy and interested with the dogs, cats, calves and colts or some out-door stunt that she really couldn't get started as the rest of us did. Ed and I criticized her quite freely on this subject, but she went serenely on struggling through three months of school work in a year, until she was eight or nine years old. Then one day she suddenly announced to all of us that she was going to read. No one disputed or interfered with her and she gathered up an armful of Youth's Companions, laboriously crawled up the outside corner of the house on the projecting logs, to the roof of the little porch that ran along the south side of the house. Here she proceeded with considerable noise to make herself comfortable, calling down emphatically at intervals that she was not to be disturbed. She was going to read.

Finally quiet reigned and we forgot all about her. I didn't think of the incident again until after I grew up when she confessed that she went sound asleep up there in the warm spring sunshine. When she awoke she was hungry and came down to find something to eat and she never read a word. I might add here when she finally did learn to read she became the worst bookworm of the lot.

Before I take leave of this subject of the postoffice in its share of furnishing entertainment I must make mention of an occasion which furnished a high tension of interest for the whole family and one outsider.

Our log house, 14 by 22, was left undivided inside so that we had one big living room whose one half held the kitchen and dining room conveniences and the other end contained the postoffice desk and little square of pigeon holes, the organ, a little walnut bureau, a home made lounge and big home made bedstead.

I was 12 or 13 when it all happened and quite tall. We had just finished supper and I had crawled under the bed after a penknife which had fallen behind the bed. Just as my hand closed over the knife I heard footsteps crunching outside and immediately a knock. The door was open so I had not time to back out. I decided to stay where I was and drew my feet up a little hoping they would not show. Father invited the man in, they exchanged the usual greetings and commonplace remarks, the man asked for the mail and it was given to him. Then just as I was beginning to relax, thinking now he would go, father invited him to sit down. He sat and the two men fell to talking.

It transpired later that none of the family knew where I was. Frances had been the only one to see me crawl under and had forgotten that I had not come out, so there I was and there he sat—maybe, after all, he saw my feet—there was work waiting for me, too. I had my choice between washing the milk pans and supper dishes and helping milk the 12 cows out in the corral. The men talked and talked. Mother began clearing off the table and piling up the dishes and then it began to grow dusk and all at once it came to her that I should be putting in an appearance. The milk pails still stood waiting and after a little time I heard mother asking where I was. No one could tell her and the man still sat on. If he did see my feet he must have had some queer thoughts. Pretty soon mother went out and called. I was silent. She called again. More silence. Then she called one of the calls that we sometimes heard a mile away when the wind was right and she feared for our safety in the fog or among range cattle. I was still dumb, I simply couldn't think of anything to say at this stage that could justify my hiding away like that. I'm still hoping that he did not see my feet; no human mind could have endured that strain and kept silent, but he certainly was interested. They had stopped talking now and every one was more or less concerned about my nonappearance. Frances and Ed ran out to the corral and came back to report no results; mother went out to the smokehouse; father was silent. He was not given to worrying and was not yet really alive to the situation. It was, however, entirely unlike me to remain away like that when I knew I was needed, and where could I possibly be? Mother went out and called some more, but I had a leaden hope that maybe his horse would break away or that there might be an earthquake so that I would not have to crawl out right there under his nose.

It was getting dark now and every one was getting worried. The situation was getting on the nerves of us all. The stranger was probably getting worried, too; I know I was, but wild horses couldn't have dragged him away. He was there to the finish.

Then I crawled out, slowly, deliberately. There were no words in any language to explain myself with, so I was dumb with the exception of the three words, "Here I am," which I realized immediately were entirely superfluous. Mother insists to this day that I was perfectly calm and collected as if it were a daily occurrence with me to spend part of my time under the bed, company or no company.

Anyway, the entertainment closed there for that day. The man suddenly remembered that it was finished, got up and went home. The only fly in the ointment is the fact that I can not remember who he was, some transient, likely, who came into the country, stayed a while, then grew discouraged and left.

## Girls' Honor Guard Do Their "Bit"

The Girls' Honor Guard of Cottage Grove, Ore., have "done their bit" this year by cooperative garden work. The photo herewith shows them at work. Ground was donated by Mrs. Clara Burkholder, Mrs. O. L. Nichols and Sam Newcombe. The Cottage Grove Commercial club paid for the plowing, all the balance of the work, including hoeing, weeding and watering, having been done by the girls, except the digging of a part of the potatoes. Miss Belle Burkholder is leader of the guard.

# Swift and Mighty War Will Save Men and Money for the United States

President William T. Foster of Reed college was one of the men who sincerely and most earnestly hoped that the United States would not be drawn into the great world war. His recent visit to Europe as an inspector for the American Red Cross so opened his eyes not only to the duty and necessity of the United States to enter the war, but to the world-wide duty of the United States now to shoulder the burden of the war and end it as speedily as possible.

President Foster has been in great demand as a lecturer on what he saw and what he believes with regard to the great world war. He is about beginning another lecture trip in the east. During December his itinerary called him from central California north through Oregon to the Inland Empire, where hundreds and thousands flocked to hear him.

Just after his return from his European trip President Foster made the following statement, which embodies his convictions on the part which the United States must play in the great war:

One night last week, "somewhere on the Atlantic," in the light of a wild storm, a group of men of varied life experiences were thrown together by the fortunes of war. A captain of the British navy was there, an admiral of the American navy, our minister to Switzerland and our minister to Colombia, our consul at Jerusalem, Ian Hay and Harry Lauder, John Golden and James Lord, not to mention a graduate of Oxford, who has just brought several thousand Chinese coolies to France; a refugee from Belgium, a Young Men's Christian Association war secretary, returning from India, a merchant from Brazil, a lawyer from South Africa, an American Red Cross organizer from the French front, a newspaper correspondent from Italy and a college professor from Bulgarian prison camps.

It may seem surprising that such a motley collection of men could agree on anything of importance. The fact is they agreed perfectly on everything of immediate importance to the world. On the basis of their recent experience the world over they agreed that the way to save the money and men of all the nations now at war is to bring the total available resources of the United States to bear against the enemy of mankind as speedily as possible. I do not mean to imply that these men, or any others I have met on the continent or in England, are disappointed with what the United States has achieved during the last six months. On the contrary, all the people I have met, except German prisoners, are jubilant, and many are amazed. Indeed, the confidence and dash and progress of the French and British armies during the last two months is in part due to their knowledge that we are already with them spiritually, and soon to be with them physically. How much fighting strength this prospect has given them I do not venture to estimate, but one can not travel along the entire French front, as I have done during the last two months, and talk with hundreds of French soldiers, American ambulance boys, Red Cross nurses, German prisoners, canteen workers and doctors, without having grave doubts whether there would have been any French offensive this fall if the United States had not sent troops to France.

The German government has been assuring its people that the United States has no army worth mentioning, no troops at all in France, no chance of getting them past the submarine blockade—in short, that the only American offensive would be the usual American "bluff." Undesigned testimony to that effect is seen in the amazement of German prisoners on first seeing American soldiers.

The point I wish to emphasize is that France and Great Britain are looking eagerly and expectantly toward us. They frankly say so. Germany is not yet conquered. An end of the war without victory, a peace that would be no peace, a truce with an undefeated autocracy, they know they could have at any time. But a peace guaranteeing our children against another attempt of Germany to dominate the world is not yet in sight. To be sure, another peace offensive by Germany is soon to be expected. America will be the main objective. The counter-attack must be prepared here, and at once, for we have seen enough of such camouflage to know what an ugly thing lies under the pretty paint. America can achieve a durable peace and freedom by making supreme efforts at once, or another kind of peace by dallying and being conquered. The sooner we realize that the better for us.

# All the World's a Stage, and All the Men and Women Merely Players

## Earth Shocks Raze Property

The above photograph shows the American consulate at Guatemala which was destroyed in the great earthquake which razed the city of Guatemala and killed hundreds of people. Hospitals, asylums and prisons, as well as homes and stores were swallowed in the great fissures that appeared in the streets, burying the occupants in the ruins.

## Dangerous Job in the Trenches

The above illustration shows a radio station and the operator standing outside of his dugout. His post is probably the most dangerous of the second line trenches, for the Germans take pains to locate these stations and keep them constantly under fire.

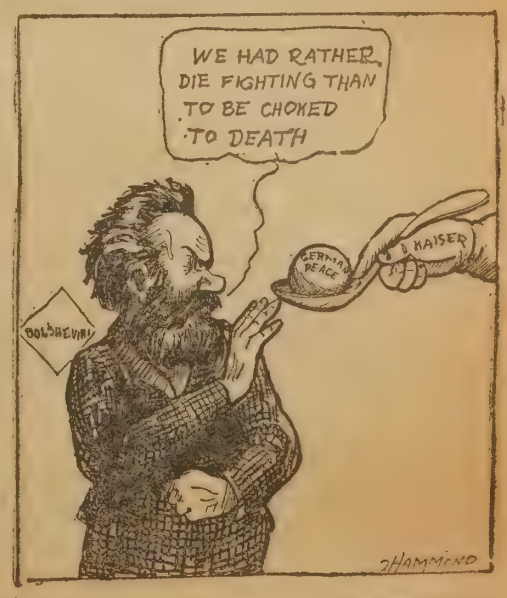
## Fuel Given the Needy in New York

Copyright—International.

Over 13 tons of coal, as well as blankets and provisions, were distributed to 400 of New York's neediest families in every section of New York by a New York daily on December 30, the coldest day in the history of the city. The trucks started out late on the night of December 29 and continued to deal out the coal in 50-pound lots throughout the night. The trucks were besieged by hundreds.

## Store Supplies Abroad for U. S. Troops

Copyright by committee on public information.)



The above photograph shows a railway station nestled in the hills of France. Uncle Sam is now sending more supplies to this district than have ever been there before. As fast as one train is unloaded another plows its way up and the work of unloading food and munitions begins all over again. The United States is doing all in its power to solve the problem of distribution to the men at the front.

## CHAPTER XVI.

### John Gale's Hour.

It was a heathenish time of night to arouse the girl, thought Burrell as he left the barracks, but he must allay these fears that were besetting him—he must see Necia at once. The low, drifting clouds obscured what starglow there was in the heavens, and he stepped back to light a lantern. By its light he looked at his watch and exclaimed, then held it to his ear. Five hours had passed since he left Gale's house. Well, the call was urgent and Necia would understand his anxiety.

A few moments later he stood above the squaw, who crouched on the trader's doorstep, wailing her death song into the night. He could not check her; she paid no heed to him, but only rocked and moaned and chanted that strange, weird song which somehow gave strength to his fears.

"What's wrong? Where is Necia—where is she?" he demanded, and at last seized her roughly, facing her to the light. But Alluna only blinked owlishly at his lantern and shook her head.

"Gone away," she finally informed him, and began to move again in her despair; but he held her fiercely.

"Where has she gone? When did she go? He shook her to quicken her reply.

"I don't know—I don't know. Long time she's gone now." She trailed off into Indian words he could not comprehend, so he pushed past her into the house to see for himself, and without knocking flung Necia's door open and stepped into her chamber. Before he had swept the unfamiliar room with his eyes he knew that she had indeed gone, and gone hurriedly, for the signs of disorder betrayed a reckless haste. Hanging across the back of a chair was what had once been the wondrous dress, Poleon's gift, now a damp and draggled ruin, and on the floor were two sodden satin slippers and a pair of wet silk stockings. He picked up the lace gown and saw that it was torn from shoulder to waist. What insanity had possessed the girl to rip her garment thus?

"She take her 'nother dress; the one I make las' summer," said Alluna, who had followed him in and stood staring as he stared.

"When did she go, Alluna? For God's sake, what does this mean?"

"I don't know! She come and she go, and I don' see her; mebbe three, four hour ago."

"Where's Gale? He'll know. He's gone after her, eh?"

The upward glow of the lantern heightened the young man's pallor, and again the squaw broke into her sad lament.

"John Gale—he's gone away with the knife of my father. I am afraid—I am afraid."

Burrell forced himself to speak calmly. This was no time to let his wits stampede.

"How long ago?"

"Long time."

"Did he come back here just now?"

"No; he went to the jail house, and he would not let me follow. He don' come back no more."

This was confusing, and Meade cried, angrily:

"Why didn't you give the alarm? Why didn't you come to me instead of yelling your lungs out around the house?"

"He told me to wait," she said, simply.

"Go find Poleon, quick."

"He told me to wait," she repeated, stoically, and Burrell knew he was powerless to move her. He saw the image of a great terror in the woman's face. The night suddenly became heavy with the hint of unspeakable things, and he grew fearful, suspecting now that Gale had told him but a part of his story, that all the time he knew Stark's identity, and that his quarry was at hand, ready for the kill; or, if not, he had learned enough while standing behind that partititon. Where was he now? Where was Necia? What part did she play in this? Starks parting words struck Burrell again like a blow. This life-long feud was drawing swiftly to some tragic culmination, and somewhere out in the darkness those two strong, hate-filled men were settling their scores. All at once a fear for the trader's life came upon the young man, and he realized that a great bond held them together. He could not think clearly because of the dread thing that gripped him at thought of Necia. Was he to lose her after all? He gave up trying to think, and fled for Stark's saloon, reasoning that where one was the other must be near, and there would surely be some word of Necia. He burst through the door; a quick glance over the place showed it empty of those he sought, but, spying Poleon Doret, he dragged him outside, inquiring breathlessly:

"Have you seen Gale?"

"No."

"Have you seen Stark? Has he been about?"

"Yes, wan hour, mebbe two hour ago. W'y? What for you ask?"

"There's the devil to pay Those two have come together and Necia is gone."

"Necia gone?" the Canadian jerked

**The combatants were dragged apart . . . "I got you, Bennett!" cried the trader, hoarsely, "your magic is no good."**

out. "W'at you mean by dat? W'ere she's gone to?"

"I don't know. Nobody knows. God! I'm shaking like a leaf."

"Bah! She's feel purty bad! She's go out by herse'f. Dat's all right."

"I tell you something has happened to her; there's hell to pay. I found her clothes at the house torn to ribbons and all muddy and wet."

Poleon cried out at this.

"We've got to find her and Gale, and we haven't a minute to lose. I'm afraid we're too late as it is. I wish it was daylight. Damn the darkness, anyhow! It makes it 10 times harder."

His incoherence alarmed his listener more than his words.

"W'ere have you look?"

"I've been to the house, but Alluna is crazy, and says Gale has gone to kill Stark, as near as I can make out. Both of them were at my quarters tonight, and I'm afraid the squaw is right."

"But w'ere is Necia?"

"We don't know. Maybe Stark has got her."

The Frenchman cursed horribly. "Have you try hees cabane?"

"No."

Without answer the Frenchman darted away, and the lieutenant sped after him through the deserted rows of log houses.

"Ha! Dere's light," snarled Doret, over his shoulder, as they neared their goal.

"Be careful," panted Burrell. "Wait! Don't knock." He forced Poleon to pause. "Let's find out who's inside. Remember, we're working blind."

He gripped his companion's arm with fingers of steel, and together they crept up to the door, but even before they had gained it they heard a voice within. It was Stark's. The walls of the house were of moss-chinked logs that deadened every sound, but the door itself was thin, whip-sawed pine boards with ample cracks at top and bottom, and, the room being of small dimensions, they heard plainly. The lieutenant leaned forward, then with difficulty smothered an exclamation, for he heard another voice now—the voice of John Gale. The words came to him muffled but distinct, and he raised his hand to knock, when, suddenly arrested, he seized Poleon and forced him to his knees, hissing into his ear:

"Listen! Listen! For God's sake, listen!"

For the first time in his tempestuous life Ben Stark lost the iron composure that had made his name a byword in the west, and at sight of his bitterest enemy seated in the dark of his own house waiting for him he became an ordinary, nervous, frightened man faced by a great peril. It was the utter unexpectedness of the thing that shook him, and before he could regain his balance Gale spoke:

"I've come to settle, Bennett."

"What are you doing here?" the gambler stammered.

"I was up at the soldier's place just now and heard you. I didn't want any interruptions, so I came here where we can be alone." He paused, and, when Stark made no answer, continued, "Well, let's get at it." But still the other made no move. "You've had all the best of it for 20 years," Gale went on, in his level voice, "but tonight I get even. By God! I've lived for this."

"That shot in Lee's cabin?" recalled Stark, with the light of a new understanding. "You knew me then?"

"Yes."

Stark took a deep breath. 'What a damned fool I've been!"

"Your devil's magic saved you that time, but it won't stop this." The trader rose slowly with the knife in his hand.

"You'll hang for this!" said the gambler, unsteadily, at which Gale's face blazed.

"Ha!" exclaimed the trader, exultingly, "you can feel it in your guts already, eh?"

With an effort Stark began to assemble his wits as the trader continued:

"You saddled your dirty work on me, Ben Stark, and I've carried it for 15 years; but tonight I put you out the way you put her out. An eye for an eye!"

"I didn't kill her," said the man.

"Don't lie. This isn't a grand jury. We're all alone."

"I didn't kill her."

"So? The yellow is showing up at last. I knew you were a coward, but I didn't think you'd be afraid to own it to yourself. That thing must have lived with you."

"Look here," said Stark, curiously, "do you really think I killed Merridy?"

"I know it. A man who would strike a woman would kill her—if he had the nerve."

Stark had now mastered himself, and smiled.

"My hate worked better than I thought. Well, well, that made it hard for you, didn't it?" he chuckled. "I supposed, of course, you knew——"

"Knew?" Gale's face showed emotion for the first time. "Knew what—?" His hands were quivering slightly.

"She killed herself."

"So help you God?"

"So help me God."

There was a long pause.

"Why?"

"Say, it's kind of funny our standing here talking about that thing, isn't it? Well, if you want to know, I came home early that night—I guess you hadn't been gone two hours—and the surprise did it, more than anything else, I suppose—she hadn't prepared a story. I got suspicious, named you at random, and hit the nail on the head. She broke down, thought I knew more than I did, and—and then there was hell to pay."

"Go on."

"I suppose I talked bad and made threats—I was crazy over you—till she must have thought I meant to kill her, but I didn't. No. I never was quite that bad. Anyhow, she did it herself."

Gale's face was like chalk, and his voice sounded thin and dry as he said:

"You beat her, that's why she did it."

Stark made no answer.

"The papers said the room showed a struggle."

When the other still kept silent Gale insisted:

"Didn't you?"

At this Stark flamed up defiantly.

"Well, I guess I had cause enough. No woman except her was ever untrue to me—wife or sweetheart."

"You didn't really think——?"

"Think hell! I thought so then, and I think so now. She denied it, but—"

"And you knew her so well, too. I guess you've had some bad nights yourself, Bennett, with that always on your mind."

"I swore I'd have you——"

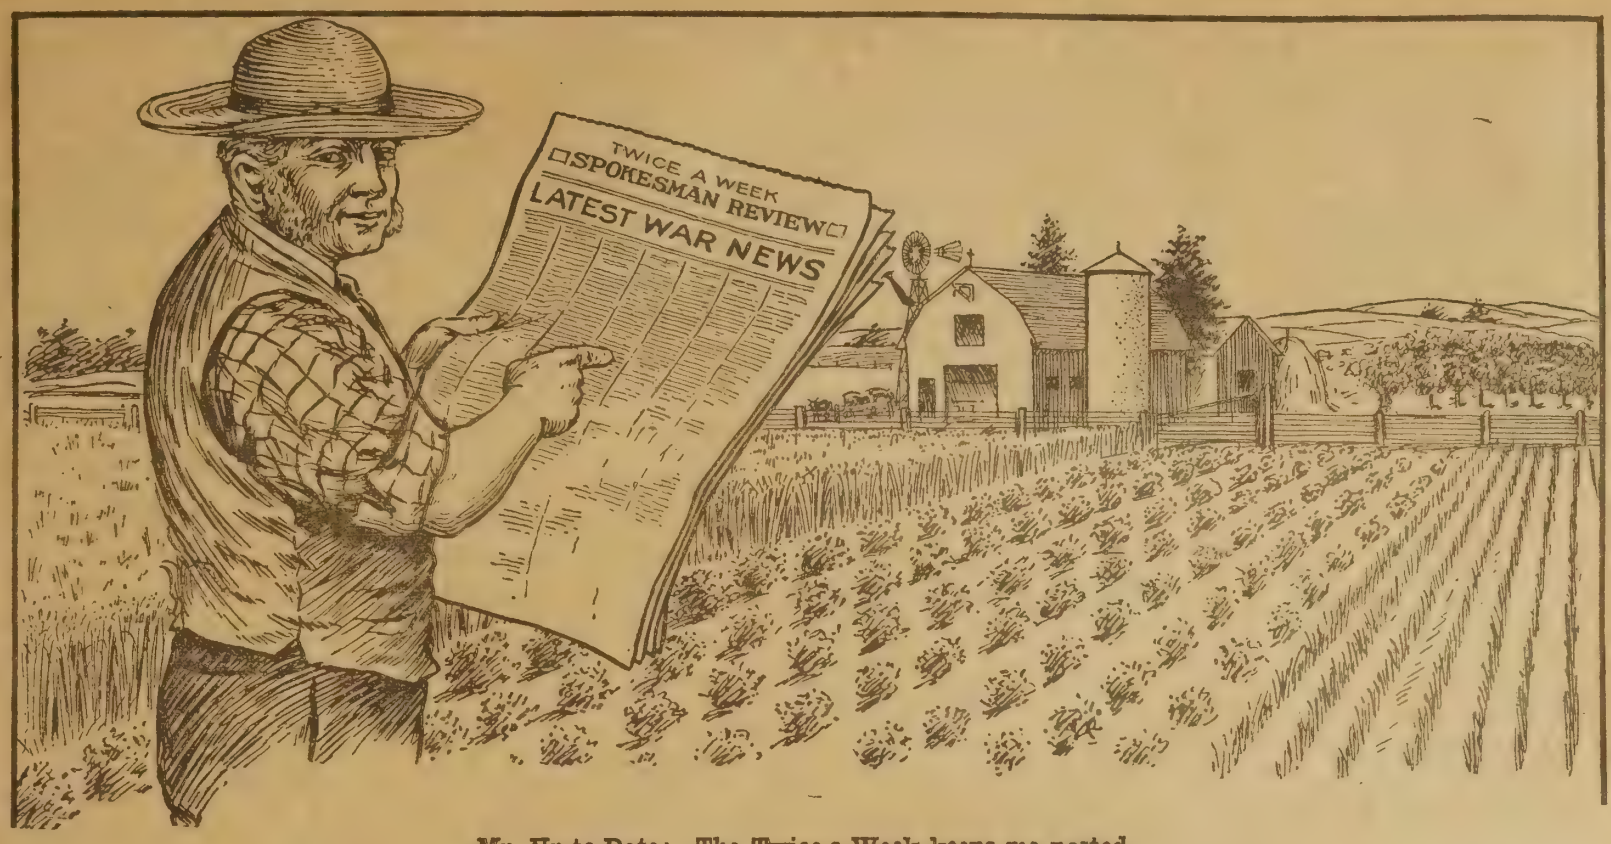
"—and so you put her blood on my head, and made me an outlaw." After an instant: "Why did you tell me this, anyhow?"

"It's our last talk, and I wanted you to know how well my hate worked."

"Well, I guess that's all," said Gale. So far they had watched each other with unwavering, unblinking eyes, straining at the leash and taut in every nerve. Now, however, the trader's fingers tightened on the knife handle and his knuckles whitened with the grip, at which Stark's right hand swept to his waist, and simultaneously Gale lunged across the table. His blade flickered in the light, and the gun spoke, once—twice—again and again. A cry arose outside the cabin, then some heavy thing crashed in through the door, bringing light with it, for with his first leap Gale had carried the lamp and table with him, and the two had clenched in the dark.

Burrell had waited an instant too long, for the men's voices had held so steady, their words had been so vital, that the finish found him unprepared, but, thrusting the lantern into Poleon's hand, he had backed off a pace and hurled himself at the door. He had learned the knack of bunching his weight in football days, and the barrier burst and splintered before him. He fell to his knees inside, and an instant later found himself wrestling for his life between two raging beasts. The Lieutenant knew Doret must have entered, too, though he could not see him, for the lantern shed a sickly gloom over the chaos. He was locked desperately with John Gale, who flung him about and handled him like a child, fighting like an old gray wolf, hoary with years and terrible in his rage. Burrell had never been so battered and harried and torn; only for the lantern's light Gale would doubtless have sheathed his weapon in his new assailant, but the more fiercely the trader struggled, the more tenaciously the soldier clung. As it was, Gale carried the Lieutenant with him and struck over his head at Stark.

Poleon had leaped into the room at Burrell's heels, to receive the impact of a heavy body hurled backward into his arms as if by some irresistible force. He seized it and bore it away from the thing that pressed after and bore down upon it with the ferocity of a wild beast. He saw Gale reach over the Lieutenant's head and swing his arm, saw the knife blade bury itself in what he held, then saw it rip away, and felt a hot stream spurt into his face. So closely was the Canadian entangled with Stark that he fancied for an instant the weapon had wounded both of them, for the trader has aimed at his enemy's neck where it joined the shoulder, but, hampered by the soldier, his blow went astray about four inches. Doret glimpsed Burrell rising from his knees, his arms about the trader's waist, and the next instant the combatants were dragged apart.



The Lieutenant wrenched the dripping blade from Gale's hand; it no longer gleamed, but was warm and slippery in his fingers. Poleon held Stark's gun, which was empty and smoking.

The fight had not lasted a minute, and yet what terrible havoc had been wrought! The gambler was drenched with his own blood, which gushed from him, black in the yellow flicker, and so plentifully that the Frenchman was befouled with it, while Gale, too, was horribly stained, but whether from his own or his enemy's veins it was hard to tell. The trader paid no heed to himself nor to the intruders, allowing Burrell to push him back against the wall, the breath wheezing in and out of his lungs, his eyes fastened on Stark.

"I got you, Bennett!" he cried, hoarsely. "Your magic is no good." His teeth showed through his grizzled muzzle like the fangs of some wild animal.

Bennett, or Stark, as the others knew him, lunged about with his captor, trying to get at his enemy, and crying curses on them all, but he was like a child in Poleon's arms. Gradually he weakened, and suddenly resistance died out of him.

Mr. Up-to-Date: The Twice-a-Week keeps me posted.

# A REMARKABLE CLUBBING OFFER

## Twice-a-Week Spokesman-Review, 1 Year The Washington Farmer 3 Years, Both for $1.00

**These are days of high and rapidly rising costs in the publishing business. Clubbing offers are rare. This fact makes the clubbing proposition of The Twice-a-Week Spokesman-Review with your state farm paper especially noteworthy. Our advice is not to delay but to accept this liberal offer at once.**

If you subscribe for The Twice-a-Week in any other way it will cost you $1 per year. That is the regular established subscription price of this semi-weekly newspaper.

The Twice-a-Week Spokesman-Review is issued every Tuesday and Friday.

It brings you a complete, condensed and thoroughly reliable review of local, state, national and international news.

The Twice-a-Week Spokesman-Review has a big and efficient body of correspondents covering the entire Pacific Northwest. It also gives you the reports of the Associated Press, the greatest news gathering organization in the world.

The Twice-a-Week Spokesman-Review will keep you posted regarding the war.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In times like these you surely need a complete and thoroughly reliable newspaper. The Twice-a-Week Spokesman-Review fills the bill.

Noteworthy events are taking place every week. Keep up with the march of events by sending in your dollar for the Twice-a-Week Spokesman-Review and your state farm paper.

**IF YOUR NEIGHBORS DON'T KNOW ABOUT THIS OFFER PLEASE TELL THEM WHAT THEY CAN GET FOR $1.**

**The Washington Farmer**
***Spokane, Wash.***

## ORDER BLANK

Jan 17.

**THE WASHINGTON FARMER, Spokane, Washington.**

Gentlemen:

I desire to take advantage of your special clubbing offer. Enclosed is $1 in full payment for one year's subscription to The Twice-a-Week Spokesman-Review and three years' subscription to THE WASHINGTON FARMER.

Name .....

R.F. D. ..... State .....

# Searching Survey of Milk Problem

## *New York Mayor's Committee Finds No Easy Royal Road to Solution*

After a searching survey of the milk problem the mayor's committee of New York has made its report. It finds that milk prices there have increased 55 per cent since June, 1914, and there has been a corresponding increase in other cities throughout the country. As a result of high prices thousands of poor families have had to cut down their supply and the city's consumption has fallen off 30 per cent within a year.

We turn now to the suggested remedies, and as the Farmer has often said, there is no easy royal road to a solution of the problem.

**For the farmers the committee recommends: Elimination of slacker cows whose milk production is small; breeding from heavy milkers; collective hauling to shipping stations, and collective buying of grain.**

**For cheapter distribution, these recommendations are made: Daylight delivery between 7 a. m. and 2 p. m., which would increase sales, insure better collections, decrease thefts, eliminate waste of lost bottles; increased retail business through grocery stores, which, it is said, will decrease the cost of sale on each quart 1 or 2 cents; reduction of milk wagon routes through centralization.**

Investigations by the federal committee are leading to the same gate. At Boston the other day the United States commission was told by witnesses that lack of cooperation among farmers, the keeping of unprofitable cows and extravagant methods of distribution by middlemen were causes of the high cost of milk.

One witness quoted statistics showing that the milk production of the country averaged five quarts a day per cow, while experience shows, according to his figures, that it is to obtain cattle that will produce an average of at least 8 1-2 cents a day.

Expensive methods of distribution were pointed out by Mrs. William A. Lowell Putnam. She said it was no unusual thing for 15 milk dealers to deliver milk in one large apartment house, some of the distributors climbing four flights of stairs to leave one quart.

Producers are slow to cut out their low-production cows, and in one way it is well that this remedy is not carried to quick excess, for the sudden elimination of all the poor milkers in the country would mean a ruinous falling off in the milk supply. Yet it is a remedy not to be ignored, and there is no probability that it will be carried to excess.

Some betterment may be expected from the application of the foregoing reforms, but it is futile for consumers to expect a return to the low prices of three or four years ago. Prices were fundamentally too low even on the old basis of feed prices and wages. The industry was really maintained on a losing foundation, and was only kept going by the dairy farmer and his family working long hours for outrageously low pay.

Now the high prices of feed and all kinds of supplies and the higher wages that farmers must pay for help, are factors that can not be brushed aside, and factors that seem with us for many years to come. So far as expectations of the old time low prices are concerned, there is no solution to the milk "problem."

At its hearing in New York the federal commission refused to go into the question of past profits of the distributors. Its counsel contended that it was necessary for the commision to make an early report, and that it would be futile to extend the investigation to any such field, as the purpose of the inquiry was to deal with present prices and costs of producing and distributing milk, and not with profits of the past.

This argument prevailed with the commission, but we think it was fallicious and that the commission would have gained new light by taking up that line.

The request came from Edward K. Baird, counsel for the consumers' organization, who said he was prepared to substantiate the following figures:

"The Borden Condensed Milk company was incorporated in New Jersey April 24, 1899. It took over the business of the New York Condensed Milk company. It was capitalized at $20,000,000. Of this amount of stock, $15,428,408 was issued for good will, patents and trademarks. In addition, the amount of $4,070,751 was paid for the assets of the New York Condensed Milk company. Stock of the company of a par value of $100 per share was sold for $25 per share.

"The common stock has paid from 1902 to 1917, a period of 15 years, over 130 per cent in dividends. In a period of 17 years the preferred stock has paid over 100 per cent in dividends. In other words, the company has distributed to its stockholders a sum in excess of $32,000,000.

"The Sheffield Farms, Slawson-Decke & company was incorporated in 1902. It was a consolidation of four existing companies. We claim and are prepared to prove by competent evidence that for one period of which we know the net earnings of this company, after deducting all charges and expenses of every kind and nature, were over 120 per cent on the amount originally invested in the company."

From facts that have come into the possession of the Farmer it is obvious that if Mr. Hoover could unlock the storage vaults and force a distribution of the overstocked cheese supply of the country a big benefit would be conferred on the American people and our allies.

The government report as of December 1 gave the total holdings in 466 storages as 80,081,360 pounds. In 414 storages that reported on December 1 both this year and last the total holdings were 71,173,170 pounds, as compared with 37,079,632 pounds last year, or an increase of 91.9 per cent. It is pointed out, however, that it would be perfectly proper to compare the total of the 414 storages last year with the 466 storages this year, as there was so much more cheese to be stored that it required additional storage room; hence, it is safe to say that the total amount of cheese in storage is more than double the supply of last year.

Against this double storage there is known to be a sharp falling off in cheese consumption, due to the high prices that the public must pay. Yet the high prices continue. As a Boston dealer put it:

"The present cheese situation gives a practical illustration of the fallacy that supply and demand form the only panacea in arriving at values during this awful war. Unfettered supply and demand can and do this generally, but the advent of cold storage and colossal combinations of capital make it chimerical in the present situation. Here is a case of the demand being perfectly free and unfettered, while that of supply is made artificial in consequence of this combination.

"However, be this as it may, I think we will have to admit that, if the present enormous stocks of cheese were more equally held by the different interests of the trade throughout the country there would be sufficient holders who would realize that to contend with such excessive quantities at this advanced stage of the season would show bad judgment, so that some of the wise ones would be pressing for a cleanance, and it is quite easy to imagine what would be the result to cheese costing practically 25 cents.

"Work it out as you like, but I still cling to the opinion that the position is strained, yes, badly strained, and nothing but an export demand for at least 500,000 to 750,000 boxes can prevent the lowest prices recorded for the 1917 output."

Authorities in the cheese trade say the meat packers are to blame for these conditions, as they have dipped freely into this line and are said to own the bulk of the present large stocks.

## BEET AND APPLE PULP.

### Feeds Like These Save Wheat.

**By JAMES N. PRICE, Yakima, Wash.**

In the feeding of hogs in the Yakima valley we use less wheat perhaps than almost any other county in the state. This is due to the fact that our hogs are fed largely on alfalfa pasture, with considerable alfalfa hay used in winter. This food is supplemented by the use of cull apples, cull potatoes and other waste fruits and farm by-products. This year a number of farmers are using sugar beets and some had planned to use some beet pulp and molasses.

We have farmers this year who are using apple pulp from the cider factory and cores and peelings from the evaporator for hog feeding and are getting very satisfactory results. We also have a number of silos being filled with apple pomace which will be fed to dairy cattle. We also have a larger production of corn this year than in any previous year since the development of Yakima county. This is coming to be our chief grain for hog feeding and in future years will no doubt furnish the basis of rations for all classes of live stock.

## Trap Nest White Leghorns.

William Hand & Son of Cottage Grove, Ore., trap-nested 116 White Leghorn hens in 1916. They began in June, and, running a full year from the time of starting, the entire number averaged over 191 eggs. For 1917 they have 500 White Leghorns, every one trap-nested. During last August one pen of 130 pullets laid 2155 eggs. One hen last spring laid 35 days without intermission.

They have a good, light poultry house with drop roof and sliding windows in the roof, which allows the hot air in warm weather to escape and thus sets up a cooling draft. The floor is covered with three inches of sand and the hens are kept in at all times.

One of their breeding pens is of hens that laid 170 eggs to 214 eggs in a year, with two cock birds. One special pen of seven hens have records of 240 to 266.

### Will Control Oil.

The government is preparing to take complete control of the oil supply of the United States under the fuel control power of the food administration law.

### Will Control Hemp.

The government is taking over complete control of the purchase and distribution of Manila hemp.

# School Club

## Wide Awake Bossburg Youngsters

Reporting the organization of two industrial clubs at the Bossburg school in the spring of last year, Principal V. I. Tucker said: "We thing the club should be not merely a pastime for the children, but a medium through which they will acquire the habits of industry and thrift and learn to do things in a business-like manner." Now the Farmer is glad to receive from Mr. Tucker the following report which shows that the clubs have indeed been something more than pastimes for children, no matter how much the pupils have enjoyed their work:

To the Editor of The Washington Farmer: Last year we organized a poultry and vegetable club with an enrolment of 14. Four of them moved away for the summer and one withdrew.

The remaining nine stayed with the work and made their annual reports showing the following record:

Profit of nine by club work, $76.30; earned at home, $50; earned away from home, $345; total earnings, $471.30.

This profit is net. Each member figured his time at 10 cents per hour.

We are enthusiastic about the work and expect to organize soon for next year. We estimate that we shall have about 20 members in our new club.

Your paper is doing a good work in showing the people the value of club work and thereby helping to keep the boys and girls on the farm. I think there is too much of the attitude of "the boy's colt and dad's horse." Let the boy have something for his very own and he will have no desire to leave the farm.

V. I. TUCKER.

Bossburg, Wash.

# Facts and Figures on Apple Growing

(Continued from page twenty-three.)

rious methods of cultivation are carefully tabulated, such as clean culture, mulch crop, cultivation with various instruments such as the plow, the cultivator, the harrow, the drag, etc., but I have given the final estimate of all averages.

### Cost of Irrigation.

In Wenatchee for orchards under clean cultivation the cost was $8.59; for orchards in mulch crops $8.92; average $8.75. This does not include the cost of water, which the writers did not give, and varies greatly under the different systems, in some cases ranging as low as 25 cents per acre under the old ditches, and as high as $8 under certain pumping plants in the state of Washington. In Hood River the duty of water is given as $1.25 to $2.50 per acre, while the labor cost is $3.25. In Colorado the duty of water ranges from a mere nominal cost under some of the old ditches near the river to a very high price, not given, under a pumping plant. The labor cost is figured at $3.44 per acre.

### Thinning.

In Wenatchee the cost of thinning was estimated at $13.32 per acre, in Hood River $5.54, in Colorado $4.43. This difference is largely on account of the difference in varieties grown in the different sections. For instance, in Wenatchee they grow a good many of the heavier bearing varieties, which require more thinning than the Spitzenburg, for which Hood River is noted.

### ProPping.

The cost of propping the trees at Wenatchee is given as $6.36 per acre. This does not include the cost of props, but the hauling out, setting up, and hauling back from the orchard. In Hood River this work is reckoned at $5.65 per acre, while in Colorado it is estimated at practically nothing. The writers say "so few growers of western Colorado practice propping that this operation need not be discussed here as an orchard operation."

### Picking.

In Wenatchee the picking cost is reckoned as $0.0503 per packed box, or $29.727 per acre. In the Hood River valley the cost is $0.0569 per packed box, or $18.49 per acre. Picking is generally paid for by the day and the average picker will pick from 50 to 80 loose boxes, owing to conditions, and when the conditions are averaged it will amount to 74.6 loose boxes, or 49.73 packed boxes.

### Summary of Other Costs.

To carry out the costs in detail as I have been doing would make this article too long; I will therefore summarize as follows:

Cost of hauling boxes to the orchard and back from the orchard to packing house, one cent per box.

Cost of hauling box shooks, .83 per acre or .0037 per box.

Making boxes, one cent each.

Sorting for those who use a sizer, is .032 per packed box, while for those who do not use sizer it is .046 per packed box. Often four sorters are necessary to keep three packers going. This is especially true where sizers are not used.

Packing costs from .04 to .05, depending upon whether graders are used and upon the condition of the fruit. The average packer will put up 77 boxes in 10 hours.

Nailing and stamping will cost one cent a box.

Paper will cost two to four cents per box.

Box shooks have ordinarily been bought for 10 cents per box, and this is the price given in the report, but this year it looks as if they would cost one-third more.

The foreman in the orchard will cost $2.50 per acre, and the foreman in the packing house will cost $3 to $3.50 per day.

Hauling to town will cost from one to three cents per box, depending on the distance, and in a few cases more than three cents.

There are other items that vary with circumstances, such as hauling of manure, cost of nails, labels, gasoline, etc., but the money received for culls, above the cost of handling them should pay for these items.

### Conclusions.

From a study of these reports I conclude that unless circumstances change to make it easier to grow good commercial fruit, and to give better average prices, that the average man and the man below average, will go out of the orchard business and leave the work of producing the best commercial varieties for the best markets to the men who are above the average. This means that the orchardist of the future will be more than an average man, unless the I. W. W. succed with their philosophy, and then the level of efficiency will be brought down to the standard of the men who will not spray, who will not study to succeed, who are careless, indolent, lazy, indiffered and dontcarative. If we could make conditions so that this class could succeed, then the best class would, of course, coin money. But in that case society would be evolving backward. The aim should be not to bring society in general down to the level of the failures, but to bring it up to the standard of the most successful.

I still believe that for the man who is an efficient orchardist and who intends to stay with the business, that this is the time to buy orchards. Am I right?

GRANVILLE LOWTHER.

# Alfalfa as a Fertilizer for Wheat Land

The value of alfalfa and clover to wheat growers of the Pacific northwest was Senator R. C. McCroskey's theme at the recent meeting of the Washington wheat convention at the State College of Washington. Senator McCroskey, whose devotion and success in the production of this "most valued of all war crops" for the last quarter of a century has earned him the title "The Wheat King of the Palouse," gave point to his discussion by calling for testimonials from other wheat kings who, in recent years, have caught the drift of wheat farming and availed themselves of inter-wheat crops of alfalfa and clover. This testimony was introduced before the wheat convention in the form of letters, which are here quoted.

Max Hinrichs of Pullman, better known for his production of high-quality alfalfa and grass seed, gave the following letter on his experience on producing wheat following his crops of alfalfa

**Alfalfa Soil.**

"Six years ago this fall I plowed about 60 acres of alfalfa soil (part of which had been pastured for a number of years, while the remainder had been cut for hay or seed for five seasons), and planted 15 acres to bluestem wheat and the remainder to oats. This grain grew exceptionally well. The wheat yielded 30 bushels and the oats 72 bushels per acre. This same land was cropped with oats the next two years, yielding around 75 bushels to an acre. The fourth year 25 acres were put to bluestem wheat. It yielded 40 bushels per acre. Another six-acre piece that was broke out one year later, but seeded to wheat the same time as the 25-acre field, yielded about 360 bushels of extra fine bluesteam. The remainder of the 60 acres was again in oats, and gave a very good yield, but showed a lot of wild oats. The renter claimed it made above 60 bushels per acre.

"This year (1917) all of the land was again plowed and seesed to bluestem, and gave around 22 bushels per acre. This makes five consecutive crops on most of the land and four on part of it. This year (1917) the grain grew quite rank, more so than any in the neighborhood, and compared very favorably with wheat seeded on summer fallowed land. The wild oats did not show much, but the last season was not very favorable for them.

"As far as available plant food is concerned, I believe there is still plenty in this field to produce another good crop; but it needs a good summer fallowing to get rid of the wild oats.

"Three years ago we plowed up 120 acres of 4-year-old alfalfa sod, mostly in the spring, and seeded the ground to oats. Around July 1 this was the richest large field of oats that I have ever seen, but the very hot weather in July burned it badly, and it yielded only 45 bushels of oats per acre.

"That fall we plowed this 120-acre field again, and seeded it to wheat. This was a mistake, as the wheat did not come up very well, and winter killed in spots besides. It yields 24 bushells to the acre. This year (1917) we spring plowed the 120-acre field, and planted it to barley, which yielded 1780 bags, or, close to 15 bags to the acre. This field is still very rich and will produce at least two more good crops.

"These two fields represent about the average of my experience in raising grain on alfalfa land. Both show that there is abundance of available plant food for a good many crops, but the biggest difficulty is the wild oats and other weeds that will bother after three crops. To obviate this difficulty we cut a 30-acre piece of Bluestem for hay (the third crop), and in the next two years grew a 40-bushel crop of Red Russian and a 15-sack crop of barley.

"All the clover sod that I have plowed up I have either planted to potatoes or corn. Both have done finely. So did the oats I grew after the potatoes and corn. With the oats I seeded some grass seed, and grew some very large crops of grass seed for two and three years. I credit the preceding crop of clover with a good deal of the success I had with the grass seed."

**Three to Five Bushels More.**

Senator McCroskey introduced as evidence in behalf of alfalfa between wheat, the following letter from Lester Daily, of Palouse, Wash.:

"In 1905 I seeded eight acres to alfalfa and used this eight-acre field for pasture and hay with good results. In the spring of 1910 I plowed it up and removed the fence, and this eight-acre field became a part of an 80-acre field.

"In 1910 the crop on this 80-acre field was very light because it was caught by the hot weather. In 1911 it was fine. I did not thresh the eight-acre alfalfa land separately, but I think that it yielded at least 10 bushels per acre more than the balance of the 80 of which it was a part.

"I have summer-fallowed this eight-acre piece only once since plowing it up in 1910, and have had it in peas one year.

"Last year I cut it for wheat hay, and you could see that the old alfalfa land produced a much better growth of hay than did the rest of the field.

"One year I let the 80 mature and threshed it. I think that the alfalfa soil yielded from three to five bushels more than the rest of the field.

"In 1915 I plowed up a 33-acre field of alfalfa sod that I seeded in 1909, and seeded it to California Glory wheat in the spring of 1916, receiving a yield of 35 bushels per acre. That being a very wet year, the field was struck with the rust, so I think the yield was cut down several bushels.

"The spring of 1917 I re-seeded to Marquis wheat, and received a yield of 20 bushels per acre, which was as much as some of my neighbors from their summerfallowed land. I am a firm believer in alfalfa as a fertilizer for wheat land, and if it had not been for the war prices of wheat, would have seeded half my land to alfalfa.

LESTER DAILY.

"Palouse, Wash."

**Continuous Cropping.**

Another letter introduced by Senator McCroskey, was from George Severance, head of the agricultural department of the state college, and covered the experience on the state farm, with alfalfa, clover, wheat and soil productivity in general, since 1894:

"Probably the best example of the improvement brought about by the growing of clover is shown in our field 2, which is the 15-acre tract that I have often spoken of as having been cropped continuously since 1894, yet producing greater yields during late years than during the nineties.

"Clover was grown on this tract during the seasons of 1907 and 1908, and was plowed up during the fall of 1909. We used the field for corn in 1910. In 1911, the wheat on this tract yielded 41.7 bushels per acre; in 1912 peas yielded 40 bushels per acre; in 1913, wheat yielded 46.1 bushels per acre; and in 1914, oats yielded 76.3 bushels per acre. In 1915 the whole tract was manured, so that the later records would be unfair as showing the fertilizing effect of the clover.

"In 1909 a tract of wheat on the comparatively high elevation on the northwest corner of the farm yielded 44 bushels per acre. This wheat was seeded early in November on corn stubble, the corn having been grown on clover sod plowed under. The wheat barely came up in the fall, and looked very thin and unpromising in the early spring. As soon as the warm weather came on, and the wheat became fairly well rooted, it began to show the effects of the clover by the rank growth and rich, dark green color of the foliage. It stooled tremendously and proved a great surprise to those who saw it early in the spring.

"In 1914, 14 acres of winter barley seeded on corn stubble after clover, yielded 85 bushels per acre. The growth of barley showed plainly the invigorating effect of the clover.

"In the small field between the cattle barn and the horse barn, a number of plots have been used to test the value of various rotations in maintaining yields without summer-fallow. Practically all these rotations, of course, include wheat.

"On another plot where a six-year rotation is practiced clover is followed by corn with wheat seeded in the corn stubble. In this plot, wheat yielded in 1907, 50.85 bushels per acre, and in 1914 4.12 tons of hay per acre, all the wheat produced in this field being cut for hay that season on account of smut.

"In another series, wheat following corn in a four-year rotation, yielded in 1906, 33.55 bushels per acre; in 1910, 40.7 bushels per acre, and in 1915, 45.92 bushels per acre."

# Stockmen Survey Situation

## *Let Not Any Fail to Do More Than His Share*

The address of President I. T. Pryor of the American National Live Stock association at Salt Lake City, Utah, Monday of this week, closed with this paragraph:

"Never was our industry confronted with more perplexing propositions. Never was there greater need for wise counsel and united action. We are in the midst of the greatest war in all history. We must maintain inviolate our sacred ideals of civilization. To do this, we must make many bitter sacrifices. Let it not be said of any stockman that he failed to do more than his share."

Reviewing the fact that soon after the war was declared, President Wilson made a strong appeal to farmers and stockmen to increase the production of food supplies and the passing of the two bills by congress—one broadening the duties and responsibilities of the national department of agriculture and the other known as the food administration bill—and the appointment of Herbert C. Hoover as food administrator, President Pryor says in his address:

Food administration is an experiment in this country. The task is gigantic, the interests involved are exceedingly complex, and it would indeed be a miracle if mistakes were not made. However, if all the different interests concerned will patiently and consistently assist, and if the food administration will promptly rectify any mistakes, I feel confident that the food problem can be solved with a minimum of injustice to any one interest, and a maximum of benefit to our nation and to our cause. We should be glad to dedicate our best intelligence and energy to that end, for we know that an unfailing supply of food is the one great essential in winning the war. A widespread discussion of the food question will surely result in a better understanding, by the public and our government, of some of our many difficult problems, and the fundamental economic factors involved. It is only through a thorough knowledge and recognition of these difficulties, coupled with intelligent action, that food administration can be successful.

For more than 60 years the United States has ranked as the largest surplus nation in meat and other food products. Our unrivaled agricultural resources have permitted us to supply the rest of the world with a large share of its needed food. Thus we repaid the debtor balance contracted in the earlier periods of our national life. In the years immediately preceding the present war our exports of meat products were relatively less, but we still retained the leading position.

**Our ability to increase our production need not be doubted, for we have not reached the maximum utilization of our agricultural and live stock possibilities.**

The greatest need of our allies and their civilian population is hog products. For the purpose of increasing our production of hogs, the food administration established, until further notice, a minimum price on hogs. For next season's crop it announced a ratio based on the price of corn. That action was both timely and wise. It should secure the necessary increase in production, and at the same time protect the producer from unforeseen hazards. Although not a money guarantee, producers generally have construed it as such, and any failure of the food administration to make it good would be most unfortunate. The purchase of meat supplies for the allies, our army, our navy, the Red Cross, and the Belgian relief has been centralized into one agency, which is operating directly through the meat division of the food administration. With the leverage of these large purchases, there is no reasonable doubt about the ability of our government to maintain its guarantee as to hog prices. The maintenance of reasonable prices on cattle and sheep will be much more difficult.

Another splendid act of the meat division of the food administration was to place all the meat packers under license, fixing their profits and exercising a supervision over their operations. They are now a regulated monopoly.

**This, I believe, will prove a long step in the right direction, provided our government will also see that fair and reasonable prices for live stock are paid by the monopoly which it is regulating. Unless this is done the producer will be worse off than before.**

Farmers and stockmen are not lacking in patriotism; they loyally responded to the call for increased production. All that they ask is that the strong arm of our government protect them from the disasters which may flow from abnormal production, or other causes over which they have no control.

**The food administration can readily ascertain the average reasonable cost of producing the different kinds of live stock, and its plain duty is to exercise all the powers it possesses to see that such prices are paid as will cover that cost, with a reasonable profit.**

A special representative of the Farmer is in attendance at this twenty-first annual convention of the American National Live Stock association at Salt Lake City and his report, which will be given later, will include phases of the live stock industry taken up at the convention of special interest to our own readers.

# County Agents Meet

## Vital Problems Are Discussed

For the purpose of unifying agricultural institutional work in the state and to make plans for the year's work, the county agricultural agents of the state of Washington are holding daily conferences at the state college at Pullman. The convention, which is really a training school for the agents, began Tuesday, January 8, and will continue till Saturday, January 19.

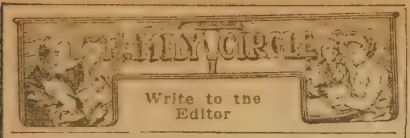
The time is mostly devoted to discussions of different phases of the agents' work and the heads of the different agricultural departments of the state college meet with them at different times and explain their various lines of work and how the county agents may work with them to the best advantage.

The labor and crop survey proposed by the United States department of agriculture is one of the most important subjects under discussion. It is the plan to make a complete survey of the state, in cooperation with the department of agriculture, for the purpose of knowing the actual conditions as they exist. The government is preparing blanks to be filled by every farmer in the country and the county agents will have the assistance of their county organizations, such as the schools, clubs, and it is hoped by the county councils of defense in getting them filled.

It is hoped that the newly appointed emergency home demonstration agents will begin their work within the next two months, and it is planned to have a woman demonstrator in Seattle, Spokane and Tacoma, who will work among the city women and children in an effort to increase production in the city by encouraging them to raise city gardens, keeping poultry, as well as to demonstrate ways of conserving foods, clothing, fuel, time, etc.

"Live Stock on Every Farm" was one of the subjects extensively discussed. It is thought best to have enough to eat up the roughage, but not in such a way as to make it necessary to buy a lot of feed.

George E. Farrell, assistant national club leader, and S. R. Simons, United States department of agriculture specialist in county organization work, were present, the former talking with the county agents, emphasizing club organizations and their relation between club and county agent work, and Mr. Simons discussed the ways and means to organize counties.



Asher Hobson, state director of farm markets, urged the necessity of farmers getting together in groups for marketing their fruits and vegetables and preparing them for market in a uniform way.

E. E. Faville talked on the training of boys to write agricultural stories and agricultural news.

The following are new assistant county agents, having been appointed during the last few weeks: A. J. Seltzer, Thurston county; Albert K. Millay, Okanogan county; A. W. Holland, Yakima county, and W. D. Love, King county. Benton M. Bangs has been appointed agent for Skagit county.

The county agents present at the conference follow, the county being given in each case:

L. M. Lampson, Benton; M. R. Alleman, Clallam; M. J. Newhouse, Clarke; L. S. Keyes, Cowlitz; Henry M. Skidmore, Franklin; William Meikle, assistant, Franklin and Benton; Theodore S. Brown, assistant, Garfield and Columbia; H. W. Reaugh, Grant; C. F. Monroe, Grays Harbor; O. T. McWhorter, Jefferson; Russell M. Turner, Island; F. W. Rader, King; C. B. Sprague, Kitsap; B. W. Cooney, Klickitat; W. A. Holt, Okanogan; G. A. Nelson, Pacific; Robert Cowan, Pend Oreille; C. A. Cole, Pierce; Benton M. Bangs, Skagit; C. C. Farr, Snohomish; J. R. Shinn, Spokane; A. R. Hahner, Stevens; C. H. Bergstrom, Thurston; A. J. Seltzer, assistant, Thurston; A. T. Flagg, Wahkiakum; H. H. Boone, Walla Walla; H. B. Carroll Jr., Whatcom; J. N. Price, Yakima; A. B. Nystrom, Lewis; Roy Larsen, Mason; Albert K. Millay, assistant, Okanogan; O. S. Fletcher, assistant, Spokane; A. W. Holland, assistant, Yakima; W. D. Love, assistant, King.

# Ways to Make Slippers

By Mrs. Sam Hayes.

The old-fashioned beaver cloth jacket is usually considered worthless, owing to its many gores and heavy weight, but if ripped up and cleaned and cut out, will make house slippers for the whole family, an old slipper, sandal or moccasin being used for a pattern, and with shirred ribbon or strips of fur to bind the top, will make very nice ones, and outlast any felt slipper, and soles cut out from the beaver cloth and closely stitched are excellent to use with knitted slipper uppers.

Leggings are also easily made, and are very warm, besides the goods are heavy enough that they will not wrinkle down over the shoes. Stretched brim hats for boys with ear-flaps, look nice if made from the dyed jacket gores, and cuffs added to home-made gloves or mittens prevent snow entering at the wrist. Circles cut from the darker scraps and sewed to gunny sacking makes serviceable rugs.

Discarded leather sofa pillow top or stand covers also make nobby den moccasins, etc. Ladies' old felt hats, dyed or stained, can be made into comfortable sandals, too, and the soft kid from ladies' hightop shoe uppers make excellent baby every-day bootees.

## Dry Apples and Potatoes.

To the Editor: I would strongly advise drying apples that we can spare to send to all places where people are suffering for the want of fruit.

I would still further advise the drying of potatoes at this time. Many people have a surplus of potatoes grown on land that produces good potatoes for fall and early winter, that will not keep longer. Such potaotes could be dried now. Potatoes are plentiful and cheap now, but may not be next year.

I have found this method of drying good. Wash and scrub with a small vegetable brush. Do not peel. Place in steamer and steam until the skins break. Place in oven until dry and thoroughly done. Peel and run through ricer. Place on plates and let dry around the stove. Do not have too thick a layer. Turn and stir when necessary. They will dry in a short time. When dry place in glass fruit jars or similar receptacles. Keep in a dry place.

These can be soaked up in a short time and can be used for the table. They are also especially handy to have for yeast making, particularly at that time when new potatoes are too new and old potatoes too old to make good yeast. MRS. E. MENDENHALL.
Whitney, Wash., Bayview P. O.

### Chicken a la King.

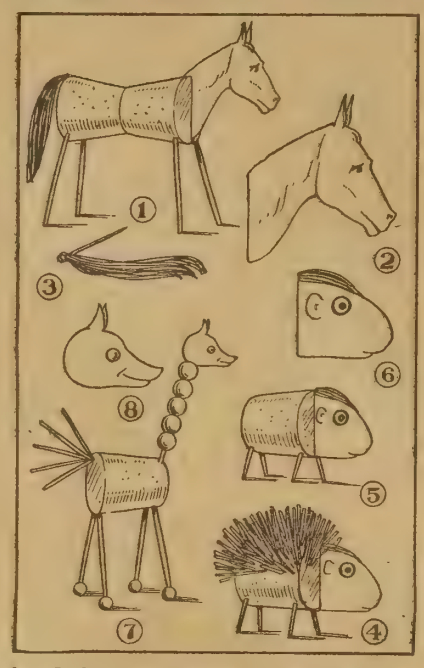
Stew large chicken until tender. Dice the nice parts, add half pound mushrooms and one red and one green pepper, one cup stock and cream together; serve on crisp toast. This will serve six people nicely, and is fine to serve for club refreshments, etc.

### Cultivation of Pea Long Known.

The discovery in Sweden of a loaf of bread made from pea flour in the time of the Vikings has disclosed the fact that peas were cultivated in Europe more than 1000 years ago.

### Cheese Pudding.

Take grated dry cheese or finely cut cheese and use it in alternate layers with crackers or bread, slightly buttered; fill the dish with milk and bake until the milk is absorbed.



Cheaper cuts of meat, well cooked with a fine sauce, are quite as appetzing as the more expensive ones.

# Handicraft For Girls

By Dorothy Perkins.

## Cork Toys.

If you will save the cork from every empty bottle before it is thrown out or disposed of to the ragman, you will soon have enough shapes and sizes to provide an afternoon's fun of toymaking. If you do not want to wait until enough corks have accumulated by this means, you can get what you will need at a drug store.

In addition to corks, you must have some cardboard, some worsted, beads, toothpicks, burnt matches, pins and glue. For cutting the corks use a very sharp knife.

The horse (figure 1) has a body made of two tapered corks, with the small ends glued together. Use the pattern in figure 2 for the head, and glue this in a slot cut across the end of the body. The legs may be toothpicks or matches; glue them into holes in the cork body. The tail is made of several strands of worsted tied to a pin (figure 3), which is stuck into the body.

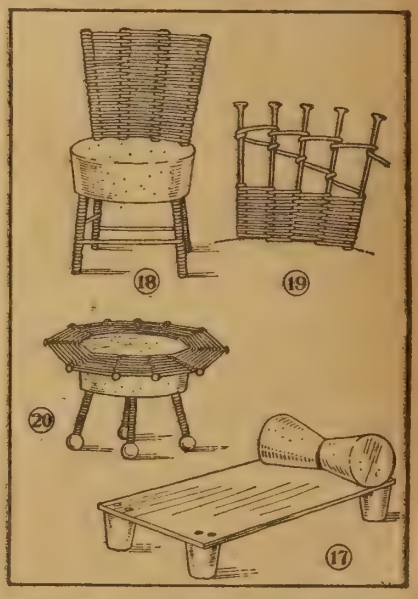
The funny little porcupine (figure 4), has a tapered cork body (figure 5), toothpick legs, a cardboard head (figure 6), and toothpick quills.

Because cork birds and animals are funny creatures at best, it is proper to devise varieties other than those found in zoos. Figure 7 shows a peculiar specimen. Isn't he a dandy with his ornamental neck? Five glass beads strung upon a toothpick form the neck, the cardboard head (figure 8) sticks upon the end of the toothpick neck, and the toothpick legs have beads glued upon their ends.

The duck (figure 9) is one of the many floating toys which can be made. Figure 10 shows the head and neck, figure 11 the tail, and figure 12 the keel fastened to the under side of the body to prevent upsetting. The keel should be of cardboard coated with paraffin.

Figure 13 shows a teeter for your cork animal circus. The strip of cardboard used for the teeter is bent down

at the edges and pinned to the ends of a straight cork (figure 14).



Tapering corks make splendid pots for toy plants for a doll house (figure 15), and plants can be made of paper or pieces of artificial ferns.

If you have never made a cork javelin to toss at a target, you have missed lots of fun. Figure 16 shows how to make one by inserting a needle in the bottom of a tapered cork, and a feather in the top.

Enough cork furniture can be devised to furnish a doll's house completely. Figure 17 shows a bed. This has a cardboard mattress, cork feet, and a pillow of two tapering corks.

You will not deny that the chair in figure 18 has pretty good style. The seat is a pickle-bottle cork; the legs and back are made of long pins wrapped with worsted. Figure 19 shows how to weave the worsted around the pins of the back.

The table in figure 20 was a pickle bottle cork top with pins stuck in its edge all around and interwoven with worsted, and the legs are pins wrapped with worsted, with glass beads glued to the ends.

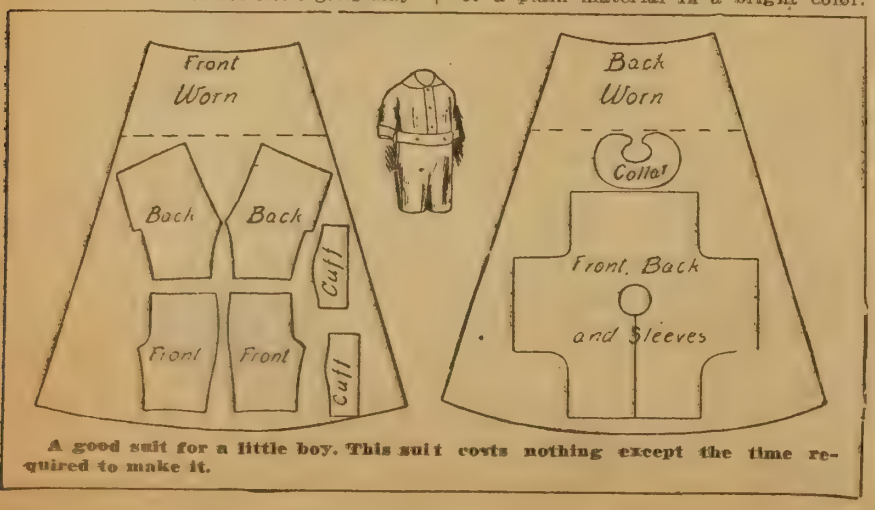
# The Fine Art of "Making Over"



Women's garments are frequently cut down and used for children's clothes. A woolen suit may be altered to fit a girl of 15 to 18 years without much change save a fresh facing for a collar and cuffs. New collar and cuffs often make an old suit look new; there are always leftovers which may be used for this purpose, says Hazel Manning, in a bulletin of the extension service of the college of agriculture, University of Wisconsin.

Coats and dresses for little girls may be made from partly worn skirts. The accompanying illustration gives an idea of how a child's coat or one-piece dress may be cut from a partly-worn five-gored skirt. Another illustration shows how a heavy serge skirt may be made into a whole suit for a little boy.

**A "new" coat—This illustration gives a good idea of how to arrange the pattern when cutting either a one-piece dress or a little coat from a five-gored skirt.**

Just a word here about the dull colors of a woman's suit for a little girl's dress. Be sure and brighten up sister's frock with a touch of gay plaid or a plain material in a bright color.

**A good suit for a little boy. This suit costs nothing except the time required to make it.**

# Community Cooperation

## *Hunting "Bargains" at Home Is Good Policy*

In these days when all of us are asked to be thrifty and saving, one of the first things we think of is to buy less and to save as much as possible on each purchase when we do buy. As a matter of fact, this is a good plan to follow at all times; but there may be a tendency on the part of some of us to carry on our search for "bargains" too far from home.

We don't want to forget that the trade we take away from our own community helps to build up some other community or city from the growth and prosperity of which we do not ourselves get any benefit. If your home town merchants ask you a higher price than you are asked to pay by outside merchants for the same line of goods, it isn't any more than fair to discuss the situation with your home storekeepers, giving them a chance to explain why their prices are higher than those you can buy for elsewhere. There may be some reason that will be worth while learning about,—some difficulty which you can help straightenu out to your advantage as well as their's, if the matter is brought up for frank discussion.

You and your family and your neighbors like to trade at an up-to-date store. If such a store can be made possible by cooperation between you and your neighbors and your local merchants—if a strong, pull-together feeling can be established in your community—then that community will be progressive, will forge ahead towards better streets, better roads, better schools, better places of amusement, better and more influential churches, better social and business advantages for yourself and your young folks. It is this spirit of community cooperation that almost invariably results in good for all concerned if it is kept alive and actively participated in by one and all.

# Patterns

2042—Ladies' apron. Cut in four sizes: Small, medium, large and extra large. It requires 5 1-2 yards of 36-inch material for a medium size. Price 10 cents.

2101—Ladies' waist. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 36-inch material for a 36-inch size. Price 10 cents.

2121—Girls' dress. Cut in three sizes: 12, 14 and 16 years. Size 14 will require 5 1-8 yards of 32-inch material. Price 10 cents.

2154—A pretty summer dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6 yards of 44-inch material for a 38-inch size. The skirt measures about 3 1-8 yards with plaits drawn out. Price 10 cents.

2190—Ladies' one-piece corset cover. Cut in six sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 1 3-8 yards of 36-inch material for a medium size. Price 10 cents.

2331—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 7 yards of 36-inch material. The dress measures about 2 1-2 yards at the foot. Price 10 cents.

2336—Girls' dress with guimpe. Cut in four sizes: 2, 4, 6 and 8 years. Size 6 requires 3 yards of 27-inch material for the dress and 2 1-4 yards for the guimpe. Price 10 cents.

2341—Dress for misses and small women—Cut in three sizes, 16, 18 and 20 years. Size 18 requires four and seven-eighths yards of 44-inch material. The skirt measures about two yards at the foot. Price 10 cents.

**BE SURE TO GIVE NUMBER AND SIZE.**

2344-2343—Ladies' costume. Waist 2344 cut in seven sizes, 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires three and three-quarters yards of 36-inch material. Skirt 2343 is cut in seven sizes, 22, 24, 26, 28, 30, 32 and 34 inches waist measure. The skirt, with tunic portions, requires four and five-eighths yards of 44-inch material for a 24-inch size. It measures about one and seven-eighths yards at the foot. TWO separate patterns, 10 cents FOR EACH pattern.

2346—A simple set of coat and cap. Cut in four sizes, 6 months, 1, 2 and 4 years. Size 2 will require three and three-quarters yards of 27-inch material for the coat and three-quarters of a yard for the cap. Price 10 cents.

2348—Girls' dress. Cut in four sizes, 8, 10, 12 and 14 years. Size 12 requires four yards of 44-inch material. Price 10 cents.

2352—Ladies' sleeping garment. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size 38, or medium, requires six and a half yards of 27-inch material. Price 10 cents.

# Today the Red Cross Needs Your Aid

**Fill out the coupon below and mail it to the Editor of The Washington Farmer, Spokane, Wash. Upon receiving this coupon you will be enrolled as a member of the Patriotic League of The Washington Farmer.**

A limited number of the complete instructions for Red Cross knitters, together with illustrations of the sleeveless sweater, the sock, the knitted helmet, the muffler and the wristlets, published in The Washington Farmer, have been reprinted on a single sheet, and will be furnished to any reader as long as they last, upon receipt of a self-addressed stamped envelope.

I am glad to express my patriotism at this time by pledging myself to render whatever special service I can to my country, and will you tell me especially about Red Cross work and the different ways in which I may be able to aid in that work?

## Ferndale Cow Testing.

The December report of the Ferndale Cow Testing association received from H. B. Carroll Jr., Whatcom county agricultural agent, shows a list of eight cows which produced more than 50 pounds of butterfat. George Steiner has a Holstein cow that gave 2112 pounds of milk, 63.4 pounds of butterfat testing 3 per cent. The second cow in the list was a Guernsey owned by Nels Jacobsen which gave 1083 pounds of milk, produced 57.4 pounds of butter-fat, the milk testing 5.3 per cent. The 11 grade Holstein cows of George Steiner averaged 36.3 pounds of butterfat and was at the head of the herds.

The averages for December show a still further decrease in production as compared to previous months. The change from part pasture onto a straight barn ration, and in some cases a winter ration with no succulence, is mainly responsible for the decrease. Mill feeds have recently declined in price, and no doubt many dairymen who have not been feeding concentrates heretofore will now commence to do so. With a few exceptions, all of the members have sufficient roughage for the remainder of the winter. This, coupled with cheaper mill feeds makes the prospects considerable brighter for carrying the herds through the rest of the winter without diminished production.

THE ORIGINAL CHEMICAL
**Indoor Closet**
30,000 SOLD—FIFTH YEAR
**More Comfortable, Healthful, Convenient**

Eliminates the out-house, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

**ABSOLUTELY ODORLESS**
**Put It Anywhere In The House**

The germs are killed by a chemical process in water in the container. Empty once a month. No more trouble to empty than ashes. Closet absolutely guaranteed. Guarantee on file in the office of this publication. Ask for catalog and price

# Fruit Transportation Is Problem

## *Perishable Nature Increases Necessity of the Solution*

"The fruit industry of the northwest occupies fourth position in the way of tonnage to be shipped over the various transportation lines which serve our different valleys. Lumber is first in the state of Washington, fish second, grain and grain products third, and fruit fourth. As lumber, grain and canned fish products are not of a perishable nature, in my judgment, here a transposition takes place in traffic matters; for, though fruit is fourth in volume of tonnage, it ranks, or should rank, first in importance on account of its extremely perishable nature."

These are significant statements made by J. Curtis Robinson, traffic manager of the Northwestern Fruit Exchange, Seattle, Wash., before the Washington state horticultural convention at Wenatchee recently. Mr. Robinson's address was one of the most searching delivered on any subject at the convention. Relative to the car shortage problem he said:

"Circumstances entirely without the control of growers or shippers have caused serious car shortages during the last two years. This threatens paralysis of the industry unless in some way it can be overcome. This year the carriers, supported by the government's council of defense, insisted on each and every car being heavily loaded in order to overcome the car shortage as far as possible.

"During the last year the carriers threatened to increase the minimum from 30,000 to 35,000 pounds. After several conferences the carriers finally consented not to increase the minimum to 35,000 pounds if shippers would load heavier than 30,000. This action was in the interest of the industry, and should be appreciated by us.

"I think the shippers showed their patriotism in the way they responded to the request of the government for heavier loading.

"If shippers are entitled to a rate of $1 cwt. on a 30,000-pound minimum, then if the same car which previously hauled 30,000 now hauls 850 boxes, or 42,075 pounds, a little more than one and one-third tonnage has been moved by the carrier. The shipper has saved the carrier one car in every three shipped; the shipper saves the carrier the empty westbound haul on that empty car for every third car which is loaded heavier. The shipper saves the carrier the haul eastbound on the tare weight of one car in every three when he loads as heavy as 850 boxes to the car. The carrier charges the shipper $1 per cwt. for hauling 30,000 pounds, or 40,000 pounds to Chicago. On the same basis the shipper saves the carrier the haul on 40,000 pounds westbound and 40,000 pounds east every time the shipper loads heavy.

"I know it costs the carrier more to pull a heavier load, but his overhead and terminal charges, which are a big factor in the rate, are not increased by heavier loading."

The following are seven specific conclusions which Mr. Robinson urged upon the consideration of the orchardists of the northwest:

"First—While I am not yet an advocate of government ownership of railroads, I do think it would be highly desirable if a plan could be worked out something like the pooling of cars which is being done now, so that refrigerator cars might be distributed to the lines that have the perishable product to move at the time they need them most; or,

"Second—Each carrier with fruit traffic tributary to its rails that it knows it will be expected to move should be compelled as a common carrier to be responsible for having sufficient refrigerator cars to move the crops raised annually and not be compelled to resort to the use of box cars. This responsibility is one belonging to the carriers and delegated to them under the law and does not belong to the shipper in any way. Connecting carriers should be compelled by law to return refrigerator cars to owning lines promptly, providing there was not general pooling arrangement. Carriers now claim cars make but one trip annually. They should make two or more.

"Third—Each district should provide sufficient cold and common storage for at least one-half of their output. It should be remembered, however, that storage alone will never save the industry. Fruit must be moved not only when physically fit and ready, but when the dealer who buys it wants it and will pay for it, and not in February or March, if he wants it in November or December.

"Fourth—Carriers should voluntarily adjust their rates in keeping with the increased loading of the shipper in the interests of improving the transportation position of the fruit industry and measuring out justice to the struggling fruit grower.

"Fifth—Instead of carriers undertaking to increase the present rate on fruit, as in the 15 per cent increase case, I think some of their most able men should be assigned to coordinate the carriers' efforts with those of the growers, shipper and agricultural department in working out the problem of safe and speedy transportation. If the carriers are then entitled to a higher freight rate and the industry can stand it they should have it. If the industry does not succeed under such a coordination of effort, then the carrier can not collect either a high or low rate upon it, because it will have perished.

"Sixth—If there is one route to the east which is warmer and just as fast, and with less chance of frost damage than another route, why not concentrate on the use of that route to the exclusion of all others? Why knowingly take the risk and cause the excessive economic waste which could be avoided? Let nonperishables be routed via the lines from which the traffic in perishables has been diverted until tonnage and earnings are equalized.

"Seventh—I believe that a market train service should be established after very careful thought and preparation of details in connection with that kind of service. A fast market train service could be organized which could also take over the present option 2 service which is so unsatisfactory to both carrier and shipper. One of the difficulties to be experienced would be to secure trained messengers with a knowledge of fruit and a knowledge also of transportation. Careful planning could undoubtedly devise a book of instructions to cover most conditions which would be met. Those instructions could be supplemented from time to time as necessity and experience required. There are special banana trains from Mobile, Ala., for the north; live stock trains into live stock centers; orange trains from California; cantaloupe trains from Imperial Valley—why not special apple trains, or market trains from the northwest to the large eastern centers like Chicago and New York? Plans could be worked out by the carriers to take care of cars for markets north or south of the main line of travel so they could be protected better than they are today.

"Last—I plead for a keener interest in transportation problems on the part of growers and owners of these vast orchards in the northwest."

### City and Country Equal.

Statistics from the army camps seem to indicate that the city and country young men are about equal in soldierly qualities.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4661 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

# BIGGER FARM FLOCKS *for* 1918

UNCLE SAM is appealing to producers for a great increase in poultry and egg production. There should be a patriotic response from the whole country, with a consequent demand for good breeding fowls and eggs for hatching—also baby chicks.

If you have good breeding birds, baby chicks or hatching eggs to offer, advertise them in this paper. We predict an unusually active season of buying.

Or if you want to buy breeding stock, chicks or eggs, watch the poultry ads in this paper for offerings of *good* breeds and *good* strains.

Write us for sample ads, rates and free advertising service blanks if you have poultry to sell and want to get in touch cheaply with thousands of possible buyers.

THE WASHINGTON FARMER

Room 37 Review Bldg. Spokane, Wash.

Dear Corner Children: In a recent issue it was suggested that we have a crochet contest, but at this time I think it better to devote all the time we have to the Red Cross and personal work for our soldier and sailor boys. At this time of war we must all have a share in the fight for freedom, not only for ourselves but for the whole world.

Some of our girls have written about what they are doing, and what they say is all very good. There are gun wipers to be made, bandages to be wrapped, those who can knit can help a great deal—make helmets, sleeveless sweaters, mitts, socks, mufflers and such things. If you can not knit, it is very easy to learn; grandmother will show you how.

Some have brothers in the army or navy; some have brothers too young to go to war, and some haven't any brothers. If we haven't a real brother in the service, we might adopt one, work for him, send him comforts and cheer him with letters. There are thousands of young men in the army and navy who have no little brothers and sisters at home to work and wait for them. They should not have to go without the things they need, should they?

A few nights ago I went to a moving picture house and saw the pictures taken "at the front" in France. I could not begin to tell you all about them, for it would take too much space, but there is one thing I want to tell you. I saw soldiers marching forward toward the enemy and close behind came the Red Cross ambulance. The Red Cross is doing a wonderful work; it rescues the wounded, brings them to hospitals, bandages their wounds, gives them doctors and nurses. What could be finer and nobler than that?

The pictures made the war seem very near and real to Aunt Nellie, and she is thinking always of the thousands of Cousins of the Corner, some of whom have fine, manly brothers helping bring peace and safety back to the world, and all of whom are loyal and eager to do what they can.

AUNT NELLIE.

**A Letter From Cheery Cousin Sallie.**

Dear Aunt Nellie: Hello my dear Corner cousins and loving Aunt Nellie. Here's another letter from a squaw girl. It has been a long time since I have written to the Children's Corner as I have been gone since last July 23. I am staying at Fort Spokane hospital. I have the T. B.—tuberculosis. How many of you think T. B. sounds funny? T. B. sounds like tall bone. Well I had eight calves this year. Now I have 24 head of cattle and four saddle horses. One time I sold three steers and it brought me $103. I can hemstitch, embroider, crochet and do all kinds of bead work and sew dresses. I can make light bread, cake and pies and do all kinds of work, but one thing that I can't do is tat, but I am going to learn how. I can play the organ very well. I played the organ for the people at the church. I made some presents for Christmas. If some of the cousins write to me I'll send her or him one. I can make nice candy, too. I used to have six cats and their names were Frenchman, Englishman, Dutchman, America, German and Blackeye. I had better shut up and comb my bushy head. I wish you all a Happy New Year.—Sallie Salina Garry, Fort Spokane hospital, Miles, Wash.

**Marie Writes to Us Again.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 10 years old and my birthday is the 19th of May. I am in the fifth grade. Have I a twin? If so I wish she would write to me. I have a dog, a little kitten and a big cat. My kitten is black and my cat is white. I go to school a mile and a half from home. We have Sunday school in our schoolhouse. There are 27 children in our school. We have eight acres of land and about 80 chickens. I like to read the letters in The Farmer. I have three sisters and one brother. I got a book for Christmas named "Rusty Wren" I hope you had a Merry Christmas and a Happy New Year.—Marie Fountain, Fragaria, Wash.

**Sunset's the Most Beautiful Time.**

Dear Aunt Nellie: It seems like ages since I wrote to you. My subject will be "Sunset." When the sinking sun is setting and its glorious streaks of crimson and yellow are flashing o'er the earth that is the most beautiful part of the day. I like to watch the setting sun over the tree tops, but better still by the rippling water. I love to read books. When you feel tired or angry at something if you sit down and read a good book it all disappears. Some books I have read are "The Trail of the Lonesome Pine," which is very good; "The Shuttle," "The Shepherd of the Hills," "Freckles," "The Crisis," "Angel," "His Evil Eye," "Late Miss Hollingsford," "Grey Knight," "Saint Elmo" and also many others. I would like to correspond with any of the Corner cousins.—Clara Olson, Box 108, Bothell, Wash.

**Writes About Life on the Farm.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. My subject is "On the Farm." I live on a 320-acre farm. It is close to the beach and is very pretty here in the summer. There were over 500 fishing boats in the bay. We have a tractor and a car, five horses, 10 cows and some young stock. We have 14 pigs, 100 turkeys and about 50 chickens. I have two brothers and one sister. My oldest brother is 14 and the other is 12. I am 9 years old and my sister is 7. My birthday is the 27th of May. Have I a twin? If I have I wish she would write to me. We all go to school. Papa takes us in the car when the weather is bad. My teacher's name is Miss Nero. I like her very well. We have three pet kittens. Their names are Muff, Polly and Snookums. We have one dog. I almost forgot to tell you about our sheep. We have about 75 of them. I help mama when I am home. I can wash and wipe dishes, dust, sweep the floor and make the beds. I am in the fifth grade. My Christmas presents were two dolls, a lavalliere, ring, hair ribbon and some handkerchiefs. I wish you and all the cousins a happy New Year.—Alice Elizabeth Govan, R. F. D. 1, Box 30, Friday Harbor, Wash.

**Why Stella Thinks We'll Win.**

Dear Aunt Nellie: This is the first time I ever wrote to the Children's Corner and I like to read the letters very much. They interest me. I am in the fifth grade in school and I will be 12 years old January 20. I weigh 109 pounds. I have one sister and two brothers. My sister's name is Oma. She is three years old. My brothers' names are Leslie and Clyde. Leslie is 10 years old and Clyde is 7 years old. We had a nice program Christmas. My little sister sang that night and she was in some more things. I had a piece to say and a song to sing and was in a scene. We have one dog and his name is Friend and we have two cats. One is black and the other one is gray. We used to have three black cats. Their names were Uncle Sam and Queen and Kaiser. Kaiser and Queen died and that is the reason why I think the United States will beat, for Uncle Sam is still alive. We have one horse that we ride to school. His name is Stogons. He is a fine horse. Have I a twin? If I have I wish they would write to me.—Stella Davis, Fruitland, Wash.

**Gertrude's Cat Doesn't Like the Pup.**

Dear Aunt Nellie: This is the first time I have written to you and I hope it won't be the last. I live on a 120-acre farm. I have a cow and two heifers. The cow's name is Pansy. We have two horses, two pigs and about 35 chickens. I have a little pup and a cat. The cat doesn't like the pup. The cat took his paw once and scratched her eye. Have I a twin? If I have I wish she would write to me. I have to go a mile to school. My teacher's name is Mrs. Waybright. I am 10 years old, but will be 11 the 23d of January. There are 14 scholars in our school. I am in the fourth grade. I am learning how to play the piano. I haven't any brother or sister. I had a fine time Christmas. We had candy and nuts, presents and a big Christmas tree. I hope my letter will be in print.—Gertrude Hough, R. F. D. 1, Greenacres, Wash.

**Winnie Is 11 Years Old Now.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 11 years old. I was 10 the other time I wrote. I am going to school now. I like my teacher fine. Her name is Miss Vivian Horndson. She is going to leave, so we have another teacher. Her name is Miss Margaret McConnell. Ada and Jimmie are the oldest. Ada is 15 and Jimmie 13. Billy, Clara, Elsie and Ruby are the little ones. There are four of us going to school, Ada, Jimmie, Billy and I. We walk three miles to school. We have 15 scholars. I like East Fork fine. I will hope to see my letter in print.—Winnie Papworth, Clayton, Idaho.

**Helen Tells About Vacation.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I hope this will not be the last. My subject is my Christmas vacation. The first day of my vacation I went to Walla Walla with my brother and sister. I stayed a week with my aunts. Santa Claus remembered me well. There was a Christmas tree at my Aunt Nellie's. I had a very nice time in a week's vacation. We did not go to school Monday, but started Wednesday. I was glad to go to school again to see my playmates. I am going to send you my picture sometime.—Helen Schoenberg, Prosser, Wash.

**Ejnoys School This Year.**

Dear Aunt Nellie: I will write again as it is raining and I haven't much to do only the housework, crocheting, embroidery or tatting. I enjoyed Christmas very much. I received a pretty present from one of the cousins. Her name is Mildred Wilhour. I received lots of presents from my friends near where I live. I enjoy school this year. Arthur, my brother, and I do the janitor work in school and go to high school, too. There are two families where I lived with twins. My aunt has one boy and one girl. They are growing fast now, but we didn't think they would live. The other twins are well, but small. They are both boys. I had six pet chicks, but they all died but one.—Dora Dunaway, Glenoma, Wash.

**Millie Has Joined the Corner.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope every member enjoys reading the letters as I do. May I join the Corner? If so, please let me know. I would like to see my letter in print. I have dark brown hair and light blue eyes. I am 9 years old. I am in the fourth grade. I have a little sister 6 years old. Her name is Madeline. She is in the first grade. I have two weeks' vacation. My papa has a Chevrolet car. My mama drives it also.—Millie Rucker, R. F. D. 2, Box 18A, Elma, Wash.

# THE BARRIER

(Continued from page twenty-eight.)

"Come away from here," the Lieutenant ordered Gale.

But the old man did not hear, and gathered himself as if to resume the battle with his bare hands, whereupon the soldier, finding himself shaking like a frightened child, and growing physically weak at what he saw, doubted his ability to prevent the encounter, and repeated his command.

"Come away!" he shouted, but the words sounded foolishly flat and inane.

Then Stark spoke intelligibly for the first time.

"Arrest him! You've got to believe what I told you now, Burrell." He poured forth a stream of unspeakable profanity, smitten by the bitter knowledge of his first and only defeat. "You'll hang, Gaylord! I'll see your neck stretched, damn your heart!" To Poleon he panted, excitedly: "I followed him for fifteen years, Doret. He killed my wife."

"Dat's damn lie!" said the Frenchman.

"No, it isn't. He's under indictment for it back in California. He shot her down in cold blood, then ran off with

John Gale and Stark settle an old score.

my kid. That's her he calls Necia. She's mine. Ain't I right, Lieutenant?"

At this final desperate effort to fix the crime upon his rival, Burrell turned on him with loathing.

"It's no use, Stark. We heard you say she killed herself. We were standing outside the door, both of us, and got it from her own lips."

Until this moment the man had stood on his own feet, but now he began to sag, seeing which, Poleon supported him to the bed, where he sank weakly, collapsing in every joint and muscle.

"It's a job," he snarled. "You put this up, you three, and came here to gang me." An unnatural shudder convulsed him as his wounds bit at him, and then heflared up viciously. "But I'll beat you all. I've got the girl! I've got her!"

"Necia!" cried Burrell, suddenly remembering, for this affray had driven all else from his mind.

Stark crouched on the edge of his bunk—a ghastly, gray, grinning thing! One weapon still remained to him, and he used it.

"Yes, I've got my daughter!"

"Where is she?" demanded the trader, hoarsely. "Where's my girl?"

The gambler chuckled; an agony seized him till he hiccoughed and strangled; then, as the spell passed, he laughed again.

"She's got you in her head, like the mother had, but I'll drive it out; I'll treat her like I did her—"

Gale uttered a terrible cry and moved upon him, but Burrell shouldered the trader aside, himself possessed by a cold fury that intensified his strength tenfold.

"Stop it, Gale! Let me attend to this. I'll make him tell!"

"Oh, will you?" mocked the girl's father.

"Where is she?"

"None of your damned business." Again he was seized with a paroxysm that left him shivering and his lips colorless. The blankets were soaked and soggy with blood, and his feet rested in a red pool.

"Ben Stark," said the tortured lover, "you're a sick man, and you'll be gone in half an hour at this rate. Won't you do one decent thing before you die?"

"Bah! I'm all right."

"I'll get a doctor if you'll tell us where she is. If you don't—I'll—let you die. For God's sake, man, speak up!"

The wounded man strove to rise, but could not, then considered for a moment before he said:

"I sent her away."

"Where?"

"Up-river, on that freighter that left last night. She'll go out by Skagway, and I'll join her later, where I can have her to myself. She's forty miles up-river now, and getting farther every minute—oh, you can't catch her!"

The three men stared at one another blankly.

"Why did she go?" said Gale, dully.

"Because I told her who she was, and who you are, because she thinks you killed her mother; because she was glad to get away." Now that he was grown too weak to inflict violent pain, the man lied malevolently, gloating over what he saw in the trader's face.

"Never mind, old man, I'll bring her back," said Burrell, and laid a comforting hand on Gale's shoulder, for the fact that she was safe, the fact of knowing something relieved him immensely; but Stark's next words plunged him into even blacker horror than the trader felt.

"You won't want her if you catch her. Runnion will see to that."

"Runnion!"

"Yes, I sent him with her."

The lover cried out in anguish, and hid his face in his hands.

"He's wanted her for a long time, so I told him to go ahead—"

None of them noticed Poleon Doret, who, upon this unnatural confession, alone seemed to retain sufficient control to doubt and to reason. He was thinking hard, straightening out certain facts, and trying to square this horrible statement with things he had seen and heard tonight. All of a sudden he uttered a great cry, and bolted out into the darkness unheeded by Gale and Burrell, who stood dazed and distraught with a fear greater than that which was growing in Stark at sight of his wounds.

The gambler looked down at his injuries, opened and closed the fingers of his hand as if to see whether he still maintained control of them, then cried out at the two helpless men:

"Well, are you going to let me bleed to death?"

It brought the soldier out of his trance.

"Why—no, no! We'll get a doctor."

But Gale touched him on the shoulder and said:

"He's too weak to get out. Lock him in and let him die in the dark."

Stark cursed affrightedly, for it is a terrible thing to bleed to death in the dark, and in spite of himself the Lieutenant wavered.

"I can't do that. I promised."

"He told that lie to my girl. He gave her to that hound," said the trader, but Burrell shoved him through the door.

"No! I can't do that." And then to the wounded man he said, "I'll get a doctor, but God have mercy on your soul." He could not trust himself to talk further with this creature, nor be near him any longer, for though he had a slight knowledge of surgery, he would sooner have touched a loathsome serpent than the flesh of this monstrous man.

He pushed Gale ahead of him and the old man went like a driven beast, for his violence had wasted itself, and he was like a person under the spell of a strong drug. At the doctor's door Burrell stopped.

"I never thought to ask you," he said, wearily; "but you must be hurt? He must have wounded you?"

"I reckon he did—I don't know." Then the man's listless voice throbbed out achingly, as he cried in despair: "She believed him, boy! She believed his lies! That's what hurts." Something like a sob caught in his throat, and he staggered, away under the weight of his great bereavement.

(To be continued.)

# News for Breeders

## Oregon Boar Wins at Chicago.

The Pacific northwest has reason to feel proud of the fact that a boar pig bred at Winona ranch, Grants Pass, Ore., was shown in the under 6 months class at the Chicago International and won first place, in the strong competion that show always affords. The pig is by the great boar Laurel Champion and out of Escalon Polly, that was junior champion at the Oregon state fair in 1916. Escalon Polly is a daughter of Grand Leader 2d, that was grand champion at the Panama-Pacific International exposition. The young boar was shown by Mr. Steele, proprietor of Winona ranch, at the Oregon state fair and then shipped to Hamilton farms, Gladstone, N. J. But J. W. Clapp, manager of Hamilton farms, was at Winona when the pig was 3 weeks old and selected him at that time, thus showing rare judgment of Berkshire quality.

Laurel Champion was purchased by Mr. Steele from Silberfa farm four years ago for $750. At that time his best friends thought him foolish to pay so much, but Mr. Steele knew his breeding, his show record and his potency as a sire. The boar has been the prime factor in making Mr. Steele's herd great. A daughter of his was grand champion at the California state fair and the Western Berkshire congress at the Oregon state fair the past fall. The first prize aged boar, that was made grand champion at the Nevada state fair, is his son. The first and second aged sows at that fair were also by Laurel Champion. His son won grand championship at the Northwest Live Stock show at Lewiston, Idaho, and another of his under six months pig won first in class and grand championship at the Pacific International at North Portland. A son of his was grand champion at Spokane.

So that for the season of 1917 Laurel Champion's offspring have won more awards than those of any other Berkshire boar, with the possible exception of Matchless Lee 8th, a noted Kentucky boar, and Mr. Steele feels sure when final returns are checked up that Laurel Champion will be ahead.

H. A.

## Noted Breeder Sells Holdings.

W. F. Howard of Roswell, Idaho, has recently sold his fine farm at that place and has advertised an auction sale of purebred stock, grades and agricultural implements. Mr. Howard has for years been a successful farmer and breeder of purebred stock and has won many prizes in strong competition. He has purchased an attractive acreage property in Caldwell and will occupy the same early in February.

## Three Sow Pigs in Three Litters.

Three registered Poland China gilts farrowed 20 pigs for Frank Needham of Eugene, Ore., with just one sow pig in each litter. Mr. Needham is well satisfied with the number of pigs, but would have liked a few more sows.

H. A.

# A Grand Champion Herd of Poland Chinas

The accompanying photograph shows the grand champion Poland China herd of the Pacific northwest, owned by Howard & Royston, Parma and Payette, Idaho. The big boar, Sammy, still under 2 years old and weighing over 800 pounds, has never failed of championship wherever shown; one or another of the sows has each time won grand championship and, shown as herd, the four have invariably won first place. They were shown at Filer, Boise, Lewiston and North Portland. Each of these gentlemen already had an enviable reputation as a Poland China breeder and, in joining forces the last fall, they were able to put up one of the greatest shows of Poland Chinas ever exhibited in the northwest.

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

| | |
|---|---|
| 10 dose pkge. Single pills | $1.00 |
| 50 dose pkge. Single pills | 4.00 |
| 10 dose pkge. Double Pills | 1.50 |
| 50 dose pkge. Double Pills | 6.00 |
| Cutter's Pill Injector.... | 1.50 |

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago
Eastern Agent

## Live Stock Movement on Increase.

In a recent trip concluded by R. A. Blanchard, agriculturist, Live Stock State bank, North Portland, Ore., through the Willamette valley and southern Oregon, he reported very interesting activity among the farmers at every place. Especially is this apparent in the live stock movement, which seems to be slightly on the increase. Two years ago when hogs were in such disrepute among ranchers there was a wholesale going out of the hog business, but now Mr. Blanchard reports that farmers are gradually stocking up on swine, especially the small farmer, who is attempting to keep just enough to take care of the waste on the farm.

The efforts of the food administration and the department of agriculture seem to have taken firm hold in a great many instances. The bankers generally in this country are encouraging the raising of sheep. Oregon now stands seventh rating in sheep production and while it is impossible to increase the number of sheep in the eastern sections in the range country, western Oregon can easily support one-half again as many sheep, which would bring the state rapidly to the fore in wool production. "Many bankers are encouraging the 'sheep on every farm,' said Mr. Blanchard, and point to the example of Ohio."

## Money In Sheep.

Denby & Stark of Sutherlin, Ore., in August of 1915, purchased 50 ewes and six wethers for $224. They then bought a registered Shropshire ram for $25, or a total of $249. They clipped the sheep in October of 1915 and again in April, 1916. They sold 20 ram lambs and increased the flock by 10 ewe lambs. They paid $100 for pasture rent of 194 acres, and fed about 500 pounds of grain during the winter of 1915. The first of August, 1916, they had the 60 ewes, five wethers and one buck all clear, the wool and lambs sold having paid the entire bill. Is it any wonder that Mr. Stark thinks there is money in a farm flock of sheep?

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

724 Pounds Butter

and 11,076 pounds milk is the record the dam of a bull calf dropped Sept. 1, 1917. The sire, Dominus, is out of an 817-lb. cow and sired by a bull out of an 853-lb. cow. PRICE $125 for quick sale.

J. B. STUMP & SON, Monmouth, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM, Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Golden Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

HENRY STEWART, Prop., Albany, Ore.

Ashwood Farm Jerseys

FOR SALE—BULL CALVES sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.

McARTHUR & STAUFF, Rickreall, Ore.

Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.

ROUTE 7, SPOKANE, WASH.

Mellow Lawn Jerseys

are promising to make a year's herd average of 700 lbs. butter, including every head from two to sixteen years old. Since June, 1916, none went under 612 lbs. butter. Junior champion bull calf at Oregon state fair, 1917, is our oldest male left for sale. Sired by our herd bull, Gertie's Poppy's St. Mawes.

F. A. DOERFLER, Silverton, Ore

ASHBURN FARM

Register of Merit Jerseys

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON, Shedd, Ore.

Oak Ridge Jersey Farm

Register of Merit Cattle

Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address

RILEY E. HULBURT, Albany, Ore.

914 Pounds of Butter

This is the official record for a year of the dam of a choice bull calf by Rosaire Olga Lad, sire of 29 tested daughters. He and others priced according to quality.

ED CARY, P. O., Carlton, Ore.
Station, LaFayette, Ore.

ANNUAL SALE OF PURE BRED SHORTHORNS

*Spokane, Wash., Feb. 23*
*Portland, Ore., Feb. 25*

Consignors announced later. For particulars and catalogs write now to

F. M. ROTHROCK *or* FRANK BROWN
Spokane, Wash. Carlton, Ore.

Spokane sale will be held during Northwest Live Stock Conference, Spokane, Feb. 21, 22 and 23.

WASHINGTON HOLSTEINS

Splendid Foundation Stock

We will sell twenty splendid heifers, granddaughters of King of the Pontiacs, from A. R. O. dams with semi-official yearly records up to 598 lbs. for junior two years, 670 lbs. for junior three years and 813 lbs. for mature cows, which records were made in practical dairy condition. These heifers range in age from 5 months to 29 months. Those of proper age have been bred to a 33-lb. bull. They are from fine, large cows and should be heavy producers. The oldest are due to freshen in February.

A substantial discount will be made on a sale of all of the animals to one customer.

THE GREENBANK FARM 800 Leary Bldg., Seattle, Wash.

## HOLSTEIN CATTLE

### 365-Day Holsteins

24,667 lbs. milk—1026 lbs. butter—is the A. R. O. advanced registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.

WESTERNWOLD RANCH.
Prineville, Ore.

### Registered Holsteins

Young calves, born last July and later; also 1 30-lb. bull, ready for service, whose sire, dam and sire's dam have all been grand champions at one or more state fairs, and full brother to his sire and full sister junior champions at a state fair. Here is production and type we hear so much about. Could also spare a few cows.

H. R. BOOMER, New Plymouth, Idaho.

### World's Record Holsteins

Herd headed by Ononis Cornucopia Johanna Newman, the best bred son of the world's record cow, Margie Newman, with more 100-lb. records in his pedigree than any other bull in the world.

Home of the world's champion junior 2-year-old and junior 3-year-old producers. Write for records and prices on young bulls.

CHAS. ELDRIDGE, Chimacum, Wash.

### LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1030.32 lbs.; milk, 24,380.3.

J. H. HULBERT, Mt. Vernon, Wash.

### Record Holsteins

Young bulls, some of them ready for service, by a sire whose 5 nearest dams average 26.17 pounds butter, or another with 29.67-pound dam, and out of high-record A. R. O. dams. Priced to sell.

ERNEST WERNER, AURORA, ORE.

### Holsteins and O. I. C. Hogs

For sale—Bulls and cows, good breeding, from tested dams. May gilts and boars ready for service, from show ancestors. Priced to sell.

E. C. SCHUMACHER, R. 1, Granger, Wash.

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific international sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days; 118.88 in 30 days, and big records all through his pedigree.

ERNEST JOHNSON, Scappoose, Ore.

### HOLSTEINS

Well bred young bulls for sale.

THOS. CARMICHAEL, Gaston, Ore.

## JERSEY CATTLE

### Jersey Home Dairy

### What Is the A. B. C.?

Audit Bureau of Circulations.

This is an association, nation-wide in its scope, not conducted for profit. Every publisher having membership in this organization pledges himself to sell circulation as a commodity, both as to quality and quantity. Advertisers using our columns are safguarded. They know that we give all the circulation we offer.

## HORSES

### Hunter Ranch Percherons

The Grand Champion KROUMIR at head of herd. Young stallions for sale at all times at breeders' prices.

A. R. HUNTER, Island City, Ore.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Jan. 14.—Although milder weather somewhat eased the corn market today, forecasts pointing to more snow prevented any substantial decline. Prices closed unsettled, at the same as Saturday's finish to ⅛@¼c lower, with January $1.27½ and May $1.25⅛. Oats underwent a setback of ⅝ to ⅞c net. Provisions finished unchanged to 15c down.

Total absence of inquiry from the seaboard intensified the weakness of oats.

Provisions sagged mainly because upturns in the hog market were not of a lasting sort.

**Cash Quotations.**

CHICAGO, Jan. 14.—Corn No. 2 and 3 yellow, nominal; No. 4 yellow, $1.65.

Oats—No. 3 white, 81@32c; standard, 82c.

Rye—No. 2, nominal. Barley, $1.40@1.59.

Timothy, $5@7.50. Clover, $21@27.

**Chicago Futures.**

## The Hide Market.

The price of hides has declined several cents per pound during the last two weeks. This is due to the fact that the cattle killed in this country has been about 3,000,000 head more than last year. The number of hides imported this year is the largest in the history of the country. Stocks of hides are large and tanners are not interested, except at very low figures. The decline amounts to 3c to 5c on hides and 8c to 10c per pound on calf skins.

The following prices were quoted officially as covering all the chief marketing points of the northwest on January 8:

Green hides, cows and steers, 12c; salted cured, 15c; green bulls and stags, 10c; salted cured, 12c; Kip, 15 to 25 pounds, 16c; calf skins up to 15 pounds, 23c; dry flint hides, 28c; dry flint calf skins under 7 pounds, 30c; dry salted hides, 25c; dry sheep pelt, 30@35c; shearlings, dry, 10c@$1 each; dry horse hides, $1@2 each; green horse hides, $2.50@4 each.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.40 box; Wageners, $1@1.50 box; Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.60 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snoweap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Winconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 21@22c lb; broilers, 24@25c lb; old roosters, 11c lb; ducks, 20@23c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Hide Quotations.**

**Green Cows and Steers**—25 lbs and up, 15c; salted cured, 17c; green bulls and stags, 12c; salted cured, 15c; kip, 15 lbs. to 25 lbs, 20c; calf skins up to 15 lbs, 28c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 10 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

## Seattle Market.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 46@48c per dozen; pullets, 38@40c dozen.

Poultry—Live hens, fat, over 4 lbs., 23c lb.; 4 lbs. and under, 23c; old roosters, 15c lb.; squabs, large, $3.50 dozen; geese, fat, alive, 18c lb.; springs, alive, 28c lb.

Butterfat—54c lb.; dairy butter, 36c.

Beef—Buying prices: Prime beef steers, 11@12c lb.; cows, fat, 9@11c lb.; heifers, 10@11c lb.

Hogs—Light, 18@20c lb.; heavy, 17@18c lb.

Veal—Fancy light, 14@17c lb.; heavy, 12@14c lb.

Hides—Salted, 15c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 12c lb.; green calf, 23c lb.; dry calf (under 6 lbs.), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 10c lb.; dry full wool sheep pelts, 35@39c lb.; salt bulls, 12c lb.

**SELLING PRICES.**

Feed—Scratch, $75 per ton; all grain chop, $67 per ton; oats, $64 per ton; rolled oats, $65.50 per ton; bran, $32.50@35 per ton; shorts, $34@38 per ton; soy bean meal, $68 per ton; whole corn, $77 per ton; cracked corn, $78 per ton; alfalfa meal, $35.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $30@31 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c lb.; do bricks, 53c lb.

Eggs—Fresh ranch, 52@53c dozen.

Potatoes—Puget sound, $1.25@1.35 per cwt.; eastern Washington, $1.50 per cwt.

## Seattle Wheat.

SEATTLE, Jan. 12.—Millers were advised this week that a cargo of Australian wheat had been landed at Tacoma, and this was taken to mean that more is on the way and that this grain, heaped up and going to waste for lack of shipping space, is to be released for grinding flour on Puget sound for the allied armies of Europe.

Seattle millers have announced that the reduction in the quality of established grades of flour to the uniform 95 per cent will not mean lower, but if anything higher prices, due to demands of the government for a cut in millfeed. To equalize the reduction of $2 and $3 in millfeed millers are quoting the new flour at the old price of patents. They claim that the 5 per cent residue is an unknown quantity, and until some basis for this is created they will be compelled to maintain flour prices where they are.

## The Wool Market.

BOSTON, Jan. 11.—The Commercial Bulletin will say tomorrow:

"While the week in the wool market has been generally quiet, there is no disposition on the part of dealers to let prices down; indeed, the tendency on all spot wools, if anything, is to ask a little more, especially on those grades known to be scarce.

"The situation at the mills shows no noteworthy change. The next colonial wool auctions at Boston are scheduled for January 24 and 25."

Scoured basis:

Texas, fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California, northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon, eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory, fine staple, $1.80@1.85; halfblood combing, $1.75@1.80; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled, extra, $1.80@1.85; AA, $1.70@1.80; supers, $1.60@1.65.

## Portland Market.

PORTLAND, Ore., Jan. 12.—The potato demand continues light and prices are steady, $1@1.15 offered by shippers and $1.25@1.35 quoted by jobbers. Yakimas are selling here at $1.50@1.75.

The egg market has climbed because of the strength of the San Francisco market. Fresh ranch are selling up to 47 1-2 cents, case count. Storage stocks are practically exhausted.

Butter is barely steady at 50 cents for country creamery extras. Talk of an early advance in cheese prices is again heard.

The inquiry for onions is better than at any time this season. The last week 13 cars were sold by the association, all for shipment to western points. The price holds at $1.75 at loading stations.

Demand from the Sound keeps poultry prices at the highest level ever known here in the face of very good receipts. Country dressed meats are also firm, but not as high as a week ago.

A few sales in the wool market are reported at around 55@58 cents.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $60.25 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $55; brewing, $58; rolled, $59@60.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $23.50; grain, $24.

Eggs — Oregon ranch, case count, 47@47 1-2c per dozen; candled, 48@51c.

Poultry—Hens, 16@19c; ducks, 20@25c; turkeys, live, 25c; geese, 16@19c.

Butter — City creamery, prints, 52@54c per pound; cubes, extras, 50c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats — Veal, 17 1-2@18c; pork, 18@18 1-2c.

Hops—1916, nominal; 1917 crops, 15@18c.

Potatoes—Oregon, buying price; $1@1.15 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon whites, 9@9 1-2c; colored, 8@9c.

## Portland Wheat.

PORTLAND, Ore., Jan. 12.—Barley reached the highest price of the season at the close of the week when 200 tons of brewing grade were sold at the Merchants' exchange at $58. Oats also touched a new record for this market with $60.25 bid for both January and 30-day delivery.

Hay prices are still maintained, but dealers look for some weakening, as there have been numerous offers of surplus hay by feeders.

## Butter and Eggs.

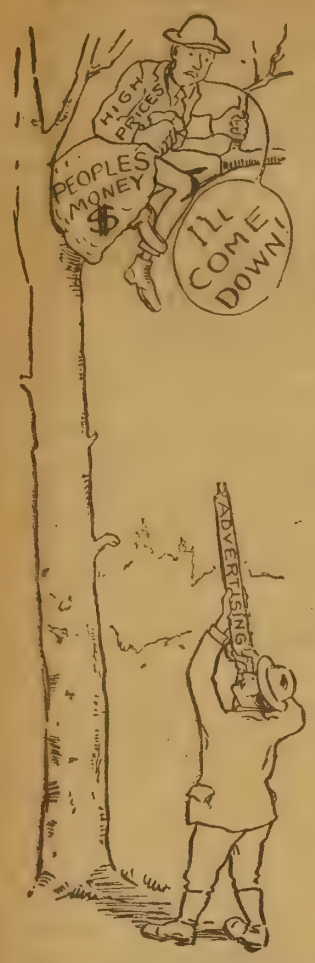
PORTLAND, Ore., Jan. 12.—Butter prints, extras, 52c to 54c; cubes, extras, 50c; prime first, 49 1-2c; dairy, 32 1-2c.

Butter fat—Portland delivery, No. 1 sour cream, 56@57c.

SAN FRANCISCO, Jan. 12.—Butter, prime firsts, 51@52c.

Eggs—Fresh extras, 67c; fresh extra pullets, 63c.

**TURPENTINE AND ROSIN.**



SAVANNAH, Ga., Jan. 12.—Turpentine firm, 45 1-2c; sales, 95; receipts, 30; shipments, 10; stock, 26,274.

Rosin firm; sales, 666; receipts, 1002; stock, 89,493.

Quote B, D, E, $6.35; F, $6.40; G, H, I, $6.45; K, $6.70; M, $6.80; N, $7.25; WG, $7.45; WW, $7.60.

## ADVERTISING LOWERS COST OF GOODS.

"Advertising," writes John Lee Mahin, a man who has spent his life studying the subject, "is an organized form of salesmanship that tends, in the long run, to make the cost of living more reasonable for the average human being.

"Advertising enables the manufacturer to give a better quality of goods at a lower price than he could if his advertising had not lifted him out of the rut of ruinous competition and standardized his articles of merchandise.

"Further, advertising reduces interest charges by giving manufacturers power to make quicker collections; it lowers the cost of production of standard articles, benefits skilled labor and improves all kinds of labor conditions.

"Modern advertising methods reduce the cost of everything that requires personal salesmanship in its distribution. Thus they reduce the ultimate cost of living."

The above truths are well illustrated by the advertising columns of this paper.

A great many money-saving opportunities are to be found constantly in them.

# Food Survey

## Ask Aid of 6,000,000 Farmers

The farmers of the United States will be asked to cooperate with Uncle Sam in making the first nation-wide war emergency food survey, which will be conducted by the bureau of markets. The bureau of crop estimates will work in conjunction with the bureau of markets in this branch of the survey, and will distribute through their voluntary crop reporters one-half million questionnaires to representative farmers asking for the amounts of the important crops and numbers of live stock on their farms on December 31, 1917, and December 31, 1916. From the data secured in this way a fair estimate can be made of the crops and live stock in the hands of the 6,000,000 farmers of the nation as compared to a year ago.

The questionnaire which the farmer will fill includes 56 items asking for estimates on all important crops and kinds of live stock. The schedule also asks for the amounts of a number of crops produced during 1917, the size of the farm, number of acres in cultivation, and whether or not it is operated by owner or tenant.

### Allied Armies Need Food.

Reports from official sources in Europe indicate that there is ever-increasing need for food in the armies and civilian populations of the allied countries.

A little powdered sage sprinkled on slices of cold pork is very agreeable.

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

### FARM LANDS—WANTED 654

WANT TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wisconsin.

### FOR SALE OR EXCHANGE 702

160-ACRE RANCH; RICH SOIL; 40 ACRES broke; 100 tillable; plenty range; stream through place; some buildings; well; good grain ranch; 3½ miles from Cambridge, Idaho. $5000. Would trade for cattle. Owner, H. T. Cutler, Parker, Wash.

# Stuck in the Mud! Pulled out with a K

THE "K" **Hand Power** Stump Puller is now being used in France and Italy to move Big Guns into position on the battle line where it is impossible to use horses or other power.

The same giant force which in times of peace has been utilized to pull big stumps and trees is now being employed in pulling around heavy guns, weighing 40 tons or more.

The above facts are merely given to illustrate to you the tremendous power exerted and that 100 lbs. pull on the lever of the "K" **Hand Power** Stump Puller will exert a 48-ton pull on any stump—all that an inch steel cable will hold. **One man operates it alone.**

*The Republic of France has bought eight and the Italian government four "K" Hand Power Stump Pullers to pull big guns out of the mud.*

*Showing easy lever operation*

## A Wonderful Machine

YOU can employ this mighty force to clear your stump land, quickly, easily and at less cost than in any other way. Better, cheaper and safer than powder. No expense for teams. Your own right arm on the lever of the

## HAND POWER K Stump Puller

can rip out any stump that can be pulled by the best inch steel cable. Works by leverage—the same principle as a jack. Made of the finest steel—guaranteed against breakage. Has two speeds, 60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. Weighs only 171 lbs.—easily carried or hauled on its own truck wheels.

### Land Clearing Book Free

Get my book on Land Clearing, it tells you many things you want to know. It tells you what other men have accomplished in land clearing and shows the best methods of pulling stumps. Send for it now.

**Special Offer** I am making a special offer to get a "K" Stump Puller introduced into every locality. Write for my special offer today.

**References** I refer you to U. S. Government officials. I give the highest bank references, I refer you best of all to thousands of satisfied users.

# Minimum Hog Price for West Is Fixed

## *Good and Evil Seen in Agreement Between Food Administration and Western Packers*

The bottom can't fall out of the hog market in the west and northwest this year, but an agreement just entered into between the meat division of the national food administration and the packers that the minimum price in the west shall be one cent below the Chicago market price may prove a severe blow to the swine production industry of Washington, Oregon, Idaho, California and other western states. The one certain virtue of the agreement is that a producer may know that his hogs will not go down to six or eight cents after he has produced them on two dollar wheat or other feed correspondingly high.

Here is what has happened: Joseph P. Cotton, chief of the meat division of the national food administration, called a meeting of western packers in San Francisco. As the food administration's representative, with authority under the food control act of congress, he entered into agreement with them that they should pay the producers of the west a price not less than the Chicago market price less one cent per pound. The federal live stock commission of California and the food administrator of that state participated in the conference.

This means that the minimum price for western hogs is now about $14.50 a hundred pounds. Under previous ruling of the food administration the Chicago price is $15.50, this figure having been arrived at on the basis of the present price of corn, the recognized hog feed staple of the middle west. It was calculated that between 13 and 14 bushels of corn are required to produce 100 pounds of pork, and that therefore the price of 100 pounds of pork should be fixed at the same figure as the market value of 13 to 14 bushels of corn.

Here is the wording of the agreement signed by Mr. Cotton for the food administration, and representatives of the principal packing companies doing business in the west:

"The food administration deems it imperative that steps be taken to increase hog production on the Pacific coast. In order that producers have confidence that hogs bred this spring may be marketed at a fair price, the administration hereby adopts the following minimum policy for the period during which similar minimums are in force in the middle west. The average price of packing hogs bought by packers at the terminal points of San Francisco, Los Angeles, Portland, Oakland, San Diego, Seattle, South San Francisco, Spokane and Sacramento will not be less than one cent under the food administration minimum effective on the Chicago market (such Chicago minimum now $15.50 per hundred). Any packer may make it a condition for the maintenance of the minimum that he shall charge any loss through condemnation by federal or municipal inspectors to the raiser or shipper."

Among the leading signers are the following packers or packing company representatives:

F. L. Washburn, Western Meat company; R. Scott, Cudahy Packing company, Los Angeles; H. L.

Continued on page three.

### WHAT A STOCK YARDS MAN SAYS

W. D. Roberts, president of the Spokane Union Stock yards, is not optimistic over the hog price agreement. Here is what he says:

"I do not think a worse thing could happen to this section, because the people of the east are in better shape to raise hogs at $15.50 a hundred than we are here at the same price, for much wheat is fed here. The top prices here are about $15.50 and down to $14.50 now. I hope that the packers here will see fit to keep up the present price, which is above the amount the agreement would permit."

### WHAT A PACKER SAYS

T. N. Conway, manager of the Carstens Packing company of Spokane, expresses various sentiments, as follows:

"This price puts Spokane on a market basis where we can get out to Chicago and the east with our product, in case there should be an overproduction, for the permission to purchase a cent a pound under the Chicago minimum, or $14.50 a hundred at present, would aid in paying the freight to the eastern markets. The packers will have to get together and agree whether they will absorb the loss of inspection or whether all will agree to charge it to the farmer or raiser.

"It appears to me that it is up to the food administration to say what the Chicago minimum shall be, as it will undoubtedly be based according to the price of corn, on which there is no limit. It takes 13 to 14 bushels of corn to produce 100 pounds of good pork. The price of corn has been left free by the government to be up or down so as to increase the production of hogs and cattle.

"If these 'cent-less-than-Chicago-minimum' prices should be carried out here it would retard the increase in the production of hogs in this section at the present time unless wheat prices should be lowered, which is not probable."

**Thrift and Patriotism** — **Two great lessons will be learned by the people of this country as a result of the war: Thrift and saving! Patriotism! The need and opportunity are both in our hands. Read on pages 14 and 15 of this issue how you can serve both yourself and your country—be both thrifty and patriotic.**

# Rule Should Work Both Ways

## The Prices on Farm Machinery Should Be in Same Ratio as Prices on the Products Raised by the Farmers

BICKLETON, Klickitat County, Wash., Jan. 8.—We have been having real spring weather for the last three weeks. Pioneers say they never saw anything like it. Grain, weeds and grass have grown luxuriantly; all fall sown grain is excellent. Pasture is fine, practically no feed has been given outside stock yet. There will be plenty of feed unless we have winter all next spring. Hay is about $20 per ton, when it can be bought. I believe a farmer can make a profit at that price, but would have to hold it over until spring and most of us need the money in the fall. I doubt if a cattleman could make a profit at that price unless he raised it himself; a sheepman could, if he did not have to feed too long. The farmers of this part are not satisfied with the price fixing at all; in fact, they are very indignant about it. They say when the government fixed the price on what was raised, they should have fixed the price on what we buy. I am in favor of fixing prices if it is on all principal articles, but is it justice to fix the price on farmers' grain and let the manufacturer of agricultural implements have full swing to raise the price on machinery, which they have done this year? It is a poor rule which does not work both ways. The price of combines is 20 per cent higher than last year and the farmer is almost compelled to buy them on account of shortage of labor. Fix the price on the articles that a farmer has to have on the same ratio as his wheat price and then he will be able to pay his debts and raise grain for the government. BERT F. FAULKNER.

### Crop Prospects Good.

WATERVILLE, Douglas County, Wash., Jan. 11.—The greatest problem that confronts the people of this county at present is how to handle the wheat next season with the prospects of no bags. The farmers are fully awake to the situation and I believe that they will meet the need of building elevators and small granaries. The most important world-wide problem in which this county is interested is the raising of enough wheat to supply their share toward feeding the allies next year. And, under that heading is the distribution of labor. The prospects for the crop at the present time is very enccuraging. There has been considerable precipitation and the soil is wet down over two feet. The winter has been very open so far, but there is so little winter wheat that the damage to it will be very small, comparatively. Feed conditions have been excellent so far; that is, as regards weather conditions. Feed is scarce all through the county and I fear will be more so before spring. Very few farmers are attending the special winter courses at the state college. Help is scarce and many can not leave the farm. H. E. LOTTIG.

### Labor Is Scarce.

DARRINGTON, Snohomish County, Wash., Jan. 16.—Public opinion as to the partial price regulations by the government is very favorable. This year hogs had to be fattened somewhat different than formerly. Shorts, small boiled potatoes and carrots, was the hog's bill-of-fare in this section with only a few exceptions where farmers are able to raise their own corn. The retailing price on cracked corn is five cents per pound at our local loading places. Wheat is $5.25 per 120-pound sack. This will make feeding corn or wheat prohibitive for feeding purposes. There has been growing weather for the last month with a temperature of from 54 to 56 degrees. This will help the feed situation considerable and not much hay will have to be shipped from east of the mountain. Floods did considerable damage in this section, not only to bridges and roads, but it washed considerably on improved farms. Practically all of the logging companies lost their bridges across the streams and are busy rebuilding and repairing. Labor is scarce for this time of the year.

C. B. NEIDERPRUN.

### Whatcom County Suffers.

FERNDALE, Whatcom County, Wash., Jan. 8.—This has been rather a bad winter for inhabitants here, though there has as yet been scarcely any cold weather. We have had a light fall of snow and rain followed by a "silver thaw," which broke off many tree branches and uprooted other trees. The damage to orchards was great, cherry trees being the most brittle, were injured to the greatest extent. The silver thaw was followed by a heavy rain for nearly 36 hours. The Nooksack river overflowed in many places. The condensary at Everson had to suspend operations for many days. The river broke through its banks about a quarter of a mile below Ferndale and flooded the entire Fertile Meadows district. No loss of live stock is reported though many people were compelled to leave their homes. Considerable damage was done to hay and oats, and the roads leading to Ferndale were washed out for nearly a mile in one place and cut into very badly in many others. It will be necessary for some farmers to move all their buildings back from the bank. Work on the roads and bridges is being rushed and the water is receding very rapidly.

MRS. JACK PLASTER.

### Sack Question Vital.

FAIRFIELD, Spokane County, Wash., Jan. 12.—A very important problem of local interest that should keep every grain farmer thinking pretty hard is the sack question for the coming harvest. A shortage of sacks is absolutely certain and other provision must be provided to care for the grain. So far this community hasn't done anything in providing means of storing the loose grain on the farms or at the shipping points. The very warm weather in December and the first week of January gave the fall sown wheat a fair start and with the present covering of snow it seems to be in a good way of making a crop. The chances are very good. Stock has done exceptionally well and it has taken very little feed to keep it in condition. Stock hogs have made the winter, up to the present snow, without being fed. The pea fields have furnished all their living and they are in fine condition. There are no farmers attending the courses or demonstrations at the state college from this locality.

ROY G. ADAMS.

### Frogs Are Croaking.

SOUTH BEND, Pacific County, Wash., Jan. 4.—The winter is continuing very mild. During December 31.13 inches of rain fell and the temperature averaged 45 degrees. Cattle are in excellent condition, the weather being very favorable to farmers and cattle growers. The frogs have begun to croak and it seems that we are to have an early spring. Many bushes and trees are showing green leaf buds and it is to be hoped that we get no severe killing frosts to injure the fruit. Dairy products are high, butter sells at 60 cents a pound in the local markets and eggs were 70 cents, but are dropping. Meat brings a good price. The most important problem of local interest here as elsewhere is the problem of food, although we seem to have an abundance. In this county we can get fish, clams, oysters, crabs and wild berries in quantities. Conditions are good for dairying and a great variety of fruits and vegetables can be raised here. The problem is to further stimulate the growing interest in raising home products and then using them. Already one of our three local trains have been taken off and shipping in foodstuffs will be more difficult in the future. An interest was taken in the series of agricultural lectures held last fall and a number of farmers visited Puyallup in the summer, but few if any have been able to avail themselves of the opportunity of attending the winter sessions.

MRS. WINNIFRED BUCKINGHAM.

### Would Unite Water Users.

NEPPEL, Grant County, Wash., Jan. 12.—The chief problem in the Moses lake district is the settling of the water rights to the satisfaction of the local land owner. There are several old established water rights on Moses lake. Personally, I was the first party to start appropriating the water according to the Pierce and Ballinger code. I am now endeavoring to draw all the parties, locally interested, into a Water Users' association, for the mutual benefit of all land owners on the banks of the Moses lake. This association, if maintained by the parties interested would assure the rapid development of the thousands of acres of alfalfa land now lying idle, caused by costly and useless litigation by two parties, one of them owning two-fifths of the land around Moses lake; the other litigant owns no land, but claims right to appropriate all the water of the lake with the exception of myself and a few others that have established rights of long record. The three-fifths balance of land is partly developed by homesteaders and actual farmers. The prospects for the 1918 crop is very favorable as weather here is open and mild and rains have saturated the ground, making a good reservoir of water for crops this coming season. Mild weather has been a large help in the carrying of stock over as but little feeding has been done to date. At this season most people are putting up their supply of ice, but the lake is still open and large flocks of geese are seen daily as they fly back and forth to the wheat fields east of the lake.

MARTIN PENHALLICK.

### At the Editor's Desk.

The Washington Farmer has received a copy of an unusual publication. It is entitled, "A Patriotic Bulletin," and is compiled and sent out by the state department of education. Mrs. Josephine Preston, state superintendent, for use in the public schools. The editor has seldom if ever seen a booklet containing so many up-to-date and rugged illustrations of patriotic documents and utterances. It is especially interesting in that it contains several of the most momentous documents and addresses of the present war, among them President Wilson's message to congress recommending that a state of war be recognized as existing between this country and Germany.

**Ask the Man Who Has Used It**

Nitrate of Soda leaves no mineral acid residues which may destroy neutral soil conditions. It does not require time to be Nitrated as do all other forms of Nitrogen. There is no risk of loss by Nitration. No matter how cold the season, no time is lost. All other forms of Nitrogen require time for Nitration.

## Stockmen Appeal to Washington

### *Association Raises $20,000 to Finance Its Interests*

The delegates attending the twenty-first annual meeting of the American Live Stock association at Salt Lake City last week contributed a total of $20,000 to be used in furthering the work of the market committee, and in sending a delegation to Washington to take up with the higher officials of the government problems of vital interest to the live stock industry.

A significant incident of the raising of this fund was the refusal of the association to accept the subscription of $1000 by Louis F. Swift of Swift & Co., packers, to assist in the movement. The committee declined to accept the subscription to avoid embarrassment that might result through the acceptance of assistance from the packing industry, with which the stock producing industry has had more or less controversy.

**Packers Make Big Profit.**

Mr. Swift, in an address before the convention, stated that the company which he represented had made a profit of $34,000,000 during the past fiscal year. What purports to be a verbatim extract from his address follows:

"This profit has been stated to be $34,000,000, or 34 per cent on a capital of $100,000,000. This is hardly a fair way to put it, as all profits should be figured on capital and surplus combined, as both are being used in the business. Our surplus is $60,000,000, a total of $160,000,000. Figuring the profits on this comes to only a trifle over 20 per cent instead of 34 per cent.

"To earn $34,000,000 we had to do a business of $875,000,000. The increase in our volume of business has been due almost entirely to higher prices rather than to increase in tonnage. Swift & Co. paid $455,000,000 to live stock raisers during 1917. This was an increase of $141,000,000 over 1916.

"This profit figures include all profits from hides and manufactured byproducts.

"On the turnover the profit is less than 4 per cent or about ¼ cents a pound on beef and this is equal to about $1.50 a head in cattle. Of this profit of $34,000,000 you might say one-half is caused by unexpected advances in the market on product in the cellars. Such prices as 25 cents a pound for lard and short ribs have never been heard of before and sometimes there will come a decline in the inventory and we will need a part of this $34,000,000 to make up losses sustained by prices paid for live stock, otherwise we may be bankrupt. Consequently part of these profits are only paper profits. Our profits, if reduced to those of a business of small scale, would be equivalent to only $3400 on a business of $87,000. You do not call this too much. If the packers made no profit whatever it would not make any appreciable difference on the prices paid to producers for live stock or prices paid by the consumers for meats."

Edward C. Lasaler of the association's marketing committee made a vigorous appeal to the delegates to send a delegation direct to President Wilson with the troubles of the live stock industry, declaring that the food administration was failing to take action absolutely necessary for the maintenance of the industry.

**Administration Man Replies.**

Joseph P. Cotton of the meat division of the food administration replied to this suggestion.

"The food administration is trying to treat everybody fairly," said Mr. Cotton. "I am not here as your friend, because a food administrator can't be a friend to anybody. We have not gone blindly into our work, but we're trying to do a big job fairly. I admit we don't understand the stock grower, but we're trying to, and that's all any one can do. We have regulated the packer, and that's more than anybody else in the world ever accomplished before the food administration came into existence."

**What Is Stock Situation?**

The report of the market committee contained a comprehensive digest of the meat situation at the present time. The nine features of this part of the report follow:

"First—A tremendous shortage of hogs, a moderate shortage of sheep and liberal supplies of cattle in the United States.

"Second—The impossibility, owing to the lack of shipping facilities, of either Argentina's or Australia's supplies affecting for some time our markets for live stock.

"Third—Unusually large numbers of cattle and sheep in feed lots, and liberal receipts of fat cattle and lambs at congested markets, which are selling at heavy losses to producers.

"Fourth—A large crop of corn and, in some sections, of forage crops, which are selling at the highest prices ever known at this time of year, making cost of production of meat correspondingly high.

"Fifth—General disposition of producers last fall to accept without question the general representations of the government regarding the needs of increased production of all kinds of meat, and its assurance of a fair profit. This is shown by the unusually large amount of stock which was put on feed.

"Sixth—The probability of relatively better prices for live stock than for grain after the war, owing to the depletion of the herds of Europe and the conversion of grazing into grain raising lands.

"Seventh—Curtailment in domestic consumption of meat on both patriotic and economic grounds, the limited exports of beef, owing to lack of shipping facilities, and the growing danger that producers of beef and mutton will become discouraged on account of heavy losses, lose faith in the representations of the food administration and curtail production for next season.

"Eighth—The need of prompt action on the part of the food administration to avert this very thing.

"Ninth—The importance of a better understanding of producers' problems and of a more sympathetic attitude on the part of the public toward them."

All the old officers were reelected as follows:

I. T. Pryor, president, San Antonio, Texas; J. B. Kendrick, first vice president, Sheridan, Wyo.

Second vice presidents—C. M. O'Donel, Bell Ranch, New Mexico; M. K. Parsons, Salt Lake City, Utah; Wallis Huidekoper, Wallis, Mont.; Isaac Baer, Meeker, Col.; W. J. Tod, Maple Hill, Kan.; E. L. Burke, Omaha, Neb.; John W. Springer, treasurer, Denver, Col.; Samuel H. Cowan, attorney, Fort Worth, Texas; T. W. Tomlinson, secretary, Denver, Col.

The 1919 convention will be held in Denver, with the probability that the 1920 meet will be in some northwestern city, probably Spokane.

The meeting was a joint affair between the live stock association and the National Wool Growers' association. The latter transacted business, took part in the general joint convention and reelected last year's officers, as follows:

President, Frank J. Hagenbarth of Salt Lake City; A. J. Knolin of Kansas City, vice president; M. L. Powers of Flagstaff, Ariz., assistant vice president; F. D. Miracle of Helena, Mont., treasurer, and Dr. S. W. McClure, Salt Lake City, secretary.

The wool men raised $6000 for the Red Cross through the sale of a ram donated by the Wyoming Wool Growers' association.

## HORTICULTURAL MEET

### In Western Washington Feb. 14-15

The eighth annual meeting of the Western Washington Horticultural association will be held in the Arctic building, Seattle, February 14-15. Among topics to be discussed are the following: "Magnitude and Importance of the Horticultural Interests of the State," E. F. Benson, commissioner of agriculture; "Four Years' Berry Production Costs," L. M. Hatch, Alderton; "Mistakes in Potato Growing," C. B. Sprague, agricultural agent, Kitsap county, Port Orchard; "Relation of the Experiment Station to Western Washington Horticulture," W. A. Linklater, superintendent western Washington experiment station, Puyallup; "Putting the Horticultural Inspection Work on a Business Basis," M. L. Dean, commissioner of Horticulture, Olympia; "Drainage Problems," Floyd W. Rader, agricultural agent, King county; "Relation of Bees to Fruit Growing," Professor Trevor Kincaid, University of Washington, Seattle; "A Message From Nature's Woods," Stephen J. Harmeling, Vashon; "How Agricultural Fairs Can Benefit Our State," C. E. Flint, Blaine; "Nut Growing in Western Washington," A. A. Quaenberg, Vancouver; "Increasing Spraying Efficiency," Arthur Frank, plant pathologist, western Washington experiment station; "Growing and Marketing Grapes," Robert T. Reid, Bellevue; "The Value of Fruits and Vegetables in the Diet," Miss Elmina White, district home demonstration agent, Puyallup; "Between Producer and Consumer," J. B. Powles, Seattle; "Grading and Marketing Fruits and Vegetables in Seattle," E. S. Gill, secretary produce association, Seattle; "Relation of the Farm Markets Department to the Horticulturist," Asher Hobson, director of farm markets, Pullman.

**Bumper Potato Crop.**

Potato crops of England and Wales are turning out much better than was expected, the estimated production being 33 per cent greater than in 1916, and the heaviest crop since 1885. Over 3,300,000 tons are estimated for the season.

## No Minors Allowed

Three forceful articles dealing with primitive pioneer days in the Big Bend country, written by the "Bunchgrass Boy," will begin in the Farmer next week.

These articles need only to be mentioned to arouse an expectant interest, and every reader may be assured that that expectant interest will be more than satisfied.

## Minimum Hog Price Is Fixed for Northwest

(Continued from page one.)

Kelley, for Wilson & Co., Los Angeles; I. L. Blum, Roth-Blum Packing company, San Francisco; C. Swanson & Son, Sacramento; W. O. Forsyth, Armour & Co., Spokane; C. C. Colt, Union Meat company, Portland; J. H. Talbot, Universal Packing company, Fresno; Charles S. Hardy Packing company, San Diego, and the Hauser Packing company, Los Angeles.

What will be the effect of this agreement on the hog producing industry of the west? The food administration says it is for the purpose of increasing production. Can the western grower produce pork with $2 wheat as his principal grain feed (or with barley or peas as a substitute) a cent a pound cheaper than the middle western grower can with $1.25 corn as his principal grain feed? Probably not, but this is not the most vital question. The most vital question is: Can the western grower make a reasonable profit on hogs under present western feed conditions if guaranteed $14.50 a hundred pounds?

Many answers are already being given to this question. There is wide difference of opinion. The food administration may get its increased production of pork, as it is to be hoped it shall. On the other hand, pork production may not be stimulated as desired. The possibilities are grave.

## Lewis County Pure Breeders.

The Lewis County Pure Breeders' club will meet January 26 in Chehalis.

The meeting will be in the nature of both a banquet and a business meeting.

The object of this association is that of promoting and encouraging the breeding of purebred live stock and all other animals and fowls, such as are and can be admitted to official registration. Membership is open to any resident of Lewis county who is the owner of one or more pureblood animals.

The association is unique in that there are no fees, dues or other such conditions of membership. Its work is carried on through voluntary contributions. The president is N. B. Coffman; vice president, F. M. Svinth, and secretary-treasurer, G. R. Walker. Mr. Walker is also connected with the Centralia-Chehalis fair in the capacity of secretary. Around 50 residents of Lewis county are members of this association.

## Yakima Farmers' Institute

Yakima is a scene of much agricultural activity this week. It is staging a mighty interesting farmers' institute, with a section for farm women and a corn show. J. N. Price, county agriculturist, is being assisted in the management of details by Lee M. Lampson, agriculturist for Benton county, and Roy P. Bean, agriculturist for the government, with supervision over the Tieton reclamation project.

W. S. Thornber, director of extension work at the State college of Washington; Professor Leonard Hegnauer, crop specialist for the college; Professor Heald, Miss Mary E. Sutherland, director of the college home economics department, and her assistant, Miss Edna Walker, besides H. E. Waterbery, Duncan Dunn, H. Stanley Coffin, Asher Hobson, director of farm markets for Washington, and others, are on the program for the five-day institute.

R. W. F.

## Crop Prospects Improve.

With the heavy rains and the open winter of the last few weeks the wheat farmers of eastern Washington are expressing greater optimism over the 1918 crop. Large acreage will be sown to spring grain, according to present indications. The fall acreage, owing to the unusually dry fall, is unprecedentedly low.

# Grant County Farmers Tell Their Needs

## *Find Inspiration in Newly Formed Agricultural Council Under County Agent Leadership*

At the organization of the Grant County Agricultural council recently a number of valuable farm pointers were given by men representing the different sections of the county. County Agricultural Agent H. W. Reaugh explained the benefits of such an organization and also stated that in many of the eastern states is was necessary to form a county council before a county agent could be secured. V. O. Patton, assistant county agent leader, was also present, mentioning the value of such an organization to help the farmers in selling and in buying and possibly in uiformity of breeding, thus helping them in the exchange of sires.

### Pump Irrigation Water 70 Feet From the Columbia

Representing the fruitgrowers of Trinidad, Steve McDonald said: "Our problems are possibly a little different from any of the localities, inasmuch as we have the irrigation proposition and fruitgrowing. We pump water 70 feet from the Columbia river to irrigate our orchards and have just put in new pumping machinery and oil engines this year. The problem of obtaining fuel oil for the coming season is the greatest important problem and we request that the fuel administration make an effort to see what can be done along this line. We have some woolly aphis and a few other diseases not very bad, but might be worse if we do not take care of them. We tried to get an inspector there and as long as we had a fruitgrowers' league it was all right, but when that fell through it practically ceased. We asked for an inspector this year, but none has been appointed. We need an inspector in order to have uniform fruit so that the reputation of the district may be maintained. I believe the council will be a great deal of benefit to the county if properly directed."

### Lost Money But Gained Some Paying Experience

Norman Johnson, representing the cooperative creamery at Quincy told of the difficulties which had to be overcome. The first was not being posted on creamery matters and allowing a promoter to come in and sell them a plant at twice its value and furnish them with a buttermaker who did not understand the business and who would run them into debt. "But," he continued, "this last year we have been successful in operating the creamery and have made back about half of what was lost the first year and have made good interest on the money we invested in the creamery. It is on a paying basis now and I believe they are a good thing for a community if people are interested in the dairy business. We are in the stock business more than in the dairy business. The people usually milk just during the summer while the grass is green and when it gets dry they discontinue milking. I believe it would be a good plan to have the cows fresh in the fall and then feed them during the winter months on such feeds as would increase milk production. I think it takes a little time to change the methods of handling stock, but do believe that people will change to dairying. In some localities they are keeping dairy herds on high priced grain and making a success of it and it is usually noticed that a community engaged in dairying is usually financially well fixed. If they feed cattle in other counties and make it pay I believe they can do the same in this county where the land is so much cheaper and there are many advantages that they do not have in other places. Expensive stables are not required as in some of the colder sections. As soon as silos come into general use the dairy business will be put on a much more substantial basis by producing cheaper feed. It will only be a matter of time until all will be using silos. What is needed now, is a few people to use silos in the county and then others will start to using them when they see their neighbors are making a success."

### Stick to Business Or Business Will Slip By

John Urquhart, representative in the legislature from Grant county, said it was the first time he had been away from home since last March, adding: "I find if you do not stick to your business your business will not stick to you very long." He gave his unqualified support to the agricultural council movement, and added: "We have to get down and grow more wheat and, in addition to that, we have to cooperate with one another. The purpose of organization is cooperation. I can not express my approval of such an organization as is contemplated here today, for I believe it will untimately be of untold value to this county. We must copy economic Germany, leaving out her political aspect altogether, copy economy in every particular, if we are going to succeed."

### Farm With About Half After You Are Posted

Martin Johnson, who represented the Neppel Producers' association, alluded to the benefits which had already resulted from the appointment of a county agriculturist, and said: "There are many problems confronting us that may be solved a little later on by such an organization. The main trouble is with buying and selling. When a person buys, as a rule, he buys at retail prices and very high ones at that, and when he sells, he sells at wholesale prices, and very low ones at that. This is the problem we must solve—that is, buying and selling. We have been organized for some time. This is a new country and productive under irrigation. We started to raise vegetables and general trucking and there was no market for anything of that kind in that locality, and ours was new to them and we had to go out and look up a sale for our produce, and we found it very difficult. It is the same as this creamery man spoke about. You can do it with about half after you are posted on the subject, but you have to study it over and go after it gradually. One thing just comes to my mind. Some time ago there were quite a number of farmers raising hogs. I had comething like 20 or 30. Fall came, we commenced to fatten them. They are fat and ready for the market and the market for hogs is high, but how can we get them to the market? No one comes around to buy them and we have not a carload to sell. This organization could probably help by getting the people together who wish to ship, and thus save considerable in transportation. Not only that, but they would then get the full value of the hogs at the market. We are not supposed to feed wheat to hogs and that is all we can get. We can not possibly feed anything else, as we can not get it. For the last three or four weeks we have been unable to get anything except wheat. We find that it is necessary to feed wheat against our will, because we can not starve them when we are starting to fatten them. We also need assistance in being able to purchase our feed in carload lots."

### Raise More Chickens Without Costing More

Ed Dunham, representing the Wheeler Cooperative Union, said he was from a wheat-growing section, adding: "Johnson is from Neppel and from where I live we could work together very nicely and work to advantage. I am satisfied we could raise more stock and wheat. We could exchange with our neighbors on the lake. We could exchange dry feed for alfalfa and be mutually benefited. We are short of meats and fats and our government is asking us to conserve these. There is not a farmer in the county that has as many chickens as he could raise without costing a cent more than to raise what few we do. I told my wife every chicken she hatched off this spring would be worth at least $1 by Christmas. They are worth more than that now.

"Our serious trouble is going to be hired help. We depended on our local boys helping us and they have enlisted or been drafted. Such an organization can help out a great deal in helping solve the labor situation. The people I represented told me to put the labor situation before this organization strong."

### How to Raise Live Stock Having No Pasture

A. T. Hampte, who represented the Steamboat Rock Community Organization, said: "The place where I represent does not amount to very much—a little three-cornered piece of ground 1400 feet high, representing 3000 to 4000 acres. The main problem with us is to know just how to cultivate the soil to produce what we want and what time to do it. As far as a market is concerned, we have a market for most everything we have raised, such as hogs, cattle, etc. The main trouble in raising live stock is that we have no pasture. It is costly to raise hogs, but we do it to a great extent."

### Bring Pressure on Those Who Are Not Spraying

H. E. Windebank, who represented the fruitgrowers at Grant Orchards, declared that the biggest problem for them was to get sufficient water for irrigation and the next of importance was to keep the orchards clean by means of spraying.

"The most of the orchardists," he said, "have thoroughly sprayed their orchards and at the proper time but a few have not. By means of an organization we could bring pressure to bear on those who are not spraying and make them spray. Transportation is a serious factor in orcharding. Possibly this organization could assist in the local distribution of produce and fruit. I am very much pleased to see something like this started and I am glad at any time to do anything I can to forward its development. I am sure it would be a benefit to us."

### Swap Work Profitably Under Right Organization

James Hill of Hartline said the main proposition in his locality was the labor situation. He said: "While I do not think it is as serious as we take it to be, for in our county we could exchange work. North of the Hartline country it is possibly a week or two weeks later than on the flats and we could exchange after our work is done and help them out. That would work all the way down to the south line of the county. We could help them out and they could return it. In other words swap work. Another proposition is wireworms. That cuts down our yield more or less each year, and another proposition is conservation of moisture.

"If we could conserve moisture so we could sow fall wheat and get it up, we could produce from five to 15 bushels more per acre each year than we do under the present system. If we can not get moisture enough in the fall and do not get it up until spring we do not have as long a season to harvest in. If it is all spring wheat, it practically all comes at the same time, but if we could sow half in the fall and the other half in the spring we could carry it on in a more extensive way. I believe the varieties of wheat are quite an important factor in this wheat-raising game. We have mostly, in our neighborhood, bluestem and early baart. I think this association could get localities to get the same class of live stock so sires could be exchanged. In part of the county we have three or four farmers' organizations, and each one seems to have a different breed. Three organizations bought three different stallions the same year, at an approximate cost of $2200 each. This year I found it necessary to change, which cost me about $1350. All this expense could have been eliminated if we could have made an exchange."

### Have Big Turnout at Low Gap Community Center

H. M. Perry, who represented the Low Gap Community organization, said: "I am to represent Low Gap, away out in the middle of the sage brush, and there are a very few people. We are organized out there and are known as the Low Gap Community Center. We did it in the first place for the social benefit. We lived so far apart very few of us were acquainted with each other, although many of us had lived there for 10 years. We have derived more benefit from this association than you could imagine. We meet every month and there are as many as 150 there every time. It is pretty hard for the agriculturist to see us or to get acquainted. He meets us there at the meetings and we get information from him and get different ideas exchanged. Practically all are interested in the same thing—live stock, creameries and a small amount of grain raising. All kinds of cattle are raised there. Some have Holsteins, and others Herefords and Shorthorns. The general problem with us is weeds, wind and dry weather. Woolly sheep will do the work with the Russian thistle. I kept 160 acres clean with 100 head last year and did not have to work the ground. It has blown but very little either. Heretofore I have had to cultivate my summer fallow regularly to keep the weeds down. This continued cultivation causes the land to blow, which is a serious problem to control. Sheep do this work and have also been a good paying proposition. The wool of the sheep fenced the ground. I move the fence from one quarter to another every year, so the sheep will keep the summer fallow clean as I summer fallow 160 acres each year."

> To The Washington Farmer: Enclosed please find $1.75 for four new subscribers, also four cooperative certificates filled out. Please send the paper as soon as you can. I am very much pleased with The Washington Farmer.

### Finds Russian Thistle Makes Good Cow Feed

J. H. Smith, who represented the Green Valley Farmers' union, said: "I was very much interested in what Mr. Perry said concerning the use of sheep in keeping the weeds down on summer fallow. His interests and mine seem to be along the same lines. I would not say that weeds bother us to any great extent in wheat raising. Of course, we would be bothered if they were not taken care of. Cattle will keep them off, but sheep will keep them off much better as they will eat mustard when cattle won't. I think we have profited by the Russian thistle. It makes good cow feed and good fertilizer if plowed down at the right time. I notice we are getting better crops as we are working the ground better and do it at the right time. I have a few sheep now, but am going to get some more. The cattle and sheep together have worked so hard in keeping the weeds down that I do not consider the weed problem a serious one.

### Other Speakers Commend the New Organization

Nathan A. Lewis, who represented the Franchman Hill community organization, said that a number of settlers are making a success of their farming in that dry section of thec ounty. He continued: "We believe in plowing our land and cultivating it with a weeder one or two times, and then cut the remainder of the weeds off with a hoe. An organization of this kind will undoubtedly be of much assistance to the farmers in our district."

Mr. Huffman, who represented the Quincy Farmers' union, spoke of the value of the proposed organization and referred to the war and the necessity of raising more wheat to win the war.

Wendell Phillips of Quincy told of the benefits which he had obtained from the farmers' union elevator, which is a cooperative organization, and added that there were many things the county council could do "if the farmers would stay together, but there is the problem, will they stay together?"

Rev. H. M. Course of Neppel said he was proud of being a farmer as well as being a preacher, that nothing can be accomplished without organization.

Mrs. H. W. Mangold pleaded for quality, that more money could be obtained and more satisfaction derived from quality produced.

Mrs. J. Q. Smith and Mrs. Daniel T. Cross also spoke of the need of organization in promoting women's work on the farm.

### Institute at Quincy.

Notwithstanding the delay in trains there was a good attendance at the institute arranged by County Agriculturist Reaugh at Quincy, Wash., the first week in January. The institute was thoroughly advertised and the three speakers made a good team. Dr. S. B. Nelson took up the diseases of live stock, W. K. Whittaker, poultry, and Professor William Hislop, head of the live stock department at Pullman, also spoke.

**Ask the State College.**

When problems arise concerning live stock, poultry, field crops, farm buildings, machinery—anything pertaining to the farm, in fact, remember that the state college is conducted to help solve your problems.

# Farmers Ready to Do Their Part

## *Will Not Hesitate to Work From 14 to 16 Hours Daily if Necessary*

**What are the plans of the farmers of the state of Washington as to food production during the coming season? In answer to this question replies continue to be received. This is the third instalment of letters and of a summary of the coupons returned on this most important question:**

To the Editor of The Washington Farmer: During the busy season it may be necessary for us to use our daughters and wives to assist in caring for our crops. As for ourselves and boys, we will not hesitate to work from 14 to 16 hours daily when necessary, to help win the war. COATE BROS.
Trout Lake, Wash.

---

To the Editor of The Washington Farmer: Almost all the farmers of this section are running short-handed. I fear we will be very short this coming summer. As to exchange work, it is being done in some sections of the country. The women and young folks have not made much of a showing around here, but we may have to call on them later. EUGENE LARSEN,
Chehalis, Wash.

---

Here is a summary of the coupons received during the week.

George J. Cannon, Buckeye: MORE wheat, oats, corn, seed potatoes, peas, beans, vegetables, hay, beef cattle, Berkshire swine, carrots, rutabagas, silage. LESS barley, rye, sugar beets, fruits, horses, dairy cattle, poultry, mangels, turnips, artichokes.

Chris Anderson, Danville: MORE wheat, barley, corn, potatoes, peas, beans, vegetables, hay, horses, beef and dairy cattle, swine, carrots, rutabagas. LESS oats, poultry.

J. M. Pulliam, Clayton: MORE potatoes, peas, vegetables, hay, dairy stock, swine, poultry, carrots, turnips.

C. Ham, Coulee City: MORE wheat, potatoes, beans, fruits, hay.

T. M. Anderson, Northport: MORE wheat, oats, barley, rye, corn, potatoes, peas, beans, sugar beets, vegetables, hay, dairy stock, poultry, carrots, mangels, rutabagas, turnips, artichokes.

Henry Metzger, Carson: MORE wheat, corn, hay, dairy cattle, swine, carrots.

J. W. Shipley, Underwood: MORE fruits. LESS hay.

J. L. Sparling, Kelso: MORE wheat, peas, hay, beef cattle, poultry, carrots, mangels. LESS oats, barley, potatoes, vegetables, fruits, dairy cattle.

E. D. Paul, Trout Lake: MORE wheat, oats, vegetables, hay, swine, poultry, carrots. LESS potatoes, dairy cattle.

L. G. Shelton, Shelton: MORE wheat, corn, peas, beans, dairy cattle, swine, carrots, mangels, rutabagas, silage.

T. D. Adams, Centerville: MORE wheat, rye, beef.

Roy Adams, Fairfield: MORE potatoes, beans, horses, swine, poultry; LESS wheat, oats.

John T. Sinclair, Rochester: MORE wheat, oats, corn, potatoes, peas, beans, sugar beets, vegetables, dairy cattle, swine, poultry, silage; LESS hay, horses, beef cattle, sheep, mangels, rutabagas, turnips, artichokes.

Henry Vanderscheid, Addy: MORE corn, potatoes, vegetables, hay, dairy stock, sheep, swine, poultry, mangels, rutabagas, turnips.

J. C. Cook, Spring Valley: MORE wheat, barley, beans, horses, carrots; LESS oats, potatoes, fruits, hay, beef cattle, swine.

J. A. Wilson, Rosalia: MORE wheat, corn, potatoes, hay, beef cattle; LESS oats, fruit, horses, dairy cattle.

N. W. Akers, Rosalia: MORE oats, peas, hay, beef cattle; LESS wheat, potatoes, dairy cattle.

David Camp, Rosalia: MORE wheat, oats, hay, horses, beef cattle, swine.

J. R. Beutel, Outlook: MORE wheat, corn, potatoes, fruits, hay, beef cattle, sheep, swine, poultry; LESS dairy cattle.

F. W. Massie, Curlew: MORE wheat, barley, corn, vegetables, hay, horses, beef cattle, sheep, swine; LESS oats, potatoes, poultry.

S. L. Busby, Outlook: MORE wheat, potatoes, peas, vegetables, fruits, hay, beef cattle, sheep, swine, poultry; LESS corn, beans.

D. C. Mathews, Sunnyside: MORE wheat, oats, barley, horses, swine, poultry; LESS potatoes, vegetables, fruits, hay.

V. L. Bevington, Chehalis: MORE wheat, rye, hay, dairy cattle, silage; LESS oats, corn, potatoes, beans.

George Myers, Espanola: MORE wheat, oats, barley, potatoes, horses, beef cattle, swine, poultry.

H. S. Findley, Cheney: MORE wheat, oats, potatoes, peas, hay, horses, beef and dairy cattle, poultry, carrots, mangels, turnips, silage; LESS swine.

A. G. Barger, North Bend: MORE wheat, oats, rye, corn, potatoes, peas, beans, vegetables, fruits, hay, dairy stock, swine, poultry, carrots, mangels, turnips, artichokes; LESS barley, sugar beets, horses, beef cattle, sheep, rutabages, silage.

Otto Jacobs, Rosalia: MORE wheat, oats, potatoes, poultry; LESS beef cattle, swine.

Coate Bros., Trout Lake: MORE wheat, beef and dairy cattle, oats.

Fred Stutler, Leland: MORE potatoes, peas, beans, hay, dairy cattle, swine, silage; LESS poultry.

Matt Crocker, Centerville: MORE potatoes, wheat, barley, peas, fruits, hay, horses, beef cattle, swine, poultry, rutabagas, turnips.

P. J. Arkenson, Quilcene: MORE oats, corn, peas, sugar beets, hay, carrots, mangels, rutabagas; LESS potatoes.

George Hendricks, Dabob: MORE wheat, oats, barley, potatoes, peas, hay, beans, vegetables, fruits, dairy cattle, swine, poultry, rutabagas, silage; LESS corn, carrots, mangels.

C. J. Nailor, Chimacum: MORE oats, dairy cattle.

Enoch A. Dorf, Ferndale: MORE oats, potatoes, peas, hay, dairy cattle, swine, poultry, mangels.

T. B. DeShazer, Lowgap: MORE hay, wheat, peas, beans, beef and dairy cattle; LESS rye, potatoes, horses.

W. F. Darby, Montesano: MORE wheat, oats, peas, beans, hay, dairy cattle, poultry, rutabagas, silage; LESS potatoes.

J. W. Clise, Redmond: MORE wheat, oats, corn, potatoes, vegetables, fruits, dairy cattle, poultry, carrots, mangels, rutabagas; LESS hay, swine.

Reade M. Young, Pullman: MORE oats, barley, corn, potatoes, peas, beef cattle, sheep, swine, silage; LESS wheat.

Henry Bouchard, Tono: MORE oats, barley, corn, potatoes, peas, beans, vegetables, hay, poultry, carrots, mangels, silage.

M. O. Dayton, Goldendale: MORE wheat, barley, potatoes, peas, vegetables, sheep, swine, carrots; LESS oats.

William Wuchman, Centerville: MORE wheat, oats, barley, corn, potatoes, vegetables, hay, horses, beef and dairy cattle, swine, poultry, carrots, rutabagas, turnips.

William J. Leonard, Pomeroy: MORE wheat, corn, potatoes, hay, beef cattle, sheep, swine, poultry.

G. A. Marshall, Twisp: MORE hay, horses, dairy stock.

Ernest Pries, Bridgeport: MORE potatoes, vegetables, poultry, carrots, mangels, rutabagas; LESS swine.

G. D. Banks, Quincy: MORE barley, potatoes, beans, vegetables, hay, swine, poultry; LESS wheat.

James Strouf, Stratford: MORE wheat, fruits, hay, horses, dairy cattle; LESS corn, potatoes, vegetables, swine, poultry, carrots, mangels, rutabagas, turnips.

L. Wilmer, Hartline: MORE wheat, potatoes, fruits, hay, horses, beef and dairy cattle, sheep, swine, poultry.

P. N. Campbell, Wapato: MORE wheat, barley, corn, potatoes, hay; LESS alfalfa.

C. M. Lelt, Huntsville: MORE wheat, peas, beans, hay, beef and dairy cattle, swine, poultry, carrots, mangels, silage; LESS oats, barley, rye, corn, potatoes, sugar beets, vegetables, fruits, horses, sheep, rutabagas, turnips, artichokes.

H. O. Mides, Fairfield: MORE wheat, potatoes, beans, horses, swine, poultry, turnips; LESS peas.

J. T. Heizelmann, Krupp: MORE wheat, potatoes, peas, vegetables, horses, beef cattle, swine, poultry.

Eugene Larson, Chehalis: MORE wheat, potatoes, vegetables, dairy cattle, sheep, swine, poultry, kale.

J. K. B. Anderson, Ferndale: MORE oats, peas, beans, vegetables, hay, dairy cattle, swine, poultry, carrots, mangels, silage; LESS potatoes, fruits, horses, beef cattle.

Barbo Brothers, Bellingham: MORE wheat, oats, potatoes, beans, beef cattle, sheep, poultry, turnips; LESS horses, carrots, rutabagas.

L. Beebe, Bellingham: MORE oats, corn, potatoes, vegetables, hay, swine, carrots, mangels; LESS beef and dairy cattle, poultry.

George Nolt, Bellingham: MORE oats, rye, corn, peas, hay, poultry, carrots, mangels, silage; LESS potatoes, vegetables, fruits, swine.

Warsing Brothers, Goshen: MORE wheat, peas, dairy cattle, sheep; LESS barley, potatoes, hay, swine, poultry.

C. E. Barnes, Bellingham: MORE oats, peas, hay, dairy cattle, swine, mangels; LESS fruits, poultry.

William Wolfrum, Davenport: MORE wheat, oats, barley, swine, cattle, beans, potatoes.

Charles Schell, Cheney: MORE wheat, potatoes, beans, vegetables, hay, horses, dairy cattle, swine, carrots; LESS poultry.

# High Privates to the Front

## *Volunteer Patriotic Campaigns Now Are Government Essentials*

The war has brought high privates to the front. The Red Cross and the Y. M. C. A. are war department essentials. The bugle call has gone forth from every department of the government for whole-hearted moral support from all the people. This moral support is manifesting itself in volunteer patriotic organizations, under the ablest leadership, and is resulting in active volunteer participation in war preparation and war prosecution.

The food conservation campaign, the Liberty bond campaign, the war thrift campaign—these volunteer organizations, led by the corporals, the captains, the generals and the commanders-in-chief, are as necessary as are the government departments themselves.

The secretary of agriculture has his double in food conservation, who thinks and plans and acts in terms of food conservation, and must he not at once have his double in stimulating to the utmost food production?

Constrained by this necessity of increased food supplies the telegram was sent to President Wilson, urging the immediate appointment of a national wartime food production administrator. A copy of this telegram was sent by the Farmer also to persons of prominence in different parts of the country.

Governor Arthur Capper of Kansas, than whom there is no more earnest evangelist of greater food production under better farm conditions, writes:

**Governor Capper's Letter.**

To the Editor: Your letter of December 31 was duly received and I have read with much interest the clippings enclosed with reference to your campaign for increased food production. I am in full accord with the movement and for several months I have been doing everything in my power to arouse our people to the necessity of raising every possible pound of foodstuffs. I have also laid before the authorities at Washington the difficulty we will encounter in harvesting these crops, once they are planted and matured, if the farms are stripped of their experienced farm labor. To that end I have urged the liberal application of the exemption law with respect to experienced and trained farmers. The farm labor problem is one of the most serious we shall have to solve in the next year or two. ARTHUR CAPPER.

---

Hon. Wesley L. Jones, U. S. senator from Washington, takes a broad view of the situation, and looks forward to possible conscription of every man in the country to be put where he will do the most good. Senator Jones writes:

**Senator Jones' Letter.**

To the Editor: Your favor of December 31 with reference to more effective work along agricultural lines at hand.

The problem is a very serious one, but it is not the only serious problem in connection with the prosecution of this war. I am on the committee investigating the activities of the shipping board and I have been impressed with the supreme importance of shipbuilding and the difficulties in securing labor and carrying it on properly. While it is true that we must raise an abundance of food for our soldiers and for the allies it is also true that this food must be transported to them three or four thousand miles. We may raise an abundance of food, but if we do not get it to them they are as bad off as if we didn't raise it at all.

The production of food, of course, is supremely important and it is also supremely important to get the food we raise where it is needed. The more we study the dependence of one industry and one product upon another industry or line of action, the more we are forced to the conclusion that no one thing is really supreme, but that several lines of activity are absolutely essential to success in this war and that the failure of any one will nullify or make ineffective all the others.

I want to do everything that I can to encourage and promote agricultural development and also make certain that all other essentials are properly promoted.

I sometimes think that the best way to carry on this war would be to conscript every man in the country, old and young, and then authorize some authority to place them wherever their services will do the most good. It looks as if this may be about the only way that will bring victory to our arms.

W. L. JONES.

---

Lynn J. Frazier, known as the farmer governor of North Dakota, and put into office by the uprising of the farmers of the state through the nonpartizan movement, writes:

**Governor Frazier's Letter.**

To the Editor: Your message sent to the president provides the means which I believe would be a great assistance in the increase of food production for next year. I have called a special session of our state legislature for the special purpose of providing seed-grains to the farmers who are unable to procure seed on account of failures of crop.

LYNN J. FRAZIER.

---

J. Ross Carpenter, secretary of the state board of farm commissioners of Wyoming, writes:

**J. Ross Carpenter's Letter.**

To the Editor: Your letter of the 29th addressed to the commissioner of agriculture, has been referred to this office since there is no agricultural commission.

We have read very carefully your enclosures and thoroughly agree that the situation you set forth is typical of the conditions here in our own state. For us the labor question promises to be a serious one the coming season.

We heartily indorse the action you are taking with reference to getting some big man to assume the duties of food production administrator, and shall be glad to do anything possible to assist with the work. We are referring your communication to the state council of national defense.

J. ROSS CARPENTER,
Secretary.

---

**Hooverize on Entertaining.**

The White House has cut out official receptions and banquets for this winter, and cabinet families have followed suit.

### WHAT IS YOUR UTMOST?

Are you planning to raise more or to raise less of wheat, oats, barley, rye, corn, potatoes, peas, beans, sugar beets, vegetables, fruits, hay, horses, beef cattle, dairy stock, sheep, swine, poultry, or for feed carrots, mangels, rutabagas, turnips, artichokes, silage?

Please fill out this coupon, sign your name and postoffice address and mail to the Editor of The Washington Farmer, Spokane, Wash. Your name will be held in strict confidence if you so request.

I am planning to raise this coming season:

More of .....

.....

Less of .....

.....

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Prepare to Store Your Grain

Producers of wheat, oats and barley face a necessity this year that is somewhat new in the northwest, that of grain storage. There are no sacks, if present indications are to be relied upon. Calcutta still produces jute for their manufacture, but the ships that would transport this material, either raw or manufactured, are carrying war materials instead. Available sacks are requisitioned by various governments to put dirt in for fortification purposes, or other war uses. The grain farmer must, therefore, figure on handling his 1918 crop without sacks, and that means handling and storage facilities for grain in bulk.

The first problem, and perhaps the most vital from the standpoint of the individual farmer, is that of handling and storage facilities on the farm. Instead of sacks to be sewed and piled on the ground, bins or granaries or wagon tanks must be ready this year. The character of these containers is something that can not be specified for all farmers. Some will find it advisable to build of one kind of material and of one style and capacity; others will have other needs and other means of filling them. For some, temporary structures will be adequate and satisfactory. For others, permanent equipment will be required. For some, lumber may be readily available and the best and cheapest thing to build of. For others, concrete may be best suited to the needs. For some, the equipment may properly be a small storage bin at each setting in the field, with one or two tank wagons for hauling at leisure. For others, it may be wisest to have one central storage warehouse on the farm with tanks to haul direct from the machine to this central storage. For others it may be wise to have enough tanks available to haul direct to the warehouse at the shipping point.

Every man must decide these things for himself; but unless he wants to pay ten or more cents a bushel for sacks, and then run a risk of not having a supply when the harvest season comes, he must prepare in some way for bulk handling.

The warehouse and elevator situation at the shipping points and large terminals presents a grave problem. It is something for the farmers to watch constantly. Farmers should exert their influence at all times to insure such facilities in their own sections and to induce the preparation of adequate elevators at the terminals, but the farmer's first problem is at home. And now is the time to be solving that problem. It will not do to wait until grain is ripening or harvest nearly on.

## Land Bank System Sound

As we reported last week, congress has passed the bill authorizing Secretary of the Treasury McAdoo to purchase $100,000,000 of farm loan bonds during the current fiscal year and a like amount if need be next year.

This wise action lifts a cloud off the farm loan system and insures continued growth.

As the Wall Street Journal points out in a friendly article, government war borrowings and increased rates of interest on all classes of loans now being put out had made it impossible to sell farm loan bonds to the general public in sufficient quantity to meet the demands of farmers' loans from the 12 land banks.

The difficulty was a general lack of demand for all kinds of securities, however inviting in ordinary times. As these bonds are free from all forms of government taxation, including federal income tax, and also are legal for investment by life insurance companies and savings banks in most states, in normal times it would be an easy matter to sell them in unlimited amounts.

Enemies of the system tried to undermine public confidence by questioning the constitutionality of the farm loan law, but that flank movement failed when the attorney general of the United States, acting for the government, and Hon. Charles E. Hughes, the republican candidate for president in 1916, acting for buying bankers, approved the constitutionality of the act and the validity of the provision exempting the bonds from taxation.

Up to November 1, 1917, the open bond market had bought $21,500,000 worth of these farm loan bonds, and undoubtedly there will still be a considerable demand for them in spite of war-time conditions.

## Many-Sided Problem

A New York statistician has figured it out that the 108,000 horses in that city eat enough grain to feed 500,000 people, and he argues from that calculation that New York ought to dispose of its horses and use auto trucks in their places.

He says that statistics compiled by the United States department of agriculture have shown that it requires four acres of cultivated farm land to produce enough grain to feed a horse for one year. This estimate pre-supposes a fertile grade of land in a good farming locality; in poorer sections more land would be needed.

On the minimum estimate it is figured that 432,000 acres of land must be cultivated yearly just to feed the horses owned in that city. On the basis of 100 acres to the farm it will be seen that 4320 farms or their equivalent are entirely devoted to producing feed for horses. Taking an average of five persons to the average farm household, 21,600 people, or enough to make a fair sized city, devote all their attention to the production of grain for this purpose.

The New York man who did all this figuring showed his calculation to the federal food controller at New York, who promptly agreed with him that the horses should be discarded.

It all seems a very clear case until we remember that other government officials are giving conflicting counsel.

The director of the U. S. bureau of mines says there is danger of a gasoline famine, and we are bidden to conserve the country's supply of that power. But auto trucks require gasoline.

And the gentlemen in charge of the sale of Liberty bonds and thrift stamps tell us that we ought not to buy anything we can possibly get along without buying. They say it takes war materials to make automobiles and auto trucks, and the labor engaged in that way would better be working in shipyards, munitions factories, coal mines, etc., and the money spent by the buyers ought to be invested in Liberty bonds and war certificates.

There is further the humane consideration. What is to become of the 108,000 horses that New York is urged to cast out of its city limits? The city might sell them, but that transfer would not stop their eating grain. New York has an active and vigilant Society for the Prevention of Cruelty to Animals, and that organization would surely be heard from if the city government contemplated the wholesale slaughter of its cast-off animals.

So we see this is a many-sided problem, and it is dangerous to jump at conclusions.

The flouring mill at Dayton, is experimenting in a new industry—the making of barley flour. The output is small and the product is being tested as to its baking qualities and food value. It may prove a palatable and nutritious substitute for wheat.

The loyalty of the granges of the state was illustrated recently when a conference of all the Spokane county locals went strongly on record as determined to do everything in the power of the order to increase the production of all things that tend to aid in winning the war.

If Chicago is to be a "primary, interior market" for the determination of the price of northwest wheat, why not make Portland a "primary interior market" for the determination of the price of Iowa corn to the farmers of the northwest, a correspondent writes to inquire. We do not know.

## Washington Gleanings

Mr. and Mrs. Robert Fredlund of Chehalis have sold out their interest in the Avon dairy to Carl Johnson for $10,500.

Merrill, the 14-year-old son of Mr. and Mrs. C. E. DeBow of Prosser, last season raised 1050 pounds of beans on .47 of an acre of ground.

The Farmers' union of Albion has elected the following officers: Charles Bryan, president; James Christopher, vice president, and Edward Moyes, secretary.

The recent warm weather, which has been succeeded by a cold snap and snow, hurried along the spinach and onions and heavy shipments of these vegetables were made from Walla Walla.

A resolution has been adopted by the Whitman county farmers' union in which it is urged that the farmers, in so far as is possible, bulk their grain. An effort will also be made to bring the price of sacks down to a more reasonable figure.

Vernon Robinson and Harry McGrunn, having entered into a partnership, have bought 2860 acres of land situated between Linn and Ritzville. About 2500 acres are in cultivation to wheat. Live stock and machinery with 1300 acres of summerfallow were included in the deal, the total consideration being $120,000.

Six cars of apples billed to cross the continent under a test by government agents as to the best means for shipping fruit in winter left Yakima recently. Each car was equipped with different methods of heating and insulation and had 10 thermometers, from which readings will be made every few hours by the men in charge.

D. A. L. Melander, professor of entomology and head of the department of zoology of the state college, has been designated by the United States bureau of entomology as project leader in entomology in this state, the work outlined to be undertaken cooperatively between the federal bureau and the state college extension service as a war measure.

## What Others Say

Dakota Farmer: Sunshine in the hog house means healthier and more profitable pigs.

Kimball's Dairy Farmer: What the milk producer must learn is that there are other markets for milk except the one which he has been accustomed to supply.

Hoard's Dairyman: It seems to us at times that there is only a small percentage of men who consider the character of cows they are keeping and the importance of raising the kind of roughage which requires the purchase of but little mill feed.

Wallace's Farmer: The problem of feeding almost half the world is up to the farmers of the United States. If we are to solve it satisfactorily, and avoid a world famine, there must be a very real and thorough mobilization of our agricultural forces, and it must be handled in a practical, and not in a theoretical way.

# Tractor Is Outstanding War Factor

## *To Speed Up Food Production on Farms as Well as to Speed Up the Fighting at the Front*

The tractor has become a great outstanding factor in the war, both on the firing line and in the way of hauling supplies to the firing line. Likewise the tractor is becoming more and more an outstanding factor in the farming industry. On thousands of farms and in many orchards the tractor is solving the problem of greater acreage and bigger crops with less help. Adapted to the farm and properly handled, the tractor means greatly increased production, simplifies the help problem, lowers the cost of plowing, seeding, harvesting and hauling.

With machinery, the factory does in hours what handwork would require days and perhaps weeks to do. The farm is a factory. The profits of a factory depend largely upon lessening the cost of production. This is just as true of the farm as of the factory. If proper machinery enables the factory to save time and human labor, has not machinery a similar mission on the farm?

Every farmer who has one or more boys ready to answer any future call to arms, has the deepest and most profound interest in the winning of the war. The sooner this great conflict is won, the less is the probability that these sons of the farmers will be sacrificed. A prolonged war means untold sacrifice. As week by week the war is brought home to the farms of the country, farmers become more and more concerned regarding all the means of carrying on that war. Guns and cannon, ships and aeroplanes become a part of their daily thoughts and yet the success of all these warlike instrumentalities depends upon the men behind the guns. Due efficiency of the men behind the guns depends upon energy-producing food and the supply of food more and more depends upon increased food production.

It is becoming more and more evident every day that nothing is more vital to the speedy winning of this war than big farm crops. It is up to farmers of the great west to raise the surplus of food for European as well as for American fighting forces. To speed up production it is up to every farmer to employ machinery to the greatest practicable extent and machinery of the right kind will make it possible for him to plow faster, seed faster, harvest faster—doing a dozen and one of the activities of the farm more quickly and with less hired help.

The first consideration of keeping the farms of the country up to their highest level of production is the manpower available. This question is becoming more serious with every recurring draft. A marked farm labor shortage existed for the 1916 harvests before the first draft was made. Last summer this shortage had become even more acute. Next spring's work can not be done even up to the level of former years with the manpower now in sight if farming methods remain unchanged. Not only is the usually vast army of floating labor of pre-war days absorbed, but many thousands of farmer boys have been enlisted in one or another of the industries of war. How shall the great grain states prepare for the harvest of 1918? What is the answer to this shortage of farm labor? This is a hard question to answer because so much depends on the viewpoint of the man who is face to face with it.

One thing is reasonably sure, that is that every man who farms together with what help he will have can with improved methods of machinery, double or treble or quadruple what he has heretofore done. Lost time is a tremendously important factor and this should be made to cover not only the idle time of men, horses and machinery, but also of idle land capable of raising profitable crops. Some of the old methods of farming will have to be discarded in the pressure that is brought to bear upon every worker through the exigencies of preparing for and carrying on America's part in the great war. The horse has his place on the farm, but the time is at hand when he is dividing honors with the machine. It takes more men to handle the same amount of horsepower in horses than it does to handle horse power in farm machinery. Even if horses were plenty and one man could work 10, 20 or 30 horses in farm work, this matter would be different, but on the average it takes one man to handle from two to six horses. Hence it is that every farmer should aim to get out of the two-horsepower class into the 10 or more horsepower class, so far as his conditions warrant.

As labor shortage has increased, the demand for the one-man tractor especially has grown. Such an outfit enables the farmer himself to multiply many times the results of his own labor with the aid of the machine. Estimates received from tractor owners show that the one-man tractor is taking the place of from 2 to 16 or more horses, depending on the size and power on the drawbar of the machine operated.

When buying a tractor it is well to be sure that the machine selected is large enough for your needs. It is better to have one that will develop more power than you feel you will actually need than to invest in one that may not develop enough. Aim to have an abundance of power.

It is the experience of those who have farmed one or more seasons with a tractor that it pays to have the machinery that is made to work with it. The tractor plow, for example, may be operated from the seat, has the correct draft and is adjusted to work with the tractor. The double disc pulverizer is also especially desirable, one set of discs throwing the dirt one way and the other set the other, thus making a seed bed at one operation. Horse-drawn machinery may often be made over for use with the tractor with very little cost.

When the work of plowing, discing, harrowing, seeding, mowing and threshing that a tractor can do has been finished there still remains much winter farm work to which it can be put. Aside from the hauling of heavy loads, there is silo filling, feed grinding, stump pulling, wood-sawing and other work calling for engine power that it will perform.

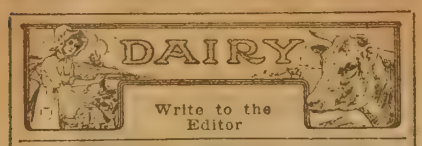
It is better, if you can spare the time, to take a week or so in which to select your tractor than to buy it after only a casual inspection of one or two sizes and types of machines. And after you have decided on a certain make of tractor, look into the reputation of the firm that is back of it, assure yourself that parts that may need replacing can be obtained in a reasonably short time.

And after you purchase a tractor, study it until you understand it thoroughly. Keep it well lubricated and never neglect to stop when the time comes to grease up. A tractor that runs along doing work to the limit of its capacity is a time and money saver. It isn't difficult to keep a good tractor in running order; but, like any other piece of machinery, understanding and care should be exercised in handling it.

A tractor should be properly housed and protected from the weather. Whenever it becomes necessary to leave it stand out it is advisable to see that all openings to the fuel tanks as well as all priming cups are turned down to prevent any water from getting into them. Just a little water in the wrong place can make a great deal of trouble, especially when starting.

Let it be repeated that the tractor is an outstanding factor in helping win the war. It is ushering in a day of more extensive and more efficient farmer. To do your utmost this year, next year and in the years to come, don't try to skimp, unless you have to, or do things the old way when you can accomplish much more, do it more cheaply and thus put yourself in position to realize more profit from your farming operations. It is up to every one here in America to help win the war. It is no more up to farmers than to other men except that farmers can help more than other men because they are in position to supply food—the greatest war need.

The tractor is a power unit merely. Alone it will not plow a foot of ground, sow a pound of seed nor harvest a bushel of grain. But hooked up to plows, to cultivators, to binders, to threshing machines and properly driven, it can be made to help towards greater accomplishment, greater production, while at the same time conserving grain and that scarce and very valuable commodity—skilled farm labor. It can be so handled as to permit a large amount of work being done that might otherwise go undone at one of the most critical times in our history. In a word it offers in many cases a means of doing things on a larger, more efficient and hence more profitable scale. Properly handled in these cases it is a force which can be made to lower the production cost of farm crops and to make it possible for the farm factory to increase its output when bigger crops stand as one of the mightiest bulwarks of national safety and defense.



Because of this, and because it is the patriotic duty and desire of every one, in whatever measure possible, to increase the supply of those things for which the nation, its army and its allies are in dire need of, this machine is referred to for supplying power to the farm as "an outstanding factor" in helping bring victory and as speedy an ending of the war as it is possible, by united efforts, to bring about.

Plowing with one type of tractor.

Discing with another type of the tractor.

A. B. NYSTROM, Editorial Contributor

# Silage This Year?

## Corn Can Be Successfully Grown

By Paul E. Triem.

If you have decided to put in some silage corn this season, here are a few important points brought out by the experience of many farmers during the last few years. To begin with, use nothing but acclimated seed of a variety which is adapted to your local conditions. On this all-important matter of variety, consult the experiment station of your state college and those of your neighbors who have been successful with corn.

Corn in the northwest does best on light, warm land. Do not plant this sun and heat loving crop in cold bottom land and expect it to do well. It may, in exceptional years, but you are not giving it a fair chance when you handicap it in this way. Remember at the same time that corn is a gross feeder—it must be, when you consider that yields of from 20 to 75 tons of silage per acre are reported—and that as this warm soil is often deficient in plant food and humus, you must supply plenty of available fertilizer.

Promptness is the keynote of success in raising corn in the northwest. The seed must not be put into the ground until the latter is fairly warm and all danger of frost is past. It must be planted just as soon as these conditions are assured, for the growing season is short. And putting the crop into the silo must be attended to without a day's delay, when the proper stage of development is reached—many of those whose corn crop was a partial or complete loss last fall would have avoided this loss had they heeded this rule of promptness.

The gospel of corn for the northwest may be summed up in the statement that this is not a real "corn country," but that with proper precautions tremendous crops of corn, particularly of corn silage, can be secured. The game is decidedly worth the candle.

# Milking Shorthorns

At a time when we in America are beginning to look with anxious eyes after the soaring pot roast and beef steak, it may be well to consider some of the advantages claimed for the dual-purpose Shorthorn. Here is the way the American Milking Shorthorn Breeders' association sums up a discussion of the milking Shorthorn.

"A good milking Shorthorn cow will give a return in milk of not less than 6000 pounds for the year, and it will test about 3.7 per cent. The cream from this milk, at present values, will be worth about $75. Her calf, reared on her skim milk and adjuncts, will be worth approximately $50 for meat when 1 year old. The return, then, from this cow is $75 plus $50, or $125."

American dairymen often ask why it is that the herds of this country must be constantly recruited by individuals imported from England.

"Is the English climate more favorable than ours for the breeding of milking Shorthorns?" the northwest dairyman is apt to inquire, before becoming too enthusiastic about the dual purpose cow.

This important question was put to W. S. Dunn, a New York importer and breeder of milking Shorthorns and Brown Swiss.

"The climate of America has nothing to do with the matter," Mr. Dunn replied. "It isn't a matter of climate, but of breeding, and until our farmers settle down into the routine of the English herdsmen we will have to import our finest breeding stock. The reason is not difficult to find: in England a dairy farmer has inherited his herd from his father, and in turn passes it on to his son, with the blood lines unbroken. He has done his share in building up the herd, and this selective breeding continues for generations. In this country we are less settled. The work that one farmer does in starting a herd is apt to be undone at his death or retirement, when, as likely as not, the herd will be dispersed."

# Better Milk Price

As previously reported in these columns, a federal commission has been investigating milk production and prices for the United States food administration. Its report is now in the hands of the government, and it approves higher prices for the producers.

Commenting on this report, Mr. Hoover says the only hope for cheaper milk for the consumer lies in the organization of transportation facilities for the freer movement of feeds. He has issued the following statement:

"I consider the committee has done the best that can be done with a difficult situation. There can be no question from the investigation of the committee that if we are to preserve our milk supplies the milk producers around New York must have relief by an increased price for their product. On the other hand, the arrangement set up of not increasing the price of cash-and-carry milk protects the most necessitous of the population to the utmost degree possible in the situation.

"If the new railway control is able to untangle the railway blockade so as to allow sufficient grain cars to return to the corn belt, the price of corn to the consumer should fall rapidly. Nor does the corn raiser benefit from a high market which he can not reach. Therefore, our feed and our milk situations are inextricably entangled with our railway situation. If we can secure a free movement of grain, there is hope of cheaper milk."

To The Washington Farmer: As far as I can find out all our next neighbors are supplied with your valuable paper.

SPOKANE, WASH.

Lily Primrose

Take Your Time

NEVER buy a cream separator in a hurry. Your reason for buying is not so much to get a cream separator, as *to get all the cream from your milk, all the time.* It takes time to pick that kind of a machine out of the many on the market.

Send to reputable firms for catalogues, and study them carefully. See which machine requires the fewest and simplest adjustments; which has the best oiling system; which is most sanitary and most easily cleaned; which is so well made that it will undoubtedly do good work for a long time. Go into details, and pick the best two or three of the lot.

Then ask for skimming demonstrations to determine how little cream is left in the skim milk. This is important, because the wrong machine can waste more cream than it is worth, while the right one will put money in your pocket every time you use it.

When you are through you will find that you have bought a **Lily** or a **Primrose Cream Separator** because the **Lily** and **Primrose** will prove to be first on all these counts. We will send catalogues on request, leaving the final decision to your judgment.

LIVE STOCK NOTES

Write to the Editor

E. J. IDDINGS, Editorial Contributor

# Finance Live Stock

## Banks Take Interest in Problem

"One of the most hopeful signs of the times has been the active interest taken by the local bankers in the agricultural development and welfare of their patrons. There are 11 banks in the United States who regularly employ agricultural experts. In no sense is this work considered philanthropic or an effort to dictate. The banker realizes that in proportion as the farmer and stockman prosper so will the city and its institutions."

This is the statement of R. A. Blanchard, agriculturist for the North Portland and Live Stock bank, who was formerly actively engaged in county agriculturist work in Oregon.

Two of the most prominent banking organizations in the northwest now taking special interest in the financing of live stock problems are the bank with which Mr. Blanchard is connected and the Spokane Cattle Loan company, which has connections with the Old National bank, the Exchange National bank, the Spokane & Eastern Trust company and Armour & Co. of Spokane.

While neither of these institutions make loans on live stock at lower rates of interest than on other staple security, both are working with a view to stimulating the live stock industry as much as possible.

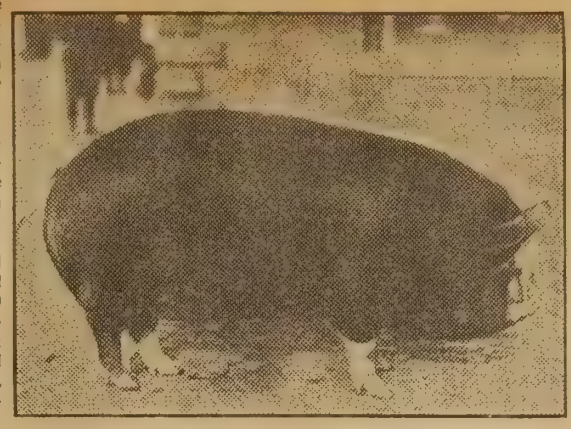
# Veterinary

Dr. S. B. Nelson

**Change Their Feed**—I have some goats running in an oak, willow and ash pasture that get the scours and live only a few days, then die. I am feeding oat hay. E. H., Barton, Ore.

Gradually change the feed. Decrease the feed to about one-half for a short time. Remove them from the pasture containing the oak into another pasture if possible. Give them once daily on a little grain feed five grains of sulfo-carbolate of zinc. Give them morning and evening a douche of one teaspoonful of Listerine in eight ounces of water for a few days.

**Trouble by Change in Feed**—I have been feeding gold coin wheat straw and a little oats to my horses. I gave them pea straw three times and one got sick. Is pea straw good for horses and cattle or did this cause it. All straw was put in the barn soon after threshing and it was dry. J. L. Mica, Wash.



The cause of your horse getting so very sick was the sudden changing of her feeding from one feed to another of a different kind. When it becomes necessary or desirable to change an animal's feed it should be done gradually. Change only one-fourth of the feed at one feeding, one-half at the next, and so forth until the system of feeding is entirely changed, taking from one to two days to change. I have seen horses and cattle taken violently ill by simply changing from oats to one feed of barley and then back to oats again and yet barley in certain sections of the country is the only grain for feeding stock. Pea straw is a fine feed for farm animals provided they are gradually accustomed to eating it and it is fed in moderation with some other feeds and especially some roots.

**Milk Leaks**—I have a splendid cow that got her teat cut over a year ago. It healed up all but a hole about the size of a timothy straw, and now the milk leaks through this opening in the side of her teat.

J. E. A., Waldron, Wash.

Take your cow and cast her with a triple hitch if necessary. Then scarify the small opening with a fine-bladed knife, turning the point of the knife round and round until the scar tissue has been removed and new, fresh tissue has been produced. Now put through above and below, going around the opening, what is known as a harness maker's stitch. Take large thread and put through the side of the teat and then fasten quite securely. This will make the lips of the wound pucker out a little, open up. Now bathe that with a 5 per cent solution of lysol in water and dry carefully with cotton dipped in the lysol solution and squeezed dry. Sew the outside of the wound together with two or three small, fine sutures, dust on some boracic acid and then cover with collodion. Place the cow in a clean place, where she will not get herself dirty, and allow the wound to heal. In five or six days the collodion may be picked off and the stitches removed.

# "Berkshire Year" in the Barrow Contest

The American Berkshire association finds good reason for calling the International Live Stock exposition at Chicago this year, in the barrow contests, a "Berkshire year."

The grand champion barrow and the grand champion pen of barrows were pure bred Berkshires shown by Hood Farm, Lowell, Mass They were senior yearlings and two of them weighed 625 pounds each. The grand champion weighed 600 pounds. The grand champion carload also was a load of Berkshires bred, fed and shown by T. E. Bruner, Augusta, Ill., in class 250-and-under-300-pounds.

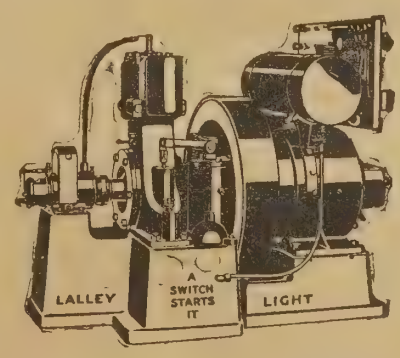
*He Does Better Work With Lalley-Light*

# Three Moving Parts Instead of Sixteen

On thousands of farms, Lalley-Light is known especially for its constant reliability, its economy, and its long life.

Because of the engine's extreme simplicity it has gained this national reputation.



Where the ordinary electric-light plant engine has sixteen moving parts—often more—our engine has only three. In fact, there is no other light plant that we know of which compares with the Lalley on that score.

Think what such simplicity adds to the life of Lalley-Light—what it saves in wear and tear, adjustment and repairs.

Lalley-Light engine was designed especially to run a direct-connected electric generator.

It has big ball bearings at every point where split babbitt or roller bearings are commonly used. It has sure-fire magneto ignition. It is water-cooled. It runs with steam-engine steadiness. That is why light direct from the generator is as unflickering as from the battery.

There seems to be no wear-out to this engine. Lalley-Light plants installed more than seven years ago are giving today the same good service they gave in their first year.

Generating plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.

This record shows Lalley-Light reliability as nothing else can show it.

Lalley-Light brings electricity to the farm—unlimited light and power in their safest, surest and simplest form.

It gives you clean, bright light whenever and wherever you want it.

Its power will run the pump, separator, churn, grindstone and other small machinery at a cost of a few cents a day.

Lalley-Light furnishes electric current from two independent sources—generator and storage battery—actually giving the service of two plants for the cost of one.

It saves labor and improves living conditions. It increases the value of your property; it reduces fire risk and insurance rates.

This is the time to figure on installing Lalley-Light.

Write us for the illustrated booklet describing, completely, Lalley-Light for your home.

If you desire, we will also advise the name of our nearest branch sales office who can show you this efficient plant in operation.

## POULTRY

Write to the Editor

JAMES DRYDEN,
Editorial Contributor.

# Selecting the Layer

In the issue of the Farmer of December 13 there were photographs of two Barred Plymouth Rock hens, one of them with a record of 220 eggs in a year and the other seven eggs, but it was not stated which was which. The question was asked: "Can any one pick out the best and give a satisfactory reason for the selection?"

A reader in Lakeview, Oregon, has made a selection and gives his reasons very lucidly as follows:

"I am a dairy farmer, if you please, and as is usual with me, have just been perusing the Farmer upon its receipt here. Now on page four of your issue of December 13, under the caption 'You Can Not Judge Layers by Their Appearance,' two hens are shown, and as I keep from four to six dozen matured Barred Rocks as a farm flock, am interested in learning which of the two is the better layer. My guess is that the hen to the left of the picture is the more desirable for laying. She appears more neat, trim and alert, more sensitive and doubtless more active and energetic than the other of the heavier and coarse-featured type, of a dense and sluggish disposition. I am not appealing for the answer out of mere curiosity, but for edification and future guidance."

The only trouble with the answer is the wrong hen was selected. He picked the seven-egg hen as the 220-egg hen. The gentleman has evidently hade a study of the characteristics of the heavy layer, and he enumerates the characteristics of the good layer possibly as well as any one can enumerate them. There was not a great deal of difference in the type of the two hens. Two hens were selected of as nearly identical shape as possible with the purpose of showing that even though the hens look alike they do not lay alike. They are about the same size. The length of body is about the same, and both have the characteristic Plymouth Rock shape. But in spite of the uniformity of shape or type there is no uniformity in production. I think, however, that Mr. Reynolds' designation of a good layer—"more neat, trim and alert and more active and energetic," is good. His description of the poor layer is also very good—"heavier and coarse featured, dense and sluggish disposition." This will hold good on the average. The alert, active, busy hen is the good layer, the heavy, sluggish, masculine hen is usually a poor layer. But one is easily fooled in selecting the best layer. The actual record of the ancestors is the best indication of the egg laying capacity of the pullet. Judge her from her ancestry rather than her looks. Heredity is greater than type of hens. J. D.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4661 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

## Treatment for Lice

To the Editor: I have a flock of chickens and although they seem to be healthy most of them seem to be lazy and do not get around as they should. I examined some and find that they have lice, but I do not find any lice in the chicken house, as I clean it out twice a week and always paint roosts with lice killer, but the lice seem to stay on the chickens. Can you recommend ways and means of getting rid of the lice?

G. B. BRAUN.

Mayview, Wash.

The question of lice has been discussed several times in these columns and treatment given, but it is an ever-recurring question, a sort of come-back proposition, that is always open for discussion.

Poultry keepers should always remember that there are two kinds of insects that prey upon the hen and a method of controlling one will not control the other. One of them we call the louse and the other the mite.

The louse stays on the hen all the time. That is, it lives and breeds and propagates on the hen. The mite lives on the hen or on the blood that it sucks from the hen, but when it gets its fill it leaves the hen and crawls back to its breeding place which are little hiding places or cracks on the roost, mostly under the roost, and in the bottom of the nest boxes. It is a sort of nocturnal actor; it does its feeding at night and sleeps during the day. It is not found on the hen during the day.

The other insect, the louse, stays with the hen all the time. It lives around the root of the feathers and subsists on the productions of the skin and feathers. The lice do not suck blood from the hen like the mites. There are different kinds of lice. One kind is found on the head, usually of small chicks. Another kind is found on different parts of the hen, a sort of wandering pest. Another is found between the barbs of the wing and tail feathers. There are various other kinds, but these are the main ones. The hen has her full share of pests, probably more than her share. Unsanitary, dark, dirty, ill-ventilated poultry houses are favorable conditions for the pests.

Treatment. First, make the poultry house sanitary. Let the light and the fresh air into it and the control will be easier. Keep the hen in good health and vigor and she herself will help to win the war. The poor, thin, droopy, lazy hens are the ones that suffer most.

The wild fowl fights her own battles with insect pests, but the domesticated hen must have assistance, otherwise the barbarians will soon put her out of business. She will need less assistance, however, if she is kept under sanitary conditions and gets the care and feeding necessary to keep her in good health and vigor. The wild fowl lives the free, open air life, and is not compelled to live in pest-ridden, germ-infected houses, and she can take her daily bath of clean dust. The dust is nature's remedy. It is one of the best things ever invented for the hen.

If the hens are kept under proper housing conditions and have opportunity to use nature's remedy, the dust bath, there should be no necessity for any other treatment for lice. At any rate it has not been thought practicable on most of the large poultry farms to

GRANVILLE LOWTHER,
Editorial Contributor.

# Depends on the Man

## Success Does Not Follow Formula

By GRANVILLE LOWTHER.

I have received a letter, not for publication but for private information. However, the information is such as many others might wish to know, so I will publish answers to the inquiries, withholding the name of the writer.

The inquirer is a professional man, an educator. Like many others, he looks forward to a time when he will be crowded back in his profession by younger teachers who, if they have not more knowledge and skill in school management, have at least more vim and energy to bear the long sustained, nerve-taxing strain of school life. In other words, he wants a place to which he can go, a home in the later years of life on earth, a quiet, restful place that will bring him an income sufficient to keep him and his wife. He thinks he wants an orchard, and wants to know what are the chances of success?

I hesitate to advise, because there are so many factors entering into it. Some men succeed where others fail. Some of the most pronounced successes in the orchard business have been by men who for years followed some of the professions. Then, too, others have signally failed. No one can tell; not even the man himself until there has been a trial.

**Progress Strewn With Wrecks.**

The pathway of human progress is strewn with the wrecks of fortunes, hopes, ambitions, nations and races; but when the sum total of influence is computed, each generation is ahead of the one that preceded it. I have a simple illustration in which I am now engaged. I have seen the necessity for some method of utilizing, at a profit, the wastes of the orchards. I have made a study of various fruit products, and a number of experiments not generally adopted. I have a record of notes and observations in reference to 32 experiments that are failures. Now if I make 100 experiments and one succeeds I will feel repaid, and the future will reap the benefit. Sometimes when I feel like it I write poetry, or verse, or rhyme, or jingle, or whatever folks please to call it. I do it generally for my own pleasure and not for publication. Much of it is like my experiments, mostly failures. But some time since I wrote something that fits in here and illustrates my meaning.

Do we look at the faults of our fathers and say
"How simple their notions were?"
Or do we observe our own errors and see
"How foolish we mortals are?"

Be not too severe; for the men who succeed
Who have mounted the heights and prevailed,
Owe more than they know to the heroic deeds
Of men who have struggled and failed.

These bold pioneers in the unknown wilds,
Whose mistakes teach us what not to do,
Help us to succeed by the knowledge we gain
By keeping their errors in view.

In the fruit business we are past the pioneer stage. Its success as an industry is established. The growing of commercial fruits in a large way for the world's markets, is yet in its infancy, but enough has been done to know that it will be one of the valuable industries of the Pacific northwest. Then, too, we have passed the boom period which always comes from the settlement of a new country. We are coming to realize that values are estimated mostly upon the basis of three factors. First, whether land will pay a good interest on the investment. Second, whether the development of the country will increase the values, as to whether the land is located in a good neighborhood of desirable people, or in a group to whom we are not congenial, nor they congenial to us. The esthetic value may be illustrated by its location on an elevation overlooking the country, or in a hole where there is nothing desirable to see.

**The Man.**

Mostly, success or failure depends on the man, because his physical strength is an asset. It makes a difference whether he is able or unable to work long hours, or whether most of the work must be entrusted to hired men.

If it is done by hired labor, much depends on the wisdom with which he can choose his help, and direct the labor of others. Much depends on how he adapts the fruits and vegetables grown, to the conditions of soil and climate. Further, it depends on the demand in the markets for the varieties of crops grown. A man may grow splendid celery, but if he can not sell it, he is bound to lose. He may grow good Ben Davis apples, but if people persist in buying other varieties, he will grow them at a loss.

There are many other things to consider, and the "man on the job," is the only one who can tell what to do.

## A NATIONAL PROBLEM.

### Individual Can't Solve Marketing.

"Marketing is not an individual problem, or even a community problem," declares Professor T. J. Newbill, formerly club leader for the state of Washington. "It may once have been so, but in that case the day has long passed. Our marketing problems must now be settled nationally—a view which is being brought to the front in the national capital during the present turbulent times as never before."

"National considerations," continued Professor Newbill, "decree that the one crop system must give place to diversified farming, under which each community will be able to feed itself. The old way of shipping fruits and grains across the country from a community which was producing them to one which was engaged solely in the production of another specialized product can no longer continue, for our overburdened transportation systems are not equal to the demand. The railroads must be used nationally."

In the matter of marketing by-products, we must learn to think straight before we can act straight, says Professor Newbill.

"We must think by-products and talk by-products for a long time before we will begin to get results," he insists. "There is a tremendous need here—50 per cent of our farm products are wasted; and the only cure for this is for us to learn to make our by-products—to standardize production and marketing, so that the 50 per cent of our people who are now going without sufficient food may be fed."

AMERICAN ARMCO INGOT IRON

Rushing "ARMCO" Culverts to the Cantonment at Camp Mc Clellan

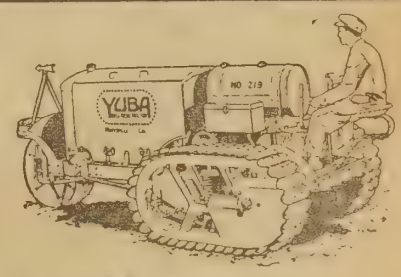
## Installed quicker – Last longer

PROBABLY some of the fastest road making ever done in this country was during the recent construction of the Nation's new training camps.

This speed was partly due to the fact that many

### "ARMCO" IRON CORRUGATED CULVERTS

could be shipped on a day's notice, and could be installed in a few hours' time by inexperienced labor.



Long years after the war is over these culverts will be doing duty. Or if the camps are abolished the culverts can be dug up and used again, because they are made of "Armco" Iron. They resist rust for many, many years because made of an iron practically free from impurities.

# Industry Is Checked

## *Fuel Administration Takes Action*

The vicissitudes of war were brought home to the American people with a jolt last week when National Fuel Administrator Garfield issued an order shutting down the greater part of the industrial plants of the east for five days, and requiring suspension of work every Monday for a period of 10 weeks. The action was taken with a view to relieving the congestion of railroad equipment at terminals and Atlantic ports, giving them a chance to catch up and get an even start with business again. The action was specially ordered because of the fact that many ships were tied up at docks unable to sail for lack of coal. Administrator Garfield announced immediately after the taking of effect of the order that the congestion was already becoming relieved, and that ships were being furnished coal to make their voyage with war supplies for the American soldiers and their allies.

President Wilson approved the action of Mr. Garfield, but many members of congress and representatives of industries made vigorous effort to have the order revoked before it could go into effect last Friday, declaring that it meant ruin to the industry affected. The order exempted all plants manufacturing or actively distributing food and also most of those engaged in war activities. Others of various kinds were exempted, but the order put hundreds of thousands of employes out of work during the five days.

This is the first time that business in America has felt keenly the effect of the war, and is believed to be only the first of a great many sacrifices that will have to be made. As the country takes a greater and greater part in the struggle, all the energies of the nation will have to be centered on war operation, and industries that do not contribute directly toward a victory over Germany and her allies will have to suffer, many even to the extent of temporary elimination.

### Peace Parley Is Failure.

Indications are to the effect that the peace negotiations between Germany and the Russians are to be a total failure. Germany holds fast to her annexation demands, to which the Russians will not yield. Indications are that the bolsheviki element is growing less popular in Russia than it has been, possibly forecasting another change of control in that ill-fated country.

### War-Proof Ship Invented?

Hudson Maxim, the inventor of fame, is reported to have given to the war department the plans of an invention which he believes will protect ships from torpedoes. The details of the invention are not made public, but it is understood to involve some of the laws of physics and chemistry.

### May Ration America.

It is not impossible that before many months the people of America will be regulated in their eating by law, though the food administration is not ready to take this action yet. Congress is considering measures that would, if passed, make certain wheatless and meatless days compulsory, and make the eaters of meat or wheat breads on those days liable to punishment.

### Teuton Mutinies Reported.

Reports indicate trouble in both the German and Austrian navies. Submarine crews are reported to have mutinied in a number of cases.

### Skilled Workers Must Go.

It appears that the allies in Europe are so pressed for men in the armies that England is compelled to recruit her forces from the ranks of skilled labor, heretofore engaged in what was ruled to be necessary war work. The move is taken to fill the ranks temporarily while America is getting her army into Europe and ready to participate in the war.

### Italy Remains Firm.

The Italian armies are still maintaining their positions in the struggle with the Austrians and Germans.

# Farming Has Always Been a Gamble

## *Should Not Prices Be Fixed for a Year in Advance?*

In a letter to the Farmer, James N. Price, county agriculturist for Yakima county, says that he believes "it would be the best thing that ever happened to agriculture if something could be done to establish a price on farm products for at least a year in advance." And the ground he gives is that "the farming business has always been a gamble."

"The farmer plants his crops in the fall or spring, as the case may be, depends upon 'Providence' in most cases to furnish sufficient rainfall, does all of the labor of cultivating and harvesting and marketing of his crops and does not know until the crops are sold and the money in the bank how much he can expect in return for his labor," says Mr. Price. "This has not only made the farming business uncertain, but has held back a proper development of our farms, has retarded proper crop rotation and development of the live stock industry and has, in general, made the farming business a losing game. I realize the question of fixing prices on farm products is a very difficult matter since the cost of production varies widely in different districts, but I am sure that this is a matter that must be worked out sooner or later and should be taken seriously in hand at once.

"As to the regulation of prices on food, feed and clothing required by the farmer and his family I do not like to make a distinction between the farmer and other consumers, neither do I think the farmer wishes this distinction to be made. We are too prone to think the farmer in a class by himself. The farmer of today, while he may not have had the opportunity of so wide an experience or opportunity for observation as some other classes, is, nevertheless, a reader and if wide awake to the situation and to his needs; and the sooner the general public realizes this the better it will be for all concerned. But I do believe that under present conditions, at least, the government should regulate the prices of articles of food, feed and clothing. There is nothing that would please the general public better.

"I find that the people generally are extremely patriotic and desire to follow out the suggestions of the food administration and other government authorities, but when people go to market to purchase articles of food or clothing or feed for live stock and find that the very articles which we are urged to use are from 50 per cent to 200 per cent higher than they were 12 to 18 months ago it makes us wonder who is getting the profit. Some seem to think that the farmers, as a class, are complaining about the way the food administration has handled the price regulation. From the attitude of the farmers I have come in contact with during the last few months I am convinced that the farmer is as patriotic as any other class of people in the United States, and his criticism is not a criticism of the food administration or the government so much as it is the criticism of business methods of the various industries."

# Farmers Are Meeting

A meeting that promises widespread influence on the farming industry of the northwest is in session this week at Lewiston, where the second annual meeting of the Idaho State Federation of Agriculture is in session. The federation is made up of representations from various farmers' organizations, including the grange, farmers' union, society of equity and the like. Speakers of national fame are on the program, and the keynote of the meeting is the need of more complete organization of the farming interests.

Owing to inability to adequately report the convention this week a comprehensive report will be given in next week's issue, that of January 31. The Farmer has a special representative on the ground. No important action of the convention will be overlooked, and care should be taken by all subscribers to read the report of the meeting.

### Household Problems.

Don't forget that the state college at Pullman has a force of workers dealing strictly with household problems. These workers are anxious to help you if you will send them your questions.

### Great Accomplishment.

The government has accomplished more in the way of efficiency regulation and war preparation in the last eight months than in all its previous history.

To The Washington Farmer: Please send me The Twice-a-Week Spokesman-Review for one year and the Washington Farmer for three years. I like your paper better than any paper I have ever taken, and I get a daily paper, too. My time has not run out yet, but will send one in so as to get the Farmer.

# BOOT FINDS THAT PUP LACKS IN STRENUOSITY

# Washington Farmer Is Agent for War Stamps

## *Undertakes to Sell $50,000 Worth of United States Government War Savings Securities*

The United States government is offering "War Savings Stamps" to the public as a means for raising money for war purposes.

Realizing that many readers of this paper who are remote from financial centers will want to buy these stamps, the Farmer has made arrangements whereby it will be easy for them to do so by mail.

This paper is now an agency authorized by the United States government to handle the war stamps, and is ready to distribute among its readers a total of $50,000 worth of these desirable securities.

This form of security permits you to invest as little as 25 cents at a time, thus enabling the child and the person with small means to strike a blow for his country.

All details of the plan are fully explained on this and the following pages.

As you will note by reading this over, two kinds of stamps are issued: a 25-cent stamp and a $5 stamp. The first is known as a Thrift Stamp and the second as a War Savings Stamp.

With the first purchase of one or more 25-cent stamps we will send you the thrift card issued by the government. This has spaces for 16 stamps. It makes it convenient to keep track of the 25-cent stamps which you buy from time to time.

With the first purchase of one or more $5 stamps we will send you an engraved folder known as a "war savings certificate." This contains spaces for 20 stamps, which must be attached to it as they are purchased.

**These $5 stamps, it should be noted, cost you but $4.12 if your remittance is mailed in time to reach us in January; increasing one cent per month thereafter. If you buy two of these in January send us $8.24. If you buy three, send us $12.36. If you buy four send $16.48 and so on.**

These war savings stamps have been called "little baby bonds."

Like Liberty bonds these infant bonds have solidly behind them the entire resources of the government and people of the United States.

They are absolutely safe; a sterling form of investment. On January 1, 1923, you will get back all you put in and in addition you will get 4% interest compounded **every three months.**

**If necessity compels you, you can withdraw every cent you have invested in these certificates at any time, not only without loss, but actually with 3% interest in addition.**

What other form of investment combines all of these advantages of absolute safety, interest compounded quarterly at 4%, and opportunity for withdrawal?

These war stamps are indeed a splendid form of investment, but more important, their purchase is a patriotic act.

The government sums up this phase of the matter in these words:

"The main reason for the purchase of War Savings Stamps is because your country is at war. Your country needs every penny which every man, woman and child can save and lend, in order to feed, clothe, arm and equip the soldiers and sailors of America and to win this righteous war in defense of American honor and the cause of democracy throughout the world.

"If we are to win the war, we must win it as a united people. The savings of every man, woman and child are necessary if we are to hasten the victorious ending of the war. War Savers are Life Savers.

"A single strand in the cables which uphold the great Brooklyn suspension bridge is not very strong, but thousands of these strands bound together uphold one of the great thoroughfares of the world.

"When our fathers and sons and brothers were called by our country to take up arms in her defense, you did not hear an individual soldier refuse to serve because his service alone would not win the war. Each man was ready to do his part. The great army thus formed is going forward to face the fire of battle and to risk everything for the safety and security of our homes and our families, and for the very existence of our country.

"These are the men for whom you are asked to save and lend your dollars.

"A country worth fighting for is a country worth saving for.

"To save money is to save life."

Big and little, old and young, should "rally round the flag," and start investing in war stamps without delay.

The following is a statement and catechism by the government, explaining in detail the reasons for the war stamps, what they are and how they may be obtained:

In offering "war-savings stamps" to the public the United States government has made immediately available for every man, woman and child in the country a profitable, simple and secure investment.

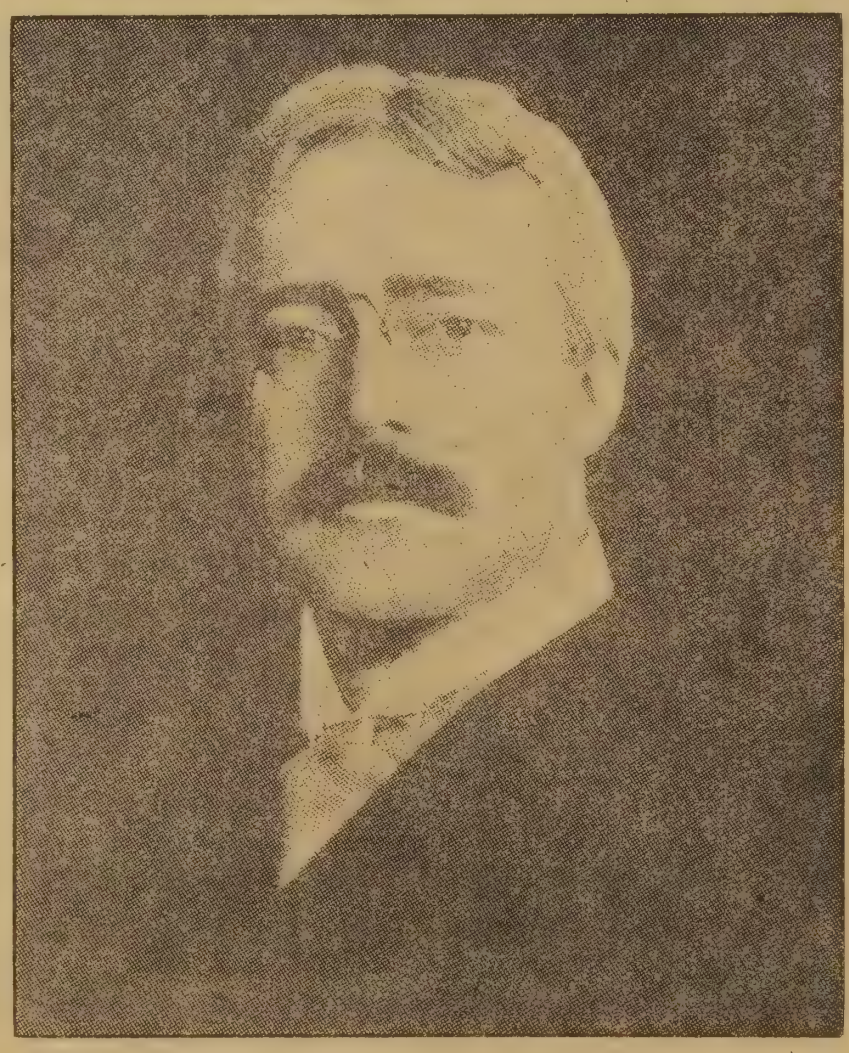
What They Are—War-savings stamps are the answer of a great democracy to the demand for a democratic form of government security. They are "little baby bonds." Like Liberty bonds, they have behind them the entire resources of the government and people of the United States. They have the additional advantage that they steadily increase in value from the date of purchase until the date of maturity, and this increase is guaranteed by the government. These stamps are issued in two denominations, the 25-cent stamp and the $5 stamp.

For the convenience of investors a "thrift card" is furnished to all purchasers of 25-cent stamps. This card has spaces for 16 stamps. When all the spaces have been filled the thrift card may be exchanged for a $5 stamp at postoffices, banks or other authorized agencies by adding 12 cents in cash prior to February 1, 1918, and 1 cent additional each month thereafter.

Those who prefer may buy a $5 stamp outright. These will be on sale from December 3, 1917, until January 31, 1918, for $4.12. They automatically increase in value a cent a month every month thereafter until January 1, 1923, when the United States will pay $5 at any postoffice or at the treasury in Washington for each stamp affixed to a war-savings certificate.

When you purchase a $5 stamp, you must attach it to an engraved folder known as a "war-savings certificate" which bears the name of the purchaser and can be cashed only by the person whose name appears upon the certificate, except in case of death or disability. This certificate contains 20 spaces. If these are all filled with war-savings stamps between December 3, 1917, and January 31, 1918, the cost to the purchaser will be $82.40, and on January 1, 1923, the government will pay the owner of the certificate $100—a net profit to the holder of $17.60. This is based on an interest rate of 4 per cent compounded quarterly from January 2, 1918. The amount of war-savings stamps sold to any one person at any one time shall not exceed $100 (maturity value), and no person may hold such stamps or war-savings certificates to an aggregate amount exceeding $1000 (maturity value).

If the holder of a war-savings certificate finds it necessary to realize cash on it before maturity, he may at any time after January 2, 1918, upon giving 10 days' written notice to any money order postoffice, receive for each stamp affixed to his certificate the amount paid therefor plus 1 cent for each calendar month after the month of purchase of each stamp. A registered certificate may be redeemed, however, only at the postoffice where registered.



In other words, the plan is simple, straightforward, and certain. The holder of the certificates can not lose and is certain to gain. He is buying the safest security in the world in the most convenient form in which the security of a great government has ever been offered to its people.

### The General Plan.

Q. What is the war-savings plan?
A. It is a plan by which you can lend small savings to your government at 4 per cent interest, compounded quarterly.
Q. How may this be done?
A. By purchasing war-savings stamps and thrift stamps.
Q. What is a war-savings stamp?
A. It is a stamp for which the government will pay you $5 on January 1, 1923.
Q. What does it cost?
A. Between $4.12 and $4.23 during 1918, depending upon the month in which purchased.
Q. What is a thrift stamp?
A. It is a stamp costing 25 cents, to be applied in payment for a war-savings stamp. It does not earn interest. The purpose of its issue is to enable people to accumulate in small sums the amount necessary to pay for a war-savings stamp.
Q. Where can I buy them?
A. At postoffices, banks and authorized agencies.
Q. Why should I buy them?
A. Every dollar loaned to the government helps to save the lives of our men at the front and to win the war.

### The War Savings Stamps.

Q. I want to begin to save on the war-savings plan. What is the first thing to do?
A. Take $4.12 to the postoffice or a bank or any other agent, buy a war-

FRANK A. VANDERLIP, Chairman of the National War Savings Committee.

## What You Must Do to Get a Thrift or Savings Stamp Through the Washington Farmer

1. Send 25 cents for each thrift stamp desired.

2. Send $4.12 for each war savings stamp desired, with one cent additional for each stamp if your order reaches us in February, two cents additional if it reaches us in March, and so on.

### What the Washington Farmer Will Do.

1. Will send you a thrift stamp for each 25 cent remittance, together with thrift stamp card if you are just starting to save.

2. Will send you a $5 war savings stamp for each $4.12 that reaches us in January, for each $4.13 that reaches us in February, and so on. Also will send a war savings certificate if you are just starting to save.

savings stamp, and ask for a war-savings certificate.

Q. What is a war-savings certificate?

A. It is a pocket-sized folder containing 20 spaces upon which to affix war-savings stamps.

Q. Is the war-savings certificate a government obligation?

A. It becomes an obligation as soon as one or more war-savings stamps are affixed to it.

Q. Can I get a war-savings certificate without buying a stamp?

A. No.

Q. Does the war-savings certificate cost anything?

A. No. The Agent from whom you purchase the stamps will write your name and address on the certificate and will furnish you an envelope in which to keep it.

Q. What do I do after that?

A. Affix the war-savings stamp on your certificate in space No. 1 and take good care of it.

Q. What do I do next?

A. You have now become a war saver. Continue to buy war-savings stamps every week or month and put them on your certificate until you have filled all of the 20 spaces. When this is done you can buy another war-savings stamp, and you will receive free of cost another certificate to which you can attach new stamps as you buy them.

Q. When I have filled the 20 spaces on my certificate what do I do with it?

A. Keep the certificate until January 1, 1923, and the government will pay you $100 for it.

Q. How many war-savings certificates can I fill?

A. Ten. The law allows each person to own $1000 worth of war-savings certificates.

Q. What is the largest quantity that I can purchase at any one time?

A. $100 worth, or 20 stamps.

**Price of War-Savings Stamps.**

Q. Does the price of war-savings stamp always remain the same?

A. No. The price for each month appears on the face of each stamp. Never pay either more or less than the amount shown for the month in which you make the purchase. The price is $4.12 in December, 1917, and January, 1918, and increases 1 cent each month after January, 1918, until in December, 1918, when the price is $4.23.

Q. What is the price of war-savings stamps for each month of 1918?

A. January, $4.12; February, $4.13; March, $4.14; April, $4.15; May, $4.16; June, $4.17; July, $4.18; August, $4.19; September, $4.20; October, $4.21; November, $4.22; December, $4.23.

Q. Why is the price higher each month?

A. Because the stamps are earning interest.

## The Thrift Stamps.

Q. If I do not have enough money saved up to buy a war-savings stamp and can only save in small amounts, what should I do?

A. Buy a 25-cent thrift stamp at a postoffice, bank or other authorized agency and ask for a thrift card, to which you can attach your thrift stamp.

Q. Is there any charge for a thrift card?

A. No. It is given you to hold thrift stamps and contains a place for your name and address.

**KEEP THESE TWO PAGES FOR FUTURE REFERENCE**

*Complete details regarding the thrift and war savings stamps are given on this and the preceding page. Be sure and keep these two pages, as all of this information can not be printed again.*

## There is But One Way! Save!

No nation in history has been called upon to provide funds equal to those America must provide for the task which has just begun. The serious, vital task before the nation is to supply the needed funds without injuring commerce and industry, without decreasing that very production which must be vastly increased that our armies may be supplied. There is but one way. The nation must save. Every individual must learn and practice the lesson of economy, of self-denial, of saving to the point of sacrifice. Thrift will mean triumph.

*F. A. Vanderlip*

Q. How many thrift stamps will this card hold?

A. Sixteen stamps, which represents a value of $4.

Q. When I have filled the thrift card what do I do?

A. Take it to a postoffice, bank or other authorized agency, surrender the card and pay in cash the few cents difference between the $4 worth of thrift stamps and the price of a war-savings stamp for the month in which the exchange is made.

Q. What do I do next?

A. You take the war-savings stamp given you in exchange for your thrift card, ask for a war-savings certificate, if you haven't one already, and attach the stamp to the certificate.

Q. Should I continue to buy thrift stamps?

A. Yes. Ask for a new thrift card and begin again.

Q. Do thrift stamps bear interest?

A. No.

Q. Then why are they issued?

A. To make it convenient for you to save in small amounts so that you can purchase a war-savings stamp, which does bear interest.

Q. May I exchange thrift stamps for war-savings stamps at any time?

A. No; only on or before December 31, 1918.

**Money to the Government.**

Q. What security is behind the war-savings stamp?

A. The United States government promises to pay $5 for each stamp on January 1, 1923. This promise is backed by the faith and honor of the United States and by the taxing power of this country, which is the richest nation in the world.

Q. Why does the United States borrow this money?

A. To pay the expenses of the war.

Q. When I lend my money to the government, would it be safer to buy a government bond rather than these war-savings stamps?

A. When a war-savings stamp is attached to a war-savings certificate it becomes a government obligation with the same security as the Liberty bond, now held by more than 10,000,000 Americans.

Q. Is the 4 per cent interest, compounded quarterly, on war-savings certificates paid in the same way as the interest on Liberty bonds?

A. No. The Liberty bond interest is paid every six months, but the interest on the war-savings certificates accumulates and is paid to you in one sum, on January 1, 1923.

Q. Why isn't the interest paid in the same manner on both war-savings certificates and Liberty bonds?

A. It would be very complicated and expensive to pay interest every six months on $5 stamps and for that reason the United States government retains the interest until January 1, 1923, at which time it pays you the compound interest and the principal, amounting to $5, the face value of the war-savings stamp.

Q. Shall I sell Liberty bonds to buy war-stamps?

A. No. The security behind Liberty bonds and war-savings certificates is the same. Keep your Liberty bonds, but buy war-savings stamps also.

Q. Is the money received from war-savings stamps and thrift stamps used for the same purpose as the money received from Liberty bonds?

A. Yes.

Q. Should I take money out of the savings bank to buy war-savings stamps?

A. No. You should save as much as you can every day and buy thrift stamps and war-savings stamps with these savings.

Q. How did congress authorize these war-savings certificates?

A. By act approved September 24, 1917.

Q. How large an amount of war-savings certificates can be issued under the present law?

A. $2,000,000,000.

Q. Can I sell or transfer my war-savings certificate to any one?

A. No. The certificate is not transferable and is of value to the owner only, except in case of death or disability.

Q. Should I sell my thrift card to any one?

A. No. Your thrift card has your name on it and should be filled with 16 25-cent thrift stamps and exchanged at a postoffice, bank, or other authorized agency for a war-savings stamp.

**Registration.**

Q. Should I register a war-savings certificate?

A. Yes, if you wish to secure payment in case the certificate is lost.

Q. Am I required to register it?

A. No.

Q. Where can I register it?

A. At any postoffice of the first, second, or third class, subject to such regulations as the postmaster general may prescribe.

Q. When can I register?

A. At the time of purchase or any later time.

Q. Is there any charge for registration?

A. No.

Q. Can I register thrift stamps or my thrift card?

A. No.

Q. Can I register a war-savings stamp that is not attached to a war-savings certificate?

A. No.

Q. Can I register a war-savings certificate for any one else?

A. No.

Q. Should a married woman use her own or her husband's name when registering?

A. Her own—Mrs. Mary Brown, not Mrs. John Brown.

Q. Suppose a married woman wishes to surrender her war-savings certificate which is registered in her maiden name?

A. She should sign herself Mary Jones, now by marriage Mary Brown.

Q. If I have five war-savings stamps on my war-savings certificate and have it registered and I put one more stamp on, must I have it registered again to have protection on my sixth stamp?

A. Yes. Each stamp must be registered.

**If a Stamp Is Lost.**

Q. If I lose some detached thrift stamps, can I get my money back?

A. No. These stamps are of value to the bearer, just as postage stamps are.

A. Be sure to put your name and address on the thrift card; so that if the finder drops it in any postoffice box without postage it may be returned to you.

Q. Is an unattached war-savings stamp of value to any one who finds it?

A. Yes. For this reason you should attach it to your war-savings certificate at the time of purchase. You should write across the face of the stamp your name and the number of your certificate.

Q. If a registered war-savings certificate is lost or destroyed, what should I do?

A. If it is not returned to you within a reasonable time, report it to your postmaster where you had the certificate registered.

Q. How do I get my money back if my registered war-savings certificate is lost.

A. By applying at the postoffice where you registered it.

**The Payment Plan.**

Q. Where does the United States government pay the $5 on January 1, 1923, for each war-savings stamp attached to a war-savings certificate?

A. At either the treasury department in Washington or at any money-order postoffice after ten (10) days' notice.

Q. Where is payment made if the certificate is registered?

A. At the postoffice where the certificate is registered.

**Payment Before Maturity.**

Q. If it is necessary before January 1, 1923, to have money for my war-savings certificate, how can I get it?

A. If it is not registered, take it to any money-order postoffice and it will be redeemed, after 10 days' written demand, as prescribed by the rules of the postoffice department. If registered, take it to the postoffice where registered.

Q. What do I get in cash for each war-savings stamp attached to my war-savings certificate if I surrender it?

A. The amount is indicated on the table, which is printed on the back of each war-saving certificate.

Q. Can I surrender my thrift card for cash?

A. No.

Q. If I must have money on my thrift card and thrift stamps, how can I obtain it?

A. By filling the thrift card and exchanging it for a war-savings stamp, which has a redeemable value.

Q. Is the postoffice the only place where I can surrender my war-savings certificate before its maturity and get my money back?

A. Yes.

Q. How much notice must I give the postoffice?

A. Ten days' notice.

Q. If I should find it necessary to surrender my war-savings certificate for cash, what rate of interest would I receive on my investment?

A. A little less than 3 per cent. The value of a stamp for each month is shown in the following table:

| Month | 1918 | 1919 | 1920 | 1921 | 1922 |
|---|---|---|---|---|---|
| January | $4.12 | $4.24 | $4.36 | $4.48 | $4.60 |
| February | 4.13 | 4.25 | 4.37 | 4.49 | 4.61 |
| March | 4.14 | 4.26 | 4.38 | 4.50 | 4.62 |
| April | 4.15 | 4.27 | 4.39 | 4.51 | 4.63 |
| May | 4.16 | 4.28 | 4.40 | 4.52 | 4.64 |
| June | 4.17 | 4.29 | 4.41 | 4.53 | 4.65 |
| July | 4.18 | 4.30 | 4.42 | 4.55 | 4.66 |
| August | 4.19 | 4.31 | 4.43 | 4.55 | 4.67 |
| September | 4.20 | 4.32 | 4.44 | 4.56 | 4.68 |
| October | 4.21 | 4.33 | 4.45 | 4.57 | 4.69 |
| November | 4.22 | 4.34 | 4.46 | 4.58 | 4.70 |
| December | 4.23 | 4.35 | 4.47 | 4.59 | 4.71 |
| Jan. 1, 1923 | | | | | $5.00 |

Q. If I have registered a war-savings certificate in one city and I move to another, do I have to go back to the city where registered to get my money?

A. No. You may, by applying to the postmaster where your certificate was registered, have your registration card transferred to any postoffice you may designate.

Q. Can I write my name on a stamp to identify it?

A. Yes.

Q. How large is a thrift stamp?

A. It is slightly larger than a two-cent postage stamp and green in color.

Q. What size is a thrift card?

A. Contains spaces for 16 thrift stamps and, when folded, fits the pocket. It is 4 by 8 inches in size.

Q. How large is a war-savings stamp?

A. It is about the size of four postage stamps and green in color.

Q. How large is a war-savings certificate?

A. It is a folder, size 4 by 8 inches, containing 20 spaces for war-savings stamps.

Q. Where can information be obtained regarding war-savings certificates and thrift stamps?

A. At postoffices, banks, or other agencies, or by addressing the national war-savings committee, Washington, D. C.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

# UNLUCKY LOOIE WANTS THE DAY FIXED

# PAPA AND THE MINISTER GET INTO TROUBLE WITH WILLIE'S LATEST

DEAR TOMMY: You can have lots of fun with one of these sails. I was trying mine, when Papa and the Minister came along, and the Minister wanted to try it. He can skate pretty good, but doesn't understand managing a sail, and got started backward. Papa was so full of laughter that he couldn't move, and the Minister bumped into him!

Yours. etc..

WILLIE.

# U. S. Would Control Water Power

## *Compromise Between the Shields and Ferris Bills Is Up*

The national administration has introduced a bill at Washington of vast future interest to American farmers. It is a measure for the development of water powers upon navigable streams, public lands and national forests.

This problem has been deadlocked for several years. The house has passed what is known as the Ferris bill, approved by the friends of conservation. The senate has repeatedly passed the Shields bill, a measure unsatisfactory to conservation, as in their judgment, while it is nominally a leasing proposition, it practically surrendered forever these great water powers to private interests.

The new administration bill is in the nature of a compromise. It creates a commission composed of the secretaries of war, interior and agriculture.

It proposes to lease the water power privilege to private capital for a period not exceeding 50 years. At the end of that time the project may be (a) taken over by the United States; upon payment of "the fair value, not to exceed actual cost of the property taken," (b) re-leased to the original lessees; (c) leased to a new lessee.

Rates and service to the public are to be regulated by the individual states where the state has a public service commission, and in case a state has no such regulative commission, then by the federal power commission.

The bill proposes that the lessee must pay the United States reasonable annual charges for the use of government lands or waters, in no case to be les sthan 10 cents per horsepower per annum.

The bill is more than electric power development. It aims at the improvement of navigable streams. For example, a company leasing a power project on the Snake river could be required by the commission to build locks for steamboats.

This problem is of special concern to the coming generation, for the use of electric current is bound to inrease amazingly, and it is of vital importance that the rates shall be reasonable and that the government shall keep a string on these water powers so that the boys and girls of this generation shall have the right, if they deem it wise to exercise it, to take them back under government ownership and operation.

The bill has vast importance in another way. The day is coming when the fertile lands of the Pacific northwest will wear out and require fertilizing. When that time comes, the farmers will need cheap phosphates and nitrates. With water power the nitrates may be taken from the atmosphere, and phosphates can be electrically produced from the vast deposits of phosphate rock that are known to underlie large areas of eastrn Oregon and southern Idaho.

We see, then, the importance of Uncle Sam keeping title to these phosphate lands, and holding a string on the big water powers, so that if private interests should charge excessive prices for fertilizers, the government can step in, take back the power projects and manufacture fertilizers to sell to the people at cost.

# Bulk Grain Meeting

Farmers from all parts of the Inland Empire will be in attendance at the bulk grain conference in Spokane beginning in Spokane tomorrow, January 25. An excellent program has been arranged, including talks and demonstrations by a number of experts in various lines affecting the handling of the grain crop of the northwest. The big question, however, is how to handle this season's crop in bulk, as the indications are that there will not be enough sacks available and that those that can be obtained will be prohibitively high. The conference closes Saturday evening. A Hoover dinner will be served Friday evening, following which discussion of the subjects at hand will be continued.

# Naval Station Active

The way Commander Miller Freeman is interesting the public in the naval station at Seattle is illustrated by the following incident:

Commander Freeman has not only succeeded in having the government do numerous things for the success of the station, but has also by example inspired the public to do likewise. For instance, one day Hazen J. Titus, a very patriotic citizen and head of the dining car service of the Northern Pacific, visited the station and expressed a desire to do something for the boys. The commander told him that they were organizing a band and needed some instruments. "Just give me a list of what you need," said Titus. The leader of the band soon compiled the list and Mr. Titus left for the city.

In the afternoon the telephone rang and the agitated voice of Titus came to the ear of the commander, saying, "Do you know that list you gave me amounted to $700?"

"I should worry," replied Commander Freeman.

"How in the world do you think I am going to get the money?" said Titus.

"That is a matter which does not concern me in the least," replied the commander.

Titus knew that he was in for it, and the next afternoon the instruments were received, together with a receipted bill for the $700.

Another patriotic citizen tendered to the station a 125-foot yacht, a sailing vessel with auxiliary power, which has proved of splendid service in the training of the boys. Of course this man did not turn over his $50,000 boat to the government for nothing. It is leased from him at the very generous rental of $1 per month during the period of the war, and for a reasonable time thereafter.

# FIVE FUNCTIONS OF ADVERTISING

The New York American describes the function of advertising as "five fold."

1. To enlighten or educate.
2. To create new wants or to satisfy old ones.
3. To protect and foster legitimate enterprises.
4. To establish a medium of understanding between buyer and seller as a basis for mutual profit and advantage.
5. To fix an economical price and the maintenance of a standard of quality.

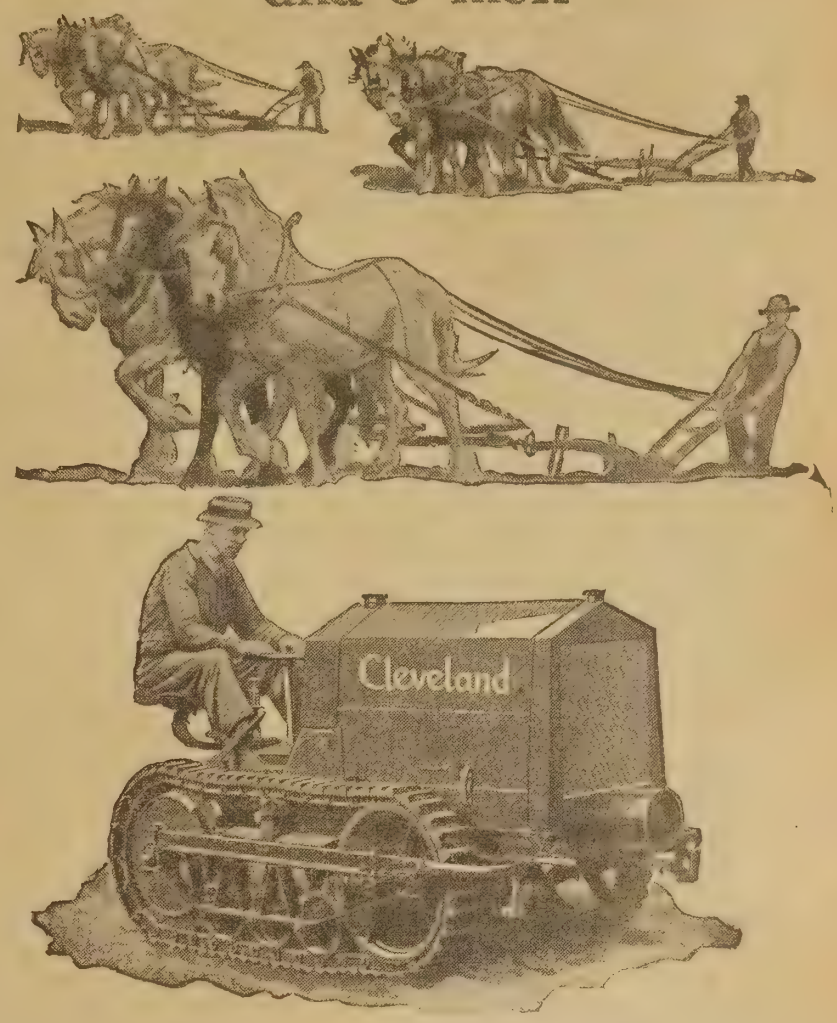
"To Enlighten."

These five uses of advertising are illustrated again and again by the advertisements printed in every issue of this paper.

They give you facts about new products and improved machinery.

They show you how you can add conveniences and comforts to your farm or home life.

They bring you into touch with strong, reliable, legitimate enterprises built up by means of advertising.



They introduce you to those with whom you can deal profitably.

They acquaint you with high standard goods economically priced.

# Cleveland Tractor

## Does the work of 9 horses and 3 men

Even if horses and men were plentiful, the Cleveland Tractor would do your work faster and at much less cost.

With the Cleveland pulling two 14-inch bottoms, it can plow up to 3½ miles an hour—*8 to 10 acres a day.* That is more than you can do with 3 good three-horse teams and their drivers.

But labor is scarce. Horses are scarce. The urgency of the situation demands farm tractors. The government urges their use.

The Cleveland Tractor not only works faster and cheaper than horses and men —*but far better.* With its aid, you can increase your production and reduce the cost.

That means more grain for Uncle Sam —*and more money for you.*

Because the Cleveland *crawls on its own tracks,* it can go almost anywhere. It weighs less than 3200 pounds and has more than 600 square inches of continuous traction surface—a bearing pressure of about 5 pounds per square inch.

Because of the small size of the Cleveland Tractor it can be turned in a twelve foot circle and housed in less space than it takes for a horse.

Its small size enables it to pass through narrow spaces between buildings, through wooded grounds, through doors and other places where larger machines cannot go.

The work in which The Cleveland Tractor can be used to accomplish more, and with greater economy, is almost endless—plowing, harrowing, discing, seeding, pulling a mower or binder, hay loader or manure spreader.

It is *the* tractor par-excellence for hauling of any nature, in excavating, road grading, pulling a snow-plow or stone-boat, in fact almost anywhere that motive power can be utilized.

Delivering 20 horse-power at the pulley, it supplements its hauling capacity by almost innumerable uses for stationary work, such as wood sawing, pumping and irrigation work, feed grinding, hay baling, corn shredding, corn shelling, ensilage cutting, silo filling, threshing, and many other uses where power is needed.

Rollin H. White, the famous motor truck engineer, is the designer of the Cleveland. He uses only the finest motor truck gears and materials. Gears are enclosed in dirt proof, dust proof cases.

*Get ready now for spring work.* Prepare for the bigger, better crops America expects of you and must have. Write us today for a complete description of the Cleveland Tractor and the name of the nearest Cleveland dealer. Address Dept. BK, or use the coupon.

### CHAPTER XVII.

#### The Love of Poleon Doret.

To the girl crouching at the stern of Runnion's boat it seemed as if this day and night would never end. It seemed as if the procession of natural events must have ceased, that there was no longer any time, for she had been suffering steadily for hours and hours withotu end, and began to wonder dreamily whether she had not skipped a day in her reckoning between the time when she first heard of the strike on her claim and this present moment. It occurred to her that she was a rich girl now in her own right, and she smiled her crooked smile, as she reflected that the thing she had longed for without hope of attainment had come with confusing swiftness, and had left her unhappier than ever.

Would the day never come She pulled the rugs up closer about her as the morning chill made her shiver. She found herself keeping mechanical count with the sound of the sweeps—they must be making good speed, she thought, and the camp must be miles behind now. Had it been earlier in the season, when the river ran full of drift, they never could have gone thus in the dark, but the water was low and the chances of collision so remote as to render blind travel safe. Even yet she could not distinguish her oarsman, except as a black bulk, for it had been a lowering night and the approaching dawn failed to break through the blanket of cloud that hung above the great valley. He was a good boatman, however, as she gathered from the tireless regularity of his strokes. He was a silent man, too, and she was grateful for that. She snuggled down into her blanket and tried to sleep, but she only dozed for a minute, it seemed, to find her eyes fly wide open again. So, restless and tired of her lonely vigil, she gave a premonitory cough, and said to her companion:

"You must be tired rowing so steadily?"

"Oh, I don't mind it," he replied.

At the sound of his voice she sat bolt upright. It couldn't be—if this were Runnion he would have spoken before! She ventured again, tremulously:

"Have you any idea what time it is?"

"About 3 o'clock, I fancy."

"Who are you?" The question came like a shot.

"Don't you know?"

"What are you doing here, Mr. Runnion?"

"I'm rowing," he answered, carelessly.

"Why didn't you speak?" A vague feeling of uneasiness came over her, a suspicion that all was not right, so she waited for him to explain, and when he did not, she repeated her question. "What made you keep still so long? You knew who I was?"

"Well, it's the first time I ever took you on a midnight row, and I wanted to enjoy it."

The mockery in his voice quickened her apprehension. Of a sudden the fear of being misjudged impelled her to end this flight that had become so distasteful in a moment, preferring to face the people at the post rather than continue her journey with this man.

"I've changed my mind, Mr. Runnion," she said. "I don't want to go down to the Mission. I want you to take me back."

"Can't do it," he said; "the current is too swift."

"Then set me ashore and I'll walk back. It cant be far to town."

"Twenty-five miles. We've been out about three hours." He kept on rowing steadily, and although the distance they had gone frightened her, she summoned her courage to say:

"We can make that easily enough. Come, run in to the bank."

He ceased rowing and let the boat drift with dragging sweeps, filled his pipe and lighted it, then took up his oars again and resumed his labors.

"Please do as I ask you, Mr. Runnion. I've decided I don't want to go any farther." He laughed, and the sound aroused her. "Put me ashore this minute" she cried, indignantly. "What do you mean?"

"You've got a fierce temper, haven't you?

"Will you do it or not?"

When he made no answer, except to continue the maddening monotony of his movements, she was seized with a rash resolve to wrench the oars out of his hands, and made a quick motion towards him, at which he shouted:

"Sit down! Do you want to upset us?"

The unstable craft lurched and dipped dangerously, and, realizing the futility of her mad impulse, she sank back on her knees.

"Put me ashore!"

"No," he said, "not till I'm ready. Now, keep your seat or we'll both drown; this aint a ferry-boat." After a few strokes, he added, "We'll never get along together unless you tame that temper."

"We're not going to get along together, Mr. Runnion—only as far as the Mission. I dare say you can tolerate me until then, can you not?" She said this bitingly.

"Stark told me to board the first boat for St. Michael's," he said, disregarding her sarcasm, "but I've made a few plans of my own the last hour or so."

"St. Michael's! Mr. Stark told you—why, that's impossible! You misunderstood him. He told you to row me to the Mission. I'm going to Father Barnum's house."

"No, you're not, and I didn't misunderstand him. He wants to get you outside, all right, but I reckon you'd rather go as Mrs. Runnion than as the sweetheart of Ben Stark."

"Are you crazy?" the girl cried. "Mr. Stark kindly offered to help me reach the Father at his Mission. I'm nothing to him, and I'm certainly not going to be anything to you. If I'd known you were going to row the boat I should have stayed at home, because I detest you."

"You'll get over that."

"I'm not in the humor for jokes."

He rested again on his oars, and said, with deliberation:

"Stark 'kindly offered did he? Well, whenever Ben Stark 'kindly' offers anything, I'm in on the play. He's had his eye on you for the last three months, and he wants you, but he slipped a cog when he gave me the oars. You needn't be afraid, though, I'm going to do the square thing by you. We'll stop in at the Mission and be married, and then we'll see whether we want to go to St. Michael's or not, though personally I'm for going back to Flambeau."

During the hours while he had waited for Necia to discsover his identity, the man's mind had not been idle; he had determined to take what fortune tossed into his lap. Had she been the unknown, unnoticed halfbreed of a month or two before, he would not have wasted thought upon priests or vows, but now that a strange fate had worked a change in her before the world, he accepted it.

The girl's beauty, her indiference, the mistaken attitude of Stark urged him, and, strongest of all, he was drawn by his cupidity, for she would be very rich, so the knowing ones said. Doubtless that was why Stark wanted her, and, being a man who acknowledged no fidelity to his kind or his creator, Runnion determined to outwit his principal, Doret, Burrell, and all the rest. It was a chance to win much at the risk of nothing, and he was too good a gambler to let it pass.

With his brusque declaration Necia realized her position—that she was a weak, lonely girl, just come into womanhood, so cursed by good looks that men wanted her, so stained by birth that they would not take her honestly; realized that she was alone with a dissolute creature and beyond help, and for the first time in her life she felt the meaning of fear.

She saw what a frail and helpless thing she was; nothing about her was great save her soul, and that was immeasurably vexed and worried. She had just lived through a grief that had made her generous, and now she gained her first knowledge of the man-animal's gross selfishness.

"You are absolutely daft," she said. "You can't force me to marry you."

"I ain't going to force you; you'll do it willingly."

"I'll die first. I'll call the first man we see—I'll tell Father Barnum, and he'll have you run out of the country—it would only take a word from me.

"If you haven't changed your mind when we get to his place, I'll run through without stopping; but there isn't another priest between there and St. Mike's, and by the time we get to the mouth of the river, I guess you'll say yes to most anything. However, I'd rather marry you at Holy Cross if you'll consent, and I'm pretty sure you will—when you think it over."

"We won't discuss it."

"You don't understand yet," he continued, slowly. "What will people say when they know you ran away with me?"

"I'll tell them the truth."

"Huh! I'm too well known. No man on the river would ever have you after that."

"You—you—" Her voice was a-quiver with indignation and loathing, but her lips could not fram an epithet fit for him. He continued rowing for some time, then said:

"Will you marry me?"

"No! If this thing is ever known, Poleon will kill you—or father."

For a third time he rested on his oars.

"Now that we've come to threats, let me talk. I offered to marry you and do the square thing, but if you don't want to, I'll pass up the formality and take you for my squaw, the same as your father took Alluna. I guess you're no better than your mother, so your old man can't say much under the circumstances, and if he don't object, Poleon can't. Just remember, you're alone with me in the heart of the wilderness, and you've got to make a choice quick, because I'm going ashore and make some breakfast as soon as it's light enough to choose a landing place. If you agree to come quietly and go through with this thing like a sensible girl, I'll do what's right, but if you don't—then I'll do what's wrong, and maybe you won't be so damned anxious to tell your friends about this trip, or spread your story up and down the river. Make up your mind before I land."

The water gurgled at the bow again, and the rowlocks squeaked. Another hour and then another passed in silence before the girl noted that she no longer seemed to float through abysmal darkness, but that the river showed in muddy grayness just over the gunwale. She saw Runion more clearly, too, and made out his hateful outlines, though for all else she

(Continued on page twenty.)

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## What You Should Know and Do About Breathing Properly

Dr. Hirshberg

You may well be thankful to sights which "fairly take your breath away." If the annual round of the year, which brings Christmas and New Year back again, could be duplicated or imitated by "surprises" of one kind and another every week, instead of only in the winter time, your lungs would be all the stronger and the air in them that much purer.

After you breathe in air and expell it fully from your lungs, there is a noticeable puffing out or protrusion of the abdomen. This is accompanied by a contraction of the diaphragm, the shallow, domelike partition between the chest and the abdomen. This corresponds to the initial act of inspiration or inhaling. Next follows the orderly elevation of the muscles underneath the diaphragm and a backward expansion of the chest over the neighborhood which corresponds to the lower lobes of the lungs.

The chest expands more to the sides in health than forward. The inflation then spreads from the lower parts of the chest upward to the collarbone area. As this expansion is completed the spine bows itself backward. At the end of all these movements of full breathing the chest will be found to have expanded to its fullest extent in all three diameters.

#### A Fine Exercise.

At best in the usual types of respiration there is always a certain amount of residual air left. This supplemental air can be driven out by powerful contraction of the abdominal muscles. Unluckily, the average person fails to exert these muscles sufficiently to expel this stale leftover air from each breath you take.

There is no real reason why the entire left lung and right lung should not both be in use at one time. That is why gymnastics, games, athletics, dancing and hard labor are recommended as incentives to perfect and complete respiration.

Since "it is better to wear out than to rust out," moderate exercise is labor with its head in heaven, and the person whose occupation and habits forbid him the activity his lungs demand ought to take the proper breathing exercises.

You should stand erect, with the heels together and the rest of your anatomy balanced upon the whole of your feet. The hands should rest upon the hips, thus relieving the shoulders of the weight of the arms.

Now lean the head very slightly back; open the nostrils—which should be previously cleared of obstructions by a nose surgeon—as widely as possible, and stretch the whole upper part of the trunk upward.

The lower ribs are then simultaneously moved outward, chiefly sideways, but also somewhat forward. The breastbone is lifted upward in the same motion. At once the air enters and fills each nook and cranny of the lungs in a steady, full flow.

#### Some Valuable Don'ts.

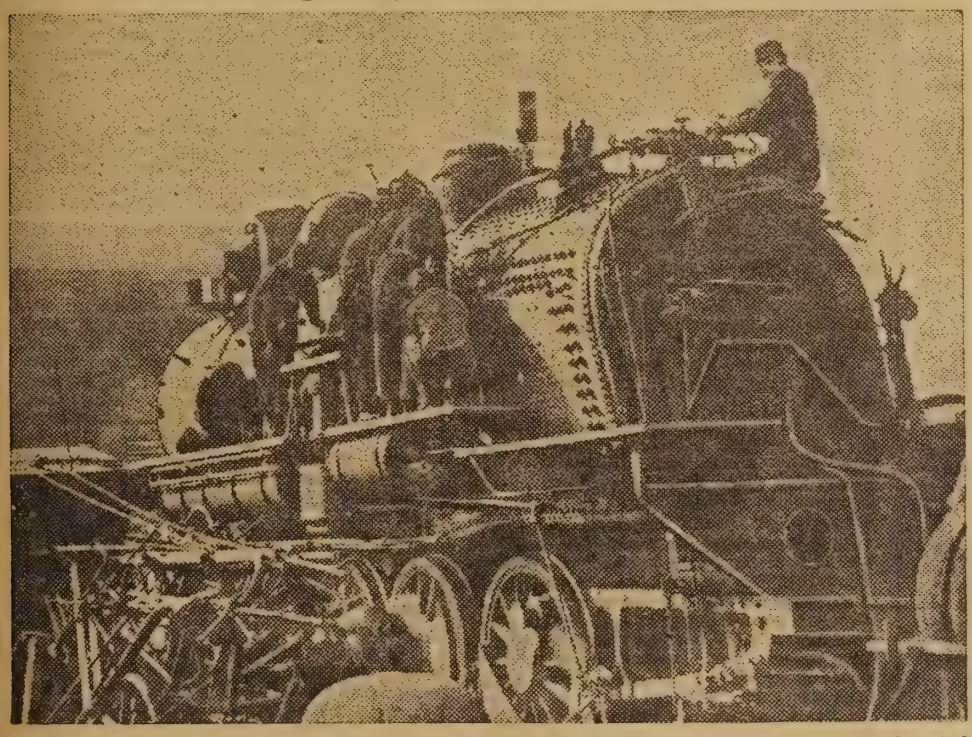
Among the "don'ts" connected with this breathing exercise, keep these especially in mind:

Never force the elbows and shoulders backward in order to bring the upper part of the chest into a cramped and highly arched position. Such a strain is too much of a tax, according to the results obtained. The upper lobes of the lungs are more easily and gently filled by the exercise of lifting the shoulders, collarbones and shoulder blades.

Never make too conscious an effort to secure the abdominal and diaphragmatic part of this full breathing by mere puffing up or distension of the abdomen. This will come unconsciously, because the diaphragm must sink when the ribs are widened, if only it is not hindered by forcibly drawing the abdomen inward. The abdominal wall should be kept in a relaxed and natural position.

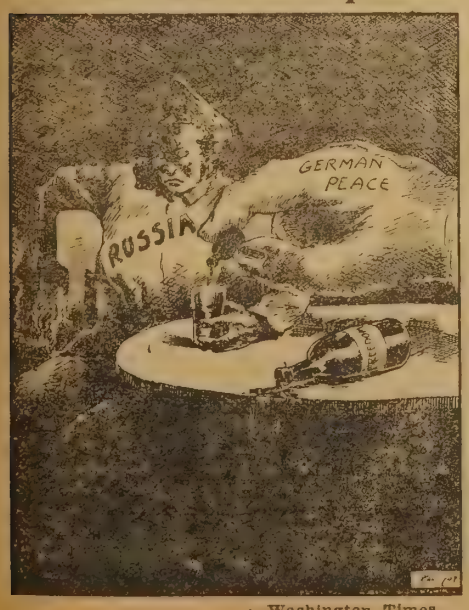
It is an easy thing for animals and healthy children to pay attention to the movements of the chest. But grown-ups have usually forgotten how to exercise the chest. They hate to distress themselves or suffer the little discomfort necessary to learn how to breathe once again as "a romping, rollicking child."

# All the World's a Stage, and All the Men and Women Merely Players



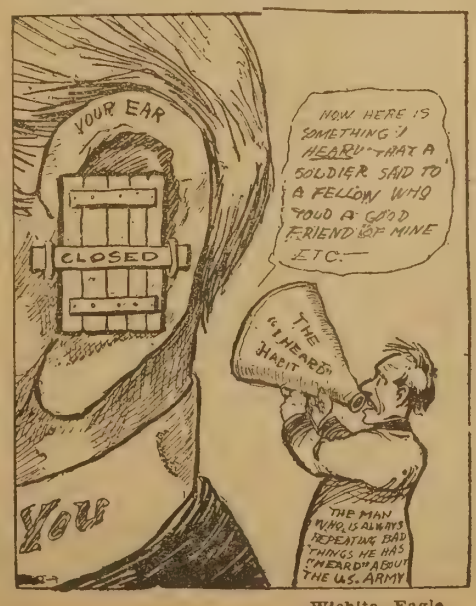
## Army and Navy Mascots Get Acquainted Before Game

—Copyrighted by International Film Service.



Army and navy mascots getting acquainted before the game. In the picture above are shown navy pet dog, "Sammy," goat "Eli," and army mule "Mike." The game at Travers island was played by the Fort Slocum eleven and the team from the Pelham bay naval training station. A bill has been introduced in the United States senate providing for the training of a thousand dogs for war service in France.

## Reclaiming Engines From the Scrap Heap



The locomotive shown in the accompanying photograph is one that had been relegated to the scrap heap a long time ago, but on account of the shortage of locomotives, it has just been rushed through Uncle Sam's repair shop at Los Angeles, Cal., and made fit for use once more. The railroad situation is so very grave at the present time that thousands of experts are employed day and night in making over old locomotives.

## Knockout Drops

—Washington Times.

## Refuse to Listen to It

—Wichita Eagle.

## Three Men Who Will Help Rush War

Secretary of War Baker recently announced that Colonel McRoberts, formerly executive manager of the National City Bank of New York, will have charge of the newly created procurement division of the ordnance bureau. This division will have charge of procuring all supplies for the armies of the United States. Major General Bullard, will, it is understood go to France. Major General James Parker also may be selected for duty in France soon.

## Camouflage as It Is Practiced

—Committee on Public Information.

This photograph gives an instance of the art of camouflage as it is practiced in France. It is a military observer prepared for an ascent into a tree which is within the observation of the enemy and which is within enemy artillery range. When the circus-appearing gentleman gets into the tree not the keenest sighted of the enemy will ever be able to tell that there is a man there. His queer looking costume will blend perfectly with the branches and leaves of the tree.

# "The Barrier" By REX BEACH

(Continued from page eighteen.)

beheld they might have been miles out upon a placid sea, and so imperceptible was the laggard day's approach that she could not measure the growing light. It was a desolate dawn, and showed no glorious gleams of color. There was no rose-pink glow, no merging of a thousand tints, no final burst of gleaming gold; the night merely faded away, changing to a sickly pallor that grew to ashen gray, and then dissolved the low-hung, distorted shadows a quarter of a mile inland on either hand into a forbidding row of unbroken forest backed by plain, morass and distant hills, untipped by slanting rays. Overhead a bleak ruin of clouds drifted; underneath the river ran, a bilious yellow. The whole country so far as the eye could range was unmarred by the hand of man, untracked save by the feet of the crafty forest people.

She saw Runion gazing over his shoulder in search of a shelving beach or bar, his profile showing more debased and mean than she has ever noticed it before. They rounded a bend where the left bank crumbled before the untiring teeth of the river, forming a bristling chevaux-de-frise of leaning, fallen firs awash in the current. The short side of the curve, the one nearest them, protected a gravel bar that made down-stream to a daggerlike point, and toward this Runion propelled the skiff. The girl's heart sank and she felt her limbs grow cold.

The mind of Poleon Doret worked in straight lines. Moreover, his memory was good. Stark's statement, which so upset Gale and the lieutenant, had a somewhat different effect upon the Frenchman, for certain facts had been impressed upon his subconsciousness which did not entirely gibe with the gambler's remarks, and yet they were too dimly engraved to afford foundation for a theory. What he did know was this, that he doubted. Why? Because certain scraps of a disjointed conversation recurred to him, a few words which he had overheard in Stark's saloon, something about a Peterborough canoe and a woman. He knew every skiff that lay along the water front, and of a sudden he decided to see if this one was where it had been at dusk, for there were but two modes of egress from Flambeau, and there was but one canoe of this type. If Necia had gone upriver on the freighter, pursuit was hopeless, for no boatman could make headway against the current; but if, on the other hand, that cedar craft was gone——. He ran out of Starks house and down to the river bank, then leaped to the shingle beneath. It was just one chance, and if he was wrong, no matter; the others would leave on the next upriver steamer; whereas, if his suspicion proved a certainty, if Stark had lied to throw them off the track, and Runion had taken her down stream—well, Poleon wished no one to hinder him, for he would travel light.

The boat was gone! He searched the line backward, but it was not there, and his excitement grew now, likewise his haste. Still on the run, he stumbled up to the trading post and around to the rear, where, bottom up, lay his own craft, the one he guarded jealously, a birch canoe, frail and treacherous for any but a man schooled in the ways of swift water and Indian tricks. He was very glad now that he had not told the others of his suspicions; they might have claimed the right to go, and of that he would not be cheated. He swung the shell over his shoulders, then hurried to the bank and down the steep trail like some great, misshapen turtle. He laid it carefully in the whispering current, then stripped himself with feverish haste, for the driving call of a hot pursuit was on him, and although it was the cold, raw hours of late night, he whipped off his garments until he was bare to the middle. He seized his paddle, stepped in, then knelt amidships and pushed away. The birch bark answered him like a living thing, leaping and dancing beneath the strokes which sprung the spruce blade and boiled the water to a foam, while rippling, rising ridges stood out upon his back and arms as they rose and fell, stretched and bent and straigtened.

A half-luminous, opaque glow was over the waters, but the banks quickly dropped away until there was nothing to guide him but the suck of the current and the sight of the dim-set stars. His haste now became something crying that lashed him fiercely, for he seemed to be standing still, and so began to mutter at the crawling stream and to complain of his thews, which did not drive him fast enough, only the sound he made was more like the whine of a hound in leash or a wolf that runs with hot nostrils close to the earth.

Runnion drove his Peterborough toward the shore with powerful strokes and ran its nose up on the gravel, rose, stretched himself and dragged it farther out, then looked down at Necia.

"Well, what is it, yes or no? Do you want me for a husband or for a master?" She cowered in the stern, a pale, fearful creature, finally murmuring:

"You—you must give me time."

"Not another hour. Here's where you declare yourself; and remember, I don't care which you choose, only you'd better be sensible."

She cast her despairing eyes up and down the river, then at the wilderness on either shore; but it was as silent and unpeopled as if it had been created that morning. She must have time; she would temporize, pretending to yield, and then betray him to the first comer; a promise exacted under duress would not be binding.

"I'll go quietly," she said, in a faint voice.

"I knew you'd see that I'm acting square. Come! Get the cramp out of yourself while I make a pot of coffee." He held out his hand to assist her and she accepted it, but stumbled as she rose, for she had been crouched in one position for several hours and her limbs were stiff. He caught her and swung her ashore; then, instead of putting her feet to the ground, he pressed her to himself roughly and kissed her. She gave a stifled cry and fought him off, but he laughed and held her the closer.

"Ain't I good for one kiss? Say this is the deuce of an engagement. Come now—"

"No, no, no!" she gasped, writhing like a wild thing; but he crushed his lips to hers again and then let her go, whereupon she drew away from him panting, disshevelled, her eyes wide and filled with horror. She scrubbed her lips with the back of her hand, as if to erase his mark, while he reached into the canoe and brought forth an ax, a bundle of food and a coffee pot. Then, still chuckling, he gathered a few sticks of driftwood and built a fire. She had a blind instinct to flee, and sought for a means of escape, but they were well upon the bar that stretched a distance of 300 feet to the wooded bank; one one side of the narrow spit was the scarcely moving, half stagnant water of a tiny bay or eddy; on the other the swift, gliding current tugging at the beached canoe, while the outer end of the gravelled ridge dwindled down to nothing and disappeared into the river. At sight of the canoe a thought struck her, but her face must have shown some sign of it, for the man chanced to look at the moment; and, seeing her expression, straightened himself, then gazed about searchingly. Without a word he stepped to the boat, and, seizing it, dragged it entirely out upon the bar, where her strength would not be equal to shoving it off quickly; and, not content with this, he made the painter fast, then went back to his fire. The eagerness died out of her face, but an instant later, when he turned to the clearer water of the eddy to fill the coffee pot, she seized her chance and sped up the bar towards the bank. The shingle under foot and her noisy skirts betrayed her, and with an oath he followed. It was an unequal race, and he handled her with rough, strong hands when he overtook her.

"So! You lied to me! Well, I'm through with this foolishness. If you'll go back on your word like this you'll 'bawl me out' before the priest; so I'll forget my promise, too, and you'll be glad of the chance to marry me."

"Let me go!" she panted. "I'll marry you. Yes, yes, I'll do it, only don't touch me now!"

He led her back to the fire, which had begun to crackle. She was so weak now that she sank upon the stones shivering.

"That's right! Sit down and behave while I make you something hot to drink. You're all in." After a time he continued, as he busied himself about his task: "Say, you ought to be glad to get me; I've got a lot of money, or I will have, and once you're Mrs. Runnion nobody'll ever know about this or think of you as a squaw." He talked to her while he waited for the water to boil, his assurance robbing her of hope; for she saw he was stubborn and reckless, determined to override her will as well as to conquer her body, while under his creed, the creed of his kind, a woman was made from the rib of man and for his service. He conveyed it to her plainly. He ruled horses with a hard hand, he drove his dog teams with a biting lash, and he mastered women with a similar lack of feeling or consideration.

He was still talking when the girl sprang to her feet and sent a shrill cry out over the river; but instantly he was up and upon her, his hand over her mouth, while she tore at it, screaming the name of Poleon Doret. He silenced her to a smothered, sobbing, mumble, and turned to see, far out on the bosom of the great soiled river, a man in a bark canoe. The craft had just swung past the bend above and was still a long way off—so far away, in fact, that Necia's signal had not reached it, for its occupant held unwaveringly to the swiftest channel, his body rising and falling in the smooth, unending rhythm of a master boatman under great haste, his arms up-flung now and then, as the paddle glinted and flashed across to the opposite.

Runnion glanced about hurriedly, then cursed as he saw no place of concealment. The Peterborough stood out upon the bar conspicuously, as did he and the girl; but the chance remained that this man, whoever he was, would pass by, for his speed was great, the river a mile in width and the bend sharp. Necia had cried Poleon's name, but her companion saw no resemblance to the Frenchman in this strange-looking voyager; in fact, he could not quite make out what was peculiar about the man—perhaps his eyes were not as sharp as hers—and then he saw that the boatman was naked to the waist. By now he was drawing opposite them with the speed of a hound. The girl, gagged and held by her captor's hands, struggled and moaned despairingly, and, crouching back of the boat, they might have escaped discovery in the gray morning ligh had it not been for the telltale fire—a tiny, crackling blaze no larger than a man's hat. It betrayed them. The dancing craft upon which their eyes were fixed whipped about, almost leaping from the water at one stroke, then came toward them, now nothing but a narrow thing, half again the width of a man's body. The current carried it down abreast of them, then past, and Runnion rose, releasing the girl, who cried out with all her might to the boatman. He made no sound in reply, but drove his canoe shoreward with quicker strokes. It was evident he would effect his landing near the lower end of the spit, for now he was within hearing distance, and driving closer every instant.

Necia heard the gambler call:

"Sheer off, Doret! You can't land here!"

She saw a gun in Runnion's hand, and a terrible, sickening fear swept over her, for he was slowly walking down the spit, keeping abreast of the canoe as it drifted. She could see exactly what would happen; no man could disembark against the will of an armed marksman, and if Poleon slackened his stroke, or stopped it to exchange his paddle for a weapon, the current would carry him past; in addition he would have to fire from a rocking paper shell harried by a boiling current, whereas the other man stood flat upon his feet.

"Keep away or I'll fire!" threatened Runnion again; and she screamed, "Don't try it, Poleon, he'll kill you!"

At her words Runnion raised his weapon and fired. She heard the woods behind reverberate with the echoes like a sounding board, saw the white spurt of smoke and the skitter of the bullet as it went wide. It was a long shot, and had been fired as a final warning; but Doret made no outcry, nor did he cease coming; instead, his paddle clove the water with the same steady strokes that took every ounce of effort in his body. Runnion threw open his gun and replaced the spent shell. On came the careening, crazy craft in a sidewise drift, and with it the girl saw coming a terrible tragedy. She started to run down the graveled ridge behind her enemy, not realizing the value or moment of her action, not knowing clearly what she would do; but as she drew near she saw Runnion raise his gun again, and, without thought of her own safety, threw herself upon him. Again his shot went wide as he strove to hurl her off, but his former taste of her strength was nothing to this, now that she fought for Poleon's life. Runnion snarled angrily and thrust her away, for he had waited till the canoe was close.

"Let me go, you devil" he cried, and aimed again; but again she ran at him. This time, however, she did not pit her strength against his, but paused, and as he undertook to fire she thrust at his elbow, then dodged out of his way. Her blow was crafty and well-timed, and his shot went wild. Again he took aim, and again she destroyed it with a touch and danced out of his reach. She was nimble and light, and quickened now by a cold calculation of all that depended upon her.

Three times in all she thwarted Runnion, while the canoe drove closer every instant. On the fourth, as she dashed at him, he struck to be rid of her, cursing wickedly—struck as he would have struck at a man. Silently she crumpled up and fell, a pitiful, draggled awkward little figure sprawled upon the rocks; but the delay proved fatal to him, for, though the canoe was close against the bank, and the huge man in it seemed to offer a mark too plain to be missed, he was too close to permit careful aim. Runnion heard him giving utterance to a strange, feral, whining sound, as if he were crying like a fighting boy; then, as the gambler raised his arm, the Canadian lifted himself up on the bottom of the canoe until he stood stretched to his full height, and leaped. As Runnion fired he sprang out and was into the water to his knees, his backward kick whirling the craft from underneath him out into the current, where the river seized it. He had risen and jumped all in one moment, launching himself at the shore like a panther. The gun roared again, but Poleon came up and on with the rush of the great, brown grizzly that no missile can stop. Runnion's weapon blazed in his face, but he neither felt nor heeded it, for his bare hands were upon his quarry, the impact of his body hurling the other from his feet, and neither of them knew whether any or all of the last bullets had taken effect. Poleon had come like an arrow, straight for his mark the instant he glimpsed it, an insensate, unreasoning, raging thing that no weight of lead nor length of blade could stop. In his haste he had left Flambeau without weapon of any kind, for in his mind such things were superfluous, and he had never fought with any but those God gave him, nor found any living thing that his hands could not master. Therefore, he had rushed headlong against this armed and waiting man, reaching for him ever closer and closer till the burning powder stung his eyes. They grappled and fought, alone and unseen, and yet it was no fight, for Runnion, though a vigorous, heavy-muscled man, was beaten down, smothered, and crushed beneath the onslaught of this great naked fellow, who all the time sobbed and whined and mewed in a panting fury.

They swung half across the spit to the farther side, where they fell in a fantastic convulsion, slipping and sliding and rolling among the rocks that smote and gouged and bruised them. The gambler fought for his life against the distorted face that snapped and bit like the muzzle of a wolf, while all the time he heard that fearful, inarticulate note of blood-hunger at his ear. The Canadian's clenched hands crushed whatever they fell upon as if mailed with metal; the fingers were like tearing tongs that could not be loosed. It was a frightful combat, hideous from its inequality, like the battle of a man against a maddened beast whose teeth tore and whose claws ripped, whose every move was irresistible. And so it was over shortly.

Poleon rose and ran to the fallen girl, leaving behind him a huddled and twisted likeness of a man. He picked her up tenderly, moaning and crooning; but as her limp head lolled back, throwing her pale, blind features up to the heavens, he began to cry, this time like a woman. Tears fell from his eyes, burning tears, the agony of which seared his soul. He laid her carefully beside the water's edge, and, holding her head and shoulders in the crook of his left arm, he wet his right hand and bathed her face, crouching over her, half nude, bathed in the sweat of his great labors, a tender, palpitating figure of bronzed muscle and sinew, with all his fury and hate replaced by apprehension and pity. The short moments that he worked with her were ages to him, but she revived beneath his ministrations, and her first frightened look of consciousness was changed to a melting smile.

"W-what happened, Poleon?" she said. "I was afraid!"

He stood up to his full height, shaking, and weak as the water that dripped from him, the very bones in him dissolved. For the first time he uttered words.

"T'ank God, ba gosh!" and ran his hand over his wet face.

"Where is he?" She started to her knees affrighted; then, seeing the twisted sprawling figure beyond, began to shudder. "He—he's dead?"

"I don' know," said Poleon, carelessly. "You feel it purty good, now, eh, w'at?"

"Yes—I—he struck me!" the remembrance of what had occurred surged over her, and she buried her face in

W.S.S.
WAR SAVINGS STAMPS
ISSUED BY THE
UNITED STATES
GOVERNMENT

# INSURANCE
## AGAINST THE HUN

**By J. F. MARTIN, Pres.**
**Northwestern Mutual Fire Association**

YOU buy Life Insurance to guard your family against Death.

You buy Fire insurance to protect your property against the Fire Fiend.

You should now buy War Savings Stamps to protect yourself against the greater Fiend—the War-mad Hun!

How would you like to see a victorious Germany with iron heel trample down from ocean to ocean the America we all know and love—the homes we have builded, the great nation of which you and I are a part; our men slain, our women dragged into worse than slavery?

Such is no idle picture if we let Germany win this war!

Our sons will be wasted in battle unless protected by the sinews of war, which we must furnish.

Only one person in ten bought Liberty Bonds.

Every man, woman and child can buy War Savings Stamps, and thus have a part in the insurance of America against the Hun.

The Northwestern Mutual Fire Association has been preaching economy and thrift for years, and it has saved its policy holders more than $2,500,000 in dividends and savings.

We are paying the policy holders of the Northwestern Mutual over $20,000 a month in cash dividends.

Take some of the money that you have saved on your Northwestern Mutual fire insurance policy and buy Thrift Stamps at 25c, or $5 War Savings Stamps at $4.13. You'll get your money back with interest from the strongest government on earth!

That isn't much of a sacrifice.

Do it now. Get started! Buy Thrift or Savings Stamps from the postoffice or mail carrier, your bank or other authorized agent.

"I mean to!" won't help you when the Hun is at the gate!

# Dad's Old Sock Again

By Elizabeth Quaker.

In a recent issue of this paper we were told how to convert the top of men's heavy winter socks into chest protectors, leggings and many other practical articles of clothing, after the foot was worn out.

Besides those already mentioned, good underskirts for little ones may be fashioned from the legs of men's worn-out socks by cutting down one side of the leg so it will lie flat. Then sew the legs together, narrowing at the waist so they will fit. Three legs will be needed for each petticoat. I have seen very good little garments made by attaching a little knit skirt of dark gray stocking tops to an underwaist and a shell edge of bright scarlet crocheted at the bottom.

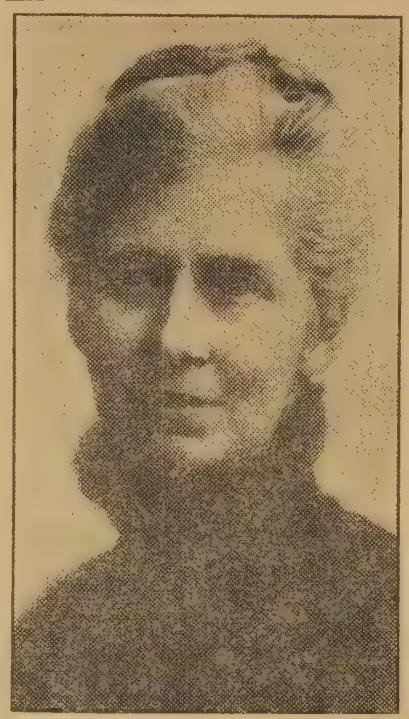
The worn foot may be cut off and the better parts of the leg and top undone. A good supply of heavy darning yarn is obtained. This wool when dyed some suitable color may be used for tying comfortables, knitting mittens and mufflers for the younger children's everyday use or for the shell edge for the little underskirts.

The unraveling is good busy work for the children on stormy days.

# Just Plain Cornbread

Get the best unbolted white cornmeal and learn to make plain cornbread. Eggs and milk are needed for muffins and spoon bread, and these are good, but so is plain cornbread. It is even better than "egg bread" for dinner. To the southerner eating cabbage, snap beans, turnip salad and spinach without cornbread is like eating food without salt. To him meat for dinner may be a luxury, but crisp little corn pones a necessity. Serve these with a vegetable dinner and you will not miss the meat.

**Corn Dodgers.**



Pour over two cups of cornmeal, one teaspoon of salt and one teaspoon of fat, enough boiling water to make a stiff dough. Set aside to cool and rise. When cold shape into small oblong pones and bake in a moderate oven 35 minutes. The crust of these pones should be thick, crisp and golden brown.

**Crackling Bread.**

Make this bread according to the recipe for corn dodgers. Omit the shortening, and when dough is cold mix in one cup of very dry cracklings. This bread is very rich, and can be served without butter or meat. Hot stewed fruit, apricots or tart apples, is the right accompaniment for this rich bread. The combination makes a good breakfast.

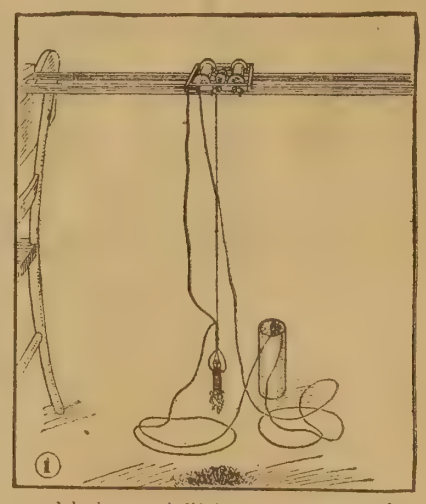
**Cornmeal Dumplings.**

Greens, cornmeal dumplings and jowl—food experts will tell you is a perfect combination of food values. The dumplings are made as follows: Pour a cup of boiling water over two cups of cornmeal and one teaspoon of salt, add a little more water if it swells too dry. Mold into dumplings, while hot, dipping the hands in cold water every minute to prevent burning. Drop dumplings in the liquor in which greens were cooked and cook 15 minutes closely covered. Lift from pot with skimmer and serve on dish with greens.

Miss Anna Barrows.

# Handicraft For Boys

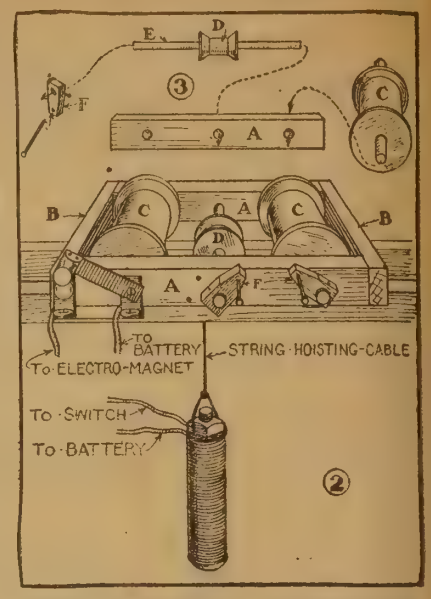
By A. Neely Hall.



## Electro-Magnet Crane.

An electro-magnet is one of the most interesting of the simpler and easily constructed pieces of electrical apparatus which a boy can construct. Figure 1 shows one of the forms of conveying toys in which the electro-magnet can be used.

## Crane Carriage.

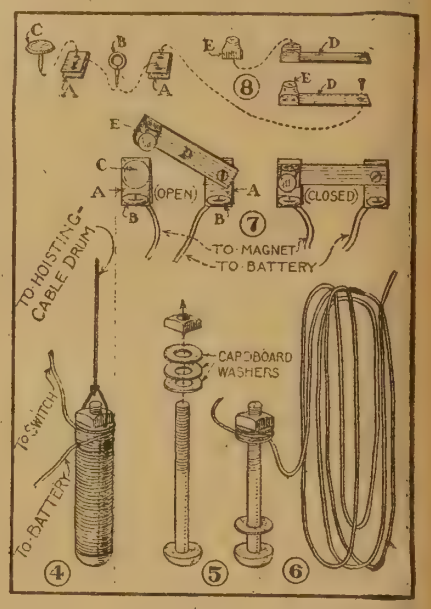


The crane carriage (Fig. 2) is a simple frame built up of two pairs of wooden strips (A and B), mounted upon a pair of ribbon spool wheels (C), with a third spool (D) mounted between for the cable winding drum.

Bore three quarter-inch holes into strips A (Fig. 3) for the spool axles. Cut the axles to fit snugly in the

spool holes, and fit loosely in the holes in strips A. The crank F (Fig. 3) fastens to shaft E. A similar crank must be fastened to the end of one of the spool shafts, also. A long brad forms the crank handle. The one for the winding-drum crank should fit loosely, and several small holes should be drilled in stick A in the correct positions so the crank handle can be ing drum at any point desired. The crank on the wheel shaft moves the carriage along its tracks.

Make the tracks of sticks heavy pushed into them to lock the wind-



enough to support the carriage without bending. Nail strips across the ends to hold them at the proper distance apart (Fig. 1).

## Electro-Magnet.

Now for the magnet. An electro-magnet has a core of soft iron incased in a coil of wire. When an electric current passes through this coil, the core becomes a magnet, but it retains its magnetism only as long as the current passes through the wire. In using an electro-magnet, therefore, we pass a current through the coil when we want to lift a load, and shut off the current when we wish to drop the load. Your magnet should lift 250 or more small brads or tacks at one time.

A carriage bolt about two and one-half inches long and one-quarter inch in diameter is needed for the magnet

core, insulated electric bell wire for the coil, cardboard, paper, and a dry battery. Cut three cardboard washers of the diameter of the bolthead (Rig. 5), slip them over the bolt, and screw on the nut (Fig. 6). Then slip the end of the wire between the upper two washers, and starting at that end wind the wire around the bolt, pushing each turn close to the preceding turn. When the head of the bolt is reached, wind back to the starting point; then wind back to the head again, and so on until four or six layers have been wound on. Slip the second end of the wire between the cardboard washers, and screw the nut tight to hold the coil in position. Figs. 1 and 2 show how one end of the coil is connected by wire to a dry battery, how the other end is connected to a switch on the crane carriage, and how a third wire connects the battery with the switch.

Fig. 7 shows the switch. Make the contact plates A out of tin or brass (Fig 8), and punch holes through them for screweye binding posts B, brass tack C, and the lever screw. Make the lever D of tin or brass, with turned up tips on one end to tack to the wooden knob E.

Attach the hoisting cable string to the top of the magnet, run it up and over the winding-drum spool, and glue it to the spool.

# Learn to Eat Things We Can Get Easily

By ANNA BUCHANAN

"I would rather not be on a committee or have to work with people who are so particular about their food, who can only eat this and that and the other thing," said Miss Anna Barrows at the Washington State college during Housekeepers' week. "They are not broad-minded people. We must learn to eat the things we can get easily. Half the trouble of food transportation today is in not using things we can get near by. We reach clear across the country for different types of food. Our devotion to wheat, I think, is due to advertising of wheat over and above the advertising of the neglected foods. We must learn to overcome this tendency to want things that are hard to obtain. Why do we insist upon having bread made of bleached flour and insist upon having our butter so yellow that it is often necessary to put coloring in it?"

Miss Barrows was the principal speaker during Housekeeping week at Pullman, Wash. She is head of the home economic department at Columbia university and is well known throughout the country as a Chautauqua lecturer and demonstrator. Just now she is demonstrating and lecturing for the national food administration.

Every one who has heard her, I think, likes Miss Barrows, not only for her quaint and pleasing manner on the platform, but because every idea she presents is so practical that it can be applied in any kind of a home.

Greater use of neglected and perishable foods was the main thought throughout all Miss Barrows' lectures and demonstrations. She spent a good deal of time discussing war breads, or as she was pleased to call it, "liberty" breads, containing the coarser flours such as corn, rye, barley and oats.

"The best way to place new bread before the family," she said, "is to do it quietly, and not say, 'Here is a new kind of bread we have to eat, I wonder if you will like it.'"

In order to accustom the family to the use of these coarser breads, Miss Barrows advises taking a small proportion of the new flour at first, so the change will not be so apparent, and gradually increase the amount of the darker flours. She uses white flour for sponge because it blends better with the yeast and gives the bread a good start.

Miss Barrows thinks it a good plan to divide the baking into three parts, using corn in one part, barley in another and having the third of white flour. If we have only a little of a kind, the family is more apt to like it and want more, she says.

**War Bread Contest.**

The war bread contest in which the home breadmakers of Washington were invited to contribute their skill and experience, attracted much attention. The judging of this bread was based on four points—nutritive value, 25 per cent; skill and texture, 25 per cent; palatability, 25 per cent, and use of flour other than wheat, 25 per cent.

Mrs. Grace Guernsey's loaf, which won first prize, received the following points; nutritive value, 24 per cent; palatibility, 23 per cent; skill and texture, 15 per cent; use of other flours than wheat, 25 per cent. Her recipe follows:

One cup soft yeast (the old-fashioned "starter"), one cup cornmeal (yellow preferred), one cup oatmeal, well cooked; one cup of mashed and sifted potatoes, two cups flour add a little more if bread sticks to the hand after kneading, two teaspoons salt.

Mix all ingredients in a solid loaf; knead till the bubbles show in the bread dough; set where it will keep very warm, but not hot; when doubled in bulk, knead it down again; when again doubled in bulk, bake the same as wheat bread.

**Won Second Prize.**

Miss Georgia Stamp of Walla Walla won second prize with bread made from the following recipe:

One and one-half cup potato yeast; half tablespoonful fat, half tablespoonful sugar, two and one-half cups wheat flour, two and one-half cups rye flour.

(Can use compressed yeast dissolved in one and one-half cups of lukewarm water, and add one-half tablespoonful of salt. Mix ingredients in order given, and knead thoroughly. Let it rise to double in bulk, shape in loaf, let rise as before, bake in moderately hot oven 45 minutes.)

Miss Stamp was given the following points: Nutritive value 22 per cent, palatability, 22 per cent; skill and texture, 18 per cent; flour other than wheat, 24 per cent.

**Third Prize Loaf.**

The third prize loaf was made by Mrs. C. Nommensen, which, on other than a war basis of judgment would have been given first by the judges. She received for nutritive value, 25 per cent; skill and texture, 20 per cent; palatability, 20 per cent; flour other than wheat, 15 per cent. Mrs. Nommensen's recipe follows:

One and one-half sifts of wheat flour, one-half sift graham flour, one-half sift rye flour, one cup any kind of fruit—jelly, pear butter or jam; four cups warm water, one tablespoonful lard, 1 tablespoonful salt.

(Boil the potatoes until done; then pour off the water and mash the potatoes. Put the water back on the potatoes, dissolve the yeast cake, add a little flour, and let it rise very light; then add flour, water, lard, fruit and salt; let it rise three times; then bake for an hour and a quarter.)

In announcing the awards, the judges gave the following points to remember when making bread for contest or show purposes:

Never enter a round loaf of bread in a contest, because if the outside is baked just right, the middle is not done, and if the middle is done the outside will have too hard a crust. The crust should be about an inch thick and the same all over the loaf.

See that the crumbs spring back to original shape after being pressed between the fingers.

Avoid large gas bubbles in the loaf.

Must be sweet and nutty in flavor, not sweet with sugar, but the fermentation must be carried on just right.

# Patterns

1149—Child's night drawers. Cut in five sizes: 2, 4, 6, 8 and 10 years. It requires three and a half yards of 36-inch material for an 8-year size. Price 10c.

2011—Child's dress. Cut in four sizes: 2, 3, 4 and 5 years. It requires two and one-fourth yards of 35-inch material for a 3-year size. Price, 10 cents.

2029—Ladies' night dress. Cut in four sizes: Small, medium, large and extra large. A medium size will require six yards of 36-inch material. Price, 10 cents.

2070—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires six and a half yards of 36-inch material for a 36-inch size. The skirt measures about three yards at the lower edge. Price, 10 cents.

2216—Dress for misses and small women. Cut in four sizes: 14, 16, 18 and 20 years. Size 16 requires six and three-eighth yards of 44-inch material. The dress measures about three yards at the lower edge. Price, 10 cents.

2324—Ladies' work dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires six and one-fourth yards of 44-inch material. The dress measures about two and a half yards at the foot. Price, 10 cents.

2325-2326—Ladies' costume. Waist 2325 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 will require three and one-fourth yards of 36-inch material. The skirt 2326 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. Size 24 will require three and one-half yards of 36-inch material. The skirt measures about two yards at the foot. Two separate patterns, 10 cents for each pattern.

2327—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires six yards of 36-inch material. The skirt portion measures a little over 2 yards at the foot. Price, 10 cents.

2328—Boys' mackinaw. Cut in five sizes: 8, 10, 12, 14 and 16 years. Size 14 requires three and a half yards of 44-inch material. Price, 10 cents.

2332—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 requires four and a quarter yards of 44-inch material. Price, 10 cents.

2340—Juniors' dress. Cut in three sizes: 12, 14 and 16 years. Size 14 will require five and three-eighths yards of 44-inch material. Price, 10 cents.

2349—Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. Size 8 will require three and a half yards of 36-inch material. Price, 10 cents.

# Treatment for Lice

(Continued from page ten.)

resort to individual treatment. It is doubtful whether it is practicable to keep any large flock entirely free from lice, nor will a few scattering body lice do any particular harm.

With farm fowls that have the liberty of the fields they will find dusting places in the cultivated field, in the garden, under the berry bushes, on the roads, but where they are confined in houses and small yards, or in winter time when the fields and dusting places may be covered with snow, the dust bath should be furnished. It should consist of finely pulverized earth or fine dust taken from the roads in dry weather and stored for winter use. Coal ashes also make a very effective dust bath. The dust should be kept in boxes large enough to accommodate the flock. It should be kept under cover, and preferably where the sunshine will strike it.

As to individual treatment, various methods are more or less effective. Satisfactory commercial powders are on the market. Recent experiments made by the United States department of agriculture showed that sodium fluorid was the most satisfactory of any material tried. This chemical can be purchased in a powdered form and the commercial grade should contain 90 to 98 per cent sodium fluorid. It should be obtained from druggists at a price 30 to 60 cents a pound retail. It is not now found in the ordinary country drug stores, but may be purchased from the larger city stores.

It may be applied either as a dry powder or as a liquid and used as a dip. In the latter case about one ounce of commercial sodium fluorid is dissolved in a gallon of water. Dipping, however, should not be tried in northern or cold sections at this season of the year. For treating with the powder, it is recommended that the fowl be held on a large pan or tray by one hand and with the other the dust is applied by the "pinch" method, as follows: One pinch on the head, one on the neck, two on the back, one on the breast, one below the vent, one on the tail, one on either thigh and one scattered on the under side of each wing. The powder should be spread a little among the feathers when released by the thumb and fingers. This is called the pinch method, and is more economical and probably more effective than to use a can or shaker with holes in the lid and dust the powder into the feathers. By using a pan under the fowl when applying the powder the waste material that falls from the hen may be gathered up and used again. One pound of the powder will treat about 100 fowls, applied with the fingers as above.

If it is not possible to secure sodium fluorid, other commercial powders, which may always be purchased in the local stores, may be used with satisfactory results.

The "barrel" treatment is not effective and may be dangerous. Sulphur is often used for lice, but is not as satisfactory as some other powders.

Lice killer applied to the perches will not kill the body lice. That is the treatment for mites, but the mite is another story. J. D.

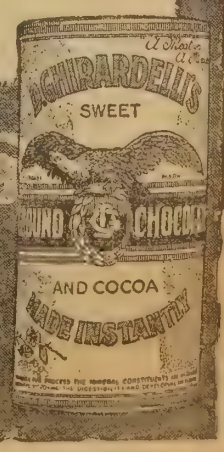
## It takes the fuss out of breakfast

THANKS to Ghirardelli's—breakfast-making is not the job it used to be. There's no fuss—no muss—no time lost.



If a chocolate pot does not happen to be handy—you use an ordinary stew-pan. It takes but a minute or two. And then—you have the most delicious of all food-beverages steaming hot, ready to serve.

An ideal blend of ideal foods—cocoa and pure sugar—Ghirardelli's supplies the maximum nutriment at minimum cost. Always keep a can on hand.

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.
Since 1852 San Francisco

Ghirardelli's Ground Chocolate

**Lots of Rain Instead of Snow.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old and my birthday is February 21. I have been going to school, but I am sick now and can not go for a few days. I had a fine time Christmas morning. There is no snow here now, but quite a bit of rain. We live about 10 miles from Colfax and we have horses, cattle, pigs and other stock. I hope I will see my letter in print.—Dwight McNeilly, Colfax, Wash.

**Marie Has Found Her Twin.**

Dear Aunt Nellie: This is my third Corner letter. I have found a twin. She lives in Pasco. Her name is Ida McCotter. She wrote me a very interesting letter. The other evening about 8 o'clock I went outside and the moon was very bright and the stars were shining. The searchlight at Fort Casey was shining on our house and our house was all lighted up by the searchlight. I hope all the cousins and you have a happy New Year.—Marie Hazel Bultman, Box 31, Oak Harbor, Wash.

**Of Course Elsie May Be a Cousin.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old and I am in the seventh grade at school. I am five feet one and one-half inches tall and I have light hair and blue eyes. I wish Aunt Nellie would write more stories. I enjoy them very much, as I read quite a lot. May I be a cousin? Our school is having a vacation. I think it would be nice if we could have more contests. I live on a 240-acre farm. I lived in a city for seven years. My birthday is March 16. I will write again—Elsie Margaret Phillips, R. F. D. 1, Box 66, Colbert, Wash.

**Grace Lives on an Island.**

Dear Aunt Nellie: This is the second letter I have written to the Corner. We live on an island. I like to live here very much. The beach is about a mile from my home. We go down there in the summer and go out boat riding. We take the boat way out in the water. Some times we go up to the fishtrap and watch the men lift. At twilight the sun sets out in the west. When it sets there are many beautiful colors. The colors reflect upon the water. This is all for this time. I am hoping to hear from my twin soon.—Grace Mildred Bultman, Oak Harbor, Wash.

**Learning How to Embroider.**

Dear Aunt Nellie: This is the first time that I have written to the Children's Corner. I have read all the letters that were printed in the Farmer. I am 12 years old. I was born January 24, 1905. Have I a twin? If so I would like for them to write to me. I like to go to school. I am taking embroidering lessons from my teacher, Miss Campbell. I like her very much. I am going to embroider a centerpiece first. We had a Christmas tree at our school house. We did not have a program. I would like to see my letter in print.—Grace Helen Smelcer, Mayview, Wash.

**First Teacher Went to War.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I have found my twin. Her name is Bertha Jennings. She wrote me two letters and I answered them, but she hasn't answered my last one yet. No one has written from here so I thought I would write. I have a little brother 4 months old. We have had one week's vacation. I like my teacher fine. Her name is Helen Argyle. My sister's teacher's name is Miss Lillian Haupt. She is the primary teacher. Our first teacher went to war. I will write again some other time.—Marie Ganguin, box 37, Goldendale, Wash.

**Edna Takes Domestic Science.**

Dear Aunt Nellie: I will write to the Farmer for the first time. I am 13 years old. I am in the seventh grade. My teacher's name is Mr. McCabe. I take domestic science. I will take the state examinations this January in both geography and physiology. I took music lessons on the piano and organ. I can crochet, embroider and tat. I have a pet calf. Her name is Star. We all love her dearly. I have been reading the letters in the Farmer so I thought I would like to write. I loved to read them. I would like to get acquainted with some of the cousins. We have a week of vacation. I surely had a merry Christmas. I wish all a Happy New Year.—Edna Dunaway, Glenoma, Wash.

**Writes About Her Christmas.**

Dear Aunt Nellie: It has been a long time since I wrote to the Children's Corner. I am going to write about my Christmas. For Christmas I got a dolly, a handkerchief, a game of India, three ribbons and a lot of candy and nuts and oranges. We have a phone in our house now. We are going to move pretty soon. Our teacher is very nice. The river has been high. Three times it went over a neighbor's field. There is my uncle and a man working on it. We have all been sick. Papa is sick now. Have I a twin? I am 8 years old and in the third grade. If I have a twin please write to me.—Irene Rogers, R. F. D. 2, Box 12, Arlington, Wash.

**Albert Is 11 Years Old.**

Dear Aunt Nellie: We have taken the Farmer for some time and I enjoy the letters of the other children. This time I am going to write about my Christmas vacation. For Christmas I got a book and some dominoes. We had lots of fun Christmas. We did not have to go back to school until the second of January. I am 11 years old. My birthday is September the 18th.—Albert Mitchell Needham, Wilcox, Wash.

**Call Baby Calf "Christmas Carol."**

Dear Aunt Nellie: I will write to the Children's Corner. I got a doll for Christmas, three ribbons and three games and nuts and candy. I like Christmas. We had a nice program at our schoolhouse. We have a baby calf. We call him Christmas Carol. I have one brother and one sister. My brother's name is Homer and my sister's name is Gladys. One of our neighbors came over and ate Christmas dinner with us. My birthday is January 14. I will be 9 years old. Homer joined the 23d engineers. I am in the third grade at school. I hope I will see my letter in print.—Ruth Bentley, R. F. D. 1, Elk, Wash.

**Go Boat Riding in Vacation.**

Dear Aunt Nellie: This is the first time that I have written to the Children's Corner. I am 11 years old. My birthday is the 12th of October. I have light hair and blue eyes. We live on a farm about four miles from Oak Harbor and only a little ways from the west beach. I like to go to the beach in the summer time. We go nearly every day in vacation and go boat riding. I know a couple of the riddles that Frances McCauley wrote. One is a watermelon and the other is the churn. Do I have a twin? If so I would like to correspond with her.—Sarah Mellenoar, R. F. D. 2, Box 29, Oak Harbor, Wash.

**Elzina Is a True American.**

Dear Aunt Nellie: It has been ever so long since I wrote to you. My sister in Stanwood has a little baby boy. He was born on Christmas. For Christmas I got two red ribbons and one black ribbon, a handkerchief, a game of battles and a lot of candy, oranges and nuts, besides my dolls and other things. My brother is in the army in England now. We haven't had a letter from him lately. I hope the Corner is growing. I hope our side will beat in this war. I am an American and I hope all the children in the Corner are. We had some little chickens and one night some big thing came and ate the mother hen. We think it is a coyote. I hope you will have a happy New Year.—Elzina Rogers, R. F. D. 2, Box 12, Arlington, Wash.

**Velvet Paws and Lilly Are Kittens.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters, so I thought I would write. I am 10 years old and my birthday was the 27th of April. I have one sister and four brothers. My sister's name is Laura and my brothers' names are Robert, Ben, Walter and Ted. My sister is 15 years old, Robert is 26, Ben is 23, Walter is 19 and Ted is 17. Robert had to go to war this summer. I have two kittens named Velvet Paws and Lilly. Velvet Paws is black and white and Lilly is gray and white. We have one cow and two calves. We have some horses, but I don't know how many. We drive to school. Have I a twin? If I have I wish she would write to me.—Hattie Hayden, Benge, Wash.

**Brother Is a Soldier.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I enjoy myself reading the letters. My birthday is the first of September. I was 10 years old. Have I a twin? I am in the fifth grade. I like to go to school. I live on the Colville Indian reservation. We have four colts and six grown horses. We have one cow and a calf. Their names are Boss and Flower. I have four brothers and three sisters. Their names are Huston, Lloyd, Roy and Charlie. My sisters' names are Velma, Emma and Mary. We have one dog and two cats. My oldest brother has gone to war. I would like to see my letter in print.—Thomas Everett Henson, Okanogan, Wash.

## THE BARRIER

(Continued from page twenty.)

her hands. "Oh, Poleon! Poleon! He was a dreadful man."

"He don' trouble you no more."

"He tried—he— Ugh! I—I'm glad you did it!" She broke down, trembling at her escape, until her selfishness smote her, and she was up and beside him on the instant. "Are you hurt? Oh, I never thought of that. You must be wounded!"

The Frenchman felt himself over, and looked down at his limbs for the first time. "No! I guess not," he said, at which Necia noticed his meager attire, and simultaneously he became conscious of it. He fell away a pace, casting his eyes over the river for his canoe, which was now a speck in the distance.

"Ba gosh! I'm a hell of a t'ing for lookin' at," he said. "I'm paddle hard —dat's wy. Sacre! how I sweat!" He hitched nervously at the band of his overalls, while Necia answered:

"Thats all right, Poleon." Then, without warning, her face froze with mingled repulsion and wonder. "Look! Look!" she whispered, pointing past him.

Runnion was moving slowly, crawling painfully into a sitting posture, uplifting a terribly mutilated face, dazed and half conscious, groping for possession of his wits. He saw them, and grimaced frightfully, cowering and cringing.

Poleon felt the girl's hand upon his arm and heard her crying in a hard, sharp voice:

"He needs killing! Put him away!"

He stared down at his gentle Necia, and saw the loathing in her face and the look of strange ferocity as she met his eyes boldly.

'You don't know what he—what he did," she said, through her shut teeth. "He—" But the man waited to hear no more.

Runnion saw him coming and scrambled frantically to all fours, then got on his feet and staggered down the bar. As Poleon overtook him, he cried out piteously, a shrill scream of terror, and, falling to his knees, groveled and debased himself like a foul cripple at fear of the lash. His agony dispelled the savage taint of Alluna's aboriginal training in Necia, and the pure white blood of her ancestors cried out:

"Poleon, Poleon! Not that!" She hurried after him to where he paused above the wretch waiting for her. "You mustn't!" she said. "That would be murder, and—and—it's all over now."

The Frenchman looked at her wonderingly, not comprehending this sudden leniency.

"Let him alone; you've nearly killed him; that's enough." Whereat Runnion, broken in body and spirit, began to beg for his life.

"W'at's dat you say jus' now?" Doret asked the girl. "Was dat de truth for sure w'at you speak?"

"Yes, but you've done your work. Don't touch him again."

He hesitated, and Runnion, quick to observe it, added his entreaty to hers.

"I'm beaten, Doret. You broke me to pieces. I need help—I—I'm hurt."

"W'at you 'spec' I do wit' 'im?" the Canadian asked, and she answered:

"I suppose we'll have to take him where he can get assistance."

"Dat skiff ain' carry all t'ree of us."

"I'll stay here," groaned the frightened man. "I'll wait for a steamer to pick me up, but for God's sake don't touch me again!"

Poleon looked him over carefully, and made up his mind that the man was more injured in spirit than in body, for, outside of his battered muscles, he showed no fatal symptoms. Although the voyageur was slower to anger than a child, a grudge never died in him, and his simple, self-taught creed knew no forgiveness for such men as Runnion, cherished no mercy for preying men or beasts. He glanced towards the wooded shores a stone's-throw above, then back at the coward he had beaten and whose life was forfeit under the code. There was a queer light in his eyes.

"Leave him here, Poleon. We'll go away, you and I, in the canoe, and the first boat will pick him up. Come." Necia tugged at his wrist for fear she might not prevail; but he was bent on brushing away a handful of hungry mosquitoes which, warmed by the growing day, had ventured out on the river. His face became wrinkled and set.

"Bien!" he grunted. "We lef' 'im here, bicouse dere ain't 'nough room in de batteau, eh? All right! Dat's good t'ing; but he's seeck man, so mebbe I feex it him nice place for stop till dem boats come."

"Yes, yes! Leave me here. I'll

## News for Breeders

The American Shorthorn association has, through the recommendation of Frank Brown, western representative, appropriated $500 for premiums for the Union Live Stock show at Union, Ore. It is a most commendable appropriation and the Union stock show, already one of the important shows of its kind in the northwest, is thus assisted on its way to greatness.

Cal Young, who is breeding Shorthorns and grade beef cattle near Eugene, Ore., is inclined to believe that sweet clover is the coming feed for cattle. He is trying some out and finds that when cattle get used to it they prefer it to timothy and velvet grass hay. Mr. Young has grown alfalfa and found it does well a year or two, but "runs out.' He is, however, going to give it another trial. Mr. Young pastures his cattle through the spring and summer, but feeds in winter—silage and clover hay with some alfalfa. Mr. Young now has 15 registered Shorthorn females. He used for awhile a high-class bull from the W. O. Minor herd, and is at present using a bull from the J. B. Cornett herd that is siring very satisfactory calves. H. A.

### An Oregon Product.

The picture above shown is Sir Nida Yamhill Wayne, senior and grand champion Holstein bull at the recent Pacific International Stock show at North Portland, Ore. This handsome young bull was bred and raised by C. S. Magee of McMinnville, Ore., who exhibited him at the show, and Mr. Magee is justly proud of his winning. H. A.

### Buys Jersey Bull.

J. N. Price, Yakima county (Wash.) agent, reports: "D. A. Hoag of Sunnyside purchased a pure bred Jersey bull from Waikiki ranch at spokane. This is one of three bulls I had recommended to Mr. Hoag. I prepared rations for feeding fall pigs on Mr. Cornue's ranch at Selah. He will use equal parts of corn and shorts with about 10 per cent tankage and a liberal supply of cull apples. We secured a price of $2 per hundred for tankage from the Yakima Meat company. Mr. Cornue has some spring shotes which he planned on feeding for two or three months longer, and selling his fall pigs at about $8 per head. I advised that he finish the spring pigs within a month or six weeks and put his feed into the fall pigs and finish them for market in March or April. The spring pigs weigh now about 180 pounds and their cost of gains will increase rapidly from now on."

### Harry Jenkins.

Harry Jenkins, who judged Jerseys at the Oregon State fair, and who had the misfortune to break a leg in an automobile accident during fair week, found on his return to his Indiana home that his bad luck was not entirely over. His leg had not knit from the setting at Salem, Ore., and he went to an Indianapolis hospital, where he underwent another operation. At last accounts Mr. Jenkins was reported to be rapidly recovering.

### Purchase of Shorthorns.

A. L. Wilson of Greenleaf, Idaho, has recently purchased of the Caldwell Live Stock association 24 head of purebred Shorthorns that represent some of the best blood of the country. The purchase includes a $1250 sire, with 14 females and seven male calves. Mr. Wilson is noted as a breeder of quality Poland China hogs, and his recent addition to his live stock holdings will land him pretty much in the line of animal hunsbandry.

### Pure Scotch Shorthorn.

Robert McGuire of Dixie, Idaho, a well-known Shorthorn breeder, has purchased of H. W. Dorman "Sassy Sultan," a pure Scotch and a snow-white 3-year-old, for $1000. Sassy Sultan is a grandson of Whitehall Sultan, another bull of fame in America.

# Breeders' Department

## HOLSTEIN CATTLE

**Herd Bulls**

Imported Donne Radiance No. 609412
and
Gainford Perfection No. 442173.

Bliss, Idaho.

**In answering advertisements don't fail to mention this paper.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Jan. 21.—With primary receipts the largest yet this season, the corn market today showed a noticeable downward slant. Prices closed steady, at the same as Saturday's finish to 5-8 cent lower, with January 127 5-8 and May 125 1-8@125 1-4. The outcome for oats ranged from 1-8 decline to a like advance, and for provisions from 7 cents down to a rise of 10 cents.

Although the increase in the arrivals of corn was principally at other centers than Chicago, the progress implied in diminishing traffic congestions gave an immediate advantage to the bears. Peace developments also counted in favor of lower prices, but selling was not at any time of an aggressive character, being checked by prospects of a renewal of lower temperature.

Oats sagged with corn, but reacted on account of assertions that seaboard exporters were in the market again for supplies.

More plentiful receipts of hogs than were expected made provisions average lower. Cash demand was slow and exports much reduced.

**Chicago Futures.**

## The Wool Market.

BOSTON, Jan. 18.—The Commercial Bulletin will say tomorrow:

"With confidence in the wool situation somewhat restored through the modification of the trade board's import regulations came the order of the fuel administrator curtailing manufacturing in the textile mills and consequently curtailing business in the wool merchants' offices, to the great annoyance of the trade, which has had nearly enough problems to meet in the last three years and more of war. Business in the trade in the earlier part of the week was of fair volume and fairly well distributed, with prices firm throughout the list. At the mills the only news is with reference to fuel and the action of the fuel administrator."

Scoured basis:

California—Northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon—Eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory—Fine staple, $1.85@1.90; halfblood combing, $1.75@1.80; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.63; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A suppers, $1.60@1.65.

## Seattle Wheat.

SEATTLE, Wash., Jan. 19.—While Minneapolis and southeastern millers are actively operating in Washington, Oregon and Idaho to get hold of the theoretical surplus of 15,000,000 bushels of wheat accredited by the government report, their efforts have unavailing since Puget sound millers wired protests to the national capital. Whether combined action here will prevail, and whether the food department can be convinced that the estimate of millers, grain dealers, state and federal inspectors and supervisors are right and the department of agriculture wrong is the problem. Grain dealers this week reiterate their statement that there is now only 41,000,000 bushels of a visible supply in the three states against the government's 56,000,000 bushels. Some hope has been taken from the fact that eastern millers are experiencing much difficulty in buying wheat in this territory. A little has moved, but the sum total is trifling by comparison.

A ship cargo of 2200 long tons of Australian wheat arrived in port Wednesday. It is reported that the wheat will be ground here on contracts for flour to the allies.

## Portland Market.

PORTLAND, Ore., Jan. 21.—The strong demand for barley is now the feature of the grain trade. The order from the food administration, putting an embargo on shipments of barley out of California, strengthened the position of this cereal in all the other Coast states. At the local exchange at the close of the week bids for feed barley were advanced $3 a ton, while offers for brewing barley were $1.75 over those of Friday. There is not much barley now left in the northwest except the stock in the hands of the larger dealers, and this is said not to be extensive.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $59 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $57.50; brewing, $59; rolled, $61@63.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $23.50; grain, $24.

Eggs — Oregon ranch, case count, 50c per dozen; candled, 52@55c.

Poultry—Hens, 22@24c; ducks, 20@25c; turkeys, live, 25c; geese, 16@18c.

Butter — City creamery, prints, 52@54c per pound; cubes, extras, 49 1-2c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats — Veal, 17 1-2@18c; pork, 18 1-2@19c.

Hops—1916, nominal; 1917 crops, 16@18 1-2c.

Potatoes—Oregon, buying price, $1@1.15 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon white, 9@10c; colored, 8@9c.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, 2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.40 box; Wageners, $1@1.50 box; Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.60 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Winconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 30c lb; broilers, 32c lb; old roosters, 11c lb; ducks, 20@23c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Hide Quotations.**

**Green Cows and Steers**—25 lbs and up, 15c; salted cured, 17c; green bulls and stags, 12c; salted cured, 15c; kip, 15 lbs. to 25 lbs, 20c; calf skins up to 15 lbs, 28c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 10 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

**METALS.**

NEW YORK, Jan. 19.—Bar silver, 89 5-8.

## Seattle Market.

SEATTLE, Jan. 19.—The potato market for the week-end shows a steadily weakening tendency, with heavy shrinkage and increasing costs of bags affecting quotations but little. Decay to spuds in storage has been so marked that it is possible to use only a small percentage of the bags for the second or third time. Sacks have reached a cost of about $5 to each ton of spuds. Shrinkage is 25 to 50 per cent. Jobbers predict that in all probability a third of the crop of western Washington will be lost through shrinkage.

The sensational ranch egg market, that jumped to 58c for two days, collapsed this morning when jobbers began seeking cover. Fortunately for them country bid prices were limited at the high lever, and only a few cases were in transit when the market broke. Dealers uniformly pronounced the flyer unwarranted.

The best reason that could be given for the fancy price was that brokers and others were getting hold of the surplus and shipping to New York on fat profits. The obvious effect, however, was to compel Seattle consumers to buy their eggs at 5c per dozen more than they were worth. The market is still weak at this level, and it is predicted that it may decline to a half dollar selling next week. Storage eggs are now history, but production is heavy and the big coops are turning some heavy shipments into this market daily. Jobbers have ceased to urge weather conditions as a bull factor, as the industry on Puget Sound is scientifically predicated to a very large exteint on heated and lighted coops.

Butter is uniformly firm. It seems impossible for brokers, jobbers and creamery men to increase the visible supply, but quotations have evidently gone as high as the traffic will stand and no attempt is being made to elevate them.

**BUYING PRICES.**

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle.

Eggs—Local, 50c per dozen.

Poultry—Live hens, fat, over 4 lbs., 25c lb.; 4 lbs. and under, 25c; old roosters, 16c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18c lb; springs, live, 25c lb.

Butterfat—58c lb.; dairy butter, 56c.

Beef—Buying prices: Prime beef steers, 11@12c lb.; cows, fat, 9@11c lb.; heifers, 10@11c lb.

Hogs—Light, 18@20c lb.; heavy, 17@18c lb.

Veal—Fancy light, 14@17c lb.; heavy, 12@14c lb.

Hides — Salted, 15c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 12c lb.; green calf, 23c lb.; dry calf (under 6 lbs.), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 10c lb.; dry full wool sheep pelts, 35@39c lb.; salt bulls, 12c lb.

**SELLING PRICES.**

Feed—Scratch, $75 per ton; all grain chop, $67 per ton; oats, $64 per ton; rolled oats, $65.50 per ton; bran, $32.50@35 per ton; shorts, $34@38 per ton; soy bean meal, $68 per ton; whole corn, $77 per ton; cracked corn, $78 per ton; alfalfa meal, $35.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $30@31 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c lb.; do bricks, 53c lb.

Eggs—Fresh ranch, 53@54c dozen.

Potatoes—Puget sound, $1.25@1.35 per cwt.; eastern Washington, $1.50@1.60 per cwt.

# THE BARRIER

(Continued from page twenty-four.)

make it through all right," begged Runnion.

"Better you camp yonder on de point, w'ere you can see does steamboat w'en she comes 'roun' de ben'. Dis is bad place." He indicated the thicket, a quarter of a mile above which ran out almost to the cut bank. "Come! I help you get feex."

Runnion shrank from his proffered assistance half fearfully, but, reassured, allowed the Frenchman to help him towards the shore.

"We tell it de first boat 'bout you, an' dey pick you up. You wait here, Necia."

The girl watched her rescuer guide Runnion up to the level of the woods, then disappear with him in the firs, and was relieved to see the two emerge upon the river bank again frather on, for she had feared for an instant that Poleon might forget. There seemed to be no danger, however, for he was crashing through the brush in advance of the other, who followed laboriously. Once Runnion gained the high point he would be able to command a view of both reaches of the river and could make signals to attract the first steamboat that chanced to come along. Without doubt a craft of some sort would pass from one direction or the other by tomorrow at latest, or, if not, she and Poleon could send back succor to him from the first habitation they encountered. The two men disappeared again, and her fears had begun to prey on her a second time when she beheld the big Canadian returning. He was hurrying a bit, apparently to be rid of the mosquitoes that swarmed about him, and she marked that, in addition to whipping himself with a handful of blueberry bushes, he wore Runnion's coat to protect his shoulders.

"Woof! Dose skeeter bug is hongry," he cried. "Let's we pass on de river queeck."

"You didn't touch him again?"

"No, no. I'm t'rough wit' 'im."

She was only too eager to be away from the spot, and an instant later they were afloat in the Peterborough.

"Dis nice batteau," Poleon remarked, critically. "I mak' it go fas,'" and began to row swiftly, seeking the breeze of the open river in which to shake off the horde of stinging pests that had risen with the sun. "I come 'way queeck wit'out t'inkin' 'bout gun or skeeter net or not'in'. Runnion she's len' me dis coat, so mebbe I don' look so worse lak' I do jus' now, eh?"

"How did you leave him? Is he badly injured?"

"No, I bus' it up on de face an' de rib, but she's feelin' good now. Yes. I'm leave 'im nice place for stop an' wait on de steamboat—plaintee spruce bough for set on."

She began to shudder again, and, sensitive to her every motion, he asked, solicitously, if she were sick, but she shook her head.

"I—I—was thinking what—supposing you hadn't come? Oh, Poleon! you don't know what you saved me from." She leaned forward and laid a tiny, grateful hand on the huge brown paw that rested on his oar. "I wonder if I can ever forget?"

She noted that they were running with the current and inquired:

"Where are we going?"

"Wal, I can't pull dis boat 'gainst dat current, so I guess we pass on till fin' my shirt, den bimebye we pick it up some steamboat an' go home."

Five miles below his quick eye detected his half-submerged "bark" lodged beneath some overhanging firs which, from the water's action, had fallen forward into the stream, and by rare good fortune it was still upright, although awash. He towed it to the next sandbar, where he wrung out and donned his shirt, then tipped the water from the smaller craft, and, making it fast astern of the Peterborough, set out again. Toward noon they came in sight of a little stern-wheeled craft that puffed and pattered manfully against the sweeping current, hiding behind the points and bars and following the slackest water.

"It's the Mission boat!" cried Necia. "It's the Mission boat! Father Barnum will be aboard."

She waved her arms madly and mingled her voice with Poleon's until a black-robed figure appeared beside the pilot house.

"Father Barnum!" she screamed, and, recognizing her, he signalled back.

Soon they were alongside, and a pair of Siwash deckhands lifted Necia aboard. Doret following after, the painter of the Peterborough in his teeth. He dragged both canoes out of the boiling tide and laid them bottom up on the forward deck, then climbed the narrow little stairs to find Necia in the arms of a benignant, white-haired priest, the best-beloved man on the Yukon, who broke away from the girl to greet the Frenchman, his kind face alight with astonishment.

"What is all this I hear? Slowly, Doret, slowly! My little girl is talking too furiously for these poor old wits to follow. I can't understand; I am amazed. What is this tale?"

Together they told him, while his blue eyes now opened with wonder, now grew soft with pity, then blazed with indignation. When they had finished he laid his hand upon Doret's shoulder.

"My son, I thank God for your good body and your clean heart. You saved our Necia, and you will be rewarded. As to this—this—man Runnion, we must find him, and he must be sent out of the country; this new, clean land of ours is no place for such as he. You will be our pilot, Poleon, and guide us to the spot."

"He's try for walk it back to camp," said Doret. "Mebbe he ain' hurt so much, after all."

"You must be right," said Father Barnum. "We will keep the steamer close to this shore, so that he can hail us when we overtake him."

And so they resumed their toilsome trip. But mile after mile fell behind them, and still no voice came from the woods, no figure hailed them. Doret, inscrutable and silent, lounged against the pilot house smoking innumerable cigarettes, which he rolled from squares of newspaper, his keen eyes apparently scanning every foot of their slow way; but when night fell at last and the bank faded from sight he tossed his last butt overboard, smiled grimly into the darkness and went below.

(To be continued in the next issue.)

# Want Ads

## HELP WANTED—MALE 3

WANTED—ACTIVE MEN WITH FARMER acquaintances, to sell Pipeless Furnaces; splendid line; good proposition to offer. Richardson & Boynton Co., 171 W. Lake st., Chicago, Ill.

## LIVE STOCK 177

FOR SALE, LIVE STOCK.

Big two days' sale, Friday, Saturday, Feb. 15-16. California Ranch, Buena, Wash. O. W. R. R., 15 miles from Yakima. Feb. 15, 30 head farm horses, 3 to 5 years; all farm raised, by reg. stallion; all broken, 20 head steers, heifers and grade cows. Feb. 16, 60 head reg. Holsteins, mostly cows and bred heifers. These offerings are the best in the west. Chas. S. Mead Jr., owner. George A. Gue, auctioneer.

HOLSTEIN HERD FOR SALE.

As I will sell or rent my ranch this spring, my entire herd of registered and high-grade Holstein cattle is for sale. For particulars as to breeding and prices, write W. Fred Harper, New Plymouth, Idaho.

ONE SHIRE REGISTERED STALLION, coming 4 years old, color dark brown, weight 1850, for sale or trade for horses or good property. James R. Barnes, Route 3, Pullman, Wash.

REGISTERED SHORTHORN COWS, YOUNG bulls and heifers, sired by Scotch bulls; liberal terms. Caldwell Cattle Co., by H. W. Dorman, Pres., Caldwell, Idaho.

YOUNG PERCHERON STALLIONS AND mares for sale. Among them Unietta, champion of three 1917 stock shows. H. E. Evans & Co., Rickreall, Ore.

FOR SALE—25 REGISTERED RED, white and roan Shorthorn bull calves and yearlings. Wm. Mulhall, Fenn, Idaho.

O. I. C. BOAR PIGS, SERVICEABLE AGE. Pearl Guineas, $5.00 per trio. C. I. Ballard, Rickerall, Ore.

FOR SALE — PIGS OF ALL AGES AND sizes. Can ship by express. Geo. W. Stevens, Maltby, Wash.

## HOTELS 306

WHITE'S HOTEL AND RESTAURANT. Rooms, hot and cold water, 75c up. Breakfast 20c to 40c. Dinner, 25c to 50c. Sprague and Stevens, Spokane.

## BUSINESS OPPORTUNITIES 516

$6000 BUYS A WELL-EQUIPPED DAIRY plant and business in a beautiful college town in So. Calif. Brings in about $400 per mo. For full particulars and terms write R. F. D. 1, Bx. 86, Yelm, Wash.

## RUBBER STAMPS and SEALS 384

FOR RUBBER STAMPS, STENCILS, badges, numbering machines, checks, seals, etc., write Pacific Coast Stamp Works, Seattle and Spokane.

## TAXIDERMISTS 426

WE MOUNT ANYTHING. FURS TANNED and made into furs and robes. Raw furs bought. Mohr, 82 Bernard, Spokane.

## PLUMBING and HEATING 594

PLUMBING SUPPLIES AT WHOLESALE. Stark-Davis Co., 212 3d st., Portland, Ore.

## SEEDS 620

SEEDS—THE KIND THAT GROW.
You can't keep them in the ground.
Send for catalogue.
BUTZER'S SEED STORE.
188-190 Front St.
Portland, Oregon.

WE SPECIALIZE IN TIMOTHY, ALFALfa, clovers, seed for forage crops. Write for prices. Mark Means Co., Lewiston, Ida.

## NURSERY STOCK 621

EVERBEARING STRAWBERRIES ARE mortgage lifters. We have plants, strong and thrifty. Send for price list. F. H. Moffett, Ellensburg, Wash.

CLARK'S SEEDLING STRAWBERRY plants. Fine, strong plants; terms reasonable. A. M. Sawyer, Hood River, Ore.

FOR SALE—STRAWBERRY PLANTS, standard varieties and best Everbearing kinds. Chas. Leigh, R. 3, Kent, Wash.

## HOMEST'DS, RELINQ'M'TS 642

OREGON-CALIFORNIA GOV'T LAND, booklet free. Joseph Clark, Sacramento, Cal.

## FARM LANDS—FOR SALE 651

BUY WHERE THEY RAISE THE PRIZE CROPS
IN SNOHOMISH COUNTY.

40-acre farms, $25 per acre. Ten yearly payments, 6 per cent interest. Visit our office and see the great exhibit of PRIZE-WINNING vegetables, fruits, grains, alfalfa and other grasses raised on the adjoining farms. They prove our claims that this is the best land in WESTERN WASHINGTON.

Paved roads. Four passenger trains a day. Graded school, cannery, creamery, cheese factory, plenty of work for the laboring man in the mills and camps, where 75 settlers are all boosters. DON'T LOSE A DAY in asking for our illustrated literature.

BROWNELL LAND CO.
904 THIRD AVE., SEATTLE, WASH.

YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence: Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; twenty years to pay; $2000 loan in improvements, or ready made farms. Loan of live stock; taxes average under twenty cents an acre; no taxes on improvements, personal property, or live stock. Good markets, churches, schools, roads, telephones; excellent climate—crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Allan Cameron, general superintendent land branch, Canadian Pacific Ry., 30 Ninth ave., Calgary, Alberta.

GOING — IRRIGATED ALFALFA AND stock ranch of 111 acres; gross income $6000; situated on the bank of the Yakima river; ideal for all kinds of stock; properly cultivated, will raise 100 bu. corn and 10 tons of potatoes to the acre. Horses, cows, registered $1000 Holstein bull, Berkshire hogs, chickens, farm implements, etc.; eight-room house, barn, silo, hog and chicken houses. This ranch is second to none in the Yakima valley. Reason for selling, old age. Price for all $28,000; one-half cash. Address B 7, care Washington Farmer, Spokane.

JORDAN VALLEY PROJECT—WHY NOT investigate this new project? It is just in the making, and opportunities of this character are becoming more scarce each year. We will explain it and send literature on request. There is plenty of development work and an opportunity for those who want to make payments in this manner. Our autos will take you from Boise to look the project over. HARLEY J. HOOKER, Shaw Bldg., Boise, Idaho.

PHYSICALLY DISABLED; OFFER 200 acres; 100 good alfalfa and grain land, with 14 head stock, chickens, implements and Ford, all for $4300; $2000 cash. Adjoins good range; in fine valley; eastern Oregon. 3-room house, barn and garage. Address Owner, care of Oregon Farmer, Spokane, Wn.

HEAD FOR THE HEADWATERS OF the old Missouri; splendid grain and stock ranches. For information about climate and soil write Chamber of Commerce, Three Forks, Montana.

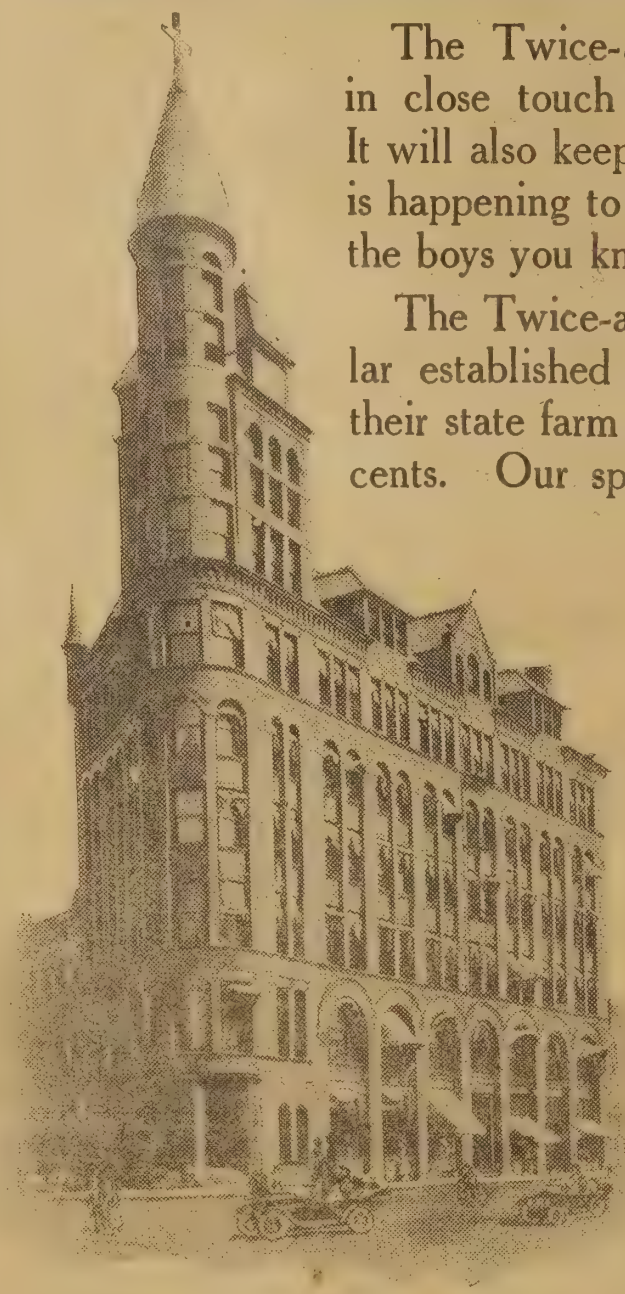
187 ACRES FOR SALE—90 IN CULTIVAtion; 41 cattle, 9 horses, 10 hogs; all machinery, grain and hay; good grass and stock region. Price $16,000. C. E. Long, Fraser, Idaho.

GOOD 80-A. FARM OFFERED CHEAP; low interest, easy terms. For detailed information write (aged owner), August Storme, R 1, Marysville, Wash.

65 ACRES; ½ MILE FROM
station. Stock and tools.
SQUARE DEAL RANCH, Oceosta, Wash.

ALFALFA, PLOW LANDS, HOP YARDS, orchards, business investments. Lund Land Co., North Yakima, Wash.

40 A. LOGGED-OFF LAND; MUST SELL at once. Geo. Misener, Bothell, Wn.



## FOR SALE OR EXCHANGE 702

160-ACRE RANCH; RICH SOIL; 40 ACRES broke; 100 tillable; plenty range; stream through place; some buildings; well; good grain ranch; 3½ miles from Cambridge, Idaho. $5000. Would trade for cattle. Owner, H. T. Cutler, Parker, Wash.

# A BIG SAVING

## *Twice-a-Week Spokesman-Review, 1 Year The Washington Farmer, 3 Years---Both for $1*

THIS clubbing offer is meeting with a big response. Most of our readers need no introduction to The Twice-a-Week Spokesman-Review. It is an old established semi-weekly newspaper which brings a complete, condensed and thoroughly reliable review of local, state, national and international news every Tuesday and Friday.

HOME OF TWICE-A-WEEK SPOKESMAN-REVIEW.

Above is a picture of the Review Building, Spokane, Wash., built, owned and occupied by the Spokesman-Review. It is the home of a great news gathering organization; the center of world-wide activities in securing reports of important events for Spokesman-Review readers.

The Twice-a-Week Spokesman-Review will keep you in close touch with neighborhood and Northwest news. It will also keep you posted regarding the great war; what is happening to the boys "over there"; what is happening to the boys you know.

The Twice-a-Week Spokesman-Review is sold at a regular established rate of $1 per year. As our readers know, their state farm paper can be secured for three years for 50 cents. Our special clubbing rate of $1 for both publications is therefore seen to be extremely liberal. With everything else going up in cost we are glad to offer you such a material saving on your reading matter.

It is also worth your while to note that clubbing offers of this kind are rare; and with the steady increase in publishing costs bargains of this kind are being generally withdrawn. It is to your interest to act at once.

## ORDER BLANK

Jan. 24.

THE WASHINGTON FARMER, Spokane, Washington.
Gentlemen:

I desire to take advantage of your special clubbing offer. Enclosed is $1 in full payment for one year's subscription to The Twice-a-Week Spokesman-Review and three years' subscription to THE WASHINGTON FARMER.

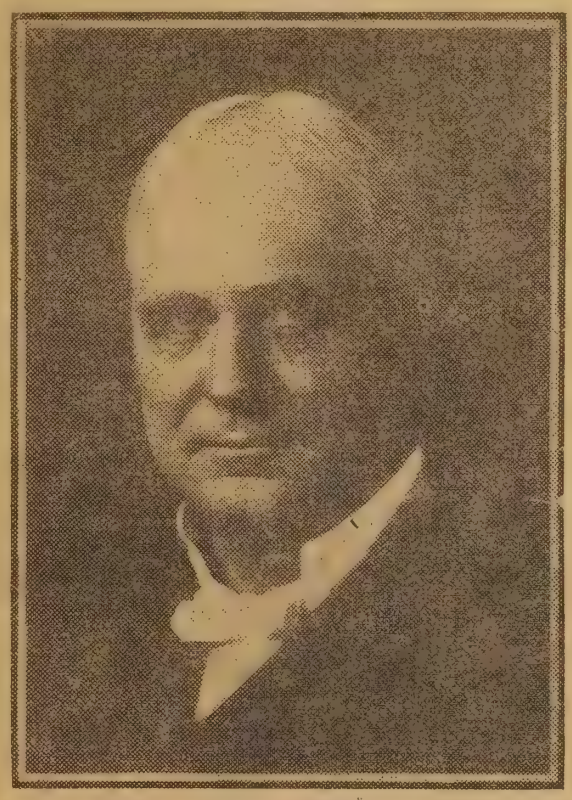
VOL. XLI. NO. 5. JANUARY 31, 1918. ** WEEKLY.

# Crisis Demands Food Production Administrator



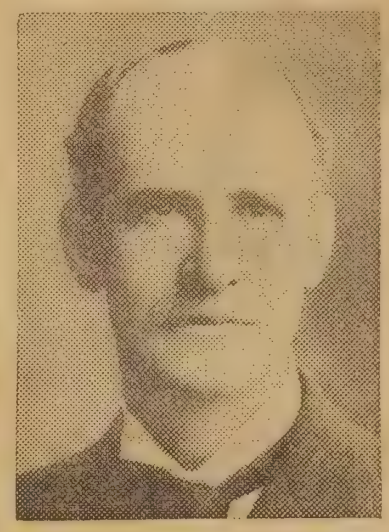
**Senator William E. Borah**

**With reference to the national war-time food production administrator, The Washington Farmer has received the following letter from Senator Borah of Idaho:**

**"I have your letter of the 31st. I think your idea a good one and I shall be glad to cooperate in any way I can."**

**Speaker Champ Clark**

Hon. Champ Clark of Missouri, speaker of the house of representatives, has this to say in his letter to The Washington Farmer:



My dear Mr. Editor:

I have your note with the enclosures. Your general idea is one I have been preaching for a good while. I have tried to persuade the Powers that Be to that effect, apparently, without success.

Your friend,

Champ Clark

**Senator Miles Poindexter**

**In his letter to The Washington Farmer, Senator Poindexter of Washington, says:**

**"Am immediately recommending to the president favorable action upon the suggestions contained in your joint telegram, which I think is highly meritorious."**

## Governor Arthur Capper

**In his letter to The Washington Farmer, Governor Capper of Kansas says:**

**"I am in full accord with the movement and for several months I have been doing everything in my power to arouse our people to the necessity of raising every possible pound of foodstuffs."**

THE FARMER believes that the time is at hand for the immediate appointment of a National War-time Food Production Administrator. This view is now supported by Speaker Clark and other most eminent public men in America.

The Farmer has pushed the campaign for the appointment of such a man. A copy of a telegram to President Wilson placing before him the urgent necessity of a food production administrator has been sent by the Farmer to leading men in many parts of the country.

Many replies endorsing the plan have been received. Some recognized the importance of increased food pro-

Continued on page seven.

## Governor Lynn J. Frazier

**From the letter of Governor Frazier of North Dakota to The Washington Farmer, the following sentence is taken:**

**"Your message sent to the president provides the means which I believe would be a great assistance in the increase of food production for next year."**

# Grow Crops on Summerfallow

## Fertility Is Being Taken From the Soil and Producing Time Is Lost Through Method of Alternate Year Farming.

COLFAX, Whitman County, Wash., Jan. 13.—I consider the most important problem in this locality to be the utilization of summer fallow for crop production together with a realizing sense of the necessity of maintaining the fertility of the soil and a method of cultivation that will minimize the washing away of the soil of the hills in winter time. If there is any crop that can be profitably grown on summer fallow, some legumes for instance, the farmers here should have a demonstration of it. Land is being robbed of its fertility as ruthlessly and systematically as the Germans sacked Belgium. I have seen acres and acres of humus in the form of stubble, burned for no other reason that that it "plowed prettier" without it. This stubble plowed under will aid in softening the soil and save washing of the hills. The most important national problem is the elimination of the middle man. This class of citizen has established himself between the two great wealth producing classes, the agricultural and manufacturing industries and because of the relatively small volume of their individual business and the staggering number engaged in the distribution of commodities together with the overhead expenses and duplication of effort, the agriculturist suffers from low prices and the consumer of his products is mulcted. There are altogether too many people engaged in distribution and too few in production. Some system of distribution must be devised that will operate democratically and cooperatively. These surplus middlemen should be recruited into the army of production which would automatically shorten the hours of necessary labor and lighten the burden of production. Crop prospects for 1918 are rosy. Winter wheat came up nicely following the warm December rains and is now covered with a mantle of six inches of snow. There is an abundance of moisture in the soil. Live stock are in much better condition than usual at this time of the year, the winter being such that feed conditions are easy. Not much interest is shown in courses by the state college at Pullman.

E. C. HUNTON.

### Farmers Must Be Independent.

GIG HARBOR, Pierce County, Wash., Jan. 15.—The most important local problem to be solved in the near future by our farmers here is to learn to be self-sustaining and independent of outside sources of income on their own little ranches. Careful management and strict economy will do this. Very soon now 30,000,000 of fighting men are to be turned loose on a somewhat disorganized world. When that time comes the high prices of farm produce, as well as of labor, will be lowered tremendously. We farmers should be the most independent and self-sustaining of all workers when that time comes. As to the national and worldwide problems which now confront us I feel sure that the most important and all-absorbing one is to coordinate with each other, with our local, state and national governments in the schedules of action laid down for us to follow, that we may thereby hasten the closing of the great conflict which now disorganizes the world. This calls for unselfish, unswerving loyalty to the principles of liberty and justice through which the nations of the earth, both large and small, are to be reestablished on a peaceful and enduring basis. Safety, prosperity and happiness may then be possible for us all.

W. D. BOYNTON.

### Apples and Hay Wasted.

MALAGA, Chelan County, Wash., Jan. 3.—The price of pork has gone down to the normal price again. The price regulation has not been in effect here long enough to tell yet just what good it will do the farmer. But I think public opinion is in favor of price regulation on things bought by the farmer as well as things sold by him. Some of the farmers here are feeding straw and alfalfa together to young stock and they say it keeps the stock in good shape. They baled straw and sold it for $18 per ton and some was too fine to bale, so that is being fed to young stock. A farmer here can make a good profit on alfalfa hay if he can sell it at $20 per ton on the place and wheat hay at $25 per ton. Nearly all the farmers' sons have gone away to the army or navy and the effect will be seen in the spring on the farms for lack of help. Lots of apples and hay went to waste in this community for lack of farm help this year.

MRS. O. ALLENBAUGH.

### Should Extend Regulation.

BOSSBURG, Stevens County, Wash., June 14.—Partial price regulation by our government has proven very satisfactory to all classes in this part of the country, and we believe in government regulation of prices for all our nonperishable products, as that would give the producer a chance to figure on the cost of production, what could be made from a certain crop and on meat animals raised on the farm. We believe the government should fix a price on cotton and wool and their products. But we are no agitators, and we are willing to let our government regulate all these matters as they come to them. We have had a very mild and warm winter here so far, and stock of all kinds are doing fine. Some farmers have fed but little hay so far, and feed is holding out well. Prices have not advanced since early in the winter. There was less hay for sale here this year than for many years, for two reasons: one on account of more cattle than usual in the country, and on account of the dry summer. Hay has sold for $25 to $30 per ton, baled, f. o. b., and that gives the farmers a large profit even at the high cost of labor on the farms. We believe the farmer can make a good profit on hay at $20 per ton, and when the cattle and sheep men have to pay $20 for hay there is not much profit in feeding their stock. If the feeding is not done in the most scientific manner there will be no profit to the stockman. Our farmers are having better success with the silo for the preparation of feed than any other way, where they can grow corn or barley, and one of the farmers said that he has tried artichoke tops in the silo and finds that the stock like it. We had a small patch last year for hog feed and the tops of the artichokes were very large. They were in a field where the horses got at them and they ate them to the ground. If a farmer has no silo he should cut his hay with straw and mix with bran and shorts which makes a good feed for cattle, and is found much cheaper than feeding the hay loose and letting the stock run to the strawstacks. Labor on the farms is going to be pretty scarce this year, as there is more work in the timber than for several years, and the mines and smelters are taking all the men they can get. Many of our young men have gone into the army and navy and will be missed this year, as most all our farmers were planning on larger acreage this year than usual. No one is complaining of conditions, and say they will do the best they can. We are going to try organizing into groups and exchange work in order to plant and harvest our crops with as little expense as possible and save everything. Every one must pull together to feed our nation and allies and win the war.

W. W. PALMER.

### Feed Problem Is Solved.

RITZVILLE, Adams County, Wash., Jan. 17.—The most important problem of local interest is the labor question and it is a hard one to solve. The most important national problem will present itself after the war and it will be harder still to solve. The duty of any community will be to preach economy and nothing but economy and plenty of industry, and we will heal the wounds which are made by this terrible catastrophe which has befallen this world. The winter, so far, has been excellent and nobody need fear a hard spell, as all indications speak for a fine winter. Stock of all descriptions are looking very fine and the feed problem, as a whole, is solved. We are hoping for an early spring, which always is a main factor in growing good crops. Our community is very sparsely inhabited and have not attended any demonstration week offered by the state college or university. JACOB HARDER.

### Multiplicity of Movements.

COLVILLE, Stevens County, Wash., Jan. 23.—It is difficult to state a single and definite local problem of particular interest to farmers which might be said to stand out above all others as the most important. Judging from discussions recently listened to by the writer and conversations with farmers at organization meetings, there is evidence that war topics are increasing in interest, and the relation of the farming class to the conduct of the war is taking first place over any merely local problems. There is an evident desire to do the full part in the matter of production, and at the same time there is a feeling of uncertainty and lack of guidance on the part of those undertaking to direct these campaigns for the government. The multiplicity of movements of a public and official character, the stream of literature issued in support of these, the succession of calls for service, especially on those holding local positions of various kinds, is beginning to bewilder the average citizen. The tours of workers, many of them making special appeals to the farmers, but all acting independently and each endeavoring to monopolize the public eye, appear to be losing force. This can not be said to be due to any lessening of interest in the great cause on the part of farmers or others, but rather to the fact that people are unaccustomed to being directed by propaganda methods. Coupled to this is the frequent weak presentation of some of these moral suasion movements by the persons representing them, who are often lacking in experience or training for such important work and leave an unfortunate impression behind them. Cooperation and enthusiasm in support of the government's plan will always be readily forthcoming if the right sort of missionaries are sent out to make the pil-

# Best Sack Offer Is Twenty-five Cents

## *Big Conference of Grain Growers at Spokane Faces Vital Problems; Bulk Handling Looms*

"Said sacks to be 25 cents f. o. b. distributing point."

These are substantially the concluding words of the only offer made to the grain growers' convention at Spokane last week by any sack company to supply sacks to the growers this season. The Bemis Bag company offered to contract 1,000,000 bags at this figure for July delivery, subject to a number of conditions.

When this offer was presented in a letter the convention broke into an uproar of laughter, but Chairman R. Insinger rapped for order and declared that it was no laughing matter. "This company is serious; this offer is made in good faith; there are abnormal conditions surrounding the sack question this year," he said.

While the condition existing this year reflected itself in a strong sentiment favoring bulk handling of grain the consensus of opinion in the convention was that a large part of the 1918 crop would have to be handled in sacks regardless of the price.

**Charles L. McKenzie, banker and farmer, of Colfax, one of the delegates to the grain conference at Spokane, where he made a strong appeal for loyalty to the interests of the country during its present crisis.**

Lack of shipping facilities and correspondingly high freight rates on bags and bag material from Calcutta are cited as the reasons for the excessive price on bags. M. H. Houser, northwestern representative of the grain corporation of the food administration told the convention that the administration was working out as best it could means of alleviating the condition, and would do its best to secure sacks for the growers of grain at as nearly a reasonable price as possible. The convention adopted a resolution by R. C. McCroskey calling upon the government to take immediate action in the matter. A delegation may be sent to Washington to push the appeal with officials.

---

The grain conference was originated by the Spokane Chamber of Commerce three years ago, when the agricultural committee of that body saw the growing need of more handling in bulk. A meeting was called at that time, a considerable number of farmers attending. Last year a larger number attended, and this year the assemblage was so large that one of the most spacious churches in Spokane had to be borrowed for the meetings, the assembly room of the chamber of commerce being inadequate.

Not only did it outgrow its quarters, but it outgrew its original scope. Then but a conference to discuss bulk grain possibilities, it this year broadened out to a discussion of agriculture in general, though the method of handling wheat remained the central theme. This was natural, for the people of the United States—even this far northwestern corner—are gradually beginning to realize the stupendous seriousness of the present day, the world condition that demands the utmost of every man and woman in every occupation. Wheat handling, wheat prices, saving wheat wastes, live stock feeding, food conservation, the war and a score of other topics, all centering about the great world crisis, were discussed during the two days of the conference.

The convention organized by the selection of a large general executive committee, representing the various counties as follows:

**Washington.**

Lincoln county—Almer McCurtain, Davenport; Edgar Williams, Mohler.
Adams county—J. F. Lauer, Odessa; Frank Hurst, Washtucna.
Walla Walla county—N. B. Atkinson, Waitsburg; B. F. Brewer, Walla Walla.
Okanogan county—Marion Warren, Chesaw.
Grant county—Frank Hinkhouse, Ruff; H. W. Carolus, Hartline.
Garfield county—J. L. Horrell, Mayview; James Oliver, Pomeroy.
Columbia county—E. L. Van Patten, Dayton; William Woodward, Dayton.
Franklin county—G. C. Foster, Eltopia; William Gibson, Snake.
Douglas county—Bernard Burke, Mansfield; Harry Clark, Waterville.
Kittitas county—Claude Catlin, Ellensburg; Ralph Lynch, Ellensburg.
Benton county—C. O. Williams, Kennewick; W. C. Travis, Kiona.
Whitman county—A. C. Whisler, Garfield; R. J. Neergaard, Oakesdale.
Spokane county—J. P. Hill, Spokane; W. J. Sutton, Cheney.

**Idaho.**

Idaho county—Riley Rice, Cottonwood.
Lewis county—C. W. Booth, Nez Perce.
Kootenai county—E. Korsboren, Worley.
Nez Perce county—John Thain, Melrose.
Clearwater county—Joseph Michaels, Orofino.

**Montana.**

Flathead county—W. M. McCutcheon, Kalispell.

A sub-committee of this committee was later selected for the purpose of conducting the affairs of the conference until the next meeting is called. This subcommittee follows:

Almer McCurtain, Davenport; B. F. Brewer, Walla Walla; Edgar Williams, Mohler; A. C. Whisler, Garfield, and C. W. Booth Nez Perce, Idaho.

The following is the wording of the resolution as introduced by Senator R. C. McCroskey of Oakesdale and incorporated into the report of the executive committee and adopted as part of that report:

"Whereas, there will unquestionably be a shortage of grain bags and bulking facilities for taking care of the wheat crop for this year in the three northwest states which have in the past been handling their grain in bags, and

"Whereas, the price of grain bags has risen to 25 cents each—the average price for the last five years, including three years of war, having been 8 cents each, and

"Whereas, we are confident that this high price is not warranted by any existing conditions, and

"Whereas, it will be impossible for the farmers who have been handling their grain in bags to prepare for bulk handling, owing to the limited time at their disposal, and

"Whereas, the cost of material and labor for constructing elevators, bins and tanks has materially increased, and

"Whereas, the loss of grain in consequence of the shortage of facilities for handling it will materially reduce the amount we will be able to furnish the allied armies of Europe, now, therefore,

"Be it resolved, that we, the farmers of Washington, Oregon and Idaho in convention assembled, do most earnestly, but courteously, ask the congressmen from these states, and the food administrations of the government of the United States and those of Great Britain and France to put on foot such measures as will result in furnishing the farmers of the northwest such number of bags at a reasonable price as will enable them to take care, without loss, of the crop of 1918."

The following is the report of the executive committee, which, after the incorporation of the McCroskey resolution, was adopted:

"A discussion was had relative to the question of the price on sacks and possible assistance from the government in the matter of furnishing sacks or fixing the price thereof.

"Your committee gave consideration to the question of the number of sacks necessary to care for that portion of the 1918 crop that could not be handled in bulk and from reports from counties represented it was believed that 10,000,000 sacks will be necessary to care for that portion of the 1918 crop which can not be handled in bulk. There being no information of a definite character presented to your committee as to the matter of sacks available for this crop your committee could make no finding as to a possible shortage of sacks at this time.

"Your committee was of the opinion that the major portion of the sacks sold to farmers up to the present time have been carried over from last year's stock, from which stock they were furnished sacks last year at 14 cents, and that the price placed thereon now at 25 cents carries an excessive profit. We, therefore, request your convention to authorize us to make such representations to our senators and congressmen asking them to take up with the administration at Washington at the earliest date possible the question of cooperating in the matter of securing sacks at a lesser price. That they suggest that American shipping now available at or near Calcutta be chartered for bringing sacks to Portland or Seattle for the purpose of bringing the price of sacks to a reasonable figure.

"On motion duly carried Charles Hebberd, food administrator for Washington, was requested to join in such representations as may be made to the department at Washington and to the food administrator and to join in a telegram to Mr. Hoover, and that the findings of this committee of five be presented to Mr. Houser of Portland, representative of the United States grain corporation.

"On motion duly carried your convention was asked to request the assistance of the federal government in furthering the handling of grain by the bulk method."

Two big problems were confronted

(Continued on the following page.)

**Almer McCurtain of Davenport, chairman of the executive committee of the grain growers' conference. Mr. McCurtain was chairman during the last year, also. He is an ardent advocate of bulk grain handling.**

## WILL HELP NORTHWEST.
### Letter Received From Poindexter

A letter was read to the grain convention from Senator Miles Poindexter, who said that he would do all in his power to have the food administration establish a "primary interior market" for 1918 wheat in the northwest, so that the growers would receive the same price as the growers tributary to Chicago. He said that all the northwestern senators were in favor of such market, and would work for it in congress and before the food administration.

## MUST GO AFTER IT.
### Delegation Can Bring Results.

Chairman Insinger told the grain convention at Spokane that it was not enough to present conditions to the government at Washington in the form of resolutions or memorials, but that such resolutions or memorials should be followed up by a delegation to present the case in person.

He was referring to the two-fold question of securing sacks for this year's grain crop and of securing a "primary interior market" for the northwest so northwestern farmers could get $2 for their wheat the same as middle western farmers.

Mr. Insinger, who was a member of the delegation that went to Washington last summer when the food administration ruled that this section must pay 30 cents freight on its grain before it could get its $2.20 a bushel for its 1917 crop, said that the work of that delegation saved the farmers of the northwest more than $2,000,000. The farmers got several cents a bushel more for their grain than they would have, he thinks, if appeal had merely been made by mail or telegraph.

# How to Feed Hogs and Get Profit

## *Break Even on Wheat; Vary the Feed, Use Pasture, and Profit Comes*

By B. E. SMEAD, Representative of U. S. Government in Pig Club Work.

A minimum price of $14.50 a hundred pounds for hogs at northwest centers, as provided in the recent agreement between the food administration and the packers of the west at a San Francisco meeting, will allow a feeder a fair profit.

Let's presume that we start with a good March pig. With careful feeding with grain costing 3 cents a pound from weaning time to maturity we can just about break even at 14 1-2 cents a pound. Supplementing with kitchen waste, roots or milk would mean a small profit.

If red shorts can be had, the price of which is now $34 to $38 a ton, the feeding cost can be cut in half.

If alfalfa pasture is available the cost can again be materially reduced.

If hog-fenced stubble is to be had in the fall, $7.50 or more can be added to the profit side of the ledger, for each pig.

These figures are not guesswork, nor taken from experiments with freak hogs, under unnatural conditions, nor are they the dream of some enthusiastic scientist.

**Experiments Are Made.**

Some experiments conducted at the Washington State college experimental farm in December with thrifty but ordinary hogs, under conditions such as are found on the average farm, gave results as follows:

Small pigs averaging 30 pounds made a pound gain with 4 pounds of grain and tankage, costing approximately 12 cents per pound gain.

Shoats weighing about 110 pounds, fed barley alone, made a pound gain on 4.73 pounds of grain. Figuring barley at $60 a ton the cost per pound gain would be 14.19 cents.

A similar group of shoats fed red shorts alone made one pound gain for each 3.72 pounds of shorts, which, figured at $40 per ton, would give the cost, per pound of gain, of 7.54 cents.

These figures check approximately with experiments made at different times at experiment stations in various states of the Union. There is no reason why any farmer, if he cared to take the time, could not do as well, or better.

**An Acre of Alfalfa.**

Returning to the question of the additional profit to a farmer with an acre of good alfalfa available for pasture, he could verify, if he cared to take the time, the following figures for a group of pigs averaging 18.7 pounds the first of May:

| Month | Average Daily Gain, lbs. | Daily Ration Grain, lbs. | Meat Meal Lbs. | Cost Daily Ration in Cents | Value of Gain in Cents at 16c per lb. |
|---|---|---|---|---|---|
| May | .33 | .79 | .05 | 2.52 | 5 |
| June | .40 | 1.19 | .073 | 3.79 | 6 |
| July | .98 | 1.84 | .116 | 5.87 | 15 |
| August | 1.66 | 4.11 | .251 | 13.08 | 25 |
| September | 1.53 | 6.33 | .385 | 20.14 | 23 |
| October | 1.38 | 6.34 | .385 | 20.14 | 20 |

From this table it can readily be seen what a very nice additional profit could be secured if the hogs ran on stubble September and October.

**Should Study the Question.**

From the foregoing it can be seen that during these war times each farmer should take it upon himself, as a patriotic duty, to study this question of economical feeding of swine, so as to make the smallest amount of grain produce the largest amount of pork.

The table above also shows what a large saving of grain can be effected by the use of alfalfa pasture.

It might be well to mention that alfalfa pasture alone will not produce most economical pork.

The boys' and girls' pig club members of various counties of the state will demonstrate this year 1918 that, with proper feeding methods, a price of $14.50 or better will leave them a satisfactory profit, after deducting all charges for feed and labor.

Why should not hundreds of farmers in the state secure at least one brood sow, that will farrow this spring, make a fair profit and aid his country by increasing swine production?

Arrangements have been made whereby piggy sows arriving at Spokane this spring will be held and placed with farmers who can handle them.

The Exchange National bank of Spokane has agreed to finance farmers who wish to take one or more of these sows.

(Details of the plan can be had by writing to R. E. Smead, state pig club leader, Pullman, Wash. Those who desire to take advantage of the plan, thereby aiding in food production and also adding to the farm income, would do well to write to him early so as to facilitate the work.—Editor.)

# Makes It Easy to Save and Earn

## *The Farmer Becomes War Stamp Agent*

As announced in last week's issue, this paper has been appointed agent of the United States government for the sale of thrift and war savings stamps. With a view of making it easy for its readers to make investments in these "little baby bonds," the Farmer made arrangements with the U. S. treasury department whereby it can offer $50,000 worth of the stamps, and a special department has been created to care for the work which the agency entails.

Last week's issue contained a lengthy and detailed statement of the plan, explaining also in detail the nature and purpose of the two kinds of war stamps offered for sale by the government. Here is a summary of that explanation:

**The Purpose**—The government needs money to finance the many phases of the war, and is selling these stamps with a view, first, of raising part of the needed money, and second, of giving the people of the country an incentive to thrift, saving and safe investment.

**The Stamps**—There are two kinds of stamps: (1) The Thrift Stamp, which sells for 25 cents and bears no interest until five dollars worth have been bought and transferred for a five dollar war savings stamp. (2) The War Saving Stamp, which sells for $4.13 cents during the month of February and an additional cent for every month thereafter, and which bears interest at the rate of 4 per cent compounded every three months. This makes the War Saving Stamp which is bought during this month (February) for $4.13 worth $5 in five years, when it matures.

**Money Back Any Time**—Here is a specially fine thing about the war stamps: If you need your money you can take your savings stamp to the postoffice and cash it almost the same as you would a money order. The postoffice may require you to wait 10 days, but no longer than that. The 25-cent thrift stamp can not be cashed this way, but you can buy enough thrift stamps to make one $5 war savings stamp and then cash that, and you have your money.

**As Safe as Gold**—You can't lose by investing in thrift and war savings stamps unless you lose the stamp, and you are just as likely to lose your silver or gold as to lose your stamp. Each stamp is in reality a government bond, with the whole resources of the United States back of it. Furthermore, you can take your war savings stamps to the postoffice and have them registered. Then you can collect your money even though you should lose the stamp.

**How to Order**—You can buy any number of stamps up to $100 of the Farmer at one time. No one person is allowed by the government to own more than $1000 worth of them. If you want to buy stamps, use the coupon printed on this page. Send 25 cents for every Thrift Stamp wanted. Send $4.13 for every War Savings Stamp wanted if your order is sent so as to reach the Farmer's office during February. Add one cent if it is to reach the Farmer in March. If you have already bought stamps of either kind, be sure to say in your order that you have the war savings certificate or the thrift card, as the case may be, so we will not send you one that you do not need.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Gentlemen: I wish to invest in ..... U. S. government thrift stamps at 25 cents each.

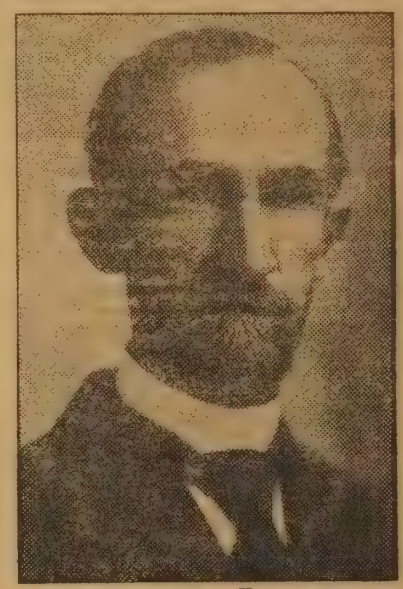
## Grange Opposes Shields Bill.

The Pomona grange of Yakima county has gone on record vigorously against the Shields water power bill. The organization has urged upon congress the advisability of enacting legislation as contemplated in the Kelly bill, which vests the control of water in the national administration.

**Many County Agents.**

Thirty-two of the 39 counties of the state now have county agricultural agents.

# Best Sack Offer



## Is Twenty-Five Cents Apiece

(Continued from the preceding page.)

by the convention: (1) That of the 1918 grain price, and (2) that of how to handle the crop, bulk or sacks. While numerous matters only indirectly connected with either problem was treated, the matter of how to handle this season's crop received the greater share of the consideration.

The following is a digest of some of the addresses and discussions most vitally affecting the conference.

**G. B. Hegardt of the public docks commission of Portland**—Mr. Hegardt said bulk handling of a large part of the crop was an "absolute necessity." He told of the building at Portland of the first unit of the elevator for which the people of that city voted $3,000,000 in bonds last summer. This unit has a million bushel capacity, and has 79 bins for the storage and handling of different kinds and grades of grain. There is railroad trackage for the handling of 80 loaded cars at one time. The elevator site comprises 158 acres. Mr. Hegardt said that there was storage at terminals in the northwest for 6,000,000 bushels of bulk wheat, or about one-ninth of the normal crop. This includes mill storage. He said

**R. C. McCroskey of Oakesdale, one of the most widely known men of the state. Though more than three score and ten years old, he is active and alert on all problems affecting the agricultural industry. He was one of the prominent figures at the grain convention last week.**

the interior storage facilities could handle some 4,500,000 bushels, or about one-twelfth of the normal crop. He estimated that it would be necessary this year, regardless of the price of sacks, for four-fifths of the grain crop to be handled in some other manner than in bulk because of lack of storage and handling facilities and inability to equip adequately in the short time yet remaining. He said that the Portland elevator would be able to handle three to five times its single capacity, or three to five million bushels, during the season, depending upon the normal or abnormal movement of grain during the season.

**B. F. Stone of the port of Astoria**—Mr. Stone covered in general the same matter as did Mr. Hegardt, covering also the facilities at Astoria. That terminal has bulk storage facilities for about 1,000,000 bushels in bulk. He estimated that the total bulk storage capacity in the three states was something over 13,000,000 bushels, which corresponded closely with Mr. Hegardt's figures.

**M. H. Houser, federal grain corporation representative**—Mr. Houser's addrsess before the convention is covered under a separate heading in this issue.

**Orris Dorman, farmer**—Mr. Dorman's subject was the advisability of handling in bulk. He said that the Bemis Bag company's offer of sacks at 25 cents each proved bulk handling to be advisable, and that he, therefore, had little to say. He declared that his experience had convinced him that farmers were unduly wary of bulk handling; that it was really a simple proposition. He said that where he had to haul his grain four miles it cost him one-half cent per bushel per mile to deliver in

(Continued on the following page.)

# Great Task of Food Production

## *Present Conditions Must Be Radically Changed if Country Is to Harvest Increased Crops*

We find ourselves in hearty general accord with the policies set forth in a powerful memorial by farming interests urging President Wilson to speed up governmental machinery in aid of production so as to relieve the anxiety of farmers as to labor supply, credit facilities and seed shortage in some sections.

This memorial was laid before the president last week and comes from the federated board of farm organizations, which is said to represent more than 2,000,000 organized farmers.

The board asked for a reply February 6, when representatives of the seven national farm organizations comprising the board, together with a number of state masters of the grange and heads of the Society of Equity and other bodies, will seek an audience with the president.

The fear has been growing in many thoughtful minds that present conditions must be radically changed if the country is to harvest increased crops this year. The Farmer is convinced that satisfactory progress requires the speedy appointment of a national food production administrator — the ablest man that can be found in the nation, who will key up action and inspire enthusiasm in the great task of food production as Hoover has fired the country's imagination with regard to food conservation.

While some of our readers may think the memorial given herewith draws too gloomy a picture, and exaggerates agricultural distress in some regions, it may be that a little exaggeration will do no harm. We have felt for some time that the agricultural department at Washington is taking too easy-going a view of the problem.

The declaration in the memorial that representative farmers are practically barred from "any position of authority in the food administration, the advisory council of national defense, or any of the other special boards charged with the conduct of the war" is unpleasantly near the truth.

While the secretary of agriculture is a member of the council of national defense and is working in close cooperation with agricultural colleges, there is a notable absence of men who are distinctively farmers. Many millers and grain buyers are represented, and some of them undoubtedly have farm interests, as also have some of the college presidents and professors connected with the national food administration.

Charles J. Barrett, national president of the Farmers' union, and L. J. Tabor, master of the Ohio state grange, were members of Dr. Garfield's committee that fixed wheat prices, but that service is over, and they seem to have no active connection now with the food administration.

It is earnestly hoped that these facts will be given thoughtful consideration by President Wilson. Agriculture plays too tremendously an important role in this stupendous war to be denied full representation in the government.

## Farming Interests Lay Powerful Memorial Before President Wilson

The memorial laid before President Wilson by the Federated Board of Farm Organizations says:

1. If food is to win the war, as we are assured on every side, the farmers of America must produce more food in 1918 than they did in 1917. But unless present conditions are radically changed increased crops next year are impossible. Under existing conditions we can not equal the production of 1917, much less surpass it, and this for reasons over which the farmers have no control.

**Causes of Smaller Crop.**

2. The chief causes which will inevitably bring about a smaller crop next year, unless promptly removed by national action, are six in number:

3. The shortage of farm labor; the shortage of seed; prices often below the cost of production; lack of reasonable credit; exclusion of the farmer from his right and necessary share in the conduct of the war; and deep-seated doubt whether he can raise the increased crops demanded of him and still support his family and pay his debts.

4. Many thousands of acres were left unharvested last fall because the necessary hands had left the farms. Already great numbers of farms near excellent markets lie idle for lack of a living return. Millions of acres will be wholly or partly idle next summer because the money to buy seed and subsistence will be lacking. Many of the farmers thus affected are tenants whom misfortune will compel to abandon the farm.

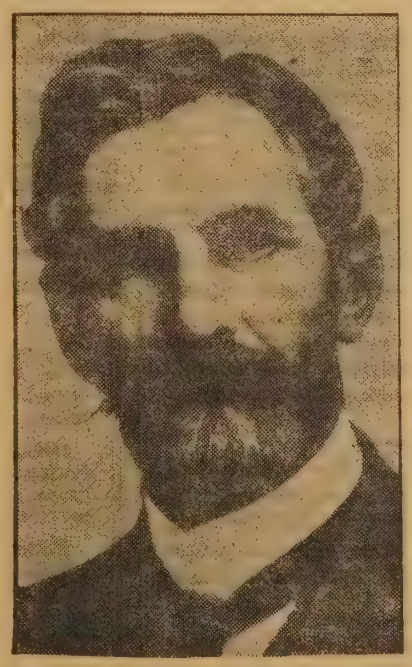
**No Farmers in Authority.**

5. So far as we have learned there is not a single genuine farmer, representative of the organized farmers of America, in any position of authority in the food administration, the advisory council of national defense or any of the other special boards charged with the conduct of the war.

6. Comparing their own small earnings with the huge war profits they see on every hand, the farmers have lost confidence that the government understands the needs and difficulties of the farmer. Unless that confidence can be restored it is useless to hope that we can maintain the food production of last year and meaningless to talk of increasing it.

# Best Sack Offer Is Twenty-five Cents

(Continued from the preceding page.)



bulk. He considered it better to haul direct from the machine to the warehouse at the station if the haul were short, but better to store on the farm if the haul were long. He said that farm storage bins should be built out of lumber that could later me used for something else if another system of handling or storing were decided upon. He said most farmers could build their own storage bins and tanks. He said he had bulked economically two crops in Montana when sacks cost only seven or eight cents, and that there was no argument for use of sacks when they cost 20 cents or more.

**Charles Hebberd, national food administrator for Washington**—Mr. Hebberd said the four great war industries, each of which "must be built up to the same acme of perfection," are munitions manufacture, shipbuilding, airplane making and food production. He said that there could be found no hope that the war would end in less than two years. He said that this country had saved between 25,000,000 and 50,000,000 bushels through food conservation, but that this was far inadequate to make up for the shortage in Europe. The allies normally import 380,000,000 bushels of wheat; last year their production was decreased because of the war some 200,000,000 bushels, thus necessitating the importation of 580,000,000 bushels to secure a normal supply of food. This importation was impossible, an actual shortage of more than 350,000,000 bushels being experienced. He urged maximum production this year, both of wheat and meat animals.

**M. W. Harris, Minneapolis, Minn.**—Mr. Harris told of the necessity of keeping cleanings on the farm. He declared that cleanings had an actual medical value for feeding hogs, relating his experience of one year when all his neighbors had hog diseases and he had none, due, he believed, to the feeding of cleanings with all manner of weed seeds and the like. He showed the great loss to the farmers in feed, sacks and freight when the cleaning was made at the terminals. He also urged using summer fallow for a crop of peas, either for feed or for a market crop.

**E. E. Flood, banker and farmer, Spokane**—Mr. Flood said the hog industry was at the lowest ebb he ever saw it; urged the conservation of breeding stock and congratulated the Inland Empire on the coming to Spokane of Armour & Co., which, he said, "brought the markets of the world to our own door."

**C. L. MacKENZIE, banker and farmer, Colfax**—Mr. MacKenzie urged that they should produce their maximum because 200,000,000 people in Europe were living on a half ration of bread now because of the withdrawal of so many men from productive to destructive industry in the war. He denounced the habit of rushing to the government with all our troubles, declaring that the United States officials were "burdened now as men never before were burdened." He designated the I. W. W. as the "most dastardly organization on earth," and recommended stringent measures to suppress its members. He urged farmers not to rush into new organizations at the present time, but to concentrate all their efforts on production along tried and true lines. He said he had recently contracted for a large number of sacks for this year's crop at 21½ cents, but that he still favored the use of sacks at even that high price.

**R. Insinger, chairman of the agricultural committee of the Spokane Chamber of Commerce, one of the active workers in behalf of the grain growers' convention. Mr. Insinger was chairman of most of the meetings of the recent convention.**

**ERNEST LISTER, governor of Washington**—"I certainly am surprised to see such a large attendance at this convention," said Governor Lister, echoing the statement of Senator R. C. McCroskey of Oakesdale, who said that it was the greatest convention of the kind he had ever known in Washington. The governor delivered a patriotic appeal to the farmers to leave no effort unexpended toward aiding in the conquering of German militarism. "I would 10,000 times rather live under the government of the United States, with all its faults, than if its control were in the hands of German autocracy," he declared.

He said that very soon agriculture was going to take first place among the industries of the state and that he would be proud of the day when that became true.

**COL. CLARENCE OUSLEY, assistant secretary U. S. department of agriculture**—The most patriotic address of the convention was that by Colonel Ousley. He pleaded with the farmers to put in the greatest acreage possible, and promised them that the government would not allow crops to go to waste because of lack of harvest labor.

Here are a few pointed statements from his address:

"The utmost we can do will not be sufficient at the present rate of living."

"Let no man deceive you with the statement that we are fighting the battles of England and France. England and France have been and are fighting our battles."

"Fifty million people have been taken from productive industry and placed in destructive industry."

"It has been said that we must farm without regard to profits. If we must farm without regard to profits let me tell you that bankers and merchants and other business men must likewise operate without regard to profits."

"If we allow England or France to lose courage the same thing that happened to Russia will happen to them."

"Eat the crust and say, 'That's for poor, suffering Belgium, who fought my fight.'"

"The man who stops to quibble about profits is gambling in the blood of America's sons."

**M. K. SNYDER, Engineering Department, State College, Pullman**—"If there's a man in this room that can't lay out a square crib, he has my sincere sympathy," said Professor Snyder in urging the farmers to build simple storage bins and do the work themselves. He favored the building of more or less temporary structures about the fields when they were necessary until the farmers of the northwest become more familiar with bulk handling and determine the kind of permanent structures best adapted to their conditions.

The following is a bill of materials which he figures are required for the construction of a crib elevator 14 feet by 28 feet by 16 feet high, with a single partition in the center:

Lumber: Sidewalls, 12,544 feet (board measure); floor (2x6), 868 feet; joists, 1386 feet ;sills, 934 feet; posts (eight feet high), 1494 feet; braces, 992 feet; rafters, 288 feet; roof board, 540 feet; floor (No. 3 flooring), 460 feet; elevator, 350 feet, making a total of 19,856 board feet of lumber.

Miscellaneous materials: Concrete for piers and wagon dump, 14 cubic yards; shingles, 4000; nails, 430 pounds; chain for elevator, 74 feet; buckets for elevator, 74.

Professor Snyder figures that four men can build this elevator in 10 days.

**DR. E. O. HOLLAND, president state college of Washington**—Dr. Holland announced that the state college was working on a comprehensive food production program that would be ready for publication at an early date, when it was hoped that the effort of this state could be coordinated and made more efficient than at present. He pleaded for the greatest production possible and the utmost loyalty in every way toward the winning of the war.

"What does Germany say about us?" he asked. "She says that we love money; we love ease: we won't fight any battle that England and France will fight for us; we can't apply science to our operations. But our reply will be the application of greater science to our problems than Germany ever knew."

He predicted that this country would yet have time to play a great part in the war, indicating the gravity of his vision in the question, "What will be our compnsation for a million and a half dead men in Europe?"

## Make Safe Investments

All over this land there are offices where all manner of stocks are on sale, and where all manner of smooth inducement is made to the possible purchaser. Some of these stocks are good investments. Thousands of them are not. It is undoubtedly true that nine out of ten of the investments made in these offices whose windows are gaudy with pictures of oil wells, big red caluculations of millions made from small investment, colored charts showing exactly where a bonanza mine is located and so on are bad investments—just so much money gone to jingle in a promoter's pocket. The ordinary investor has difficulty in selecting the one out of the ten "buys" that is safe and sound.

But all over this land there are offices today where certain securities are on sale that are both safe and sound. Uncle Sam, with all his resources and all the resources of his family of 100,000,000 loyal Americans is behind these securities. They are sometimes called "baby bonds," but more commonly called thrift stamps and war savings stamps. They are the finest thing ever invented for the man or woman or boy or girl who wishes to save a little and invest a little—anything from 25 cents to $1000. No bank in the world is a safer place to put money. It is as easy to buy these stamps as it is to put money in the bank, and it is almost as easy to get one's money back as if it were on deposit. And furthermore, they bear interest, a good rate of interest, 4 per cent compounded every three months. No person will make a mistake if he buys a thrift stamp or a war savings stamp or a hundred of each. It is the finest little investment in the world, and it will help this country win the war.

## Is More Power Needed?

A conviction is growing in many authoritative minds that the food control law should be amended to give the national food administration power to fix prices on all foodstuffs and to put the people on rations where necessary.

At a recent conference in Washington between Mr. Hoover and state food administrators from all parts of the Union this view was urged by several as an essential attribute of the United States food administration if it is to cope successfully with the problems to be met the coming year.

This recommendation, although not supported by all of those in attendance at the two-day conference of state administrators, was easily the most important feature. The testimony of Mr. Hoover before the senate committee on manufactures recently indicates that it is in line with his views on the subject. He claimed then that so far as his efforts had failed, this had been due to the curb on his power provided in the food control act rather than to his usurping powers not given him by the law. He maintained further that mere fixing of prices would prove ineffective, but that, supported by control of distribution or of the commodity concerned, such action would bring far-reaching and beneficial results.

Special emphasis was placed on the fact that in Great Britain the food controller has the power to fix prices and to inaugurate a rationing system. In the United States, even though the necessity for exercising such power might not arise, the food administration would be able to handle the situation much more effectively if supported by it, both in enforcing conservation measures and in action designed to control distribution and prices.

## The War Everybody's Business

The war is everybody's business. The war is too big a job for any one set of people. The war department, the navy department, the agricultural department—all the organized forces of the government can not of themselves carry on this war successfully without the loyal cooperation of our biggest financiers and captains of industry. These ablest financiers and captains of industry are again entirely dependent upon the loyal cooperation of the girl knitters, the boy scouts, the thrift stamp buyers and the Y. M. C. A. contributors. Army surgeons are complemented by a host of medical men from civil life. Every industry and every profession and every home becomes for the time being an integral part of the war forces. The great department of agriculture, with its staff of tens of thousands, reaching through the state colleges and extension department almost to every hamlet of the nation, receives the cooperation of the people in general through the food conservation department headed by Herbert Hoover.

In normal days food conservation may be as important as food production. In war days food conservation is no less important, but food production is more important. There must be adequate supplies of food to be saved for the allies and for our own fighting boys. As Governor Graham of Vermont says in his telegram to President Wilson: "We have a national food conservation administrator. I feel very strongly that we should also have a national food production administrator of equal ability."

Every back yard's garden, every suburban poultry house, every dairyman and stockman, every grain raiser and crop producer throughout the length and breadth of the United States needs the stimulus of public opinion which alone can be given by the ablest available man in the country as National War-Time Food Production Administrator.

It was from the viewpoint of this "far-reaching cooperation with the agricultural department, agricultural colleges and farmers in all sections of the country in meeting their war-time food production difficulties" that the telegram reprinted elsewhere was sent to President Wilson.

---

It is hard for the average human mind to conceive the utter fiendishness of a man or class of men who will deliberately destroy foodstuffs and other property when millions of men and women and children are starving for lack of nourishment.

---

While there is not a doubt but that the federal government can help relieve rail congestion by operating our railways under one head and not from a competitive standpoint, every shipper can help very greatly by cooperating. One way is to unload cars speedily, and load them as rapidly as possible. Do not delay in dealing with the railways. There is a crisis in the affairs of the nation and it behooves every patriot to do his share.

---

It is not too late nor is it too early to speak of the seed problem. This is the time to conserve seed. Without question there will be a shortage of many seeds needed, and those who are forwarned are forearmed.

Those who have enough seed will do well to safeguard it carefully. Those who have not should look around for available supplies.

---

One of the valuable adjuncts to the farm at any time is the silo. Right now it has been classed as a part of the war equipment. Why? It makes use of material which otherwise would be largely wasted; it increases the live stock capacity of the farm and thereby increases the supply of fertilizer and adds to growing crops; it provides summer feed when pastures are short; it is a succulent winter feed.

## Washington Gleanings

County Agriculturist R. M. Turner in connection with his work as county agent, will organize pig clubs among the boys of Island county.

W. H. Paulhamus and business associates have organized to take over the cooperative holdings of the Puyallup & Sumner Fruitgrowers' association. The capital stock is listed at $600,000.

The Farmers' Union Mill and Grain company of Tekoa has decided to construct a large bulk grain elevator. It will have a capacity of 75,000 bushels and the approximate cost will be $20,000.

Bellingham's popular Chuckanut drive, the most scenic part of the Pacific highway in the northwest, will not be entirely open for travel before next spring, as the result of damage done by recent storms.

That the Sunnyside factory is an assured thing for next year is now a proved fact, with the filing of the deed to 93 acres of land at Sunnyside for the Utah-Idaho Beet Sugar company closing the matter. The consideration named in the transaction is $18,300.

Aroused by the devastation wrought by the recent freshet, owners of farm lands just outside of West Kelso have petitioned for the organization of diking district No. 6 of Cowlitz county, to include about 1500 acres of land lying between Fowler's lake and the foothills.

An invention based on the principle of internal charpit combustion, which, if generally applied, will revolutionize methods of land clearing in the northwest, has been conceived by Arthur Watts, land agent for the Bellingham Bay Improvement company and manager of half a dozen farms in Whatcom county.

Unless the Nooksack river is diked just west of Ferndale it will cut through the high bank at that point and flood the lands below, comprising 2500 acres of fine agricultural soil, is the belief of Captain A. Butt of Ferndale, who has asked the chamber of commerce to lead a movement to have the river diked by the government.

The Island County Fair association has elected the following officers for the ensuing year: P. P. Custer, president; George M. Izett, vice president; H. V. Hills, secretary; Leonard Lang, treasurer. Jerome Ely of Oak Harbor, Fred Funk of Langley and John Kineth of Coupeville were chosen as the board of trustees.

Capitalized at $100,000, the Puget Sound Wholesale Cooperative society, with headquarters in Everett, will start buying and marketing for the various cooperatives throughout the district. It consists of 15 directors elected by the affiliated bodies, composed of consumers' societies, creameries, canneries, shingle mills, farmers' associations, and the recently organized food products association of Seattle.

## What Others Say

Farm and Fireside: There is no getting away from the fact that normal prices can be restored only with the return of normal conditions.

Dakota Farmer: A silo in the north is equally important as a silo farther south—perhaps more so, for the silo is the great saver of immature corn.

National Stockman and Farmer: A calf is like a boy, a colt, or any other young animal. Fresh air, sufficient feed and plenty of exercise are the foundation of a good constitution so necessary to well-doing at hard work in the future.

Nebraska Farmer: If children are taught to think logically they will see that the country with its glorious surroundings affords the greatest of all opportunities for home building and they will strive with the correct goal in mind.

# Crisis Demands Food Production Administrator

(Continued from page one.)

duction, but think the agricultural department is sufficient unto the work. That the offices of food conservation and food production should be united under one chief is another view. The writers of the replies indicate an earnest endeavor to do all they can to help out the food production campaign in one way or another.

The letters of Governor Capper of Kansas, of Senator Jones of Washington, of Governor Frazier of North Dakota, of Secretary Carpenter of the state department of agriculture of Wyoming and that of R. H. Stockton, president of the Majestic Manufacturing company of St. Louis, were published in last week's issue of the Farmer.

Letters also have been received from Secretary Houston of the United States department of agriculture, from Governor W. L. Harding of Iowa, Governor Sidney J. Catts of Florida, Governor Horace F. Graham of Vermont, Governor Frank O. Lowden of Illinois, Governor James M. Cox of Ohio; from Congressmen Eugene Black of Texas, Ernest Lundeen of Minnesota, Albert Johnson of Washington, Sydney Anderson of Minnesota, Stuart F. Reed of West Virginia, John W. Langley of Kentucky; from state departments of agriculture, Charles Adkins of Illinois, J. C. Mohler of Kansas, N. E. Shaw of Ohio, Wesley Webb of Delaware, James H. Page of Arkansas, Alva Agee of New Jersey, Mat S. Cohen of Kenturcky, Charles C. Cannady of Indiana, Wilfrid Wheeler of Massachusetts, Fred W. Davis of Texas, and from Charles S. Knight, dean of the college of agriculture of Nevada; H. C. McCartney, treasurer of the Bull Tractor company, and from P. G. Holden of the American Harvester company.

**Food Production Administrator.**

Here is the telegram sent to President Wilson:

"When the assistant secretary of agriculture, Dr. Pearson, left Spokane after a regional conference with large farmers, agricultural college representatives and bankers strong hope was raised that the Pacific northwest would produce greatly increased crops. Dr. Pearson left here believing that the work could be followed up effectively. We regret to advise you, however, that notwithstanding the state college of Washington and the state department of agriculture have done their utmost to carry on these plans, the present outlook here is exceedingly discouraging. Because of adverse weather conditions not more than 25 per cent of the average fall crop acreage has been planted.

**Must Keep Youth on Farms.**

"If wheat yield is to be even normal enormous spring planting is necessary and more labor will be required. The farms are being stripped of workers and the remaining youths are eager to leave for the war. Unless something is done quickly there will be an alarming slump in the agricultural production of this region.

"The west is called on to produce the wheat surplus needed to feed our allies, but it can not do it unless a way shall be found to hold our young men to the soil. Some system should be developed whereby loyal service in the production of foodstuffs shall be impressively recognized. Some way must be found to better labor conditions and hold young men on the farm with a patriotic consciousness of honor and dignity.

**Need National Leader.**

"The crisis demands the immediate appointment of the ablest available man in the country as national wartime food production administrator, who will fire the imagination of all the people, consumer as well as producer, to the supreme necessity of increased food production, and who will establish far-reaching cooperation with the agricultural department, agricultural colleges and farmers in all sections of the country in meeting their wartime food production difficulties, just as Hoover has brought home to every family the need of food conservation, and just as the Red Cross campaign has swept the entire nation under the leadership of Davison."

A leading part in the framing of this telegram was taken by the Farmer, its managing editor being one of the signers. The other signers were as follows: E. F. Benson, Washington state commissioner of agriculture; Charles Hebberd, federal food administrator for Washington; R. Insinger, chairman agricultural committee Spokane Chamber of Commerce; Waldo G. Paine, vice president Spokane & Inland Empire Railroad company; David Brown, president Hazelwood Creamery company; J. L. Paine, president Spokane Chamber of Commerce; N. W. Durham, chairman Spokane county council of defense; David Munroe, farmer and Holstein breeder; D. W. Twohy, president Old National bank; E. T. Coman, president Exchange National bank and regent State College of Washington.

The letters given as follows are but a few of those received. Many are crowded out this week. but will be given next week and succeeding weeks:

**Heartily Concurs.**

Congressman John W. Langley from Kentucky writes:

"To the Editor: I beg to acknowledge the receipt of your letter of January 1st, enclosing copy of a telegram which was sent by yourself and others to President Wilson and which was reproduced in The Spokesman-Review of December 29 last. I have read this telegram and I heartily concur in the views therein expressed. In the haste to raise a large national army I fear that the agricultural situation and its necessities have been neglected and more or less overlooked. Those in authority are laying abundant stress upon the action of the president regarding increased production in order to win the war, but apparently they are not taking sufficient action to secure the necessary man power for that production. This is not intended as a criticism of any one, but rather as a frank statement of the situation, as I view it, which could be greatly improved, I think, by a wider circulation of arguments along the lines embodied in your telegram. I thank you for bringing it to my attention.

"JOHN W. LANGLEY."

**Hearty Support.**

STATE BOARD OF AGRICULTURE, DOVER, Del.—To the Editor: Your telegram to President Wilson on food production strikes the matter squarely and solidly, and it has the hearty and unqualified support of the department of agriculture of Delaware.

WESLEY WEBB,
Secretary.

**Sure It Does.**

EXECUTIVE CHAMBER, TALLAHASSEE, Florida.—To the Editor: I have your letter of recent date in which you tell me that the biggest war problem of today is war supplies and asking me if your telegram to the president does not help. I am sure it does.

SIDNEY J. CATTS,
Governor.

**Deserves Serious Thought.**

J. C. Mohler, secretary of the Kansas state board of agriculture, writes:

"To the Editor: The idea of a national war-time food production administrator, as suggested in the telegram to President Wilson, is deserving of serious thought. At first blush I would say it was excellent, although it occurs to me that the U. S. department, with its organization and machinery, with Secretary Houston at the head, ought to be in position to do just what you would ask of the special food production administrator, and do it most efficiently. Our board meets this week in its annual state agricultural convention, and I shall be glad to bring the matter before it. Certainly, the suggestion merits thorough consideration.

"I shall also have your communications brought before the state council of defense, which meets here next week.

"Thanking you for your thoughtfulness in forwarding the interesting documents and assuring you of our desire to cooperate in promoting all movements calculated to increase production, I am J. C. MOHLER."

**Demands Action.**

The Farmer has received from Governor Horace F. Graham of Vermont a copy of the following telegram sent by him to President Wilson:

"We have a national food conservation administrator. I feel very strongly that we should also have a national food production administrator of equal ability, through whom the food production committees of the several states can coordinate their work. The time to plan increased food production is upon us."

Governor Graham also addressed the following letter to the chairman of the Vermont committee of public safety:

"We have reached the time when renewed effort and a campaign for another season command our serious consideration. It demands action. Last spring much was accomplished in the limited time left to us. This year we have the time, and we must map out in advance the courses of action to be carried out during the year. Particular attention must be given to agricultural production. If the suggestions and assistance of the committee of public safety are to be of value to the people of the state the committee should indicate promptly to the public what efforts will be undertaken."

**As a War Measure.**

"We are still handicapped with the old plan of making all kinds of promises concerning agriculture with little serious intention of carrying them out," is the pardonable statement made by Commissioner Fred W. Davis of the state department of agriculture of Texas. Mr. Davis' letter follows:

"To the Editor: Your letter, together with enclosures on the food production question, was received many days ago. I have delayed in replying to same, thinking I might have something concrete to offer as a suggestion; but so far I have not been able to get things in shape. Everybody seems anxious to do something here in Texas, and we have all kinds of offices and commissions, with the result that a maximum of concrete work is not being done. I am working with all my migth to get things in better shape, in order that we might do a great deal more.

"In general terms, I agree with the plans outlined in the copy of the telegram to President Wilson. Stress must be laid upon the question of agriculture as a war measure. General assertions of general facts are not going to meet the situation. We are still handicapped with the old plan of making all kinds of promises concerning agriculture with little serious intention of carrying them out. Of course, the people are much more in earnest now, but this state and the nation, it seems to me, have not yet realized the full import of the great machinery and means that are necessary to carry on this great industry as it must be carried on.

"Texas has about three-fifths of her agricultural area almost barren, having

(Continued on page nine.)

# Secretary Houston Tells of Vast Work of Agricultural Department

Department of Agriculture, Washington.—To the Editor: I appreciate your letter of December 30. The telegram to which you refer has been called to my attention. I felt sure that the parties sending the telegram did so largely in ignorance of the vast emergency as well as normal work being done by this department for food production in cooperation with the land-grant colleges of the nation and, where the commissioners of agriculture have the requisite power and justification, with them and with other state agencies, as well as with the federal food administration and farmers' organizations throughout the Union. We are dealing with food production through thousands of approaches and have engaged in this work a very large and experienced force. You may know that the staff of the department of agriculture numbers over 18,000, and that of the 48 land-grant colleges numbers as many more, and that the relation between the members of these two staffs is intimate not only under the law, but under informal agreement and activity. Through the extension service alone we are jointly carrying on demonstration work with a force of extension workers numbering over 5500, including the specialists performing extention work employed through both state and federal regular and emergency funds.

This department, of course, is working in close harmony with the food administration and is giving its attention for war purposes to the problems of production, the conservation of farm and animal products up to the time they reach the market, to marketing, and to assisting farmers in safeguarding and securing seed. You doubtless know something of the greatly expedited work in combating plant and animal diseases, especially in controlling cattle tick, hog cholera, tuberculosis, dourine and the like.

I am enclosing herewith a statement issued by the president some time ago; which indicates in general the functions of the department of agriculture and the food administration. I am enclosing also a statement which sets forth the agreement between the food administrator and this department, as well as a copy of my annual report. This report only hints at many of the war-time activities of the department of agriculture. I am also sending you a copy of a statement regarding the farm labor problem, which shows the directions our activities in this field are taking.

D. F. HOUSTON,
Secretary.

# Bring Into War Industry the Best Brains and Enthusiasm of Country

Reading the following letter from Sydney Anderson of Minnesota, who is a member of the house committee on agriculture, one is reminded of the scriptural injunction: "Neither do men put new wine into old bottles; else the bottles break, and the wine runneth out, and the bottles perish; but they put new wine into new bottles and both are preserved."

Here is Mr. Anderson's letter:

To the Editor: Your favor of the first instant, enclosing a copy of a telegram to President Wilson relative to food production next year, is at hand and contents noted.

I am in entire accord with the suggestion contained in the telegram. It attempts to deal with a situation which exists not only in connection with the government's activities in increasing food production, but almost in every other activity. The trouble seems to me to be that the government has been accustomed to run everything according to a particular groove, and that instead of undertaking to operate war activities upon the basis of war and its immediate necessities, they are undertaking to apply the same old methods, the same old organization, to this new activity. Most of us, I think, who come in contact with the practical aspects of these problems as they have to be worked out on the farms and in the factories appreciate the fact that this war can not be run on that basis. Some time official Washington will come to realize it, too. Congress, I think, is alive to the situation, but we all know that laws can't win this war and that laws are utterly ineffective unless they are backed up by efficient and energetic administration. I only hope administrative Washington will wake up to the necessity of bringing into this great war industry of destruction the best brains and enthusiasm of the country before it is too late.

SYDNEY ANDERSON.

# Poisoned by Diabolical Teachings

## *Instilled Into the Thoughts of the German People by Their Government, Their Press, Their Churches and Their Schools*

The committee on public information, consisting of the secretary of state, the secretary of war, the secretary of the navy and George Creel, sends the Farmer a remarkable book of 171 pages. Its title is "Conquest and Kultur; Aims of the Germans in Their Own Words."

The committee on public information asks the Farmer to lay before its readers the essential facts revealed in this astounding expose.

**1. That the German government began more than a generation ago to work out its plans for world conquest.**

**2. That the German people were taught from infancy to hate all the other peoples of the globe; that they were a superior people, favored of God and by Him chosen to conquer all other nations; that the kaiser was the chosen agent of God, and disobedience to one was disobedience to the other.**

**3. That the war should be carried on with pitiless fury and ferocity.**

**4. That German arms should carry the German flag to all the continents of earth, including Africa and South America.**

**5 That the American Monroe doctrine should be overthrown in order that German settlers in South America and Mexico might set up German colonies there under the German flag.**

In proof of these premises the book quotes the exact words of hundreds of German leaders in all walks of life—the kaiser, his ministers, members of the bundesrath and the reichstag, professors in the universities, teachers in the public schools, pastors of great German churches, merchants, manufacturers, lecturers and writers in newspapers and magazines.

In the United States our views and policies have been molded by such men as Washington, Franklin, Jefferson and Lincoln.

In Germany the public mind has been educated by Fichte, Nietsche, Treitschke, Bismarck, Von Moltke, General Von Bernhardi and the kaiser.

The essence of Fichte's teachings is expressed in this extract from one of his books: "In case of need one single man has the right and duty to compel the whole of mankind. * * * He is the master armed with compulsion and appointed by God."

The gist of Nietsche's false teachings is contained in this extract from his works: "Ye shall love peace as a means to new wars, and the short peace better than the long. I do not advise you to work but to fight. I do not advise you to compromise and make peace, but to conquer. Let your labor be fighting and your peace victory. You say that a good cause hallows even war. I tell you that a good war hallows every cause."

The spirit of Treitschke's teachings speaks in this extract: "We have already seen that war is both justifiable and moral. * * * We may depend upon the re-Germanizing of Alsace, but not of Livonia and Kurland (two great Russian provinces now invaded by German armies). There no other course is open to us but to keep the subject race in as uncivilized a condition as possible, and thus prevent them from becoming a danger to the handful of their conquerers."

For two generations or more the kaiser's government has been planting these doctrines in the German mind, beginning with the children in school. "What is Germany?" is a question asked in a German text book, and this the answer. "My fatherland, a country entirely surrounded by enemies."

A magazine published for young readers, and widely circulated in Germany, is called Jung-Deutschland. It is the official organ of young Germany, and its spirit is expressed in this article, published in October, 1913, only nine months before the kaiser's forces were hurled on helpless Belgium and inoffending and peace-loving France:

**"War is the noblest and holiest expression of human activity. For us, too, the glad, great hour of battle will strike. Still and deep in the German heart must live the joy of battle and the longing for it. Let us ridicule to the utmost the old women in breeches who fear war and deplore it as cruel and revolting. No, war is beautiful. Its august sublimity elevates the human heart beyond the earthly and the common. In the cloud palace above sit the heroes, Frederick the Great, and Blucher, and all the men of action—the great emperor, Moltke, Bismarck are there as well, but not the old women who would take away our joy in war. When here on earth a battle is won by German arms and the faithful dead ascent to heaven a Potsdam lance corporal will call the guard to the door, and Old Fritz, springing from his golden throne, will give the command to present arms. That is the heaven of young Germany."**

Such are the diabolical doctrines taught to young German boys of about the same age as our Boy Scouts.

These atrocious doctrines are also disseminated through the churches. We have space for only a few of the many extracts from sermons of German pastors.

"We feel ourselves to be the bearer of a superior kultur," declared Dr. Paul Conrad, pastor of the Kaiser Wilhelm Memorial church in Berlin, in his book published in 1915. "We execute God Almighty's will and the edicts of his justice we will fulfill, imbued with holy rage, in vengeance upon the ungodly. God calls us to murderous battles, even if worlds should thereby fall to ruins."

And this from the writings of Pastor J. Rump, in 1914: "Take heed that ye be counted among the blessed, who show declining England, corrupt Belgium, licentious France, uncouth Russia, the unconquerable youthful power and manhood of the German people in a manner never to be forgotten. * * * Brethren, make an end of this generation of vipers with German blows and German thrusts."

After the sinking of the Lusitania Pastor B. Baumgartner wrote a pamphlet that contained this fiendish thought:

"Whoever can not prevail upon himself to approve from the bottom of his heart the sinking of the Lusitania, whoever can not conquer his sense of the gigantic cruelty to unnumbered perfectly innocent victims * * * and give himself up to honest delight at this victorious exploit of German defensive power—him we judge to be no true German.

"We are compelled to carry on this war with a cruelty, a ruthlessness, an employment of every imaginable device unknown in any previous war."

**When we realize that this is the kind of teaching that the German people have been receiving from their government, their press, their churches and their schools, we come to a clear understanding of what lies back of the submarine, the Zeppelin raids on villages and towns, and the awful cruelties perpetrated by the German armies in Belgium, France, Serbia, Rumania and Russit. These horrors are a part of the kaiserõs system—planned, plotted and executed in cold blood.**

The German people are naturally as kind and generous as any people. But their hearts and minds have been poisoned by diabolical teachings. They have been fed on monstrous lies; told that the rest of the world hated them and wanted to destroy them, and that in self-defense they must fight like fiends and devils.

It is the gigantic tragedy of the ages—this vicious building up of national hatred and fear. It has plunged the world into an inferno of shot and shell, of liquid fire and poison gas, of wasted lands and millions perishing of starvation and disease.

We are raising armies to fight that frightful menace to civilization and humanity. We are sending our farmer lads across the sea, to bear their heroic part in this heroic strife. They are going to strike gallant blows for a noble and exalted cause, the cause of world freedom, safety and enduring peace. Once again, as their fathers before them, under Lincoln, they will bear a "fiery gospel writ in burnished rows of steel," and an applauding world again will see the hero born of woman crush the serpent with his heel."

# Must Keep Seed

## Can Find Substitutes for Food

Heavy shipments of wheat to the allies have brought the American people pretty close to the bottom of the flour barrel. A New York grain authority says the visible supply of wheat in the United States showed a decrease for the week of 1,365,000 bushels, bringing the total down to 17,581,000 bushels. A year ago it was 78,781,000.

Yet the calls of France, Italy and Great Britain become more and more insistent for bread, and our government is justly going to let them have it, even if the American consumers have to go to short rations. We have abundant substitutes for wheat, such as corn, oats, rye and barley, and no real suffering would result even if the American people had to stop eating wheat bread altogether for a few weeks or months.

One grave danger, however, needs to be guarded against—the possibility of cutting down home stocks until not enough wheat would remain for seed requirements.

The seed wheat problem is particularly acute in Montana, North Dakota and Texas, and to meet requirements there the government will purchase, through money appropriated by congress, approximately $1,000,000 worth of seed wheat to be held until spring, when it will be sold for cash to farmers.

Professor F. S. Cooley of the Montana State college, who has returned to Bozeman from a conference at Washington, makes the following statement:

"The seed will be sold at cost, for cash, to those who require it. It will be seen that the government seed supply does not contemplate the financing of seed purchased by farmers. It will, however, save the profits charged by dealers, and the freight out and back on seed kept within the state. It should be understood that this seed is to be sold for cash and that purchasers will have to finance their seed buying without federal aid."

# Teach Farming by Doing

## *Farm Needs Boy Now and Boy Needs Farm*

**By D. R. Hubbard.**

Some years ago numerous magazine writers gave lengthy articles, lavishly illustrated, of a great farmer with thousands of broad acres, who had, by organization of men, animals and mechanical efficiency, solved the problem of wheat production, could produce it, together with large dividends himself, at 50 cents bushel.

Men, animals, mechanics, dividends, human factor nil. Commercialized farms—the writer traversed the area of this enterprise in 1916—men, mules, mechanics, efficiency! Yes. Migratory men who come onto the farm in spring, put in crop, summer fallow, harvest crop, do fall plowing, move on to lumber camps or city. Churches? Schools? Homes? Children? Social life? All very rare.

The American home is basic to the American nation. The rural home is the ideal. Sufficient isolation to properly emphasize the home-life, surroundings to develop the mental, moral and physical. Home ties grow stronger with the years. Such homes furnish the real reasons for a nation. The daily tasks are woven into the lives of the youth day by day. The mental, the physical or manual, and proper emotions, all come as a natural process as the days go by.

Shall we ask for coolie labor on the American farms to speed up production to carry on the war? In many portions of the Pacific northwest this may be feasible. The large wheat fields may require it. Yet when we see the few men, the large horsepower used in culture and seeding, the great mechanical engines and small amount of man-power used in harvesting, we ask what part in this work can a Chinese coolie do? Farm labor is skilled labor. Farm management calls for high business qualifications.

Just where will the coolie work in on the lesser farms. One, two or three men may be needed for a few days or weeks. There will be haying, cultivating, harvesting, animal care and management, milking. Here again we are confronted with skilled labor. On the best farms this is not only skilled labor, but labor that is best done by members of the family.

The beet fields and the orchards may have a place for the coolie, but he could have only a small part in American agriculture. There is no vocation which requires and usually has a longer training than that employed upon the farm. There is no line of industry that will suffer greater waste for want of proper training than the farm. Then why discuss the lowest grade of physical and mental labor, as a substitute for the highest skill, which comes only from long contact and close application in the service?

The American farm uses self-employed labor. The head and the hand do the work coordinately. The coolie labor can not be substituted for the boys who are at the front.

We are proud to think of the paid teacher as the only educator and that hours in the school room are the only proper mental credits to the child. Vocational education, manual training, are now generally looked upon as exclusive creations of the school rooms. And the sweet little miss is dealing out agricultural empirics to the boy in the country schools who sits admiring her clever manners and comeliness during the spring, summer and autumn months of his years from 14 to 17 while his overworked father and mother at home could teach him more real agriculture in one season that he could get in the present primitive academics in five years.

It's a fact! Let your academics and actualities go hand in hand. So adjust the teaching that the boy and the girl may do the actual thing, at home, with simply enough time in the schoolroom to classify and work into a system the fruit of actual experience.

The farm needs the boy now and the boy needs the farm.

Mental and physical training, with added interest in the doing, will accomplis vastly more. Let the city agricultural boy go to the country at 14 to 17. They need the drill. The country needs their service. Do they teach the soldier in the schoolroom? If so, why do they ask him to dig trenches, practice the art of personal offense and defense in the ranks? Does not the farm require skilled physical experience as well as the battle field?

Let us get sane!

The agricultural army in our schools will solve our farm labor problem. This has always been their proper work, vastly more so now. The coolie? No! Let the best there is in America be mustered into this honorable service.

### The New National Party.

A convention for the purpose of making the new national party a permanent organization in the political life of the nation has been called for March 6 in New York, at which time delegates will be present from many, if not all states of the Union. The so-called national party is designed to be composed of certain elements of the prohibition party, socialist party, progressive party and others not willing to fight their battles out alone or in either of the two major political parties of the nation.

# Crisis Demands Food Production Director

(Continued from page seven.)

been stricken by the worst drouth in her history, and, speaking in general terms, the drouth still exists. We have reached that point where in many communities the farmers are gone or are leaving, and those that have stayed or who could be persuaded to return have not the means to make a crop nor the collateral to secure the means. The banks can not furnish money except on good security. The nation can take a chance, as a war measure; but so far we have not been able to put it by, having met with opposition from the national department of agriculture. This is one of the reasons why I included the nation in my statement that we were not yet sufficiently aroused to the needs of agriculture.

"FRED W. DAVIS."

### Truth and Logic.

Congressman Stuart F. Reed of West Virginia writes:

"To the Editor: Your letter of January 1st has been received and it and the enclosure have been read with a great deal of interest. Your telegram to the president appeals to me as containing a great deal of truth and logic. The government should be slow in taking from the farms for military service the men upon whom the farmer must depend for his labor. I shall be glad to hear from you again when you have other suggestions to offer.

"STUART F. REED."

### A Grave Situation.

Governor Cox of Ohio recognizes the fact that a practical solution of the problem of increased food production is beset with vexatious difficulties.

"EXECUTIVE CHAMBER, COLUMBUS, Ohio.—To the Editor: Your communication of December 31 is at hand. Your recommendation is unquestionably conceived in the best of motives and with a view to the practical solution of a problem that promises vexatious difficulties. The military authorities appreciate the necessity that the agricultural production of the nation must not be disturbed too seriously by the selective service system, and recent rulings accredited to Provost Marshal General Crowder indicate that the authorities propose to avoid making any further inroads upon farm labor than are absolutely necessary. The federal authorities are unquestionably alive to the gravity of the situation, and the general tone of your memorial to the president may be calculated to have a salutary effect.

"JAMES M. COX, Governor."

### Least Possible Delay.

Professor P. G. Holden, whose remarkable work in increasing the corn production of Iowa by waking up the farmers to better methods of seed selection and who is one of the very best agricultural evangelists in all the country, now director of the agricultural extension department of the International Harvester company, writes:

"To the Editor: Your letter of January 3 is just at hand, and will say that I am in hearty sympathy with the suggestion which you make, and I also want to add that I think that it should be done with the least possible delay, as it will soon be too late to take advantage of our opportunities. Will certainly do what I can to aid the movement.

P. G. HOLDEN."

### Glad to Cooperate.

Congressman Walter Kehoe of Florida writes:

"To the Editor: Your letter of the 1st inst., enclosing copy of telegram sent to President Wilson, duly received. The same has been read with a great deal of interest and pleasure, and I assure you that I will be glad to cooperate with the congressmen representing the states of Washington, Oregon and Idaho in this connection.

"WALTER KEHOE."

### Committee of Eleven.

Here is a new proposition with regard to speeding up food production made by Secretary Alva Agee of the state department of agriculture of New Jersey:

"To the Editor: I am pleased to have a copy of your telegram to President Wilson. A group of us are urging the president to appoint a committee of 11, of which a majority of the members shall be practical farmers and of which the secretary of agriculture and a representative of the national food administration shall be members, to control the national government's policy in respect to food production, and that the chairman of this committee shall be a member of the war council.

ALVA AGEE."

### Hearty Indorsement.

The following is from Congressman Louis W. Fairfield of Indiana:

"To the Editor: Your letter, with enclosed appeal to the president, has been carefully read. Permit me to say that I heartily indorse what it contains and trust that there may be prompt action in this matter.

"LOUIS W. FAIRFIELD."

### In Winning the War.

Commissioner Mat S. Cohen of the state department of agriculture of Kentucky writes:

"To the Editor: Replying to your valued communication of December 29, attaching thereto telegram signed by your people to President Wilson, also circular entitled "America's One Big Business Is War," beg to congratulate you and your people upon the method and manner of expressing yourself and sincerely hope that your earnest and most consequential appeal will aid materially toward increasing your share of the necessary products so essential in maintaining the war and extremely imperative in the winning of the war.

"MAT S. COHEN."

# What would the oil in your engine show?

FOR years, both motorists and engineers were in the dark as to the amount of friction and consequent wear due to the sediment formed in the average motor oil.

Inferior oil breaks down under the terrific heat of an automobile farm tractor or stationary engine and forms voluminous black sediment. This sediment causes rapid wear of the parts because it crowds out good oil at points where friction occurs.

## How a lubricant muzzles the tiny teeth of friction

If you could look at the surface of a bearing or other engine part through a powerful magnifying glass, what would you see?

Not a smooth, even surface, but thousands of microscopic teeth. Sediment excludes the protective film of the oil and allows these tiny teeth to grab and tear at each other, thus causing rapid wear.

## A practical proof of superiority

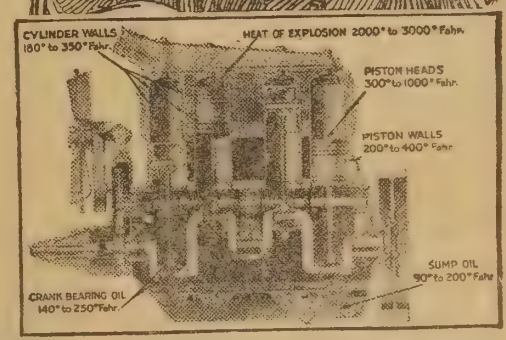
The Sediment Test, illustrated at the right, is as simple as it is convincing.

The bottle to the left contains a sample of ordinary oil taken from the crankcase of an engine after 500 miles of running.

In the right-hand bottle is a sample of Veedol after being used for 500 miles under identical conditions.

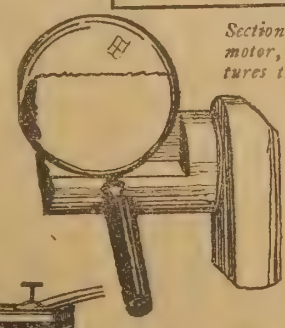
Notice that ordinary oil contains over five times as much sediment as Veedol.

### Make this test for yourself



Drain the oil out of your crankcase and fill with kerosene. Run the engine very slowly for 30 seconds and then clean out all kerosene. Refill with Veedol and make a test run. You will find your engine has acquired new power and a snappy pick-up. It will run more smoothly and give greater gasoline mileage.

### Buy Veedol today



Your dealer has Veedol in stock, or can get it for you. If he will not, write us for the name of the nearest dealer who can supply you.

### An 80-page book on lubrication for 10c

Written by a prominent engineer. Used as a text book in many schools and colleges. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every make of car, tractor, or stationary engine, winter or summer. Send 10c for a copy. It may save you many dollars.

*Sectional view of a popular type of motor, showing high operating temperatures that cause rapid destruction of the average automobile oil*

*Millions of tiny teeth cover the apparently mirror-like surface of a bearing or other working part of an engine. These teeth tear and grind each other unless kept apart by a protecting film of lubricant*

# Beet Pulp for Silage

To the Editor: Is it well to plant potatoes on land that produced sugar beets the preceding year? Is it well to feed milk cows beet pulp or potatoes? Also is it injurious to horses to eat pea straw?—L. J. E., Burley, Idaho.

The above questions were referred to Professor George Severance, vice dean, college of agriculture, Washingtotn state college, who gives the following answer:

Potatoes will do well after sugar beets on good land. Beet pulp gives very satisfactory results when fed to dairy cows, making a very satisfactory substitute for silage. It is not as good as corn silage, but furnishes succulence, which is one of the most important reasons for feeding silage. Horses do not, as a rule, eat dry pea straw readily, though it is not injurious if they are not confined to it as a sole diet—even in that case it would be better than a stack of wheat straw.

## Cow Making a Record.

Zamolia Nutwood, one of the Jersey cows in the Meadow Lawn herd of F. A. Doerfler, Silverton, Ore., is making a remarkable record for her age. Her official test begun at 15½ years old and she is badly stifled, yet in her ninth month she produced 50 pounds of fat and it looks as if she would finish her year with over 700 pounds of 85 per cent butter.

A number of other very creditable records have been and are still being made, among them one by Spozza Foxhall of F. O., that will probably win a gold medal by producing over 800 pounds of butter.

Since June, 1916, none of the records completed have been less than 619 pounds of butter. This was made by a junior 2-year-old. The highest record completed so far was 765 pounds of butter made by Gwendola's Rosaire. She was fresh when Mr. Doerfler purchased her and moving gave her quite a set back. She dropped a heifer calf two months before her test was finished and was dry nine days before calving, for which she gets no credit. So it can be seen she is capable of doing much better and Mr. Doerfler has strong hopes of yet getting a 1000-pound record from her.

H. A.

## Colored Oleomargarine.

The Farmer has received the following from William T. Creasy, secretary of the National Dairy Union:

"You are no doubt aware of the fact that the butter interests are confronted by the most serious situation for years. At present there is a propaganda being carried on to take off the 10-cent tax on colored oleomargarine.

A large oleo manufacturer a few years ago, when appearing before a committee of congress stated: "That the natural color of oleomargarine was white; that the white oleomargarine was of a higher quality, because it contained a higher grade of refined oils," but he added: "Of course, there is more money in the yellow."

Comparing the price of butter with the cost of producing milk, butter is the cheapest dairy product at the present time. Notwithstanding this fact, the beef trust is trying to add new burdens to the creamery interests by recommending to the joint committee on definitions and standards of food 'that the fat standard for butter be increased from 80 per cent to 82 1-2 per cent."

## Stillaquamish Cow Tests.

There were 470 cows tested during the month of December in the Stillaquamish (Wash.) Cow Testing association, according to report of Will W. Henry, official tester.

The average pounds of milk per cow was 550.7, the average pounds of butterfat per cow, 26.73 and the average cost of feed, $7.79.

In 30 days during this month 48 cows produced over 40 pounds of butterfat, 11 produced over 50 pounds, and three produced over 60 pounds. The highest record cow for the month is owned by Zenas Farrington. She made 67.5 pounds butterfat. The other two 60-pound cows are owned by M. F. Borseth, and J. E. Wrage. The 50-pound cows were owned by the following members: Farrington, 1; Wrage, 5; Grimm, 2; Sneve, 1; Estby, 1, and Olsen, 1.

This month finishes a year's work for the association. There were 448 cows finishing the year's record. The average butterfat production for these cows was 300 pounds and a fraction of the 26 herds tested 15 were under this average. The lowest herd average was 239.84 pounds, and the highest average 400.13 pounds.

Twelve cows were sold for beef last month.

It is quite noticeable during the year's work that herds do much better where regularity is observed in regard to the time of feeding, milking, etc., and where the herds are not made to stand in the rain when they might just as well be in the barn. The more one observes in the dairy field, the more he will be convinced that it is the small, seemingly unimportant things that count.

## Buhl Testing Association.

The Buhl (Idaho) Pioneer Cow Testing association began its third year's work December 1, 1917, of promoting the dairy industry in the state. It has at the present time 32 members owning approximately 550 cows entered in the association, according to the report of R. W. Sharp, test supervisor. The present territory now consists of portions of four different counties, namely: Twin Falls, Gooding, Minidoka and Cassia.

It is found by comparing the net returns from the different herds that in the majority of cases the herds returning the greatest average profit are the small ones where only select cows are kept. This difference is very noticeable, showing the cost of producing one pound of butterfat three times as great in some herds as in others. In other words; some of the herds with one-half the number of cows are producing as much butter as other herds with only about one-half the cost of feed, labor and money invested. When it is possible to have a large herd and of just as good quality as the smaller ones, it is often wondered why dairymen persis in milking and feeding twice as many to get the same returns or do not make twice the money in order that they may offset the greater amount due for taxes and interest on the investment.

This is partly explained by the absence of a sufficient number of real high class cows in Idaho, but the time is not far distane when more of these mortgage-lifters will be shipped from the east into this natural dairy country.

## A Promising Cow.

Nashville Susie, the Jersey cow that was grand champion at the Panama Pacific live stock show at San Francisco, and that is owned by F. E. Lynn, Perrydale, Ore., is on official test, with good promise of becoming a gold medal cow. Susie already has a very creditable record, made as a two-year-old, with two milkings a day. She freshened in November, has milked up to 52.5 pounds and is still milking close to 50 with about a five per cent test. She is milked three times a day and, if everything goes right, will be given a chance to show what she can do. Right now it looks as if her production might be nearer 900 than 800 pounds of butter. She has a fine bull calf by St. Mawes Golden Poppy, son of St. Mawes Poppy (1120 lbs.), a very handsome calf, and he is not for sale.

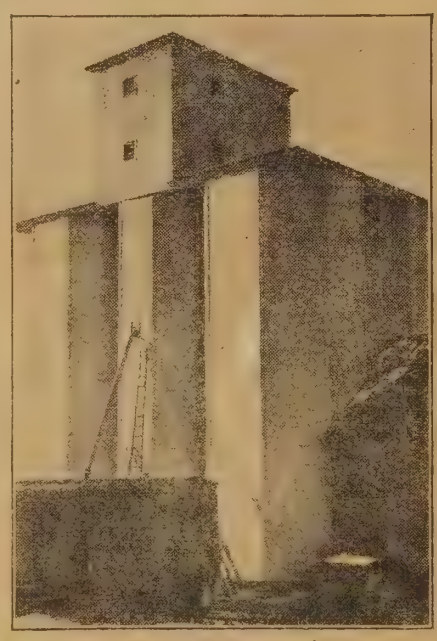
THE NEW DE LAVAL CREAM SEPARATOR

Will Give You Greater Capacity, Longer Wear, Better Service, Bigger Value

THE bowl of the New De Laval has greater capacity for a given size and a given speed than any other. The experience of thousands and thousands of users has proved that a De Laval will outlast and outwear any other make.

Look well to service when you buy a cream separator. That means more than anything else. That should include not only a good working and reliable machine, but the right sort of attention and interest on the part of the seller, not only at the time the machine is set up but as long as you continue to use it. De Laval service is well known. You can depend upon it.

Value depends upon the amount and quality of service the separator gives you—what you get out of it. You get more value for your money when you buy a De Laval, because it will give you more and better service than any other separator.



Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or if you don't know him, write to the nearest De Laval office as below

Community Tung-Lok Elevator at Hanson Station, Wash.

Handle Your Wheat in Bulk!

Wheat sack prices are prohibitive, even if you could get the sacks. Surely you will not pile your wheat on the ground, to suffer heavy damage and loss above and below. Patriotic duty and business judgment alike demand that you save ALL your crop.

Here is the answer to your problem—build a

Tung-Lok Elevator

(Home-Built, Singly or in Series.)

A Tung-Lok Elevator can be built for so little money that it will pay for itself in one year, while it provides **permanent** storage. Easily and quickly erected—storm-proof for a lifetime. The most economical and convenient way of building is by community cooperation, each farmer erecting one of a group of Tung-Loks, as shown in the cut herewith.

Just notify us, and one of our agents will call on you and explain the Tung-Lok method to you and your neighbors. That costs you nothing. Now is the time to act—WRITE US TODAY!

# Potatoes for Feed

## Have Real Value for Live Stock

By E. L. POTTER.

Potatoes are made almost entirely of starch and water. The starch has a very high feeding value, while the water has the same value as the water in the trough. One pound of potatoes contains about 23 per cent as much digestible nutrients as a pound of wheat, barley, or corn, and about 12 per cent as much protein. Potatoes may be fed to almost any kind of live stock, but give the best results when steamed and fed to hogs. They may be fed to cattle or sheep in place of silage or roots, but are not very palatable and can not be fed in very large amounts, especially when raw. Potatoes are very seldom fed to cattle or sheep, not because they can not be so fed successfully, but because they will give greater returns when fed to hogs. Experiments show 100 pounds of cooked or steamed potatoes equal in value to from 23 to 29 pounds of grain with an average of about 25 pounds. Experiments with raw potatoes show 100 pounds of raw potatoes worth about 18 pounds of grain. As a rule, therefore, we do not recommend raw potatoes, but instead recommend feeding them steamed or boiled and consider them worth, when so used, about one-fourth as much, pound for pound, as grain.

Potatoes can not be successfully fed alone to fattening hogs for two reasons. First, they contain so much water that the pig can not eat enough to fatten him. A 150-pound pig can eat conveniently about 12 pounds of potatoes a day. This will be equivalent to about three pounds of grain when he really needs six to seven pounds of grain, or its equivalent. It is therefore the usual custom to feed to fattening pigs one pound of grain with each three or four pounds of potatoes. The second objection to potatoes alone lies in the fact they contain a very small amount of protein, so little, in fact that proper gains will not be made unless this protein is supplied from some other source. This may be furnished through the medium of good alfalfa or clover pasture, or when pasture is not available, by skim milk, buttermilk, or tankage. A gallon of milk or one-half pound of tankage per day will be enough. This, of course, applies with equal force when grain is fed. The average farmer figures that it takes four pounds of grain to make one pound of pork when a little supplement will reduce the amount of grain to around four pounds.

For growing pigs or sows suckling litters, the potatoes are fed the same as with fattening pigs, that with grain and some little suplement as pasture, milk, or tankage. Dry sows, however, will get along nicely without the grain although they will not produce strong, healthy litters without the supplemental feed.

Steaming is generally considered the best method of cooking, but it has not been proven that steamed potatoes are any more valuable than boiled potatoes. The pigs like the potatoes, better, however, if the water in which they have been boiled is poured off. Grain should not be cooked with the potatoes since cooking lowers the digestibility of the grain instead of improving it as it does with the potatoes. After cooking the potatoes may be mixed with the grain or they may be fed separately, as the feeder may prefer. Salt is sometimes added, but it is generally safer to mix a small amount of salt with wood ashes or slack coal and let the pigs help themselves to it.

# Veterinary

Dr. S. B. Nelson

**Udder Swells**—I have a cow that freshened two months ago. In the evening her udder is swollen and sometimes there is fever. In the morning the swelling seems to be all out. She is stabled at night, is fed alfalfa hay twice a day, apple pulp twice a day and at noon is given a small bunch of corn fodder. S. E. E.

Medford, Ore.

Try giving your cow one and one-half pounds of Epsom salts in three quarts of water. Cut down the feed about one-third, then give morning, noon and night one ounce of fluid extract of pokeroot in a little water as a drench.

**Trouble With Ankle**—I have an 8-year-old horse that for the last year has been in the habit of getting his ankle joint out of shape if he steps into soft ground. The joint slips back and forth when he walks as if the muscles were too weak to hold it tightly together. He goes considerably lame after working. There is no inflammation.—H. L. O., Lane, Idaho.

The condition that you mention in your inquiry is that which is known as cocked ankle, and is due to a soreness in the posterior tendon. There are not very many horses that get over the trouble. It can, however, be alleviated by cutting down the toe, that is, by raising the heel and thus resting the tendon, also by taking him off from hard work of all kinds, giving him a rest for some time, spraying the ankle with cold water for five or six minutes and then rubbing dry is also of benefit. Liniments do not seem to be of any special benefit in these cases. Firing by the actual hot cautery has in a few instances given results, but, of course, this is a pretty severe treatment and one where you need the services of a veterinarian.

### Surpasses Krupp Output.

It was recently stated by Charles M. Schwab that the capacity of the shipyards controlled by the Bethlehem Steel corporation is a 10,000-ton vessel about every five days. This organization expects soon to have in its employ between 120,000 and 130,000 workmen. Its output of war material greatly surpasses even that of the great Krupp works.

### Requisition Timber for War.

To empower the president to requisition timber and timber products for war purposes Senator Chamberlain has introduced a bill to permit taking standing or fallen timber for the use of the army, navy or shipping board.

Founded 1842 CASE Famous the World Over

Never Before Have Silo Fillers Been Built the Case Way

In sturdiness and construction, in ability to do good fast work, Case Silo Fillers cannot be equaled.

All are built to withstand the severe strain put to a machine of this kind. Case Silo Fillers all have large throat capacities.

A simple gear-shift permits cutting four different lengths. The boilerplate knife-wheel prevents dangerous breakage.

Case Silo Fillers are made in three sizes—the 12-inch, with a capacity of 8 to 12 tons per hour; the 16-inch, with a capacity of 15 to 20 tons per hour, and the 20-inch, with a capacity of 20 to 30 tons per hour. This affords a size for any silo.

A complete description of Case Silo Fillers, with pictures, will be sent free upon request. Don't buy any Silo Filler until you have investigated the Case.

# Petaluma's Egg Output

The hens are not all killed off. A report published in the Petaluma Poultry Journal shows that there was an actual increase of about two and a half million dozens of eggs in 1917 over 1916 shipped from Petaluma. The total product for the year was 15,552,376 dozens. The shipments by months were as follows:

| | |
|---|---|
| January | 1,080,432 |
| February | 1,351,498 |
| March | 1,924,602 |
| April | 1,947,720 |
| May | 2,134,943 |
| June | 1,583,346 |
| July | 1,188,380 |
| August | 1,076,368 |
| September | 898,234 |
| October | 844,810 |
| November | 705,265 |
| December | 812,768 |
| Total | 15,552,376 |

The shipments, as will be seen, were largest in May and smallest in November. On the average April is the best month for shipments at Petaluma.

For the last eight years the shipments have been as follows:

| | |
|---|---|
| 1910 | 7,388,215 |
| 1911 | 8,134,127 |
| 1912 | 15,252,131 |
| 1913 | 10,164,714 |
| 1914 | 9,432,333 |
| 1915 | 11,681,154 |
| 1916 | 13,101,512 |
| 1917 | 15,552,376 |

This shows an increase of 19 per cent in shipments in 1917 over 1916. It does not look as though the hens have been killed off at Petaluma. This is encouraging. We have been told by many that the hens were being marketed in great numbers due to the high price of feeds, but the situation is not as pessimistic as has been made out. They have been telling us that the poultry industry was doomed. In this one county alone there was an increase of two and a half million dozens of eggs last year over the previous year, and 50 per cent over the shipments in 1913, the year before the war.

Poultry-keepers are not going out of business in Petaluma. That is a good piece of news. They are not going out of business in Oregon, Washington or Idaho, in spite of assertions to the contrary. From the best information available, there is an actual increase in poultry in Oregon and there is doubtless an increase in Washington and other western states. J. D.

# How She Sprouts Oats

To the Editor: I had no idea you were going to print my former letter. If I had known I surely should have sent the directions for sprouting oats. I had a message over the phone this morning asking how to do it, and I will try to tell in print how it is done for the benefit of others.

Some five years ago I sent for my sprouter in some eastern state (I have forgotten the address). The inside dimensions for each of the six trays are 18x18x4 inches. They are perforated in the bottoms and sides, but so arranged that the oats can not fall from one tray to the one below and still give drainage as well as admit air. The bottoms are of zinc. The bottom is a frame about 18x18x12 inches to hold a lamp, with a pan to catch the water.

I do not use the lamp, as I keep the sprouter in the kitchen in winter and in the brooder house in the summer. So I put the water tray clear under the bottom to catch the draining water.

I take half a gallon of recleaned white oats and cover with lukewarm water and let it stand overnight in summer and longer in winter. Then I drain off into a holey bucket and let it stand there another day, then I pour off into a bucket that has a good bottom. I set one on top of the other and take the older each day to put in the first tray of the sprouter. It takes nine days from the time the oats are put in water till ready to feed out. I have all the six trays going.

I feed out the first thing in the morning and clean and dry the tray and fill in from the older bucket, whose oats should have begun to sprout. Whenever necessary, I sprinkle the oats in the trays. The trays having loose oats should be stirred and smoothed out, but as soon as they begin to mat they should not be stirred any more, only sprinkled morning and night. I leave them open in the daytime and cover them with a tight lid at night, and it is really surprising how they will grow. I have it warm in the kitchen all day long, otherwise it might take one or two days longer.

This ration is plenty for 200 chickens. I don't feed their mash until from 10 to 11 o'clock, and finish feeding with whole gray oats at 3 o'clock and give a small wheat feed as soon as the oats are eaten up. If it were not for the sprouted oats I would not think of keeping up the flock at the present prices of feed.

MRS. MARIE FULHAM.
Dayton, Ore.

## High-Class White Leghorn.

The above is one of the high class White Leghorn cockerels at the Mount Angel College Poultry farm in Marion county, Oregon. This farm combines in a remarkable manner the heavy laying and show type. At the Portland show in December their White Leghorns won 15 prizes. They trapnest enough of their birds at all times to mate up their breeding pens and to tell which hatchings are producing the most eggs. Other breeds are kept in smaller numbers and at the Portland show their Black Sumatra cock attracted more attention than any other bird in the show. He is 18 years old and struts around with all the airs and is as ready for a fight as any year-old bird. Father Boniface, who is in charge of the farm, and who is as careful a breeder and almost as much of an experimenter as Mendel, informs me the old bird is not only being used on birds of his own breed, but that he is experimenting with him in cross-breeding, with very interesting results.

A new poultry house for the White Leghorns had lately been completed when I was there. A movable fence is so arranged that the runways can be changed from one side of the house to the other. Each unit of the fence is 10 feet long and each run 30 by 120 feet. When the runways are changed the old ones are plowed up and put in grain, while for spring run stubble turnips, rye and vetch, early spring wheat or spring peas are sown.

# New Zealand

## Will Hold National Apple Show

The directors of the National Federtion of Fruitgrowers of New Zealand have decided to hold the next national apple show at Auckland, beginning on Wednesday, May 1, and continuing until Saturday, May 4, 1918. It is proposed to make this the greatest show of the kind ever given in New Zealand, since the fruit crop for the coming season is very promising; and a special effort is being made to organize the fruit industry so as to better distribute the crop throughout the country in order to increase the consumption of fruit, especially apples.

It is proposed to standardize the packing of the different kinds of fruit in New Zealand, and after inspection to affix mark or sign to the packages setting forth the class of goods, and those who are not prepared to pack up to standard will be denied the advantages gained by this system.

# Fruit Grower and Buyer

By GRANVILLE LOWTHER.

The marketing season of 1916 opened with only moderate prospects of good prices. Henry Wilson had delivered to the association what he had contracted to them, had sold a small amount to the cash buyers, had consigned to a stock company, in which he held shares, a certain amount, and had about half his crop stored in his packing shed and other places about the orchard. He had made a tour along Commission row to see what were the prospects, but the prices did not suit him.

He had just opened a few boxes to see how the apples were keeping, when a very pleasant looking man appeared and said, "This is Mr. Wilson, I presume." "Yes," said Mr. Wilson, "that is what they call me." "My name is Bland," said the man. "I represent the well-known firm of Roseburg and Bloomfield, of whom you have doubtless heard, because they are known all over the United States, but until recently we have not operated largely in this part of the country. We have concluded, however, that we want to get started here and handle our share of the boxed apples grown in the northwest. I have been referred to you as one of the prominent fruitgrowers and one of the reliable men of this community, so I have come to see you, and to talk matters over."

Mr. Wilson felt somewhat flattered at these compliments, but tried to conceal his emotions as he replied: "Well, I suppose the more buyers there are, the better chances we have of making sales." "Just so," said Mr. Bland, "and the fact is, we are all the time opening up new territory and while our competitors, sooner or later, find it profitable to enter our fields, some of the best sales we make are in sections where the sales agencies of the other companies have not entered. However, if they do enter our territory, we have nevertheless enlarged the markets, so our being in the field is an advantage for all the marketing agencies, but is more especially of advantage to the grower."

Mr. Wilson was favorably impressed with this plan and really felt that the firm of Roseburg and Bloomfield was a good agency, a kind of benefactor to the whole country, and deserved the patronage of the growers. He showed Mr. Bland specimens of fruit in some of the boxes he had just opened. The fruit was in fine condition and Mr. Bland said, "What have you been offered for these extra fancy Winesaps?" "Well, I suppose I should ask you how much you will give, but to be frank with you, I will say I was offered by the cash buyers $1.25 a box, while the association thinks it can get $1.50, net to me. Now I have told you my secret, tell me what you can give."

"That depends," said Mr. Bland, "on the conditions of sale. If we buy for cash, we will be under the necessity of doing what the other cash buyers do, that is, to get as much fruit as possible for as little money as possible, and then sell for as big a profit as possible. If we take it on consignment, we will do as the other commission companies do; that is, we will ship your fruit to the markets, let you furnish the fruit, bear all the expenses, run all the risks, and then we will return to you what we get, less the commission, less the railroad expenses, etc. But, I have a general method, which is much better for the grower than the plan of the cash buyer, or the commission man. We will pay you when the fruit is delivered on board the cars what it cost to grow it, pick, pack, and haul to town, which I believe is about 50 cents a box, but whatever it is, you are sure of enough to pay expenses, then we will use our large marketing agency to get you the best prices possible and you are to have what we get, less our commission and railroad expenses. I believe, Mr. Wilson, that I can make these apples net you $2 a box, and while I could not guarantee that amount, I am sure market conditions justify more than the buyers are offering. In fact, they are doing just what anybody in their circumstances would be likely to do, but what they are doing is not to the best interest of the growers. Now, Mr. Wilson, since your apples are above the average, I will pay you 55 cents a box when they are delivered on board the cars and when they are sold in the eastern markets I will do as I agreed in reference to the returns. That is practically what the other commission houses are doing, except that I pay you 55 cents in advance and except that we have better marketing facilities than they have, so you see our proposition is much better than theirs." "Well," said Wilson, "I will sell you a carload of Winesaps on the terms that you suggest, and will deliver them to you on board the cars within two days." "That is entirely satisfactory," said Bland, "and I will pay 55 cents a box as a first payment when the car is loaded." "All right," said Wilson, and they shook hands and Mr. Bland departed.

The next morning Wilson began loading a car. He had not told his wife about it. Whether he felt at this time that the bargain had in it risks that she would not approve, is not certain. At any rate, the car was loaded and a check given for $346.50, which Wilson had in his pocket when his wife said to him, "Henry, I see you have been hauling some fruit to town. Have you made a sale?" "Yes, I have sold a car of Winesaps." "What did you get for them?" "Well, I do not know, yet. I got an advance payment of 55 cents a box and the man who bought them thinks he can get enough to net me $2 a box." "That would be splendid, if we could get it, but to whom did you sell?" "I sold to Mr. Bland, who represents Roseburg & Bloomfield, said to be one of the largest marketing agencies in the United States." "Do you know Mr. Bland?" "No, I never met him before," and he drawled a little as if he felt that his wife questioned the wisdom of his transaction. In fact, he had himself begun to feel that he had not been careful enough in making inquiry about the firm with which he was trading.

After a suspense of at least five minutes, during which time neither one spoke, Mrs. Wilson said, "Henry, do

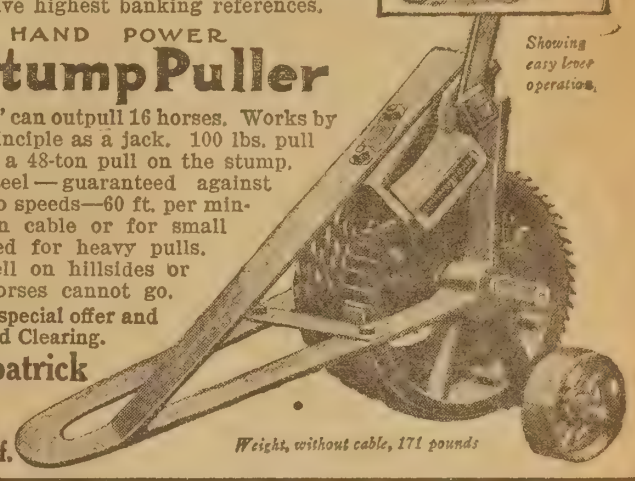
MODESTO, CAL.
Dept. D.

H. G. Hunzicker, of Foster, Wash., pulling a 24-inch fir stump with deep tap roots out of hard ground.



Double Land Values
Pull Big Stumps *by* hand

Cleared land is worth from two to six times the value of stump land

CLEAR your stump land cheaply—no digging, no expense for teams or powder. Your own right arm on the lever of the "K" Stump Puller can rip out any stump that can be pulled with the best inch steel cable. I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references.

HAND POWER
K Stump Puller

Showing easy lever operation.

One man with a "K" can outpull 16 horses. Works by leverage—same principle as a jack. 100 lbs. pull on the lever gives a 48-ton pull on the stump. Made of best steel—guaranteed against breakage. Has two speeds—60 ft. per minute for hauling in cable or for small stumps—slow speed for heavy pulls. Works equally well on hillsides or marshes where horses cannot go.

Write me today for special offer and free booklet on Land Clearing.

# Trapping the Fox and the Coon

By GEORGE LA RUE.

Among the valuable fur bearers are the fox, the otter and the coon. Many a trapper has been disappointed by not finding one of those animals anchored to what his trap was made fast to, when he would have a trap set in such a favorable place that he would have wagered half of his future that he would catch one that night. I learned to catch the coon and fox while a school boy and old trappers were after me for pointers on fox trapping when I was about 16 years old. I never claimed to be a professional trapper but I have always liked the sport since I was about six or seven years of age. I have studied the nature of the fur bearers and got acquainted with their habits and when a small boy I used to trap in the summer just for the sport, in fact I didn't know the value of fur. It was very seldom that I could get a fox to take bait, but they would come up within 10 or 12 yards, sometimes closer to the bait which was a rabbit or chicken, and would leave without touching the bait or springing a trap. I decided to try a new scheme and if I remember correctly I got a big red fox at the first set I made after that. I caught or killed a rabbit and hunted a dense thicket of brush and found a dim trail leading through and decided that would be a good place to make a set. I hung the rabbit so his head didn't quite touch the ground and set one trap near the bait and the other one about 12 yards from the trap and in that dim trail and scattered a little fur on each side of the trail and to my surprise I found a fine big red fox in the trap that was set in the trail in a few mornings afterward while on my way to school. I caught several after that by the same method, but I learned that by finding a crosstrail and making the set in the crossing that my chances were better for a catch. The coon isn't very difficult to trap, but won't walk into an open set like some animals.

They are easily trapped along the water's edge but if the trap is set in a favorable place in the water the trap should be covered with leaves or mud. They can often be caught by placing a bright object on the pan of the trap if the set is in the water. If a person can get a minnow or two or crawfish or frog and fasten on the pan and cover the trap, except the bait, the first coon along will get his front foot in the trap. I never had much experience with the otter so won't attempt to tell how to catch them. I shot one and my brother and I caught one in a trap and that is the limit of my experience with them.

## Walla Walla Poultry Winners.

The following awards were made at the recent Walla Walla Valley Poultry show:

Barred Rocks—L. B. Losey, College Place; B. D. Riser, Walla Walla; A. E. Oliver, Zillah; W. J. Earnest, Walla Walla; D. D. Wright, Walla Walla.

Buff Rocks—P. H. Tomlinson, College Place.

Silver Wyandottes—Sterling Wyandotte ranch, Kennewick; William Shepherd, Walla Walla.

Single Comb Rhode Island Reds—Matt Ennis, Walla Walla; Losey & Stratton, College Place.

White Wyandottes—P. H. Tomlinson, College Place; J. A. Griffin, Eugene, Ore.; A. Brooks Summers, Walla Walla; H. Brown, Walla Walla.

Single Comb Brown Leghorns—E. H. Rosenkranz, Colfax; J. W. Stateville, Walla Walla.

Single Comb White Leghorns—Mrs. Robert Seiberman, Walla Walla; F. W. Sheets.

Single Comb Anconas—Mrs. G. M. McKenzie, Walla Walla; C. A. Burman, College Place.

Single Comb White Minorcas—John Goodhew, College Place.

Single Comb Buff Orpingtons—C. H. Thompson, College Place; Jerry Farrell, Walla Walla; J. B. Thomas, Walla Walla; D. G. Thomas, Walla Walla.

Black Orpingtons—C. H. Thompson, College Place; L. E. Biggs, College Place.

Games—Austin Williams, Walla Walla; George Rogers, Walla Walla; J. E. Johnson, Walla Walla; H. Huber, Waitsburg; W. F. Sheets, Walla Walla.

Buff Cochin Bantams—Paul Rypyzinski, Walla Walla.

Peking ducks—D. B. Riser.

Rouen ducks—P. H. Tomlinson.

Bronze turkeys—Miss Mary Villa; C. M. Bowers, Whitman Station.

The exhibit of State Game farm and penitentiary was excellent. The poultry was of exceptional quality and pheasants were beautiful. The pelican was a great attraction, says J. A. Levy, assistant secretary of the show.

# National Shorthorn Congress Show and Sale

**Chicago, Ill., February 19-22, 1918.**

**International Exposition Bldg., Union Stock Yards.**

No other event ever staged within Shorthorn circles has approached this in importance and magnitude. It will be the greatest opportunity for students of improved live stock and for prospective buyers who wish to raise the standard of their present stock or lay the fundation for breeding herds.

**400 high class Shorthorn cattle,** contributed by prominent breeders from the Atlantic coast to the Rocky mountains and from Canada to the gulf will be entered in the prize contests and offered at public auction.

Approximately $8000 will be offered in cash prizes in the show contests which will call forth the best the breed affords, and the fact that all of these prize winners will be sold insures to the buyers an offering of the highest class.

Extensive programs of an instructive and entertaining character, including addresses by speakers of international reputation, have been arranged for the evenings.

An etire day will be devoted to the milking Shorthorn interests.

Membership badges will be furnished to every person attending the congress.

**For further information address**

# Houser Talks on Grain Marketing Situation

In his address before the grain growers' convention held in Spokane last Friday and Saturday M. H. Houser of the U. S. food administration grain corporation, warned the farmers that it was high time to decide what they proposed to do in the matter of handling their grain this year, whether to continue the sack system or change to the bulk system; that the food administration met with difficulties when it undertook to handle the 1917 crop because of the newness of the work considered and the lateness of the season when it was committed to them.

Mr. Houser pointed out that the 1917 crop was one of the smallest in years, but believes that the 1918 crop will be double that of 1917. It is true that the fall acreage is not as great as it was last year, but he thinks what is seeded will do much better than last year, according to the present prospects. The manner in which the 1918 crop will be moved depends upon the size of the crop and the competition of the tonnage on the Pacific coast. Last year when the delegation went back to Washington contending for a basis market on the Pacific coast they made representations as to prospective tonnage and as to terminal facilities. Those representations have held good with the exception of the completion of the tonnage, but the strike in the shipping industry continued and held back the new ships.

Considering the limited fall acreage Mr. Houser does not anticipate a record breaking crop this year. He thinks the maximum of Washington and northern Idaho will be from 55,000,000 to 58,000,000 bushels; deducting 25,000,000 bushels as the minimum for home consumption and California, this would leave only 33,000,000 bushels, and this can be easily reduced from 5,000,000 to 7,000,000 bushels. Mr. Houser believes there should be put afloat at least 1,000,000 tons of new tonnage this year, and that most of this tonnage should be available to the movement of crops.

It is high time for the grain growers to decide whether they will change from the sack system to the bulk system of handling the wheat, or to what extent they will make the change. He has taken up the price of bags with the various business firms interested, and finds that conditions are such that these firms are practically helpless. Only three or four years ago the most that was paid on grain bags from Calcutta was $5 and $6 per ton, today they are asking $105 and $106 a ton. Practically the only tonnage that is loose and available today for bringing bags here is the Japanese tonnage, and naturally the Japanese are making the most of the situation. If bags must be had, Mr. Houser says, the food administration will do all in their power to obtain them at as reasonable price as possible. The average price for the last 10 years has been 7 1-2 cents, the average price for the three war years has been 8 1-2 cents, under existing conditions from 15 to 16 and possibly 17 cents is the cheapest could be gotten. Even if that could be accomplished "you need not expect even with the government taking a hand that they would be gotten cheaper, but even that is cheaper than 24 or 25 or 26 cents, and no telling where they may be in 30 days, even if they can be had at all."

Mr. Houser reviewed the history of price fixing by congress, how the act of October 14, 1917, gave the president power to fix prices on wheat as he sees fit under existing conditions, and then providing distinctly that under no conditions shall the price for the crop year 1918 be less than $2 per bushel at the principal primary interior markets.

I am wondering if the senators and the representatives who framed this bill—just what they had in mind when they made that statement, principal primary market. I was not in congress. I was not a representative or a senator, and therefore I think some of our representatives should say what was the purpose of it, what they had in mind and what they meant in that language in that bill. As you know conditions in the east are such that the wheat fields are a long ways from the Atlantic seaboard. Many times when a car of wheat would be started in former years before establishment of primary markets, Minneapolis, Duluth, Milwaukee, Chicago, Omaha, Kansas City, St. Louis, Buffalo, etc., they found from experience it was better to confine that car of wheat to one of these primary markets. If they shipped a car of wheat to the Atlantic, while it was in transit, some miller or somebody would pay 3 to 5 cents more for the wheat than they could pay when it got to the seaboard. Therefore they found it more practical to move this wheat to the primary market and then segregate it and parcel it out for the direction and purpose for which the grade of the wheat best destined it. That has created the market.

With us on the Pacific coast, on account of the close proximity of the wheat fields to the tidewater, there has never been any need for those markets. It has been a short haul, from 300 to 350 or 400 miles, and consequently we haven't any of those primary markets that they had in mind when they framed that bill, as I see it, and that is the interpretation of it in the east. Therefore it is either one of two things, as we do not have to make any shipments to primary markets the primary market must be elsewhere or else our primary and terminal markets are one and the same thing. That is not a question that either I or any one else has a right to say any more than the people who framed the bill, and I think it is up to them to say. I think it is up to them to declare to the wheat growers what they had in mind when that bill was framed.

Mr. Houser said that he had received some letters recently that would lead him to believe that there was some feeling and apprehension throughout the northwest that the general food administration was not particularly friendly to this section of the country. He declared himself at a loss to understand why such feeling should exist; that Mr. Insinger and the other gentlemen of the committee who went and interviewed Mr. Hoover felt that the treatment and consideration that they received was all that they could ask and "so far as I know and from conversations that I have had with Mr. Hoover he has a kindly and interesting feeling toward us and he was very much taken with the delegation and the fair and square manner in which they presented their case."

Returning to the question of the price of the 1918 crop of wheat, Mr. Hoover said that while the price was not to be less than $2 per bushel, that does not mean it should be only $2. Continuing, he said:

"Just what should be the final price that is fixed will, no doubt, be along the line of what has been done during the last year. Possibly there will be a commission appointed and we must prepare. This is the only wheat grown that has a surplus to ship to the other parts of the country in a year when it was badly needed, and undoubtedly the people this year will know more about the possibilities of the northwest, that we are raising wheat here and have a surplus. I think it is up to the northwest to see that we have a representation there when the price fixing is being done and whenever that time comes I presume it will be fairly and squarely dealt with. As far as I can and the food administration can, I will do the best I can.

"Last fall, when this question first came up on the basic price, the work was new. I was not quite sure what the position was, and I was unacquainted with the people I was working with. I know them better today and I can go to them and I can ask for more than I did last year, and whatever is done in that matter I think will be properly done.

"In regard to the bag situation, seeing the shipments of grain going east today I noticed almost a third of it is moving in the sack. I think this is a serious mistake. I know, and we all know, there is little if anything to be said in the general run of the second-hand wheat sack, but it is a whole lot better if it is patched up than no bag at all.

"In regard to the handling of the crop this year, there was some complaint, and I notice the old reliable Spokesman-Review here—the paper I read when I was a boy and used to turn to when the free silver argument was before the country and any question that came up it always used to be left to the Review—they got a wrong idea of the embargo put on the shipments to the terminals. You all know when the delegation went back

M. H. Houser.

last year to establish the facts, they made certain representations that we had so many ships, so many mills and we had so much terminal elevators and so much terminal facilities, and on that representation we were given a terminal basic price. Well, what happened? The wheat started to move and it was only a short time until it became very apparent that the terminal facilities were going to be deficient and quickly filled up. Now then, if we should let the shipments continue to come until those warehouses had been filled all we could have said is, 'Here, our terminals are are we going to do?' They could say, 'We gave you the basic price on the representations the ships in the terminals would take care of themselves.' There was a condition arising that made it imperative shipments should stop coming down there. As long as there was an embargo issued it made it both practical and possible to arrange some way of payment for the rest of the wheat that was left in the country and could not get to tidewater, and I thought it was much better to put on the embargo and keep the supply from increasing there, and thereby make it possible for the payment of the carrying of the wheat. The price which this commission fixed for this year was at the terminal basic points, and I could not pay under the price, I could not pay for wheat in the country; it was impossible; I would be breaking the law to pay for it in the country. The rule was not framed properly, and therefore we had to do the best we could under the circumstances, and by putting on an embargo from making any further shipments necessitated meeting the situation in some way, and we have tried to meet that the best way that was possible by allowing your interior dealer the carrying charges of so much per month, which just about pays it, and he in turn could settle with you, and if he couldn't settle in full he could very nearly do so.

"This leads up to the proposition that there has been more or less criticism this year on account of the delay in final settlement. You know our quality was poorer this year than it has ever been that I can remember almost. When they started to buy this wheat and pay for it in full the complaints were coming in 50, 100 and 200 a day that we were being robbed. I immediately put the matter up to the grain people and asked them what the trouble was and I found out it was a lack of understanding. As you know, this year we are buying wheat on the basis of the federal grades while heretofore we had been buying wheat on the average, and we would try to average it up one man with another's. This year every lot of wheat is going on its merits, and we have had the poorest quality in years, and the farmers claimed they didn't have the separators, the people in the country didn't know how to determine the grade and in order to have them play safe they were taking a grade or two under what the wheat would grade. Then I put it up to them this way: If you can't buy wheat as you should why not act as a commission man and ship the wheat down there and pay what the wheat brought and charge him for service and have it all open and above board. The mills took 30 or 40 days before they would give the returns and the bookkeeping where you have every car and sometimes one car has three or four different grades of wheat, it took a lot of trouble. I know every grain firm in Portland and Seattle worked into the night until 11 o'clock or all night doing the best they could, and I think when you realize the difference in the grades and the method of handling and the other details, the delay was almost impossible to avoid with this commission basis. If they had bought your wheat outright, they would have had to discount that enough to pay for the delay until they could get their money and what is the difference whether it is figured one way or the other? The thing to do is to try to eliminate as much of the delay as possible, but when it is all said and done I think we will get all or practically all of the wheat shipped out between now and the first of March.

Mr. Insinger—I will ask Mr. Houser to state what allowance will be made for sacked wheat on this crop?

Mr. Houser—That is rather hard to answer at this time, but there will be a great deal of consideration given to the price of the bag. It is true I do not think it is going to be possible to anywhere near recompense for the outlay, but nevertheless even today I had in mind that the price should be increased by having in mind to conserve the bags. I thought it was much better for the ultimate good not to make any change at this time, but by having a wide difference in the price that could be gotten for the bag less the difference between the bulk and the sack, hoping the people would hold back the bags and make the shipments of the wheat as much as possible in bulk. With bags at 24 and 25 cents now, I do not know what it will be later on, it stands to reason it is not going to be possible to make all that difference in the sacked wheat, because we do not know what the second-hand sack value will be on the coming year's crop. This year we may get 4½ cents. Some of the millers objected, they wanted to make it five and the farmers and millers four, so we split the difference and made it 4½ where the bag costs on an average 10 or 11 cents. We are going to try, if possible, to follow along that line as much as possible, but when you get up to those extremely high prices the danger of the decline or possible decline of the next year would preclude following it altogether.

Senator McCroskie—I believe I understood Mr. Houser to say the food administration was figuring out a method by which they transport to this coast the necessary bags or necessary material from which bags were to be made, to make up the deficit between the method of handling in bulk and the bags we now have on hand to handle the crop of 1918. Am I correct?

Mr. Houser—Partly so. We are trying to determine how much is needed that the regular handlers of bags will be in a position to get the material with which to make the bags, which are necessary, so that the shortage on the bag material may not raise the price materially. It seems to me there should be some way of putting the requirements of this convention before the food administration.

Senator McCroskie—I infer from that that it is contemplated that the governments of England and the United States are concerned with some means, devising ways of bringing materials to this coast to make up the deficit?

Mr. Houser—Providing tonnage to bring it to this country, whether to this coast or not I would not be able to say.

**Promise Grain Sack Relief.**

Mr. Houser announced the receipt of the following message from the grain corporation:

"Control of grain bag situation is now under consideration by the war trade board, and we hope that something definite and beneficial will be accomplished soon. We are giving the matter of burlap sacks our attention and hope to be able to give you definite information in the near future."

After the meeting, and after having had further communication with the food administration at Washington, Mr. Houser said:

"The grain corporation, acting jointly with the federal food administrator for Washington, Charles Hebberd, desires to urge the farmers to bulk their grain. We realize the situation as it exists at this time, and we wish to assure the farmers that everything will be done to see that the demand for sacks will be met if possible, and at fair prices. This assurance, however, should not cause any letup in the movement to provide bulk facilities wherever possible."

## NOBODY SEEMS TO KNOW

### Meaning of Wheat Law Is Mystery

What congress meant when it put the words "primary interior market" into the law fixing $2 as the wheat price for 1918 is something for a Sherlock Holmes to discover. Other folks can't. Mr. Houser, northwestern representative of the federal grain buying corporation, admits that he doesn't know, and he told the grain convention at Spokane that it seemed impossible to find out from those who passed the measure in congress. His way of looking at it is indicated in his address to the convention, printed in part elsewhere in this issue.

In the meantime the farmers of this section do not believe that the framers of the law meant that the nearest point at which wheat would be worth $2 a bushel was meant to be Minneapolis, which is the case under the grain corporation's ruling of some time ago.

R. C. McCroskey of Oakesdale, still one of the most alert men in the interest of the northwest though past the three-score-and-ten mark and handicapped by the loss of sight, took a prominent part in the convention, and presented an interesting bit of evidence on the matter, Mr. McCroskey said that he had what appeared to be reliable information that Senator Hitchcock, who was active in the interests of the grain price law before it was passed, stated definitely on the floor of congress what the law meant. When asked what was meant by "principal primary interior markets," Senator Hitchcock is reported to have answered that it meant that "every farmer shall receive $2 for his wheat at the point to which he delivers it with his wagon."

Mr. McCroskey told the convention that he was convinced that if the matter were taken into the courts the courts would accept that record as convincing evidence that the markets had not been properly established by the grain corporation.

Mr. Houser is a strong advocate of moderation in this section's appeal on the matter. He thinks it would be unwise to press the claim for a $2 market at every interior shipping station, but that it would be wiser to try to have northwest coast terminals made the "primary interior market" for the northwest.

## *Exports Amount to Only About Five Per Cent With No Increase in Sight*

By E. L. POTTER

The annual meeting of the American National Live Stock association at Salt Lake January 14 to 16 was one of the largest and best attended in the history of the association. The chief points discussed in the course of the convention were "meatless days" and the marketing situation. The serious feature of the present beef situation lies in the heavy increase in the supply of beef without a corresponding increase in the outlet. The secretary of agriculture estimates that on January 1, 1918, the total number of cattle in the United Sates showed an increase of 3,500,000 head, the number of hogs a decrease of 4,700,000 head, and sheep a decrease of 2,400,000 as compared with the number in the country one year ago. Not only is the number on the farms increasing, but the number being marketed is following a similar course. The department of agriculture has just recently announced that the receipts of cattle at 52 leading markets showed for the first 11 months of 1917 an increase of 4,400,000 head as compared with the receipts of the same period of 1916, or an increase of 26 1-2 per cent, an increase certainly worthy of serious consideration. On December 1 the amount of frozen beef in storage in 297 leading storage plants was 57 per cent greater than on December 1, 1916. The month of November alone showed an increase of 27 per cent.

We hear a great deal about the needs of our allies for beef, even in face of this great increase in supply our exports only amount to about 5 per cent of our supply and according to the food administration is not apt to increase soon. The general attitude of the stockmen is that they are more than willing to do all in their power to increase production in accordance with the demands of the food administration, but they feel that it is up to the food administration to find some adequate outlet for this increase.

Joseph C. Cotton, the federal food administrator for meat products, addressed the convention and announced that a holiday from the meatless day would be granted in the western states for two months as has already been announced in the press. He further promised aid in the way of publicity to encourage the use of lamb and mutton rather than pork. The announcement made early in the war that lamb was not to be used has caused great harm and while the attitude of the food administration was at once changed on this point and the liberal use of lamb and mutton both is now encouraged since these products can not be exported the general public is not very well aware of the change and there are hundreds of conscientious housewives that still regard it as almost a crime to use lamb. Mr. Cotton would not, however, promise any permanent relief from the meatless days as he felt that while there was a surplus accumulating just now there was a shortage only a few months away.

Louis F. Swift of Swift & Co., was also at the convention and finally consented to break his rule of silence. His very willingness to come before the producers in person was hailed with a good deal of pleasure. He said that the published statements of the profits of Swift & Co. as being 34 per cent was not entirely correct since this was on a capital stock of $100,000,000, when it should have been based on a combined capital and surplus amounting to $160,000,000. Even this modification, however, only brought the profits down to a little more than 20 per cent, a figure so large as to make the producers green with envy. In regard to the surplus of beef piling up in the freezers he would make no definite statements except that he felt that it would all be needed soon. As to prices he felt that they would not very soon be lower but he did not say they might be higher so the producers got cold comfort out of that, since prices are already in many places below the cost of production. Hay, labor and other expenses have more than doubled while cattle prices have not doubled by a long ways.

The marketing committee, which was established at the El Paso meeting two years ago, gave a long report of its activities. This committe was formed with the purpose of "fighting the packers," although it has really a broader view of the situation than any mere antagonism toward the packing house interests and is trying to do everything in its power to correct the two great abuses of live stock marketing, i. e., the too great difference in the price the producer receives, and the one the consumer pays; and, even more important, the excessive, and often apparently unwarranted fluctuations in live stock prices which make it impossible for the producer to know within 20 per cent of what his stock will be worth a month hence. This latter is especially hard on the feeder who never knows whether he will double his money or whether he will lose every dollar he has invested. The marketing committee during the past year has secured an investigation of the packers by the federal trade commission, assisted by the United States department of agriculture and backed with an appropriation from congress of $250,000 to cover expenses of such investigation. (2) It assisted Mr. Wattles, food administrator of Nebraska, in securing a withdrawal of advance charges by the commission merchants of South Omaha whereby commissions would have been increased 25 per cent to 50 per cent, which would have cost the producers over $450,000 per annum at the Omaha market and what is more important the case was being watched by other markets which would have doubtless have increased their rates had the Omaha people been successful.

In spite of the avowed purpose of the association to do all in its power to help the live stock producer the sentiment everywhere was to the effect that the chief business of the country was to win the war and that if it should become necessary for the live stock producers to undergo severe losses they would do so willingly and cheerfully and with the feeling that they had sacrificed nothing as compared with the boys who are doing the actual fighting.

The next place of meeting is to be in Denver, although both Spokane and Portland wanted it. Spokane withdrew in favor of Portland, but the sentiment was too strong in favor of some more central point such as Kansas City or Denver.

# Three Hundred Sheep on 700-Acre Wheat Farm

"If it had not been for my sheep I would have had no income tax to pay this year and would no more than have made expenses," said R. G. Lyle, the pioneer "sheep farmer" of Whitman county, who has been raising sheep on his farm on Union flat, not far from Pullman, for 12 years. There has been much said and written about keeping sheep on the farms and much of this has been conjecture or theory. But there is no theory with Mr. Lyle's expereince. He has been in the business long enough to know and he is preparing to keep more sheep than ever in future years. Agassiz once said: "If you want to know how many legs the grasshopper has, ask the grasshopper." In other works go to headquarters, and The Farmer correspondent went to Mr. Lyle, who is the pioneer farmer-sheep raiser of the wheat belt to ascertain just what are the facts in regard to keeping sheep. His talk is interesting and instructive.

"I have kept sheep on my farm for 12 years and find they pay more clear profit than any other portion of my farming industry," said Mr. Lyle. "Owing to the hard winter last year and fear of a repetition of it and a shortage of feed due to the driest season we have ever known, I cut down my flock to about 180 head. I sold off all the lambs, including the ewes. Last year, as every farmer and stockman knows, was a bad year for sheep. The lamb crop was very light. The long, cold, wet spring made it difficult to save the lambs and I only raised a little more than 100 head. I sold 116 head for an average of $13 per head, which made a nice income. I could have had more if I had sold them at auction for people are beginning to realize that there is money in raisng sheep in connection with farming. Sheep no better than mine have brought $18 and $20 per head at auction sales recently.

"My sheep sheared an average of 10 pounds last year and I got 53 cents a pound, or an average of $5.30 per head. I had been breeding for January and February lambs, but, owing to the unfavorable sprnig last year will have my lambs come this year in April."

Mr. Lyle was originally a wheat farmer, but he fenced a large portion of his land with woven wire fencing and engaged, many years ago, in hog raising on an extensive scale and he made money on his hogs, but he tried sheep 12 years ago and they proved so much more profitable that he practically went out of the hog business and raised sheep. Primarily he is a wheat farmer still, but his sheep have been bringing more profit than his wheat, amount of work, capital and expense considered. He has 700 acres of land near Pullman and generally keeps from 150 to 300 head. In the future he plans to keep more, as he finds he can raise more sheep at a profit. He has Shropshires, which he thinks are the best for farm purposes. He has bred them up by the use of purebred bucks of large size and has a fine herd that are practically purebred, although not registered. He sells the ram lambs, or many of the best ones, to owners of large flocks and every fall has a lot of wethers to turn off for mutton, and he gets a fancy price for them.

"It requires study and patience to learn the sheep business,' said Mr. Lyle. "I have learned much since I started in. I believe that many sheep can be kept on 160 acres if it is farmed as I farm my land. I do not summer-fallow as others do, but I raise some pasture on my summer-fallow land. I sow wheat in the fall on summer-fallow. The next year I sow oats or barley in the spring and sow five or six pounds of sweet clover with the grain. When the grain is cut the sweet clover makes the finest kind of pasture. I do not plow that up for summer-fallow, but let the sheep pasture on it until fall and then plow it late and sow it to fall wheat. Perhaps I do not get quite as much wheat as I would if the land were plowed earlier in the summer, but I get the pasture and the sheep running on it fertilize it and I think that even if I lose a very few bushels of wheat the next year I get more than its value in pasture. I only summer-fallow one-third of my land each year and farm two-thirds of it, raising two crops, one of fall wheat and one of spring barley or oats, with the sweet clover. The sweet clover benefits the land and the sheep running on it also fertilize it. Some people think there is danger of the sweet clover spreading and taking the ranch, but I have found no trouble with it in that respect.

"I raise alfalfa for hay, but do not let the sheep pasture on it. That is unsafe. I have lost a great many sheep from bloat while pasturing on alfalfa and it is very dangerous. They do well on alfalfa hay, but it is not the right pasture for sheep."

Asked how many sheep 160 acres of ordinary wheat land ought to keep in connection with wheat farming, Mr. Lyle said: "That is a hard question to answer. But I can handle 300 head very easily on my 700 acres and I believe I could handle more and still raise good crops of wheat. If every farmer tried my plan of raising pasture and farming two-thirds of his land every year as I do, I believe that about that number of sheep can be raised profitable on that amount of land."

Mr. Lyle's experience has shown that about one sheep for two acres of grain land is a safe number and will yield a good profit. Taking that as a basis and using his experience and his plan for a guide, the ordinary grain farmer with 160 acres could keep from 75 to 80 ewes that would bring him from 80 to 100 lambs a year and make a good profit from them without interfering with his wheat crop. With lambs selling for from $10 to $15 per head in the fall, and wool bringing from 50 cents to $1 per pound (the price sheepmen expect this year), and an average of from eight to 10 pounds can be expected each year, it is easy to see how a man can add to his profits if he adds sheepraising to his wheat farming in the Inland Empire.

Mr. Lyle had come to meet the income tax collector when seen by The Farmer correspondent. Like every other wheat farmer in the northwest his grain crop last year was light, but his sheep saved him from loss and made a nice profit on his year's work.

Mr. Lyle is a pioneer of the Palouse country and one of its most successful farmers and a real patriot. He is doing all he can to increase production of food products and wool for clothing. He has been spending his winters in town, but will go back on the farm in the spring for his oldest son, Floyd A. Lyle, is now in France, fighting with the American army, and Mr. Lyle will have to take his son's place on the farm this year.

Even before sheep reached the present high prices Mr. Lyle was making good profits on his sheep. He not infrequently made 100 per cent each year on each of his ewes, selling the lamb and the wool for more than the value of the ewe and the cost of her keep for a year. He has done this many seasons since he began raising sheep more than a decade ago.

## SEEK MORE MEMBERS

### Farmers' Union Starts Campaign

President A. A. Elmore of the farmers' union of Washington and northern Idaho, has announced the opening of a broad campaign for increased membership. It is the plan of the committee in charge to visit every farmer in the district and invite him to become a member. If he has reasons for not so doing it is intended to make a record of such reasons with a view on the part of the union to meet such objections if they appear to have validity.

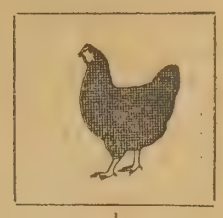
## African Ant-Eater

Among the curious African animals is the aard-vark, from the Dutch word "Aarde," earth, and "Varken," pig. As the picture indicates, this is an ungainly animal resembling a short-legged pig with a thick, heavy body, nearly naked or sparsely clad, bristly reddish-brown hairs, and a long, narrow head with a pig-like snout. The ears are long and erect, the eyes are small, and the mouth is small and tubular, with a long, slender tongue capable of extension. A full-grown aard-vark is about three and a half feet long, or, with the tail, more than six feet. It is a timid, inoffensive animal, nocturnal in its habits, and lives

Aard-Vark.

in burrows in the ground, where it sleeps usually all day long. Its limbs are armed with powerful claws, four on the front feet and five behind. This gives it great facility in digging and it will burrow so rapidly, if pursued, throwing out great clods of earth between its hind legs, as to get out of sight in a few minutes. The burrows of the aard-vark are generally near the mounds of white ants, on which they feed almost exclusively, hence the animal is named the ant-bear by the English colonists in Southern Africa. The flesh of the aard-vark is wholesome and its hams, salted and cured like pork harms, are good eating. Their skins, too, are valuable for leather. A similar animal is found in northeastern Africa, having less hair than the Cape aard-vark and a longer head and ears.

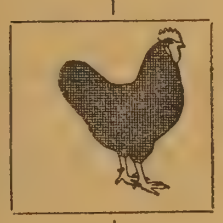
## Store Ice and Save Ammonia.



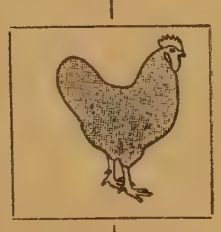
Such importance is now attached to ammonia as a war commodity that the food administration is planning to effect a reduction, if possible, in its use for making artificial ice. Ammonia is widely used for making ammunition, for cold storage and for the manufacture of artificial ice.

### Cares for 1200 Children.

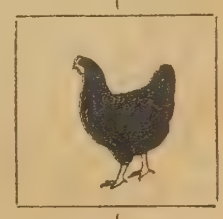
Lady Beatty, wife of Sir David Beatty, commander of the British fleet, cares for over 1200 children, all of whom belong to sailors who lost their lives in the Jutland naval battle.



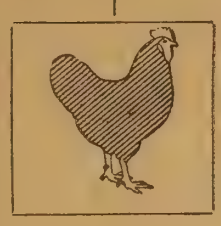
# WANTED



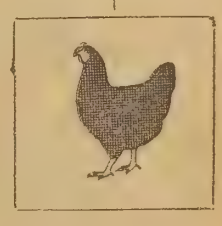
## Good Breeding Fowls, Hatching Eggs, Baby Chicks



Just as the high cost of poultry feed is forcing many small flock owners in town out of the poultry business, the attractive profits that farm flocks can be made to yield is developing widespread attention among ranchers.



If you have good breeding birds, hatching eggs or baby chicks to offer, by all means advertise the fact in farm papers this season. We predict that such advertising will bring you mighty pleasing results.



### More Than 50,000

farm homes receive The Idaho Farmer, The Washington Farmer and The Oregon Farmer regularly each week. Each of these papers carries a corking good page of breeders' ads. For good returns your own birds and hatching eggs ought to be offered there during the mating and hatching season.

Send the coupon today for Poultry Breeders' Advertising Rates for this combination of three big state farm weeklies.

# How To Do More Farm Work With Less Hired Help Is Problem

The farm labor problem in these days of war does not depend wholly upon being able to hire one or more farm hands. It is possible to find ways and means of increasing farm labor efficiency from 25 to 50 per cent on the farms of Washington. This is the opinion of J. C. Scott of the State college at Pullman, who is also labor specialist of the United States Department of Agriculture.

"In the first place," said Mr. Scott to the Farmer, "the best way to get the largest possible amount of farm work done with the smallest manpower is by use of farm machinery. In order to realize this one should go back to the time of the cradle and flail. The average amount of work that could be done in those days was three-fifths of an acre of cradling, binding and threshing. By the new method of the combine you can average six and a quarter acres a day or 143 bushels. By the old method it would take 10 days to do the work done in one day by the two-man combine. Two-man combines are no longer an experiment. Last year in the Walla Walla and Big Bend countries they were used and I have yet to hear a report against them. Moreover, one man can run a 34-horsepower tractor which will pull a six-bottom plow. Tractors can be used more generally in the Palouse country. One man whom I know is farming over 3000 acres of land in the Palouse country told me the other day that the labor problem would not trouble him if he could get one good man that could run the tractor. He said he could run a tractor himself and they could get the work done between them; if necessary he could get some 16-year-old boy to tend to the plows behind the tractor. Plowing with a big tractor needs another man, but a good 16-year-old boy can and will do the extra work. Huston McCroskey of Garfield figures on getting a 45-horsepower tractor driven by one man and pulling a six-bottom plow.

"The four points worth considering in favor of the tractor are: (1) Labor saver. (2) Big saver of horse feed. (3) Since the farmer is in such keen competition with other industries in hiring men, the hired man will prefer to work in town where he will not have to get up at 4 o'clock in the morning, feed and curry and harness a bunch of horses. (4) If there are two or three boys in the family they can keep the tractor running 24 hours or easily put in two shifts.

"Among other farm machines the automatic beet topper and lifter is of great value. The Utah and Idaho Sugar company, I am informed, will have these machines to rent to farmers in the Yakima valley.

"The milking machine is another important labor saver, wherever there are 20 head of cows or more.

"One young man in the Palouse country and his brother say they are going to get their work done this year whether they can get any men or not. They are going to get out and work. Labor efficiency can be inercased if every farmer in the Palouse country will get out himself and take a team every day. As a rule, many Palouse farm owners have not heretofore found it necessary to drive a team or themselves work as hired men in harvest time. On a farm of 300 or 400 acres two men can do the work. In one instance in the Big Bend country a man and his wife harvested his crop with a combine, the wife driving and the man doing the rest.

"Of course one advantage of the binder in the Palouse country is that they can begin harvesting a little earlier and the grain will dry out somewhat quicker in the shock than it will on the ground. On the other hand it usually takes one man to drive and two men to shock on the combine, while a header crew requires at one time a header puncher, loader, four box drivers, spike pitcher and stacker.

### Exchange of Labor.

"Another method in increasing the efficiency of farm labor is that the farmers could exchange work, make up a harvesting crew among themselves, without hiring any new men.

"Then again exchanging between communities according to climatic conditions. Farmers around Oakesdale go to the Sunset country 12 or 15 miles, and by the time the work in the Sunset country is done the season will be beginning in the Oakesdale country. In one instance 36 days were spent in threshing in the Oakesdale country, and then back to the Palouse country at the beginning of the threshing season. This exchange of work is especially applicable to early spring work when there is not much of anything to do before spring work opens. This labor can be transferred to sections where spring work begins earlier.

"The farmer should realize now as he has never realized before that he is in keen competition with other industries; better food, more wages, shorter working hours and better sleeping conditions will be required more now than ever before to keep farm labor on the farm.

"The postponement of public and private improvement not of absolute and immediate necessity will release much labor for farm use. The postponement of the planting of orchards or other crops requiring much labor, and where there is no immediate return of food is also a method of saving farm labor.

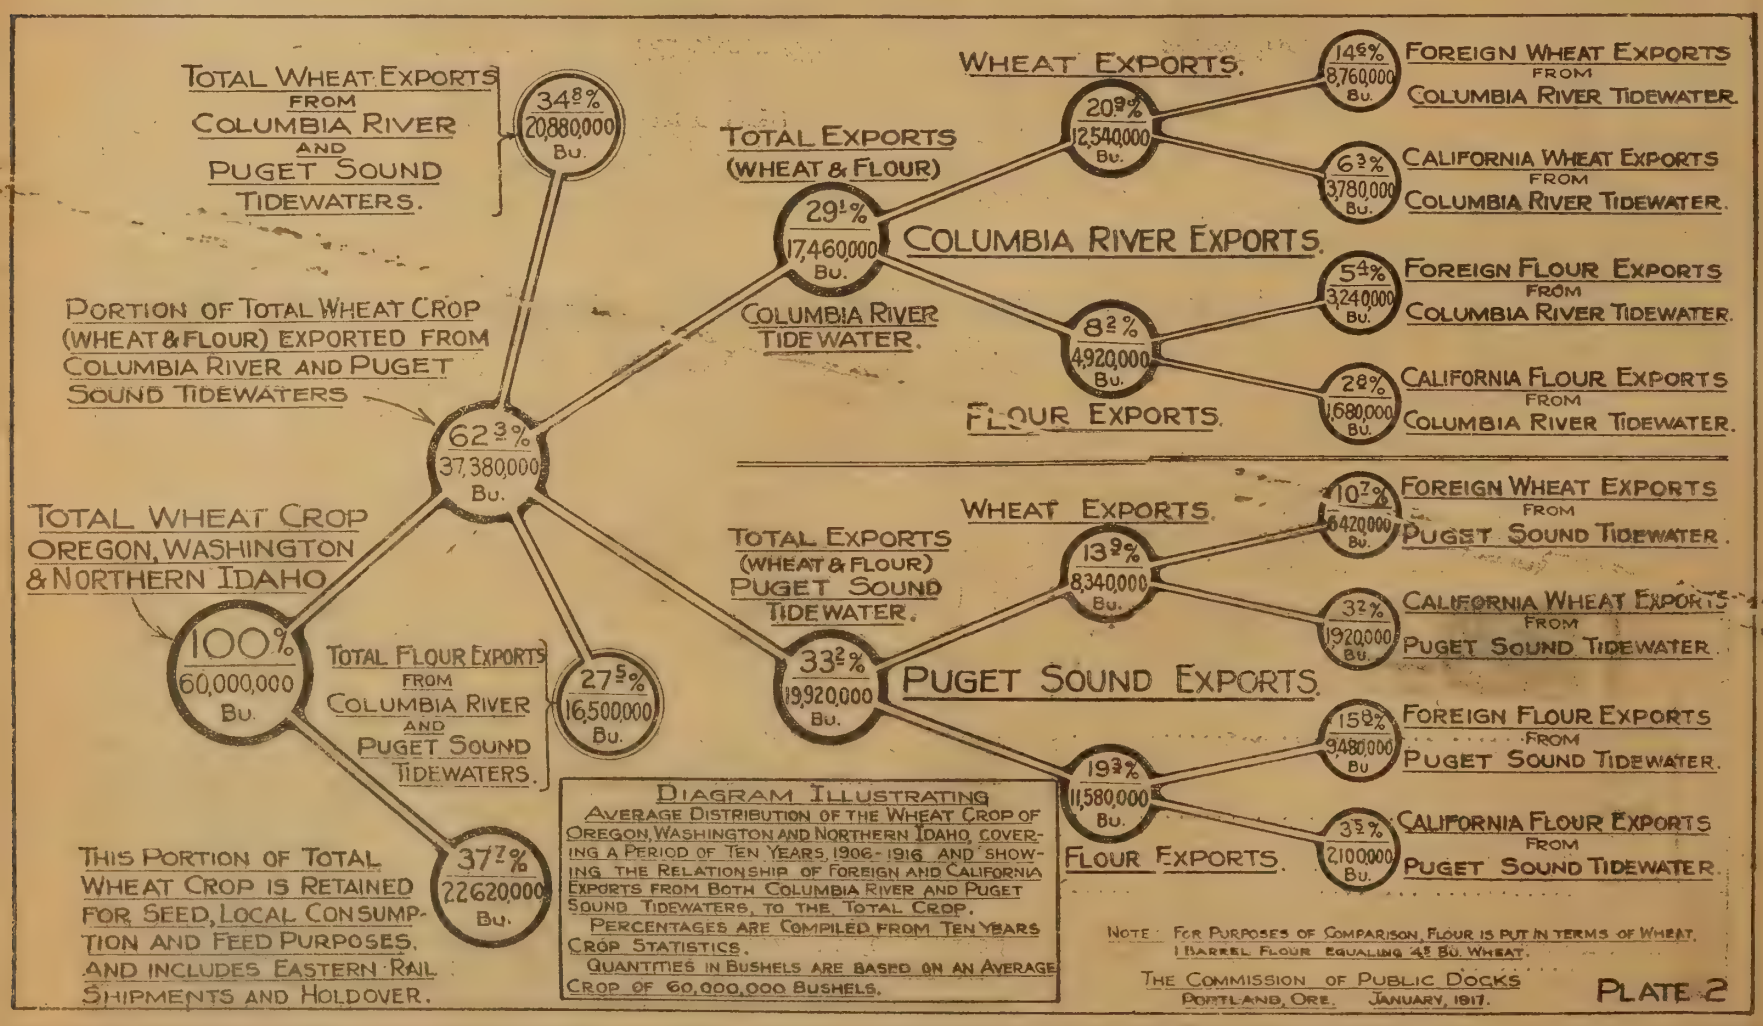
"Another thing, the farmer should stick to stable crops. Don't let somebody get you started on some new kind of crop and don't experiment on these new ideas. You can not now afford to waste time and money in this way. By sticking to the old reliable crop you know exactly what to do and when to do it, thus saving a lot of time. Don't do unnecessary things.

"The best source of labor comes from the farmer himself and then from his family. In order to get more work from the family six days of school in time of war will add a month to summer vacations. In time of great harvest stress it is a good thing to close the school and business houses and let everybody get out and help in the apple harvest, potato harvest or beet harvest.

"In the United States there are estimated to be 700,000 retired farmers. These should get out and work. One retired farmer about 50 years of age, was telling me he wished he could get into the army. I replied that it would take at least one year's training to make him fit for service; in the meantime he would have to be fed and clothed and men hired to train him to get ready, while he was trained and all ready to render immediate service on the farm, and where could he render more needed and patriotic service.

"In cities and towns many business men who come from the farms can take their vacations in time of harvest and go out and help.

"As to conscription of labor there are many difficulties. Men should not be allowed to be idle and on the other hand if you have a ranch and have six or eight horses, are you willing to trust these animals to conscripted men? Maryland has a law that every man between the ages of 18 and 50 must register, any man loafing can be put to some useful work. If we had a law like that in Washington then it would be up to us to see that we had work all the year round for these men.



"I am given to understand that the vagrancy law in this state can be extended to loafers, either work or move on.

"Most farmers expect the government to do something, but why can not each community take up this labor problem and carry it on?

"The U. S. department of labor, county agents, farm help specialists, state council of defense, the labor department of the Spokane Chamber of Commerce, have agreed to help in the question of better distribution of labor. Heretofore employers from Ritzville would call Spokane for men. When the work is completed these men would return to Spokane, not being put in touch with other employers in the vicinity of Ritzville, thus causing loss of time and money in finding another employer almost in the vicinity where they last worked.

"The thing is to get the farmers in every town in the country, even in a hamlet where there is only a store, to organize, appoint a committee and give that committee power to establish a farm labor bureau. This plan has been worked out in Spokane county and Yakima county with great success. Men were found who were willing to donate part of their time to take charge of this labor bureau, especially men with offices where the farmers could phone for help, and where a blackboard will inform the farmer with regard to the supply of men. The U. S. department of labor has promised to do all it can to make this a success and to furnish these sub-agencies created by the farmers in any community with franked envelopes, report blanks, etc., to report to the nearest U. S. labor agency. Lawrence Wood has been placed at the head of the government employment bureau of the state of Washington. B. A. Hunter is the head of the employment service in Spokane. All the year round government agencies have been established at Walla Walla, North Yakima, Seattle, Tacoma, Aberdeen, Everett, Bellingham, Seasonable labor employment offices at Kennewick, Puyallup, Sumner, Colfax and Wenatchee. All these government offices will keep in touch with one another and know what is being done as to the proper distribution of labor throughout the state."

# Where Does the Wheat Produced in the Northwest Go, and How Does It Go?

One of the interesting addresses at the grain convention in Spokane was that by Engineer Hegardt of the Portland Dock commission. The above is a chart prepared by Mr. Hegardt showing what becomes of the wheat raised in the three states of the northwest. The calculation assumes that the production is 60,000,000 bushels a year, which is probably a few million bushels more than the usual crop, though there will be a strenuous effort made this year to produce that much. The yield, however, makes no difference with the percentages that are shipped as indicated in the above chart.

# FLORA FLIRTS IN A BIG SNOW STORM

Flora Flirt, dressed nice and warm,
Takes a walk in a big snowstorm

Daintily her dress she lifts
As she trudges through the drifts.

A handsome man, all dressed in fur,
Says "Hello, kid!" and winks at her.

Flo winks, too. Joy wreathes her face
As she leads him to a sheltered place.

She snuggles close to the young man bold;
His arms 'round her keep off the cold.

A big snowslide their romance wrecks—
And buries them up to their necks.
**The Moral**—Now, girls, in flirting make no blunder,
Or you may find you've been snowed under

# War Machine Ready

## *Secretary Baker Tells of Good Results*

Secretary of War Newton Baker told the military committee of congress Monday and, incidentally, the whole world, that this country had half a million men ready to take up the brunt of war in Europe early this year, with a million more ready to go as rapidly as transportation across the Atlantic can be had. And he said that this army was completely equipped with food, clothing and guns.

This announcement, which occupied nearly all day in the making, resulted from attacks made upon the war department by Senator Chamberlain of Oregon and others, who declared in public addresses and statements that the department had failed miserably in its preparations.

It was charged by Senator Chamberlain that the war department had not equipped the army properly; that the great army camps had not been properly constructed; that thousands of American soldiers in camps had died because of lack of protection from weather and insanitary conditions; that there are not enough guns for the soldiers; that the American soldiers in France have borrowed French guns with which to train.

The movement on the part of Senator Chamberlain and his associates is part of a greater movement for the creation of a munitions director to coordinate all the preparations for war in the way of equipment. President Wilson has gone on record as vigorously opposed to the creation of such authority, arguing that it would take out of the hands of those who are now in a position to profit from experience the control of their activities.

It was admitted by Senator Chamberlain, who is chairman of the military committee of the senate, that the reply of Secretary Baker made a profound impression.

At this writing, the secretary is still to appear before the committee for further statement concerning further war preparations, at which time those desiring so to do will likely question him at length.

Secretary Baker said that this country was getting its big guns from French and English factories, because those countries had them and the equipment to make them and preferred that they be furnished by them rather than that ships be taken from food and troops transportation to carry them to Europe. He said that this country now had in process the manufacture of 60,000,000 shells, and that they would be ready for use as rapidly as the American army could use them. He said that every man who was ready to use a rifle had one of approved type, and that rifles and ammunition would be supplied as rapidly as men could be trained and put into the field. He answered the charges of unsanitary and unhealthful conditions about camps, declaring that there had been instances of failures along this line, but that they were only instances and that the general condition was admirable.

### Politics Get Stimulus.

Politics took the center of the stage in congress the other day when Senator Stone of Missouri, democrat, made a speech in which he charged certain republican senators, among them Senator Penrose of Pennsylvania, with playing politics. He charged that the investigations of governmental departments which have been under way were started for the purpose of handicapping the administration. Senator Penrose and other senators replied in kind. This is the first open break between republicans and democrats in congress since the war began, and it is likely that the break will grow wider rather than heal over until the next presidential election.

### More Food Conservation.

President Wilson has issued a formal proclamation calling upon the people of the United States to save 30 per cent, or nearly one-third, of the wheat and meat normally consumed. He points out the great and increasing need of the allies if they are to survive against the attacks of the Germans. The proclamation calls upon dealers to restrict their customers to 70 per cent of normal purchases.

Food Administrator Hoover has issued another conservation program in conformity with the president's proclamation. Here are the salient points embodied in it:

1. A baker's bread of mixed flours, beginning Monday with a 5 per cent substitution of other cereals for wheat, increasing until a 20 per cent substitute is reached February 24.

2. Sale by retailers to householders of an equal amount of substitutes for every pound of wheat flour purchased at the time the wheat flour is bought.

3. Sales by millers to wholesalers and wholesalers to retailers of only 70 per cent of the amount of wheat flour sold last year.

4. Two wheatless days a week—Monday and Wednesday—and one wheatless meal a day.

One meatless day a week—Tuesday—and one meatless meal a day.

Two porkless days a week—Tuesday and Saturday.

### Revolt in Austria.

Reports of discontent manifesting itself in the form of revolts in Austria, and also to some extent in Germany, continue to come from those countries. It is becoming apparent that the element of people growing dissatisfied with the war in those countries is increasing. It is reported that one of the German newspapers says Von Hindenberg is considering withdrawing from his present leadership because of the growing disfavor in which he finds himself and the militaristic faction with the German people in general.

### Break Diplomatic Relations.

Russia and Rumania, up to recent times members of the entente allies, have broken off diplomatic relations, owing to disagreement between the bolsheviki, now controlling affairs in Russia, and the Rumanian government. Rumania appears in general to consider the bolsheviki as of pro-German character, and has undertaken to check some of their activities as they have affected Rumania.

### White River Valley Cows.

The cows appearing on the honor roll of the White River Valley Cow Testing association in western Washington had been fresh one month or over when the test was made, according to Frank W. Logan, official tester.

Twenty-three cows gave over 55 pounds of butterfat and 99 gave over 1000 pounds of milk. Average milk production for December was 687 pounds per cow; average butterfat, 27.19 pounds; average test, 3.95 per cent, and the average feed cost, $12.56.

High cow for the month was a 5-year-old grade Holstein. She gave 68.3 pounds of milk daily and tested 3.9 per cent, making 83.17 pounds of butterfat for the month. This cow holds up well the entire lactation period. She belongs to Cochrane Bros., and is machine milked.

## Some Yakima Breeders

For uniformity in conformation, size and type Charles G. Sprong's bunch of September Durocs ranks high. The Sprong ranch, at Grandview, Wash., has purchased a number of prize-winning Durocs and this new lot of gilts and boars are well up to standard. They have been well and carefully fed and are in the pink of condition.

A. D. Dunn of Wapato will enter 15 head of Shorthorns at the Spokane Shorthorn sale February 23. The offerings will include cows with calves at foot, bred heifers and young bulls. The Dunn herd has long stood for all that is good in the Shorthorn breed and breeders who heretofore have not had opportunity to inspect its members will welcome this opportunity.

Among other live stock there will be sold 60 head of registered Holsteins at the California ranch, Buena, Wash., February 15 and 16. The California ranch is owned by Charles Mead Jr., and George A. Gue will have charge of the sale.

**USE THE WESTERN PULVERIZER, PACKER AND MULCHER**

3 MACHINES IN 1

for preparing your seed bed, will increase your crops 25% whether you raise wheat, barley, sugar beets, beans, potatoes, alfalfa or any other crop. A perfect, well pulverized and firm seed bed is as important for one crop as for another. The Western pulverizes and packs as deep as plowed and leaves a loose mulch on top to protect the moisture; saves 1-3 of expensive seed and time, labor and horse power in preparing a seed bed. It is especially adapted for breaking crust and cultivating winter wheat in the spring, or for breaking crust on sugar beets or beans either before or after they are up without injury to the plants.

MADE IN 12 SIZES, FOR HORSES OR TRACTOR USE, IN 1 AND 3 SECTIONS

1918 crop will bring war prices; make it a record breaker in size by using the Western. Send for our free illustrated catalog, giving full description of the machine and its work, also dealer's name and much other valuable information.

Western Land Roller Co., Box 300 Hastings, Neb.

**WHEN PRICES ARE HIGH *and* LABOR IS SHORT**

the farmer MUST save time and effort, not only in producing, but in hauling. The larger the load and the faster the trip to market, the greater the profit.

Good roads have always helped the farmer. Now they are indispensable. Farm labor is scarce. Wages are high. Every hour wasted on the highway cuts down output and eats a hole in profits.

What the farmer needs is not a patch of hard road here and there, but a connected system of hard roads putting him in easy reach of his markets. And to get the best prices he needs **roads that stay good 365 days a year.**

There is no reason why farming communities should not have perfect systems of permanent highways. It is entirely up to them. The roads can be built in two or three seasons. When the cost is spread over fifteen or twenty years the annual tax for both interest and principal is only a few cents per acre. In Vermilion County, Illinois, for example, a magnificent concrete system is being built and the annual tax is only about 8c per acre per year, for 20 years, which covers the interest and gradually pays off the debt.

The farmer should act now in getting road plans under way to further his own interests. Systems of permanent highways benefit everyone, but to the farmer they are *indispensable*.

# Dirt Pit Silo Cured Beet Tops

## *Sugar Man Tells of Success of His Experiment*

By A. E. GIPSON.

An experiment important to all who use beet tops for feeding purposes was conducted last season by Mark Austin of the Idaho-Utah Beet Sugar company.

Mr. Austin conceived the idea of siloing the green beet tops in a cheap ground silo, and he did it in the following manner. Taking his teams and scraper, a pit was excavated 100 feet long, 4½ feet deep and 14 feet wide. He then filled it by a layer of straw in the bottom of the pit, followed by a layer of beet tops, alternating in this way until the pit was filled. In filling the team was driven into the pit in unloading the beets, thus packing the tops and helping to settle the contents of the silo.

After the pit was filled about six inches of straw was placed over it and this was followed by six inches of manure. In this way the air was excluded and the beet tops were perfectly cured and kept from freezing. One hundred and twenty tons of the tops were put in, at a cost of 60 cents per ton. The cost was figured on the basis of $3.50 a day for men. The beet tops, he said, were not rotted, but perfectly cured, thus increasing their feeding value. Twelve tons of the beets give six tons of the tops. About 80 per cent of feeding value was secured on what was put in. An important thing to observe is to put the tops in shortly after they are cut, or before they have had a chance to dry. Mr. Austin fed something like 500 head of ewes and lambs on this silage, giving them three pounds per head per day in connection with alfalfa hay. The sheep not only relished it, but did exceptionally well, and consumed probably a half, or nearly so, less hay than they otherwise would.

### Help to Buy Stock.

Mr. Austin is so well pleased with this experiment that it will be conducted on a larger scale in the future. Recognizing the value of live stock on the farm, Mr. Austin's company has established a live stock department for the purpose of encouraging farmers to keep good feeding stock. This will enable them both to get a revenue from the stock and to keep up the fertility of their lands. His company will buy the animals and sell to any responsible farmer on long time at the low rate of 5 per cent per annum. The aim is not so much to encourage the breeding of young stock but to buy for feeding purposes and to turn the animals as soon as they are ready for the market.

Speaking about the prospect for sugar beet growing, Mr. Austin said it was yet too early to tell with certainty what the acreage the coming year would be. With the price of $7.25 per hundred fixed by the government it would certainly be impossible for the sugar companies to pay about $8.50 per ton. With an advance of 50 cents a hundred on the selling price of sugar they could advance the price for beets to $10 per ton.

### Cost of Raising Beets.

Regarding the cost of the planting, care and harvesting of an acre of beets, Mr. Austin says it can be done and done well for $58.50. This is figuring every item at a reasonable price. Estimating the yield at 12 tons per acre, which is conservative, and the yield often considerably exceeds this, with the selling price at $8.50 gives a net return of $43.50 per acre, with the beet tops left for feeding purposes. Twelve tons of beets will make about six tons of tops.

If the yield were 15 or more tons the net returns would be increased in proportion. Mr. Austin says they are perfectly willing to increase the price per ton if the government will allow them to increase the price of sugar to protect them from loss. He, however, strongly urges farmers to combine beet growing with stock raising as a means both of adding to their annual revenue and of maintaining soil fertility.

## RAISE MILK STANDARD

### Associations Announce Proposal

At the meeting in Spokane last week of the Northwest Milk Dealers' association and the Pacific Northwest Milk Inspectors' association, a resolution was adopted declaring it to be the policy of the associations to raise the standard of milk for the coming year in every way possible. The former association selected Butte, Mont., as its next year's meeting place, and the latter association selected Portland. Officers elected are as follows:

Dealers—F. B. Flood, Spokane, president; A. F. Bird, Seattle, secretary-treasurer; F. C. Streff, Butte, vice president; directors, F. N. Martin, Spokane; Bert Walker, Tacoma; T. M. Carlyle, Calgary, Can.; August Christoferson, Seattle; E. F. Gentry, Wallace, and A. M. Embrey, Great Falls.

Inspectors—E. C. Calloway, Portland, president; George Henderson, Seattle, secretary-treasurer, and L. Davies, Everett, vice president.

## Hislop Resigns College Position.

Announcement of the resignation of Professor William Hislop as head of the animal husbandry department of the state college of Washington at Pullman has been made. It is stated that Professor Hislop will enter private business in the northwest. He has been active in the live stock industry of the northwest for several years, and is widely known among stock men for his judging at many live stock shows throughout the west.

## Fruit Grower and Buyer

(Continued from page thirteen.)

you know anything about Roseburg & Bloomfield? "Nothing, except what Bland told me." Mrs. Wilson's countenance fell and while out of respect for her husband, whom she really loved, she said nothing, yet she went into the bedroom and took a good cry, for she felt that at least part of their profits were gone. Wilson saw that he had not been cautious. He had sold to a man he never met and that man consigned the fruit to a firm of which he had never heard, and about which he had not taken the trouble to inquire. He knew, too, that by instinct, or intuition, or something else, his wife often reached conclusions that were more accurate than his own, which he believed to be founded upon reason.

He resolved to keep track of that car, so early the next morning he went to the freight office to get the number of the car into which he had loaded his fruit, but had not thought, while loading, to take the number. He also wanted to see to whom it had been consigned. He found that it was billed to Blank of Minneapolis, but he reasoned that they were probably agents of Roseburg & Bloomfield. He found Bland, who was so busy getting other cars started to market that he could not talk, except to assure Wilson that everything was all right.

Days went by. Bland was sending carload after carload out of the country. Wilson tried to reassure himself that he had acted wisely, but was ill at ease. In about two weeks a telegram came from Blank of Minneapolis. The message was directed to Bland, saying: "Fruit received in bad condition. Await your order."

Wilson knew the telegram was false, but what could he do? Again, he found Bland, who assured him that everything would turn out to be all right and ordered the car sent to Chicago. Here it was refused and after a week or two another telegram came, saying: "Fruit received in bad condition. Await your orders." Bland then sent the car rolling for New York. Weeks went by and finally a telegram was received from New York, saying: "Fruit received in bad condition." Bland was receiving dozens of cars at his station in the northwest. Other agents like himself were at other stations in the same country and dozens, perhaps hundreds of cars through these agencies had been sent to the eastern markets.

It was evident now to Wilson that he had been swindled and that his neighbors had been swindled in the same way. He went to his banker to get him to consult Bradstreet and Dun's financial review, in order to find the rating of Roseburg & Bloomfield. Their names could not be found in the directory. Why did I not have sense enough, he mused, as if talking to himself, to make inquiry before I let those thieves have my fruit? Whether there was any such firm or not, as Roseburg & Bloomfield, and, if so, whether or not they were reliable.

Weeks went by before returns came in, reporting the prices for which they said the apples had been sold, less the freight, less demurrage, less the commission at New York, less the commission at Chicago, less the commission at Minneapolis, less Bland's commission.

Bland had left his business in the hands of another man and could not be found. Doubtless the men who employed him took care of his commissions. The returns showed that Wilson was in debt 2 cents a box. He felt chagrined on account of the loss of his fruit and the loss of his own self-confidence, but most of all, he disliked to tell his wife. However, he met it like a man and on returning from town said: "Well, wife, I have had returns from my car of Winesaps." "Have you; what did they bring?" "Nothing," said Wilson; "I am in debt 2 cents a box. Still, I have made a valuable discovery. I have discovered that I am the biggest fool in this community." "No, you are not," said his wife, "for at the Woman's club yesterday I heard of a dozen others who were swindled in the same way. I am sorry, for we needed the money, but I said nothing about it, because I saw you were worried and we can get along somehow. You are the dearest man in the world." "No," said Wilson, "I acted without ordinary business sense, but you are the best woman in the world, for if you had been critical and cross about it we would probably have quarreled and instead of being in closer sympathy with each other, as we are now, we would have been embittered. It is worth a car of fruit to know each other better, but I still insist that I am a fool and that I have paid $600 at least to find it out."

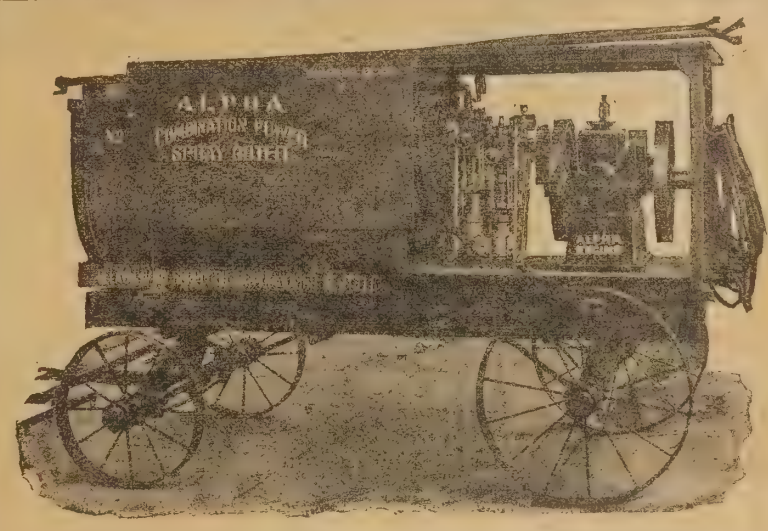
**These tools enable you to cultivate triple the acreage**

They are so scientifically constructed that you can do 3 to 6 times as much as with old-fashioned tools in the same time, and get bigger and better crops because of more thorough cultivation. 45 years of practical farming and manufacturing experience is back of every Planet Jr. Fully guaranteed.

**No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow** sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates all through the season. A hand machine that does the work so easily, quickly and thoroughly that it pays for itself in a single season.

**No. 12 Planet Jr Double and Single Wheel-Hoe** is the greatest combination hand-cultivating tool in the world. The plows open furrows, cover them, and hill growing crops. The hoes are wonderful weed-killers. The cultivator teeth work deep or shallow. Crops are straddled till 20 inches high; then the tool works between rows with one or two wheels. 24 styles—various prices.



**S. L. Allen & Co.** Box 1107P Philadelphia

**72-page Catalog, free!**

Illustrates Planet Jrs doing actual farm and garden work, and describes over 55 different tools, including Seeders, Wheel-Hoes, Horse-Hoes, Harrows, Orchard, Beet, and Pivot-Wheel Riding Cultivators. *Write postal for it today!*

We carry stock in Los Angeles. Agencies in all principal Pacific Coast cities.

**No Diaphragm or Relief Valve Used**

ON THE

**Alpha Automatic Spray Outfit**

The pump pressure is positively controlled by means of a spring joint on each plunger rod. When the pressure reaches the predetermined limit the plungers automatically cease operation, the engine idles, thus saving unnecessary wear on both pump and engine. No part of the mechanism is subjected to the clogging corrosive action of the spray solution.

**A Dependable Engine Drives the Alpha Spray Pump**

When spraying you have no time to lose tinkering with a balky engine. The Alpha engine starts easily without cranking; equipped with a reliable built-in magneto; no batteries or coils necessary.

# Farm Meetings at Yakima

## *Wool Growers, Bee Keepers and Forest Users in Session*

By RAY W. FELTON

Representatives of five branches of agricultural activity met at Yakima recently. Three of these meetings, the annual conventions of the Washington State Wool Growers' association, the Washington Forest Users' association and the Washington Beekeepers' association, were representative of the state at large. The other two gatherings were the Yakima County Farmers' institute and a meeting for Yakima county women, conducted by extension workers from the home economics department of Washington State college. All meetings were well attended, and served as evidence of Yakima's growing importance as a center of diversified farming.

In view of the government's appeal for a greater production of mutton and wool the sheepmen, who met Thursday, Friday and Saturday, adopted a resolution embodying a memorial to Secretary of the Interior Franklin K. Lane, urging that steps be taken to open sections of Rainier National park for summer grazing purposes. The resolution points out that there are many sections of the park wholly unused, and never seen by tourists, which can be used most advantageously by masters of flocks in the summer time who use the Columbia river basin ranges during the winter. These districts in the national park afford valuable range, but are not accessible to tourists, it is asserted. They can be reached by sheepmen without going near those sections which are now frequented by tourists making trips to Mount Rainier, or camping in any of the adjacent valleys.

Yakima will have the meeting of the wool growers again next year. This was decided by a ballot taken at the end of the first day's sessions. Some desire had been expressed to hold the meetings in different centers rather than cling to Yakima as the permanent meeting place. Spokane had invited the sheepmen, as had Walla Walla. F. M. Rothrock, well-known stockman, and J. H. Roberts of the Spokane Union Stock yards, conveyed Spokane's invitation, but added Spokane had no desire to take the meeting away from Yakima if it was the sense of the meeting that Yakima should be the permanent home of the association. Walla Walla then got into the ring and a vote was taken by ballot to decide where the meeting was to be held in 1919. This split it three ways, with the result that Yakima was decided upon, with Spokane second.

J. W. Bradley of the Old National bank, Spokane, was present and told of Spokane's desire to cooperate with live stock interests and to give every possible assistance to forwarding the industry in the northwest.

Officers elected for the ensuing year are: President, Tom Drumheller of Walla Walla; vice president, W. A. McGuffey of Yakima, and secretary, F. A. Sears of Prosser.

The resolutions committee was composed of H. Stanley Coffin of Yakima, F. M. Rothrock of Spokane and C. A. Hales of Pasco. The executive committee's personnel is George Jackson of Yakima, Charles Anderson of Ellensburg and Everett Butler of Prosser.

Professor William Hislop of the state college, who managed the ram sale at the Washington state fair last year, gave a brief report of the sale and told of plans for this year's sale, which will be held on even a more pretentious scale than the first attempt, which was successful beyond even the hopes of the most sanguine. This year's standard has been raised so that none but thoroughbred and standard bred rams will be entered in the ring.

Income tax, exemption of herdsmen from military duty, the necessity of amending the present herd law so as to keep cattlemen off unfenced ranges owned by sheepmen and the forestry department's rule requiring sheepmen to prove they grow hay before they are given range permits were among topics discussed at the first day's session.

Commissioner E. F. Benson of the state department of agriculture, who is an enthusiastic woolgrower and seldom fails to attend the annual meeting, wired his regret over his enforced absence this time.

### Farmers' Institute.

The farmers' institute extended from Monday morning until Friday night. It was very largely attended. The program was arranged by J. N. Price, agriculturist for Yakima county, and Roy P. Bean, agriculturist for the government's Tieton project. The instructors were Professor J. C. Caldwell, H. L. Waterbury, Professor Hegnaur, Professor Thornber, Mr. Price, Mr. Bean, L. M. Lampson, county agent for Benton; A. D. Dunn of Wapato, H. Stanley Coffin of Yakima. It is doubtful if the state of Washington has this winter experienced a more interesting or profitable meeting than the institute at Yakima.

Farm women turned out in large numbers to hear Miss Edna Walker and Miss Elizabeth Jacobson of the Washington State college home economics department. They did work similar to that accomplished at Pullman. Matters pertaining to home management during war time, elimination of waste, strength conservation, feeding of children, fuel economy, saving sugar and making a new shirt out of dad's old one, were subjects which received most earnest consideration.

### Beekeepers' Meet.

Washington State Beekeepers' association held an interesting two days' session. J. B. Ramage of Yakima was elected president; J. P. Hostetler of Puyallup, vice president; W. H. Tucker of Prosser, secretary and statistician, and H. L. Hart of Yakima, treasurer. A committee was appointed to purchase supplies for all members of the association. W. H. Foster, a government expert, who is working under the supervision of Professor Thornber of the state college extension service, attended the meeting and gave the beekeepers valuable ideas on the treatment of colonies infected with foul brood. Mr. Foster will spend several days in the Yakima valley inspecting various colonies.

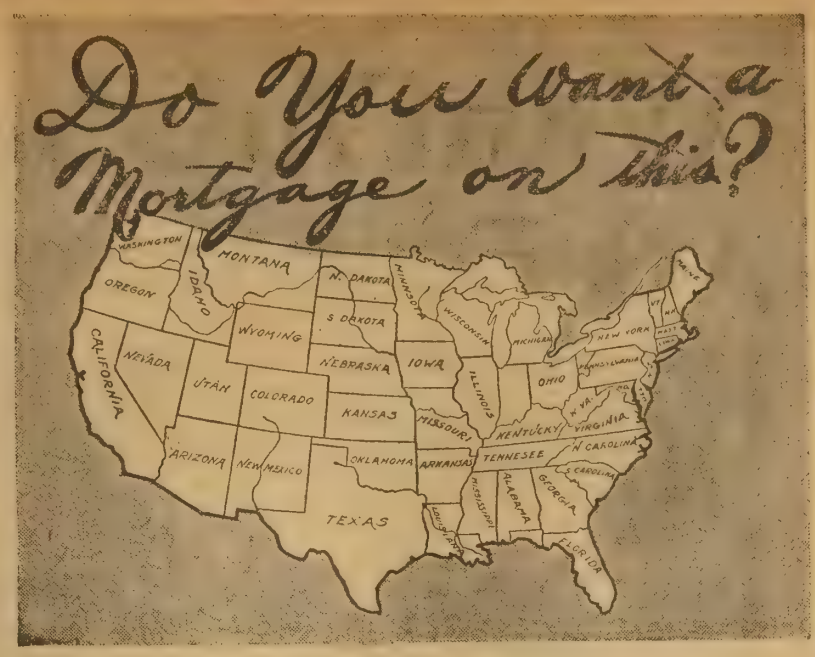
### Corn Show.

In days gone by they used to say Yakima was not a corn country. Showings at the corn show held in connection with the institute told a different story last week. Corn growers experienced in the corn belts of the middle west and south, who saw the exhibits at the Yakima show, pronounced them first class and stories of big yields were in keeping with the high quality specimens exhibited. B. D. Sloop of Outlook, was awarded the blue ribbon for the most perfect ear of corn shown. Professor Leonard Hegnaur acted as judge. Other winners are:

Yellow corn—J. L. Willett, first and third prizes; C. Olson, second prize; J. L. Willett, F. A. Hall, A. J. Johnson, B. D. Sloop, J. A. Starcher, highly recomended.

White corn—C. Starcher, first; John Klingle, second; A. Boggess, third; E. N. Roady and A. J. Plessey, highly recommended.

Calico corn—C. E. Newell, all prizes.



Popcorn—R. C. Woodruff, first; J. H. Morrison, second; R. C. Woodruff, third; best single ear, C. Starcher.

The best 10 ears for all exhibits belonged to J. L. Willett, and he was awarded a prize of $10 therefor. First prize in other exhibits was $5; second, $3; third, $2, while a prize of $1 was given each of those persons whose corn was highly recommended.

## Beans on Summer Fallow.

Arthur Carter, a farmer near Colfax, Wash., raised 10 acres of beans on his summer fallow last year and was so well pleased with the results that he is planning to plant 40 acres this year. Mr. Carter is a fervant advocate of diversified farming and raises a number of hogs, as well as grain. He plants peas on summer-fallow for hog pasture and fall feed, and this year he plans to raise a great many hogs and a large quantity of beans. "The government wants pork and beans for the army and I am going to 'do my bit' to provide these staples for the fighting men," said he. Bean raising has become quite popular in the Colfax neighborhood despite the fact that the crop last year was far below normal, due to the prolonged drouth.

To The Washington Farmer: I want to subscribe again for your valuable paper. Have been taking it for several years before my husband, H. Watson Smith, died.
MRS. RACHEL A. SMITH.
Lynden, Wash.

**A mortgage on the whole United States is exactly what you get when you buy War Saving Stamps. Uncle Sam's "I. O. U." backed by the entire resources of the country—at 4% interest, compounded quarterly.**

War Savings Stamps are a gilt edge investment for everybody—the best chance to save and invest small sums of money that has ever been offered in financial history.

The government is raising $2,000,000,000 this year through War Savings Stamps—that is only an average of $20 for every man, woman and child in the United States.

If it were not for that $100 limit on each purchase and the $1000 limit on the total that any one can buy, the big financial fellows would leave precious few of these War Savings Stamps for the rest of us.

We have a chance now, such as we never had before, to show whether we know a good thing when we see it.

In February you can buy for $4.13 each War Savings Stamps for which the United States Government will pay $5.00 each on January 1st, 1923.

U. S. Thrift Stamps for 25 cents each—with your first Thrift Stamp you will get free a Thrift Card with spaces for 16 stamps. When you have filled it you can exchange it, with the few added pennies, for a $5.00 War Savings Stamp.

# "Want" Ads in These Papers Are Economical and Effective

## Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

**Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.**

# Horses in the Army

## *Rules Adopted for Their Care and Feeding*

Few persons realize how many horses are required by the army. Besides the artillery, ammunition and supply horses there is an immense number used by mounted officers and orderlies and by the ambulance and signal corps. Since the battle of Cambrai the formation of a cavalry division has been ordered.

There are hundreds of men in the artillery camps of the country, especially those drawn from the eastern cities, who are now engaged in the care of horses although they have never touched a horse before in their lives. Even in the western and southern camps there are doubtless thousands of men who are ignorant of the rudiments of horsemanship, or the care and feeding of the animals. Taking these facts into account the Boston Work Horse Relief association has issued 14 rules especially for beginners in the care and feeding of horses. They were submitted to and approved by Colonel Frank Tompkins, a widely known cavalry officer, and they have been adopted by Brigadier General John A. Johnston for use in the northeastern department which he commands. Here they are:

1. Remember that the horse is an extremely timid animal, and must be handled very gently, though firmly. Always speak to the horse when approaching him; take hold of his headstall carefully, pat him on the neck, and draw his head slowly toward you. In tying him be sure that the rope is not so long that he can get his leg or foot over it, as painful wounds are often caused in that way.

2. In entering a stall do not put your hand on the animal, as that might cause a vicious or stupid horse to kick, especially if you are a stranger to him; but tell him to "get over," and then step in quickly on the left of the horse.

3. In leading a horse take a firm grip of his headstall or bridle with your right hand, hold the end of the halter rope in your left hand and keep beside him not in front of him. If he rears or pulls back you can let go of the headstall and hold him by the rope—not trying to struggle with him, keeping your face turned from the animal, but stepping toward him as he goes backward. He must move slowly in going backward and will soon tire of it.

4. Do not mount a horse equipped only with a halter; and do not attempt to ride a strange horse unless he is bridled, and there is some one with you to hold him, and lead him about at first. You may be willing to take a chance yourself; but a horse never forgets anything and if he bolts or throws his rider once he may do the same thing again at a critical moment. The Prince Imperial lost his life because his horse would not stand to be mounted.

5. The stomach of the horse is extremely small and therefore he should be watered at least three or four times a day and if possible should receive both hay and grain three times a day. The less work he does the more important it is to give him hay often, because a hungry, idle horse is apt to take up some bad habit such as biting, kicking, cribbing or weaving.

6. If the horse gnaws his manger or stall it is certain that he needs salt unless he is very hungry. Keep a lump of salt always before him if possible.

7. Horses should be watered first and fed afterward, and if possible watered again an hour or two after eating their grain.

8. Never water or grain a horse that is much heated; to do that is likely to "founder" and so ruin him.

9. Never give grain to a tired horse; let him rest for an hour or two first. Otherwise, he is very likely to have indigestion and colic. More horses die from colic than from anything else.

10. Bring your horse into the stable or camp cool and breathing easily, if possible. Nothing is worse for a horse than a chill after being heated. But if for any reason it is necessary to halt or encamp when your horse is sweating—then blanket him and walk him about, or put him in a sheltered spot and rub him—according to circumstances. A horse is cold when his ears are cold. Get in the habit of feeling his ears.

11. Use the currycomb very lightly, if at all. It is apt to hurt the skin of the horse. A stiff brush is better—and much more efficacious if the horse's coat is long. The head and legs should never be touched with the currycomb. You can clean your horse with a wisp of hay or straw vigorously use—or even with your bare hands. At least an hour a day of hard work should be devoted to cleaning a horse. This helps the circulation, removes dead skin and dirt, and makes the horse feel right and look right. Look out for frosted bits in winter.

12. Avoid sore backs and shoulders by keeping the inside of your saddle or harness perfectly clean, and by sponging or cleaning off the saddle or harness marks. The dandruff in the horse's hair is very salt, and when this dandruff dries on the horse or on his equipment it irritates the skin.

13. On reaching camp or stable, do not remove the saddle, unless you can at once clean and dry the hair underneath. If that can not be done immediately, loosen the girth and leave the saddle and blanket on until the hair is dry underneath.

14. In order to avoid scratches, rub your horse's legs dry when he comes in wet or muddy. This is hard work, but it can be done. In winter, when the roads are muddy, or there is snow on the ground, put a little vaseline or grease on his pasterns and heels to shed the moisture.

# Farmers Meet

## A. C. Townley Talks at Lewiston

One of the most important farmers' meetings ever held in northern Idaho was that of the State Federation of agriculture, held at Lewiston Tuesday, Wednesday and Thursday, January 22-4. It was attended by delegates from all of the farmers' organizations of the state, including the grange, the Farmers' union, the Society of Equity, the Fruitgrowers' association and the Potato Growers' union of southern Idaho. In addition to these delegates there were organizers and members of the National Nonpartizan league, including the national president and national secretary and their talks on what the league has done, is doing and will do were well received.

President Tronaas reviewed briefly the history of the organization in Idaho, stating that when W. G. Scholtz was state market director he came in contact with the farmers and found three separate organizations all working to the same end, but not together. The grange, the farmers' union and the society of equity were working to help the farmers and remedy existing conditions, but were working along different lines, he said. Mr. Scholtz conceived the idea of getting them all into one organization and formed the State Federation of Agriculture for his purpose. The first meeting was held in Boise in February, 1916. The second meeting was held a year later at the same place, when it was agreed that annual conventions should be held alternately in northern and southern Idaho, and the Lewiston convention was arranged. President Tronaas said there should be "no north and no south" in Idaho, and he said that one of the first things the federation planned to do when it secured power is to connect the two sections of the state by railroad.

He deprecated the fact that there are so few farmers in the legislatures and in congress and said that a young lawyer once told him that farmers and business men can not afford to go to the legislature; that only lawyers can go there and live without accepting a bribe, for lawyers can take a retainer, and they will never go against the interests that retain them. He said that unless there are more farmers and more representatives of the producing classes sent to the legislatures and to congress to make our laws "government of the people, by the people and for the people will perish from the earth." President Tronaas then introduced President Townley of the national association, who was given an ovation as he slowly stepped forward and faced the big audience. Mr. Townley spoke slowly and distinctly until he warmed up to his subject, his eloquence and force increasing as he developed his theme:

President Townley declared that this above any other day in the world's history is the day of organization. Almost every club of industrial workers are organized not only for protection, but to keep other organizations from destroying them as well as to make for efficiency in their own business, he said. Here are extracts from Mr. Townley's speech:

Now the farmers are organized in some little measure, but not in a very large measure. The farming industry is the very basis of civilization; it is the foundation upon which all of our civilization structure rests. Without the farming industry there could be no civilization. Now as organizations of all other industries contributed to the efficiency of the industry and of the general welfare of the state, so likewise, in a very much greater measure will organization of the farmers, organization of the basic industry, organization of the industry which is the foundation of all civilization—I say so, in a great measure, in a measure proportionate with the importance of that industry, will organization of the farmers benefit not only the farmers, but the whole community, the state, the nation and the world. Organization of the farming industry is as essential as organization of the army that defends this nation against the foreign foe. While the sons of the farmers by the million will be organized into a military machine that is to defend the honor of this nation and liberty and democracy, not only of ourselves, but of all the world—I say, while the sons of farmers are being organized for that service—the biggest thing that can be done to benefit those sons of farmers is to organize the old men at home, for without organization of the basic industry, farming, we can not so well support the organized military machine made up of our sons as we can by organizing farming, the basic industry.

And as in this time of prices the work of the farmer is more important than it ever has been before because the winning of the war—victory, depends upon food. As at this time we look to the foundation upon which we stand for success, so at this time organization of the farming industry, organization of the farmers for more efficiency in the business of farming, is more patriotic than organizing anything else in this United States, for it is the foundation upon which everything else rests.

F. P. Waters, a "war horse" in farmers' movements, who has been organizer for the grange in many states, is now a national organizer for the nonpartizan league and deputy state master for the grange in Washington, was the principal speaker in the afternoon session Wednesday. Mr. Waters is a forceful speaker and held the closest attention of the audience. He went after the "middlemen" who take enormous profits from the producer and the consumer and told of many instances that had come to his observation. He told of being in North Dakota, where he organized the state for the grange movement, and said C grade apples that had been bought at North Yakima for 75 cents per box and shipped to North Dakota at an expense of 37 cents a box sold there for $2.50 per box. As a result the producers in Washington were making little or no profit and the consumer in North Dakota could hardly afford to eat these lower grade apples because of the high cost, but the "middlemen" were making more profit off a box of apples than the producer and the railroad got for producing, packing and hauling the apples 1000 to 1500 miles. He told of buying Bing cherries that had been grown in Idaho and sold for 4 cents a pound, in North Dakota for 35 cents a pound and the retailer made very little profit off them at that. They had been handled through St. Paul and Minneapolis commission houses. He pleaded for closer relation between the producer and the consumer to the end that the former might get a profit and the latter could afford to use them. He said that tens of thousands of men, women and children are doing without fruit because they can not afford to buy it, while tens of thousands of boxes of fruit have rotted in the west because the producer could not afford to gather, pack and ship it for the price allowed by the "middlemen."

The federation of agriculture is an organization in which any farmers' organization may take part. It is an outgrowth of the farm marketing plan of the state of Idaho of which William G. Scholtz was director until removed by Governor Alexander. In his travels over the state and his dealings with the farmers Mr. Scholtz found that while there were many farm organizations, such as the grange, farmers' union, society of equity, fruitgrowers and other associations, they were local and did not work together. He conceived the idea of having them work under one management; to work together for better marketing conditions and better conditions generally on the farms, in the orchards and on the stock ranges. As a result this organization was perfected and the first meeting held in Boise in January, 1916. Two other annual meetings have been held since, the last closing at Lewiston Thursday evening. Each of the old organizations keeps up its organization, operates as before, but it can, if it wishes, become a member of the federation and receive all the benefits accruing from it. Those attending the convention claim that already they have secured great benefits from their association with the federation.

Next comes the question, "What is the nonpartizan league?" The answer is that this league is, as its name indicates, a nonpartizan, but by no means a nonpolitical league. In fact, it is wholly political. It is organized exclusively for political purposes. None but farmers can be members of it, but the league is supported by merchants, labor organizations and others. The secretary is Ray McKaig, who is also secretary of the state republican central committee of North Dakota, and master of the North Dakota state grange. The league elected most of the officers in Dakota by indorsing and voting for them, regardless of party. Mr. McKaig told of a strong democrat being placed on the republican ticket and elected by a big majority in North Dakota. While only farmers can be members of the league, it is a tower of strength in North Dakota, which is largely a farming country, and in Idaho, where it is being organized and has the support of the labor organizations, the promoters insist they will have a clean majority in the next election. Among the prominent organizers for the league who attended the Lewiston convention are: L. C. Crow, for many years president of the Washington-Idaho Farmers' union; F. P. Waters, state organizer and deputy master of the grange in Washington; H. L. Fest of Emmett, Idaho, a prominent breeder of Duroc Jersey hogs, who reduced his herd to the minimum and is spending the greater part of his time organizing the league in Idaho; and there are scores of others. They are republicans, democrats, former populists and socialists. Riley Rice, prominent stockman of Cottonwood, Idaho, who has been a life-long democrat, is an enthusiastic booster for the league, while Miles Cannon of Payette was, for many years, a republican "war-horse" in Washington, where he was classed as a "standpatter."

To The Washington Farmer: I like The Washington Farmer just fine, and am in good standing until 1919. Find enclosed 50 cents for which please send a new subscription to The Washington Farmer for three years.

Tacoma, Wash.

# Will Do His Part

To the Editor: As to the minimum, also maximum, 14 cents for hogs, it surely decreased the hog population of the Big Bend country by 50 per cent. It will hardly pay for fattening, to say nothing of raising them to the first 150 pounds and wintering the brood sows. If the government will put a stop to the packers' little "up and down" game, up when we are raising and down when we are selling, and be sure to buy the bonds for the farm loan bank, so we can have 5 per cent money to buy hog wire, instead of the 10 and 12 we now have to pay, it will help more than a set price. The set price is so easy to juggle with, especially when they know a farmer is out of feed. A buyer offered me 12 cents for good, fat hogs and 4 1-2 cents for cattle just the other day because he thought I was bound to sell.

But personally I am going to stay in, for I think every farmer ought to do not "his bit" but "his all" for the increasing of food, both meat and bread. The farmer will find $1.75 for wheat and 14 cents for hogs a big thing if peace should come this spring, for peace will mean plenty of help and that means cheaper machinery, clothing and everything we have to buy. But the set price for wheat will remain for two years.

Every farmer should keep enough hogs and cattle to clean up all waste of the farm. It will mean work and stay at home more, but we have not finished this big war yet and if we do not do our every bit and win, our little home will not be fit for a Yankee to live in. This means the conditions in the Big Bend country, and my experience for 20 years.

LESTER C. HAYDEN.
Mold, Wash.

## Milk Yields in Scotland.

At the annual sale of Ayrshire pure-bred bull calves held at Netherton, Newton Mearns, 21 bull calves were offered, and all were out of cows whose yearly yield of milk was over 1100 gallons, which, allowing 60 days off for the dry period, gives a daily flow of 3 2-3 gallons. One 9-months-old calf brought $2150, and another, 1 year old, sold for $1500. Its dam had a record of 1156 gallons of milk in 48 weeks, yielding 3.67 per cent of butter fat. Mention is also made of an Ayrshire cow whose flow of milk constitutes a world record. In nine seasons she gave 9500 gallons of milk, and calved each year on an average within 12 months.

# More Rather Than Less

## *Food Production Plans of the Farmers of Washington*

Notwithstanding the fact that many of the farm boys are called to war and labor shortage generally faces the farmer, there is a decided determination on the part of the farmers of the state to raise more food crops this year. Here is another instalment of letters in response to the "More or Less" circulars sent out by The Washington Farmer:

**Do More Than Last Year.**

To the Editor of The Washington Farmer: I take pleasure in informing you that I am going to do a little more for my country this year than I did last. We raise lots to eat and have some on hand now, such as potatoes and beans. It is not the top price that we look at, but we like to Hooverize some and if we sold a carload to our merchants they would want us to take it all out of the store in trade. We would like to see a government buyer do all of this buying.

J. A. BUMGARDNER.

Wenatchee.

**Sons Leave the Farm.**

To the Editor of The Washington Farmer: Owing to one son being at the training camp, and one expecting to go in February, I don't know exactly what I will do in regard to raising more. The camps and sawmills are paying more wages than the farmers around here can afford to pay.

E. M. MOSES.

Chehalis.

**Farm Help Question.**

To the Editor of The Washington Farmer: I have been planning on putting in more of everything that I have been raising, wheat, oats, corn, hay and beans. I will have 90 acres of wheat and oats to sow in the spring and would like to put in about 20 acres of potatoes, two acres of corn and two of beans, and half an acre of carrots. The question is will we be able to get any help. Have been paying $40 a month for a man and I don't feel like I can afford to pay much more than that. If I have to pay from $60 to $70 for a man I think it would be better to put in just what I can take care of myself.

OSCAR PETERSON.

Spokane.

**Summary of Coupons.**

The following is an additional summary of coupons received:

Theodore Johnson, McIntosh—**More** potatoes, peas, beans, hay, beef and dairy cattle, swine, carrots, mangels.

Robert Winters, Port Angeles—**More** wheat, potatoes, peas, hay, swine, cattle; **less** poultry, horses.

Mrs. E. M. Kashernickor, Cle Elum—**More** wheat, potatoes, alfalfa, Holsteins, Duroc Jersey swine, carrots, mangels.

E. M. Moses, Chehalis—**More** wheat, oats, barley, corn, fruits, hay, dairy cattle, sheep, swine, mangels, silage; **less** potatoes, peas, horses, beef cattle.

Thomas Berg, Allyn—**More** wheat, barley, rye, corn, potatoes, beans, vegetables, hay, swine, poultry, carrots, mangels, turnips, artichokes, silage; **less** oats, peas.

G. J. Camp, Trout Lake—**More** wheat, oats, peas, beans, vegetables, beef and dairy cattle, swine, carrots, rutabagas; **less** hay, poultry, turnips.

Bellwood Farm, Valleyford—**More** wheat, oats, rye, corn, potatoes, peas, vegetables, hay, horses, dairy cattle, swine, poultry, carrots, mangels, silage; **less** beans, sugar beets, fruits.

Mrs. J. W. Henley, Roy—**More** swine, poultry, potatoes, carrots; **less** berries.

G. O. Roundtree, Boistfort—**More** wheat, rye, corn, potatoes, sugar beets, fruits, beef cattle, sheep, swine, poultry, carrots, rutabagas, silage; **less** oats.

William Weimerskirch, Mold—**More** wheat, potatoes, vegetables, horses, swine, poultry, carrots, mangels, rutabagas, turnips.

J. T. McLean, Bridgeport—**More** wheat, barley, rye, vegetables, horses, sheep; **less** swine.

D. W. Tomlinson, Mansfield—**More** corn, beans, beef cattle, silage; **less** barley, swine, poultry.

Oscar Peterson, Spokane — **More** wheat, oats, corn, potatoes, beans, hay, horses, swine, poultry, carrots.

Martin Penhallick, Neppel—**More** vegetables, fruits, alfalfa, beef cattle, swine, carrots; **less** potatoes.

Albert Bertschi, Glenwood—**More** wheat, oats, barley, rye, hay, dairy cattle, swine.

Charles M. Keinfmon, Middleport—**More** wheat, oats, potatoes, peas, sugar beets, vegetables, hay, poultry, carrots, mangels, rutabagas, turnips.

C. W. Fitzsimmons, Pomeroy—**More** corn, potatoes, beans, poultry.

J. A. Bumgardner, Wenatchee—**More** wheat, barley, potatoes, beans, vegetables, hay, horses, beef cattle, sheep, swine, poultry.

L. K. Cogswell, Chehalis—**More** wheat, oats, corn, potatoes, peas, beans, vegetables, hay, carrots, mangels, rutabagas; **less** dairy cattle.

Thomas E. Woodward, Fairfield—**More** wheat, oats, barley, potatoes, vegetables, poultry; **less** peas, beef cattle, swine.

Joe Gizler, La Center—**More** potatoes, vegetables, hay, beef cattle, dairy cattle, rutabagas, turnips; **less** beans.

Peter E. Boyce, Snohomish—**More** wheat, oats, peas, vegetables, hay, dairy cattle, poultry, carrots, silage; **less** corn, potatoes, rutabagas.

Hunter Land company, Hunters—**More** wheat, vegetables, fruits, hay, beef cattle, swine.

Oscar McNeill, Hanson Ferry—**More** wheat, oats, barley, corn, potatoes, beans, beef cattle, swin; **less** hay, horses.

W. H. Ritzschke, Centerville—**More** wheat, oats, potatoes, beans, vegetables, hay, beef cattle, swine, poultry.

George Harlan, Goldendale—**More** wheat, potatoes, hay, horses, beef cattle, sheep, swine, poultry, turnips, artichokes, silage; **less** oats, barley, rye, corn, beans, sugar beets, vegetables, dairy cattle, carrots, mangels, rutabagas.

# Favor Bulk System

## Colfax Farmers Find It Cheaper

**By J. E. NESSLY.**

Cutting, threshing and delivering on board the cars at the railroad station 4000 bushels of wheat at a total cash outlay of $210 is the record made by B. R. Pratt, of near Colfax, who is an enthusiastic advocate of bulk handling of grain. Mr. Pratt has an elevator and used no sacks. Had this grain been handled in sacks the sack bill alone would have been $280.

Mr. Pratt is farming rented land. He has the farm of Dr. W. B. Palamountain of Colfax, rented. The land lies on the Spokane & Inland Empire electric railway between Colfax and Steptoe and the station of Blackwell is on the land. Mr. Pratt built a wooden elevator on the land at the edge of the right of way and loads the grain directly into the cars by a long spout that runs from the elevator to the cars. His elevator cost him $1200.

"While I do not own the land I found it cheaper to build the elevator than to buy sacks," says Mr. Pratt. "I have a long lease and the sacks required to handle this grain during the period for which I have the land leased would cost more than the elevator cost me, to say nothing of the saving in cost of handling the grain. I used an Idaho combined harvester last year and had 11 head of my own horses on the machine My total cash outlay for harvesting the 160 acres of my own grain, which yielded 4000 bushels, was $185 and it cost me $25 to load the grain on the cars. I have an elevator run by gasoline engine and we clean the grain before it is loaded, consequently we save the screenings for feed. I got 200 bushels of good hog feed from the wheat and saved the freight on this. If I had had the grain sacked I would have had to pay freight on the screenings and lost that 200 bushels of feed, which is another big item in favor of handling grain in bulk."

Mr. Pratt came from Minnesota, where all grain is handled in bulk and he could not accustom himself to using sacks.

Harry Roberts is another very successful farmer who is an enthusiast in favor of bulk handling. Mr. Roberts is a pioneer. His land lies between Elberton and Steptoe, in Whitman county, Wash., and he has raised wheat for more than a quarter of a century. He has changed from the sack to bulk grain and says he saved big money. Mr. Roberts said:

"I handled my grain in bulk last year. There were no facilities for handling bulk grain at the railroad, but I had tanks at home and had to sack my grain out of the tanks and haul it to the railroad and load it in cars in bulk, but saved money at that. I saved three men on the thresher, which is a big item in itself. At Steptoe there is an elevator built two years ago that has already paid for itself and the men who own it say they will never again handle grain in sacks: I find that one man can handle as much grain through an elevator as 10 men can handle in sacks, and there is a great saving in the loading of grain on cars. I am in favor of the bulk system and believe it will be the best thing for this country when adopted generally."

Many matters of interest to the grain farmers of the northwest were discussed at a recent meeting of the Patriotic League of Colfax, which is endeavoring to help the farmers in every way possible to produce a record crop of grain this year. This meeting was devoted exclusively to the grain question and Dr. W. B. Palamountain, the president, who owns a valuable farm, had invited farm owners who farm their own land, land owners who rent their land, and renters who farm other men's land, to attend the meeting and take part in the discussion and tell what the league can do to help the farmers. There was a good attendance and matters of vital interest to the farmers were discussed. The sack and bulk question was given prominence.

It was brought out that rich land owners who have grown wealthy and retired and have their lands rented, refuse to build granaries for the renter, whose contract generally requires him to "delicer one-third (or two-fifths, in many instances,) of the grain in sacks," either at the nearest warehouse or on the land. The renter can ill afford to build a granary unless he has a long lease on the land. Some farmers contend that it will be utterly impossible for them to handle grain in bulk this year and that unless they are assured of having sacks they will plant oats or barley and feed it at home. It was made plain that the wheat production of the Inland Empire will be cut short unless sufficient sacks are provided to hold a large part of the grain. It was estimated that not more than 50 per cent of the 1918 crop can be handled in bulk under the most favorable circumstances, which will mean that Whitman county alone will have close to 3,000,000 bags this year. Many elevators will be built this year if material and carpenters can be secured, but this is doubtful.

The labor question is one that is interesting the farmers and those at the meeting of the Patriotic league asked that high school boys and those in the upper grades of the lower schools be released from school not later than April 1, to work on farms. One farmer said that every boy so released who can handle a six-horse team can put in 80 acres of wheat that will not be planted unless some such arrangement is made. He estimated this at the low average of 20 bushels, which would mean 1600 bushels of wheat additional to the total crop for every boy who can go on a farm during the spring seeding season.

# Grow Crops on Summerfallow

(Continued from page two.)

grimages on its behalf. I believe this community could do nothing in a local way that would have a closer relation to world-wide needs than to push the dairy interests. The country is admirably adapted to this business if concerted action on the part of the farmers could be secured. As an aid to such a movement a campaign for the erection of a large number of silos would have a powerful influence, and with the remembrance of the late disastrous season of drouth still fresh in mind it ought not to be a difficult matter to stir up a boom in silo construction and the growing of suitable crops with which to fill them. It has so far been an admirable winter, and live stock are faring well in spite of the shortage of feed. Farmers are busy with the sleighs, and until the last snow were still able to keep the plows running. The ground is frozen only a few inches, and the snowfall is light.

E. E. ELLIOTT.

### Hog Feed Not Abundant.

HUNTERS, Stevens County, Wash., Jan. 18.—This community is wide awake as regards the assistance it can give Red Cross work, conservation of food and purchase of Liberty bonds. We have a very active Red Cross auxiliary. The purchase here of Liberty bonds has been very considerable. A campaign to further the sale of war savings stamps is being initiated and substantial progress in their sale has been made. Nearly every one is falling in line with the administration's food campaign. It is a little early to make any forecast as to the 1918 crop. The soil was extremely dry when winter set in; in spots dry soil was turned up in January plowing. There is time yet for a considerable addition to the moisture content of the soil before planting time. A satisfactory yield of grain crop in this locality depends upon a normal rainfall in May and June. The winter has been very mild and much hay has been saved. Stock is in good condition and there is plenty of feed for cattle and horses, but hog feed is not so abundant.

ELIAS NELSON.

### Will Do Their Bits.

RAINIER, Thurston County, Wash., Jan. 18.—We have had a mild winter so far, no snow and mud all the time. A very few days since November 25 that we have not had rain. Winter grain growing all the time and some had to feed it to cows to keep it down. The mild winter has helped a lot in feed and pasture, although milch cows have to be fed heavy to keep up the milk flow. Farmers are not hiring any more help than necessary. This is a dairy community and the problem is how to produce the most and best feeds on the farms, to produce more milk and keep more cows. The problem of national interest in which this community can play and is playing a part is that the women are helping in the Red Cross work, economizing in the kitchens and helping in the farm chores. The farmer will put into crop every acre he possibly can to help out on food production.

L. F. DAVIS.

### Labor Problem Puzzles.

METHOW, Okanogan County, Wash., Jan. 21.—The most important problem of local interest that this community will have to solve in a short time is the problem of labor on the farms and orchards. The young men have gone to the Sound to work. The most important national problem in which we must play a part is to help win the war by working harder, practicing economy and buying bonds. The prospect for the 1918 crop is promising, as everything looks like an early spring, with no snow to speak of. The mild winter has saved the feed, range horses still feeding on the range and doing better than they did in the fall. The cattle are in better condition than usual, too. No farmers or families are attending the winter courses at the state college, owing to the fact that there is an average of only one man to the ranch where formerly there were two or three.

CHARLES GRANT.

### Live Stock Stimulus Needed.

NEWPORT, Pend Oreille County, Wash., Jan. 22.—The most important problem of purely local interest in this community is naturally the stimulation of the live stock industry, to which the country is best adapted, but as it is a timbered country the marketing of timber products is engaging the attention just now of most farmers whose land is not entirely cleared. Through the efforts of the county agent many farmers are improving their present stock and others are taking on new stock as their means will permit, but the district generally is far below its carrying capacity, due largely to the fact that the lumber industry furnishes a market for crops at a much greater profit than could be secured by feeding these crops to live stock. The most important problem of national interest that this community could assist in is the stimulation of crop production. There is very little snow at present, no frost in the ground and fall wheat so far is in splendid condition. The heavy run-off of snow early in the month will probably preclude the possibility of overflow in the river bottoms the coming summer. Live stock is wintering well and economically; in better condition generally, I believe, than on the average at this season of the year. I know of no farmers attending the short courses this winter.

CHARLES M. TALMADGE.

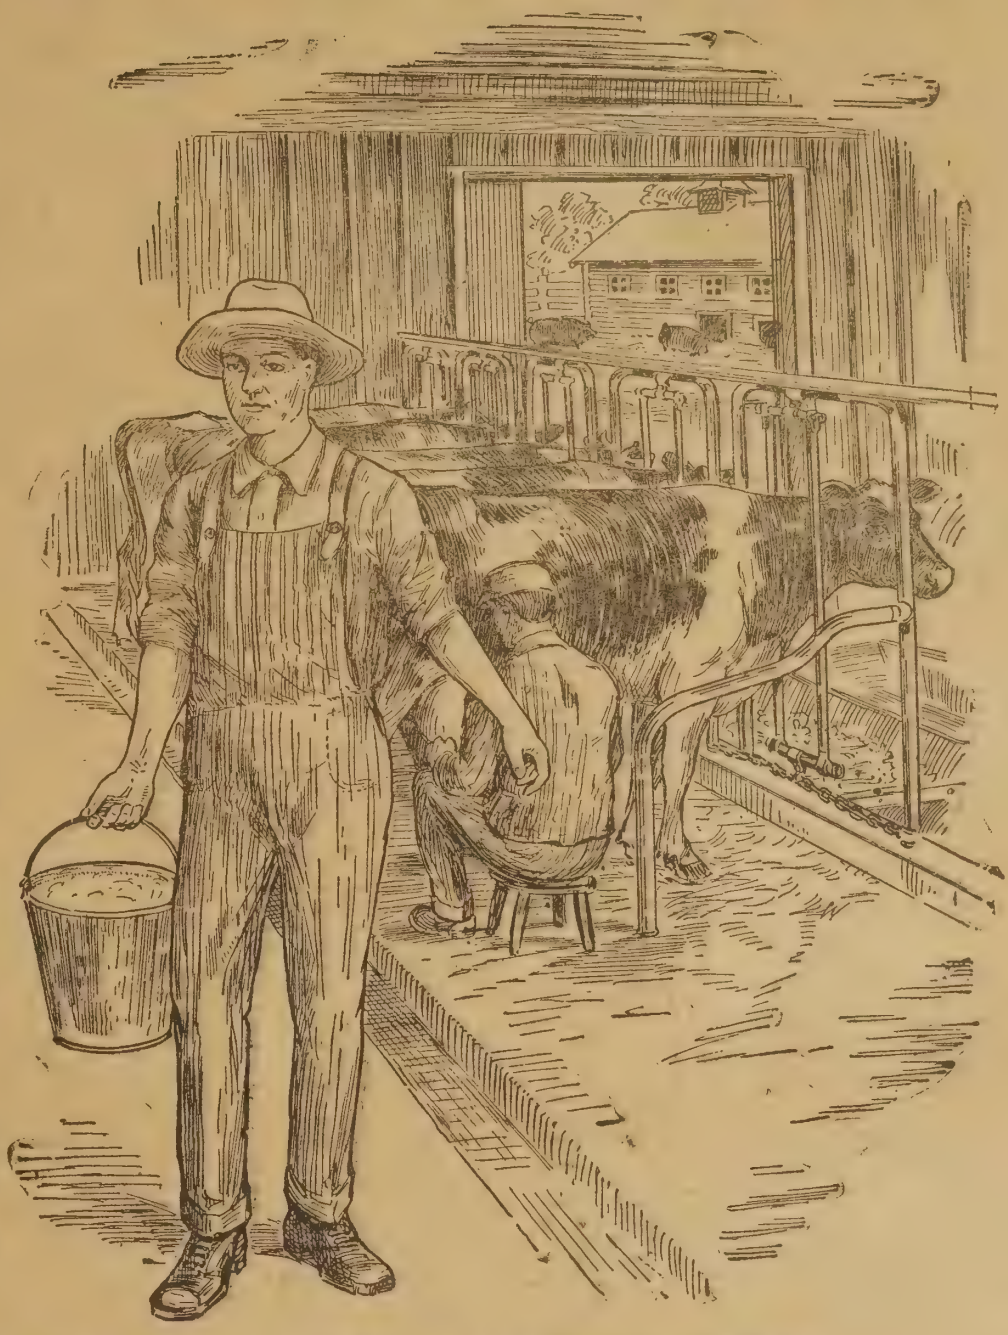
### Bond District for $375,000.

Water users in the Naches-Selah irrigation district indorsed a proposal to bond the district for $375,000 at a largely attended meeting at Selah January 15. There are about 10,500 acres in this district, which is recognized as one of the most prominent of the fruit growing sections of Yakima valley. The contemplated work includes a large amount of tunnel construction, making possible the elimination of uncertain trestle work besides straightening out many of the troublesome kinks of the canal. E. M. Chandler, president of the Washington Irrigation institute, attended the meeting and gave the water users advice and information on the work proposed and what results may be expected therefrom. It was decided to appoint an advisory committee to work in conjunction with the directors of the district in an effort to assist them in the supervision and management of the proposed work.

**Eat More Potatoes.**

The United States food administration wishes to place the Irish potato every day in the year on every table in America. Potatoes furnish nourishment, bulk, mineral salts and a corrective alkalinity in the diet. They are plentiful this year and reasonably cheap.

# BIG SAVING OFFERED



By sending subscriptions direct to this paper and thus eliminating cost of middlemen, the following rates are obtained:

**25c** for one year's subscription to The Washington Farmer.

**50c** for three years' subscription to The Washington Farmer.

**$1** for five years' subscription to The Washington Farmer.

By sending subscriptions direct, our subscribers have released many subscription agents for work in other lines.

## If You Believe in the Principle of Cooperation Help Us Make This Plan a Success

Granges and farmers' unions everywhere have said, "The middleman must go!" They have debated ways and means for accomplishing this result.

As an experiment and war measure THE WASHINGTON FARMER asked its readers to help dispense with the middleman in subscription matters. We said to our friends—"Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, if you believe in eliminating the middleman, help us make our experiment a success: Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

It can not be stated too often that the lowering of price does not mean a lowering of quality. We feel sure that our readers will heartily agree to the statement that we are giving them a better paper today at a rate of $1 for five years than we did a year ago at a rate of $1 for one year.

## USE THE COUPON →

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

Jan. 31.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# No Minors Allowed

By J. L. ASHLOCK

PART I.

The games we boys used to play in the streets of Coulee City in the days when that town was "wide open" to the dissipation, joys, sorrows, social immoralities, and pioneer thrift of a pine-board city in the bunchgrass would give the modern city in playground people a touch of heart failure.

A row in a saloon broke up our game of "hi barbaree" one night. Shooting started, which caused us to huddle together on the lee side of the Star livery barn till it was over.

A little while afterward, when the town was quiet, Charlie Blank and I were racing down the street in front of the saloon, yelling "hi barbaree" to our pursuers. Charley's flying feet struck something lying on the ground in the dark that sent him headlong to the ground. I stopped to see how he fared in his fall, and in a second we were "caught."

"One of you stiffs was lyin' on the ground there and tripped me," vowed Charley. "It ain't fair. We've got a right to run it over."

The boys vowed that no one had tripped him. Charley was stubborn.

"My feet hit somebody," he vowed. "I stepped right on his stomach, or something. We've got to run it over."

We argued pro and con with rising heat. Finally some one proposed that we go back and look at the place where Charley fell. We did so, lighting matches—and found a dead man!

A man had been walking down the middle of the dark street. A bullet had come his way when the shooting started, and hit him in a tender spot.

Frightened now, we held a whispered conference. Charley was the first to get his wits together.

"Fellows, if we say anything about this, we'll be pulled in as witnesses," he declared—in a whisper. "Everybody promise not to tell anybody—not even his folks."

It is unlikely, I think, that any of us small boys would have been called in as witnesses. But Charley thought we would; so we all promised and vowed utter silence on the subject, for all time to come.

The killer, drunk when he did the shooting, and having no intent to kill the man walking out in the dark street, got 20 years for his frolicsome shooting. He finished his term five years ago, I think; and so far as I know, the vow the boys made within 10 feet of the dead man in the street has been kept to this day, by every one of us, and is here broken for the first time.

There were many saloons in old Coulee City of the bunchgrass days. My memory fails as to number. But I recall that they were noisy places and hilarious. Barred from their mysterious interiors by the sign "No Minors Allowed" we youngsters had to content ourselves with second-hand accounts of what went on inside, which to us was most entertaining.

A lot of us organized a "play saloon" out in the sagebrush adjacent to the town, once. We picked up bottles of many sizes, shapes, and colors, and made use of some beer and whisky signs which an adventurous member of our set pulled from a saloon front one dark night. We filled our bottles with water of a bitter, alkali kind, which was taken from the small, undrained lake near the railway water-tank. In this lake many cattle stood during the warm days, and several times the town hobo had bathed there. The last time the cowboys bathed him they cut off his whiskers with sheep shears, and we boys waded out in the lake, rescued as many of the whiskers as we could find in the water, and tried to turn them into water snakes by soaking them a long time in bottles of water kept in the sun. Charley Blank said you could turn the hairs of a horse's tail into snakes by soaking them that way, and we wanted to find out what kind of a snake would grow from the whiskers of a hobo.

Well, our play saloon was stocked with liquor taken from this lake, and in the management of our "house" we carried on the experiment with the hairs from the town hobo's whiskers as a side line. We sold our wares for poker chips—red, white, and blue. The chips that were cut out inside so that they could be worn on a necktie were more desirable than the others.

We had one of our big boys for the policeman. One day the policeman and some other big boys got super-hilarious on our bottled goods, which they actually drank, including one bottle which contained a soaking whisker, and wrecked the shop. They smashed our bar, broke our bottles, and shot up the place generally. That ended our saloon game. We understood well enough that inebriated patrons had a right to wreck our joint, and that this was only part of the game. But we smaller youngsters didn't care for that part of the game, so our play saloon and the experiment with the whiskers of the hobo ended in the sagebrush flat south of Coulee City, where it began.

"Hi barbaree" was the classic game of bunchgrass days. It was played at night, when it was dark—the darker the better; in fact, in the full of the moon we could not play it. The game went thus:

A crowd of us boys met in the main, unlighted street, and arbitrarily designated one of our number as "it." At a signal, we scattered in all directions, yelling "hi barbaree." The "it" had to follow, and lay hands on whoever he could, and he upon whom "it" laid a hand, became "it" No. 2. And so on, till a dozen to 20 "its" might be scouring the town in every street and alley for one lone fugitive, who must keep moving and at intervals not too far apart, yell "hi barbaree." In thrills, lion hunting in darkest Africa can not compare with the game of hi barbaree that we boys used to play in the dark streets and alleys of old Coulee City.

In the first part of the game we had to keep in the streets or alleys and be on the move. When there were five "its" to one fugitive, the latter could then hide in empty whisky barrels which were thick all over the town, particularly in alleys and saloon rears. Hiding in the empty barrels, we had to answer "hi barbaree" whenever a pursuer called to us. However, "hi barbaree" from a whisky barrel was not a safe guide to pursuers. The voice calling from the barrel was muffled and unnatural; also, worse still, the barrel seemed to "throw" your voice the wrong way, so far as your pursuers were concerned. It often happened, therefore, that a dozen or 20 of the "its" scoured the town for hours for the last one or two fugitives who kept dodging from one barrel to another and cunningly eluding the "its"—who, along about midnight would get discouraged and go home to bed.

One night Charley Blank and I played a mean trick on the "its," who had vainly pursued us two for an hour or so. We dodged from barrel to barrel, doubled back, criss-crossed the streets and alleys, cunning as foxes. A dozen times we raced at breakneck speed down the dark alley in the rear of the old Owl saloon—and our pursuers likewise plunged down the alley at top speed.

Sprinting to get ahead of the "its" we darted into the alley the last time, and working in mad haste, rolled whisky barrels across the alley and jammed them end to end. Then we shrilled "hi barbaree" and slipped off to one side and listened in the dark.

Down the alley came the "its" panting and racing at top speed. Over the barrel barricade they went, to a boy. With many exclamations they regained their feet—and did not fail to examine the inside of every barrel to see if we were lurking therein. We made off stealthily and yelled "hi barbaree" from the rear of the Elk saloon, and down this alley the "its" came, in a panting, discouraged, badly bruised crowd. A little while afterward they gave up the hunt and each boy made for his home and bed. Charley and I were left at large.

That night Charley and I had an adventure which put into my mind new understanding of that great, shadowy, underworld encompassed in the word "saloon."

We had evaded all our pursuers. Our piercing "hi barbaree" failed to evoke a single challenge. So, two gloating conquerors, we emerged from a dark alley, and walked boldly down the dark street. As we passed in front of the Owl saloon, in whose rear we had a short time before wrecked our pursuers; we heard a piercing yell. We stopped to listen.

The yell was repeated. Then there were several yells which rose to the attitude of shrieks. Going with the loud yelling and shrieking was an undercurrent of excited talking, and we perceived that the sounds were coming from the Owl.

The saloon porch was unlighted save for the dim rays from the flickering, yellow illumination in the barroom. The glass front of the building was smoke-stained as well as frosted or "whited," and the smudgy lamplight from within left the board walk under the dimly glowing, whited glass in complete darkness. Into this darkened space close to the building crept Charley and I, bent on discovering what the rumpus was about.

Charley said there was a place in the glass where the whiting had been rubbed away. We proposed to look inside.

Charley took the first look. While he looked, he whispered to me what he saw.

"Billy (the bartender) is scared stiff," he whispered. "He's scared so stiff that his mustache is turned yellow—no, his face is so white—that's what it is." His eye fairly glued to the hole in the whiting, and his lithe bady stiffened with excitement. From inside came a sudden, fierce, animal-like screaming, and the sounds of a struggle. Suddenly Charley ducked low and flattened to the sidewalk. I did likewise.

"Billy is tryin' to get the Swede's gun," he whispered. "There's goin' to be some shootin'."

Inside we could hear the scuffle that was going on—the overturning of chairs and tables, the crash of falling glasses and bottles, and the howling of the drunk Swede whom Billy, to save his own life, was trying to disarm. He apparently was successful. There was a final smash and whoop, and then comparative silence.

"Now will you be good?—get out of here," we heard Billy say.

Charley again had his eye glued to the hole in the whiting, which let him see behind the bar.

"Billy's put the Swede's gun up there behind him in the bottles," he whispered. "He's got his own gun down there—I see the handle sticking out from under a towel. The Swede had commenced to yell, howl, shriek and curse. Billy kept calling him a damned fool and ordering him out of the saloon.

"You look now," said Charley.

I looked. The Swede, crazed with drink, was leaning over the bar clutching Billy's sleeve with one hand. The other hand was clinched and waved aloft as he yelled:

"You got my money—you steal my money—I sleep with $50, and you steal it—I owe you a dollar—I pay, I pay, when you give my money back!" Thus he raved. Over and over again he shouted this at Billy, who kept shoving him away, calling him a liar and other things worse, and telling him to clear out. But the Swede didn't clear out worth a cent.

Wildly accusing Billy of having robbed him, he would suddenly break off in a wild, cursing chanting which rose to piercing yells and shrieks. At times he would break out in a strange, crazy sort of singing in a tongue unknown to us. Suddenly, with ominous abruptness, he ceased raving.

"You steal my money while I sleep," he said quietly. "For that I kill you—now or some day."

I could see Billy's mustage go a shade yellower—which merely meant that his face had gone a trifle writer.

The Swede's frenzy broke out again, as suddenly as it had subsided. Moving like a flash, he caught Billy's hand and wrist, and nearly dragged him over the bar before he could break lose. Billy cursed roundly, though in chattering tones. He was scared clear to the marrow of his bones.

Up and down the barroom the Swede raved and stormed like a maniac.

"My money—I work for my money—you steal my money—I owe you money, I pay it when you give back what you steal," and so on. He charged suddenly at the bar and flung his hands, with fingers curved like claws, at Billy's throat. Billy leaped backward in time to save himself.

With this outburst the Swede sagged wearily on the bar. He was all in; but without a doubt, gathering steam for a new start.

Billy made use of this lull in the storm by taking a new tack. Confidentially and in comforting tones, he assured the Swede that maybe "they" had stolen his money; but that he, Billy, was onto the "bunch" and that if they had grabbed his coin he sure would make 'em come through.

"You're tired and worn out, old fellow," he told the drunken fellow, kindly, as if he were talking to a brother. "Go on to bed now—I'll fix you a bunk in the back room. Sleep there, and when you come around in the morning I'll have your money, somehow.

"If the gang stole it, I'll get it, and if you lost it, I'll find it," he vowed. "Go to bed now, and come and get your money in the morning."

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How Your Muscles Help to Keep Your Mind in Condition

Dr. Hirshberg

"Mind" and "brain" are far from the same, for it is now definitely known that the brain is not the exclusive seat of memory, perception, judgment, reasoning and the intellect. Ovid wrote that "it is the mind that makes the man, and our vigor is in our immortal soul." Here you have the truth reversed in the first phase and corrected in the second. It is the world outside of a man and his inherited physical parts which make his mind. The immortal soul then manifests itself through the material perfections.

The most antiquated physiologist will agree that the switchboard or "motor centers of the brain" develop only after exercise and training of the muscles. The sensation capacity and motive power of the muscles appear first. Unless these are formed, the corresponding "centers" in the brain will not have their proper development, growth and efficiency.

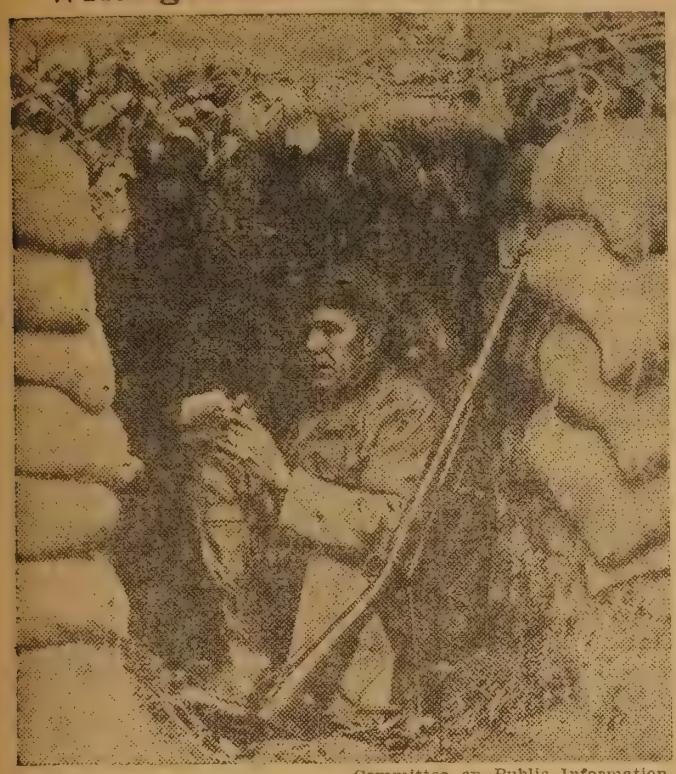
The brain is biologically and anatomically a bridge across the Danube of muscle with muscle, memory, perception or comparison with comparison. It is not the seat of the soul, the intellect, the nonmaterial store houses in the different tissues any more than are those tissues themselves, but is a mere pathway for the coordination of one kind of physiological activity with another, whether muscular, conscious or unconscious.

**Important for Brain Growth.**

Muscular and sense association and adjustment are more important for brain maturity and growth than is brain development for them. The greater the sensitiveness, skill, variability, ingenuity and complexity of sensation or of muscular movement, the fuller the development of the gray matter of the brain. But not vice versa.

It follows, then, that play, labor and creative work freed from habit and instinct, full of change and new situations train the mind. The development of the brain is a secondary accomplishment as is proved by many highly trained and educated plants and animals.

Professor William James was one of the first to emphasize that the will and the feelings are intimately related to muscular activity and development. Sensations and ideas direct muscular action, and the muscles in their turn guide the emotions. You are afraid—an emotion—because you see a savage beast which make your legs tremble or seek to run away.



**Source of Delicate Feelings.**

Many of the muscle movements and delineations in the face are the source of delicate feelings. Darwin seems to have been right in the observations that the muscles give the expression of and to the emotions.

Flabby muscles are a sign of a weak will. A life of inactivity, indoors or out, spells a gradual sap of will power.

## CHAPTER XVIII.

### Runnion Finds the Singing People.

"No Creek" Lee came into the trading post on the following morning, and found Gale attending store as if nothing unusual had occurred.

"Say! What's this about you and Stark? I hear you had a horrible run-in, and that you split him up the back like a quail."

"We had a row," admitted the trader. "It's been a long time working out, and last night it came to a head."

"Lord—ee! And to think of Ben Stark's being licked Why, the whole camp's talkin' about it. They say he emptied two six-shooters at you, but you kept a-comin', and when you did get to him you just carved your initials on him like he was a bass-wood tree. Say, John, he's a goner, sure."

"Do you mean he's—passing out?"

"Oh no! I reckon he'll get well, from what I hear, though he won't let nobody come near him except old Doc; but he's lost a battle, and that ends him. Don't you savvy? Whenever a killer quits second best, it breaks his hoodoo. Why, there's been men laying for him these twenty years, from here to the Rio Grande, and every feller he ever bested will hear of this and begin to grease his holster; then the first shave-tail desperado that meets him will spit in his eye, just to make a name for himself. No, sir! He's a spent shell. He's got to fight all his battles over again, and this time the other feller will open the ball. Oh, I've seen it happen before. You killed him last night, just as sure as if you'd hung up his hide to dry, and he knows it."

"I'm a peaceable man," said Gale, on the defensive. "I had to do it."

"I know! I know! There was witnesses—this dressmaker at the fort seen it, so I hear."

The other acquiesced silently.

"Well! Well! Ben Stark licked! I can't get over that. It must 'a' been somethin' powerful strong to make you do it, John." It was as close to a question as the miner dared come, although he was avid with curiosity, and, like the entire town, was in a fret to know what lay back of this midnight encounter, concerning which the most exaggerated rumors were rife. These stories grew the more grotesque and ridiculous the longer the truth remained hidden, for Stark could not be seen, and neither Gale nor Burrell would speak. All that the people knew was that one lay wounded to death behind the dumb walls of his cabin, and that the other had brought him down. When the old man vouchsafed no more than a nod to his question, the prospector inquired:

"Where's Poleon? I've got news for him from the creek."

"I don't know; he's gone."

"Back soon?"

"I don't know. Why?"

"His laymen have give up. They've cross-cut his ground and the pay ain't there, so they've quit work for good."

"He drew a blank, eh?"

"Worse'n that—three of them. The creek is spottedder than a leopard. Runnion's men, for instance, are into it bigger than a house, while Poleon's people can't raise a color. I call it tough luck—yes, worse'n tough; it's hard-biled and pickled. To them as has shall it be given, and to them as hasn't shall be took even what they ain't got, as the poet says. Look at Necia! She'll be richer than a cream puff. Guess I'll step around and see her."

"She's gone," said the trader, wearily, turning his haggard face from the prospector.

"Gone! Where?"

"Up-river with Runnion. They got her away from me last night."

"Sufferin' snakes!" ejaculated Lee. "So that's why!" Then he added, simply, "Lets go and git her, John."

The trader looked at him queerly.

"Maybe I won't—on the first boat! I'm eating my heart out hour by hour waiting — waiting — waiting for some kind of a craft to come, and so is Burrell."

"What's he got to do with it?" said the one-eyed miner jealousy. "Can't you and me bring her back?"

"He'll marry her! God, won't there never be a boat!"

For the hundredth time that morning he went to the door of the post and strained his eyes down-stream.

"Well, well! Them two goin' to be married," said Lee. "Stark licked, and Necia goin' to be married—all at once. I hate to see it, John; he ain't good enough; she could 'a' done a heap better. There's a lot of reg'lar men around here, and she could 'a' had her pick. Of course, always bein' broke like a dog myself, I 'ain't kept up my personal appearance like I'd ought, but I've got some new clothes now, and you wouldn't know me. I bought 'em off a tenderfoot with fold feet, but they're the goods, and you'd see a big improvement in me."

"He's a good man," said Gale. "Better than you or me, and he's all torn up over this. I never saw a man act so. When he learned about it I thought he'd go mad—he's haunted the river-bank ever since, raging about for some means of following her, and if I hadn't fairly held him he'd have set out single-handed."

"I'm still strong in the belief that Necia could have bettered her hand by stayin' out awhile longer," declared Lee, stubbornly; "but if she wants a soldier why, we'll get one for her, only I'd rather have got her somethin' real good and pronounced in the military line—like an agitant-gen'ral or a walkin' delegate."

While they were talking Burrell came in, and "No Creek" saw that the night had affected the youth even more than it had Gale, or at least he showed the marks more plainly, for his face was drawn, his eyes were sunken as if from hunger, and his whole body seemed to have fallen away till his uniform hung upon him loose, unkempt, and careless. It was as if hope had been a thing of avoirdupois, and when taken away had caused a shrinkage. He had interrogated Stark again after getting the doctor, but the man had only cursed at him, declaring that his daughter was out of reach, where he would take care to keep her, and torturing the lover anew by linking Runnion's name with the girl's till the young man fled from the sound of the monster's voice back to his own quarters. He strove to keep the image of Runnion out of his mind, for his reason could not endure it. At such times he cried aloud, cursing in a way that was utterly strange to a God-fearing man, only to break off and rush to the other extreme, praying blindly, beseechingly, for the girl's safe-keeping. At intervals an unholy impulse almost drove him to Stark's cabin to finish the work Gale had begun, to do it coldly as a matter of justice, for was not he the one who had put Necia into the hands of that ruffian? Greeting Lee mechanically, he said to Gale:

"I can't wait much longer," and sank wearily into a seat. Almost the next instant he was on his feet again, saying to the trader, as he had said it a score of times already: "Runnion comes to me, Gale! You understand he's mine, don't you?"

The old man nodded. "Yes! You can take him."

"Well, who do I git?" asked Lee.

"You can't come along," the trader said. "We may have to follow the hound clean to the states. Think of your mine——"

"To hell with the mine!" exploded the shaggy prospector. "I reckon I'm kind of a daddy to your gal, and I'm goin' to be in at the finish."

Back and forth paced the lieutenant restlessly, pausing every now and then to peer down the river. Suddenly he uttered a cry, and with a bound Gale was beside him, Lee at his shoulder.

"Look! Over the point! Down yonder! I saw smoke!"

The three stared at the distant forest fringe that masked the bend of the river until their eyes ached, and the dark green grew black and wavered indistinctly.

"You're tired, my boy," said Gale.

"Wait!"

They obeyed, and finally over the treetops saw a faint steamer of black.

"It is! It is!" cried the soldier. "I'm going for my war bag." And before the steamboat hove into sight he was back with his scanty bundle of baggage, behaving like one daft, talking and laughing and running here and there. Lee watched him closely, then went behind the bar and poured out a stiff glass of whisky, which he made Burrell drink. To Gale he whispered, a moment later:

"Keep your eye on him, John—he'll go mad at this rate."

They waited, it seemed interminably, until at last a white hull slowly rounded the point, then shaped a course across the current toward the other bank, where the water was less swift. As it came fully into sight, Gale swore aloud in despair:

"It's the Mission boat!"

"Well, what of that?" said Burrell. "We'll hire it—buy it—take it!"

"It's no use; she ain't got but three dog-power to her engines," Lee explained. "She's a down-river boat—has to run with the current to move."

"We can't use her," Gale gave in, reluctantly. "She'd only lose time for us. We've got to wait for one of the A. C. boats."

"Wait!" cried Burrell. "Good God, we've done nothing but wait, wait, wait! Let's do something!"

"You go back yonder and set down," commanded Lee. "We'll have a boat before long."

The arrival of the tiny Mission steamer was never of sufficient importance to draw a crowd to the river bank, so the impatient men at the post relaxed interest in her as she came creeping up abreast of the town. It was little Johnny Gale who first saw Necia and Poleon on board, for he had recognized Father Barnum's craft at a distance, and stationed himself at the bank hand-in-hand with Molly to bid the good, kind old man welcome.

The men inside the house did not hear the boy crying Necia's name, for his voice was small, and they had gone to the rear of the store.

"Understand! You leave Runnion to me," Burrell was saying. "No man shall lay hands on him except me—" His voice trailed away; he rose slowly to his feet, a strange light on his face. The others turned to see what sight had drawn his eyes. In the opening, all splendid with the golden sunlight, stood Necia and Poleon Doret, who had her by the hand—and she was smiling!

Gale uttered a great cry and went to meet them, but the soldier could move nothing save his lips and stood dazed and disbelieving. He saw them dimly coming toward him and heard Poleon's voice as if at a great distance, saw that the Frenchman's eyes were upon him, and that his words were directed to him.

"I bring her back to you, M'sieu'!"

Doret laid Necia's hand in that of her lover, and Burrell saw her smiling shyly up at him. Something gripped him chokingly, and he could utter no sound. There was nothing to say—she was here, safe, smiling, that was all. And the girl, beholding the glory in his eyes, understood.

Gale caught her away from him then, and buried her in his arms.

A woman came running into the store, and, seeing the group, paused at the door—a shapeless, silent, shawled figure in silhouette against the day. The trader brought the girl to her foster mother, who began to talk in her own tongue with a rapidity none of them had ever heard before, her voice as tender as some wild bird's song; then the two women went away together around the store into the house. Poleon had told Necia all the amazing story that had come to him that direful night, all that he had overheard, all that he knew and much that he guessed.

The priest came into the store shortly and the men fell upon him for information for nothing was to be gained from Poleon, who seemed strangely fagged and weary and who had said but little.

"Yes, yes, yes!" laughed Father Barnum. "I'll tell you all I know, of course, but first I must meet Lieutenant Burrell and take him by the hand."

The story did not lose in his telling, particularly when he came to describe the fight on the gravel bar which no man had seen and of which Poleon had told him little; but the good priest was of a militant turn, and his blue eyes glittered and flashed like an old crusader's.

"It was a wondrous combat," he declared, with all the spirit of a spectator, "for Poleon advanced bare-handed and beat him down even as the man fired into his face. It is due to the goodness and mercy of God that he was spared a single wound from this desperado—a miracle vouchsafed because of his clean heart and his righteous cause."

"But where is Runnion?" broke in Burrell.

"Nursing his injuries at some wood cutter's camp, no doubt; but God be praised for that double spirit of generosity and forgiveness which prompted our Poleon to spare the wretch. No finer thing have I known in all my life, Doret, even though you have ever been an ungodly fellow."

The Frenchman moved uneasily.

"Wal, I don' know; he ain't 'fight so dam' hard."

"You couldn't find no trace of him?" said Lee.

"No trace whatever," Father Barnum replied; "but he will surely reach some place of refuge where we can pick him up, for the days are still mild and the woods full of berries, and, as you know, the streams overflow with salmon, which he can kill with a stick. Why, a man might live a fortnight without inconvenience!"

"I'll be on the lookout for him," said the Lieutenant, grimly. "Tonight I'll send Thomas and a couple of men down the river."

When the voluble old priest had at last exhausted his narrative he requested of Burnell the privilege of a few words, and drew him apart from the others. His face was shrewdly wrinkled and warm with understanding.

"I had a long conversation with my little girl, for she is like a daughter to me, and I discovered the depth of her love for you. Do you think you are worthy of her?"

"No."

"Do you love her as much as you should?"

"As much as I can. They don't make words or numbers big enough to tell you how dear she is to me."

"Then why delay? Tomorrow I leave again, and one never knows what a day may bring forth."

"But Stark?" the young man cried. "He's her father, you know; he's like a madman, and she's still under age."

"I know very little of law outside of the Church," the Father observed, "but as I understand it, if she marries before he forbids her, the law will hold him powerless. Now, he has never made himself known to her, he has never forbidden her anything; and although my conclusion may not be correct, I believe it is, and you have a chance if you make haste. At your age my boy, I never needed a spur."

"A spur? Good Lord! I'm from Kentucky."

"Once she is yours before God, your hold will be stronger in the eyes of men. If I am wrong, and he takes her from you—well, may some other priest rewed you two—I sha'n't!"

"Don't worry," laughed Burrel, ablaze at the thought. "You're the only preacher who'll kiss my bride, for I'm a jealous man, and all the Starks and all the fathers in the world won't get her away from me. Do you think she'll do it?"

"A woman in love will do anything."

Burrell seized the little man by the hand. "If I had known more law you needn't have given me this hint."

"I must go now to this Stark," said Father, "he may need me. But first I shall talk with Necia. Poor child, she is in a difficult position, standing between the love of John Gale and the loyalty she owes her father. I—I fear I can not counsel her as well as I ought, for I am very weak and human. You had better come with me! perhaps the plea of a lover may have more weight than the voice of reason." As they started toward the house, he continued, energetically: "Young man, I'm beginning to live once more. Do you know, sometimes I think I was not designed for this vocation, and just between you and me, there was a day when—" He paused and coughed a trifle, then said sharply, "Well, what are you waiting for?"

Together they went into the trader's house.

Back in the store there was silence after the priest and the soldier went out, which Gale broke at last:

"This forgiveness talk is all right, I suppose—but I want Runnion!"

"We'll git him, too," growled Lee, at which Poleon uttered a curt exclamation:

"No!"

"Why not" said the miner.

"Wal," the Canadian drawled, slowly, then paused to light the cigarette he had rolled in a bit of wrapping paper, inhaled the smoke deeply to the bottom of his lungs, held it there a moment, and blew it out through mouth and

"Yes, Sir, The Twice-a-Week Gives Me All the War News."

# COMPLETE NEWS ABOUT THE WAR

**Twice-a-Week Spokesman-Review, 1 Year**
**The Washington Farmer 3 Years, Both for $1.00**

The present war is the greatest, most far reaching and stupendous conflict in the history of the world. You and your family will want to keep in touch with every move in this tremendous drama of the nations. You can do so at low cost by accepting our clubbing offer. The Twice-a-Week Spokesman-Review presents a reliable, condensed review of all current events.

Being a member of the Associated Press, the important happenings are flashed to it without delay from every capital and village, and from every far flung battle line where the history of our day is being set down in ink and blood. It pays particular attention to the war news of special interest to the people of the Pacific Northwest. It reports the progress of the draft; and from its pages you will learn who among your friends and neighbors have joined the colors.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In addition to this intensely interesting and important war news, the Twice-a-Week brings you an accurate summary of local, state, national and international events. It is published every Tuesday and Friday. Purchased in any other way it costs $1.00 per year. Certainly an offer so liberal should appeal to every one of our readers. Every issue contains important news. If you have not acted already, send in your dollar now.

**IF YOUR NEIGHBORS DON'T KNOW ABOUT THIS OFFER PLEASE TELL THEM WHAT THEY CAN GET FOR $1**

**The Washington Farmer**
***Spokane, Wash.***

# Teach Child to Love

By Elizabeth Quaker.

The most beautiful sentiment we have; "the greatest thing in the world;" the one virtue which the law leaves to the discretion of the parents—love.

The law will take care of the thief or the murderer, but the sour, crabbed old crank is just left alone with his unhappiness.

How very important, then, that we mix plenty of love in the foundation of our children's characters.

I entered a room one day where two little boys were engaged in a childish squabble over toys. "Oh," I said kindly, "I see what is the matter with these little ones. They don't love one another enough." It was very apparent they were not very loving at that moment.

The boys looked wonderingly at me for a minute, then, with a shamed little glance at each other, went quietly on with their play. How pleased I was a few days later to have one of these little boys,—during a heated argument between two of the older children,—come quietly to my side and say: "Auntie, they don't love enough, do they?" You see the little idea had "stayed with him."

Of course, you can not expect much if you simply tell the children to love. But there are so many little opportunities, presenting themselves, daily, by which they can be led in the right direction. Sometimes a fitting quotation or rhyme will be all that is needed. Here is one my grandmother taught me:

"Little children, love each other;
Never give another pain.
If your brother speaks in anger
Answer not in wrath again."

Don't worry; you will not make a "mollycoddle" out of that boy; more danger that his natural ability to "stand up for his rights" will crowd out the loving tenderness and kindness you are trying to instill.

It seems to me if brotherly love was given a larger place in the children's discipline there would be less of greed and selfishness and more happiness for all.

# Learn How to Live

By RAY W. FELTON.

"Sometimes it seems we must live a life before we learn how to get the very best from it."

So remarked Walker Moren, well known Yakima valley (Wash.) fruit grower.

We were talking of country life, its joys and its sorrows. Morren hasn't always been a fruit grower. He came to Yakima 11 years ago from Kentucky and built up a good law practice. Always a genial, likeable fellow he soon became to be regarded as one of the fixtures of the town. His friends were legion.

"I thought I was having a pretty good time," continued Moren, "and yet there was something that wasn't just right and I couldn't figure out what it was. One day a friend of mine said to me:

"'I envy Tom Jones. Why? Go and talk to Tom. He'll tell you he's got the finest farm in the finest state and in the best country outdoors. His wife is the most efficient woman in the neighborhood and his daughter the most lovely and accomplished. Tom not only appreciates every blessing he has but he can see just a little bit more than there actually is among the fortunes of his life.'

"You know that set me thinking. I began to envy Tom Jones, too. Then it dawned on me that I didn't have to envy him a bit. I found Tom didn't have much more than the ordinary man of thrift and industry is able to acquire here in Washington. Well, soon after that I married the finest girl in Yakima and bought the best fruit farm in the Naches valley. I know I'm right about the former, although some will question what I say about the fruit farm. Eight days ago the finest baby girl in the land arrived at our house. I haven't any desire to accumulate great riches and I'm having the finest time of my life. I believe I've found myself. I've been here on earth a long time, yet, I'm just beginning to live."

Moren has the right idea. Too few of us have taken the time to figure out just how much we have. We haven't found that the real joy of living comes from the simple pleasures we can get from every-day existence, provided we "find ourselves" and get the right slant at life in general.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4661 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

## Pretty and Inexpensive.

Just to prove that it doesn't require a lot of money to dress a small girl stylishly, note this cunning little school frock of striped blue and white and plain Copenhagen. The skirt, collar and cuffs are of the stripe.

# Ways to Economize

By MRS. SAM HAYES.

When a khaki or denim riding skirt wears out, usually in the crotch and down the inside of leg gores, it can be made into a useful garden or outside work skirt by trimming out worn gores and closing seam down front and back, or it can be made into serviceable overalls for the small boy.

If the collar and cuffs are worn out on a good blouse, a couple of bright-bordered handkerchiefs will make a lovely new set. Any handkerchiefs laid away by the men folks with borders considered too loud for pocket use make smart cuff and collar sets. Three of them will make a nobby dust cap and apron. Watch your magazines for patterns or look through the old numbers.

Flour sacks which have been used as bags and are too worn for that purpose make good dish towels. Rip them open and hem the raw edges. Boil them in a vessel separate from other clothes, with a little soap. Lemon rind keeps them bleached.

When hat and dress trimming ribbons which have faded and have accumulated in the house are washed and dyed, they make good hair ribbons for little daughter.

Men's good percale shirts, discarded owing to light figures or stripes fading, can be made into boys' blouses, girls' aprons, babies' caps or slips, etc., by bleaching out the faded figures and using plain white, or dying them.

Dining room table pads made of worn cotton blankets quilted together are soft and can be washed and boiled to the heart's content.

Hunt up the beaded jet (or other color) jackets, etc., on the out-of-date clothing and use beads instead of French knots on the new blouses, or make medallions of them on the front of belts for serge dresses or velvet hat trimming, and be up to date.

Cut out the best parts of the worn Jap silk blouse and shape and hem into a supply of boys' bow-ties.

A big full-sleeved short-waisted jacket of brilliantine or other good material makes good knitting bags, the sleeves for the main part of the bag and gores of body of jacket for handles, ruffles, side pockets, etc.

Cut a hole to fit the neck or head in a silk chiffon scarf and wear over an unusually plain party dress, holding scarf in at the waist with ribbon to match. This will make a new frock of it entirely.

The tight velvet corduroy jacket, if faded, should be dyed and made into one or more tam-o-shanters. A large tassel or fur puff is the only additional purchase for trimming. A corduroy "hobble" skirt to match will make a large muff and scarf or cape collar. They may be fur trimmed.

The out-of-date Turkish toweling hat cut into a bag to fit the hand, with elastic run in the wrist, makes good bath mitts. The best parts of worn Turkish towels or bathrobes can be put to the same use and are much more satisfactory than the wash cloths.

Make the back or best parts of a galatea or worsted skirt into blouses or kilts for the small boy. Unravel woolen stocking legs, caps, sweater, etc., and when there is no other use for them use the yarn for knotting comforters, etc.

When baby has outgrown his crib blanket, make a morning jacket of it by cutting a diamond-shape hole near the center to slip over head and catching the edges under each arm with hook and eye, bows of ribbon over hooks and eyes and on shoulder at neck as trimming improves the appearance. It also can be opened down the front or a ribbon sash added—any way to suit the individual.

When a shoe string has "played out," and the supply of new ones is gone, get a length of binding tape, corset lace or narrow soutache braid, blacken it with shoe polish, dip the ends in melting sealing wax, paraffin or candle, and roll them, and you have a good substitute.

Boil until bleached the discarded or faded print or cretonne curtains and sew the lengths together and use to dry your vegetables and fruit on next summer, by so doing saving the sheets.

### A Cheap Rice Pudding.

One-quarter cup uncooked rice, one pint milk, one-fourth cup New Orleans molasses, one-third teaspoon salt, one-fourth teaspoon cinnamon and one tablespoon butter.

Wash rice well. Mix ingredients and pour into greased baking dish. Bake about two hours in slow oven (under the broiler of the gas range when using the baking oven), stirring two or three times during the first hour to prevent rice settling to bottom of dish, at last adding butter (or other shortening). Serve hot.

## The following are just a few of the points gleaned from the talks of Miss Anna Barrows during Housekeepers' Week at the State College of Washington:

When buying cooking utensils choose those with round corners, instead of square, wherever possible. They are easier to keep clean.

Light granite round pans are better than crockery bowls to use for mixing. They are easier to handle.

When you put things away on shelves see that they are in deep utensils, rather than large shallow ones. They take less room on the shelf, and there is less danger of spilling.

Use spices for flavoring instead of so much vanilla. Vanilla is much more expensive and contains no nourishment.

When you cut up an onion and use part for seasoning, cut up the balance and dry it, and it will be ready when needed the next time.

After parsley has been used for garnishing dip it in boiling water to set the coor, then dry and sift it and have it ready for soup, dressing, etc.

Best way to wash rice is to put it in a strainer and hold under a running faucet.

When ricing potatoes, warm the ricer in hot water instead of with the hot potatoes and serving the potatoes cold.

Keep a brush especially for washing vegetables.

When using cheese with mashed potatoes it is better to cut the cheese in small pieces and mix in than to grate it over the potatoes. The flavor is then mixed all through.

Warm potato salad is good because it absorbs the flavors better than the cold, and doesn't have that "cold potato" taste.

Baked or boiled leftover potatoes will keep better if the skins are left on.

If cabbage is dry or old cut the tough stem off and set in water over night or until it freshens.

Aprons made of crossbar pattern can be easily mended without the patch showing.

Half-bleached cotton crepe napkins are good for everyday use. They save lots of ironing, and yet the children may be taught proper use of the napkin at the table.

**American Mastodon Pansies**

These possess the most robust vigor, largest sized flowers, superb rounded form, great substance, violet scent, and marvelous colors without limit. The quickest to bloom and most durable; the acme of perfection in Pansies. Seed, pkt. 10c.

# Patterns

2022—Ladies' apron. Cut in four sizes: Small, medium, large and extra large. It requires for a medium size four and three-eighth yards of 36-inch material. Price, 10 cents.

2100—Ladies' combination corset cover and drawers. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires three and seven-eighth yards of 36-inch material for a 36-inch size. Price, 10 cents.

2102—Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. It requires three yards of 44-inch material for a 6-year size. Price, 10 cents.

2104—A charming lounging robe. Cut in four sizes: Small, medium, large and extra large. Size medium requires six and a quarter yards of 44-inch material. Price, 10 cents.

2159—Dress for misses and small women. Cut in four sizes: 14, 16, 18 and 20 years. It requires five and one-eighth yards of 44-inch material for a 16-year size. The skirt measures about two and a half yards at the foot. Price, 10 cents.

2220—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 years requires three and a quarter yards of 44-inch material. Price, 10 cents.

2338—Girls' dress. Cut in four sizes: 2, 4, 6 and 8 years. Size 6 requires 3 yards of 36-inch material. Price, 10 cents.

2339—Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 7 1-4 yards of 36-inch material. The skirt measures about 3 yards at the foot, with plaits drawn out. Price, 10 cents.

2350—Child's waist and bloomers. Cut in five sizes: 4, 6, 8, 10 and 12 years. Size 10 requires 2 3-8 yards of 36-inch material for the bloomers and 1 3-8 yards for the waist. Price, 10 cents.

2353—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 7 3-4 yards of 36-inch material. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

2354-2351—Ladies' costume. Waist, 2354, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt, 2351, cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make the entire dress in size 38 will require 8 3-8 yards of 36-inch material. The skirt measures about 1 3-4 yards at the foot. Two separate patterns, 10 cents for each pattern.

**Associations May Amalgamate.**

With a view to joining the international irrigation congress and the international farm congress into one organization, these two associations will meet at the same place at the same time next year, the place and date to be decided upon later.

# Make Savory Stews

Make a little meat go a long way; Use savory stews. It needs only a small piece of meat to give flavor to a hearty dish. In the following dishes part of your building material comes from the more expensive meat and part from the cheaper peas, beans, hominy and barley. The recipes are taken from a leaflet issued by the United States department of agriculture:

**English stew**—One pound mutton, one-half cup pearled barley, one tablespoon salt, four potatoes, three onions, celery tops or other seasoning herbs. Cut the mutton in small pieces and brown with the onion in fat cut from meat. This will help make the meat tender and improves the flavor. Pour this into a covered saucepan. Add two quarts water and the barley. Simmer for one and one-half hours. Then add the potatoes cut in quarters, seasoning herbs, and seasoning and cook one-half hour longer.

**Beef stew**—One pound beef, four potatoes cut in quarters, one-fourth peck peas or one can, one cup carrots cut up small, one teaspoon salt. Cut the meat in small pieces and brown in the fat from the meat. Simmer in two quarts of water for one hour. Add the peas and carrots and cook for one-half hour, then add the potatoes. If canned peas are used, add them 10 minutes before serving. Serve when potatoes are done.

Here is the way you can change the stews to make them different and to suit the season:

1—The meat.—This may be any kind and more or less than a pound may be used. Use the cheap cuts, the flank, rump, neck or brisket. The long, slow cooking makes them tender. Game and poultry are good.

2—Potatoes and barley may be used or barley alone, or rice, hominy or macaroni.

3—Vegetables.—Carrots, turnips, onions, peas, beans, cabbage, tomato are good, canned or fresh. Use one or more of these as you wish.

4.—Parsley, celery tops, onion tops, seasoning herbs, or chopped sweet peppers add to the flavor.

5—Many left-overs may be used—not only meat and vegetables, but rice of hominy.

**Woman Overseer of Poor.**

Montclair, N. J., has a woman overseer of the poor, at a salary of $900 per year. No doubt she will do the work well, for many of the duties connected with such a position are especially appealing to women.

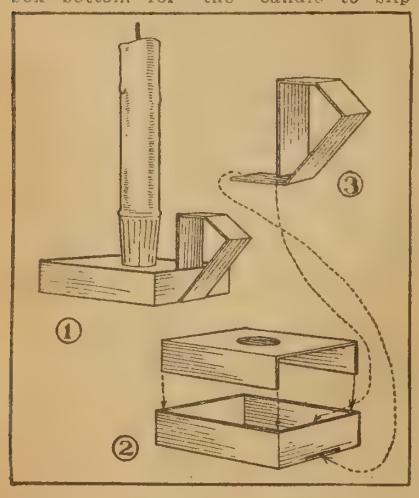
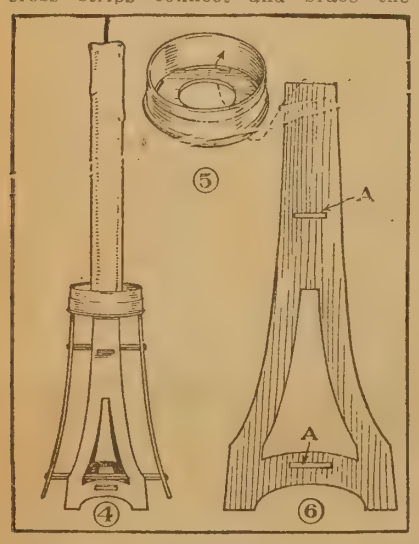
# Handicraft For Girls



By Dorothy Perkins.

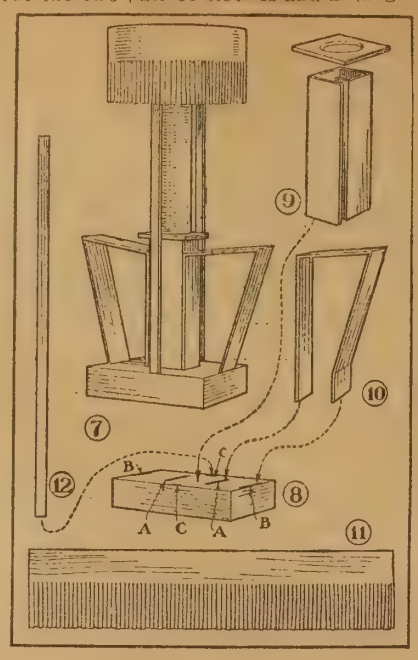
## Home Made Candlesticks.



Candlesticks are coming more and more into use as ornaments, and a pair on the mantel shelf, and one on the library table or desk top is quite the thing. The three candlesticks in the illustration are of unique form, and you girls will find them interesting things to make. As they are made of cardboard, it is best not to light the candles. Burn each candle just enough to give it a used appearance, then keep it in the candle stick unlit.

The candlestick in Fig. 1 has a base made of a small cardboard box (Fig. 2). In this box is fitted a piece of cardboard having its edges turned down and a hole cut through the center to receive a candle (Fig. 2); glue the turned down edges to the sides of the box. Fig. 3 shows how to fold a cardboard strip for the handle. One end of this is stuck through a slot in one side of the box and glued to the box bottom; the other end is slipped into the box and glued to the side.

The candlestick in Fig. 4 is of a more ornamental design. A pill box forms the top. Fig. 5 shows how a hole is cut through the center of the box bottom for the candle to slip



through, also how slots are cut through the bottom to receive the ends of the four supports. A pattern for the supports is shown in Fig. 6. Fig. 4 shows the relative proportions of the box top and the supports. After making and cutting out one support, use it as a pattern for marking out the other three. The two slots A (Fig. 6) are provided for the cross strips to stick through. Fig. 4 shows how these cross strips connect and brace the

supports. The upper pair of braces support the candle. Glue the ends of the crosspieces in slots A, and glue one crosspiece to the other at their intersection.

## Candlestick Shade.

In Fig. 7 we have a candle stick with a simple shade. The base is a small cardboard box, turned bottom side up (Fig. 8). The center post mounted upon the base is in reality a sleeve that fits over the lower part of the candle (Fig. 9). This post is folded out of one piece of cardboard, and a flap is provided on one edge to lap and glue to the other edge. The top cap projects over the sides of the support all around, and has a hole cut through its center large enough for the candle to slip through. This post is glued to the center of the base, and is braced with the candlestick handles (Fig. 10). After preparing the handles, cut the two pair of slots A and B (Fig.

8) through the base, for the handle ends to stick through. Glue the inner upright of each handle to the candle post, glue the end of the outer upright to the ends of the box, and glue the end of the inner upright to the box bottom.

The candle shade is made of a band of cardboard bent into a ring and covered with a strip of paper that has been slashed along its edges (Fig. 11) to form fringe. Red paper will look best for the covering. The supports for the shade are a pair of cardboard strips (Fig. 12). Glue the upper end of these to the inside of the shade; stick the lower end through a pair of slots in the base (C, Fig. 8) and glue to the box sides.

When you have completed the candlesticks, you may try your hand at decorating the cardboard with different tints of water color.

(Copyrighted, 1916, by A. Neely Hall.)

# No Minors Allowed

(Continued from page [illegible].)

"You promise me—you promise me—you not break your promise," implored the Swede. He was fairly praying to his newly found friend, Billy.

"Yes, damit, I promise," vowed Billy. "I won't break my promise—you know I never do, Gus. All I'll break is some necks for them guys that stole your money, if they don't come through. When one of my best customers is robbed in my house, I'm sure one little rattlesnake—ain't I, old man?"

The "old man" agreed. Also, he was comforted and agreed to go to bed.

"Say, when am I goin' to get a peek at that hole?" complained Charley. That was my cue to retire, and Charley took the eye-hole.

"Billy's puttin' the Swede to bed," he whispered presently. "The crazy gink wants to throw his arms around Billy and love him; gee, but they're a lovin' pair!"

He watched for both of us, informing me of developments in a low whisper.

"Billy's goin' to blow out the lights—time for us to beat it," he announced aloud! He had made the fatal slip.

Billy heard him. He uttered a startled curse, and there was the swift rush of his feet as he made for the door.

Charley and I left the saloon porch like a pair of flying squirrels, and flattened in the street where it was dark as pitch just as Billy jerked open the door, and in a harsh voice shouted:

"Wutinell you doin' there?"

We didn't answer, of course. So Billy hurled at us, in the dark, the vilest curses and names imaginable. Charley's quick temper overcame his caution.

"I'll fix you for that," he whispered; and to me: "Find me a rock, won't you—never mind, here's a dandy."

Softly as a cat he got on his feet. Standing on the saloon porch with the lamplit glass of the saloon front back of him, Billy was a good target, though he could not see us. Charley's lithe arm lashed out with the snap of a whip as he let the stone fly. I have a notion that the stone missed Billy's head by an inch or less. It went through the glass front of the saloon with a mighty bang.

"Beat it!" whispered Charley. We "beat it" for a little way. Suddenly Charley stoped and whirled about.

"Catch us, you damned thief—catch us! Thief, thief, thief!" he taunted.

We heard Billy's feet strike the ground as he sprang from the porch and started in pursuit; and away we went, running on our toetips with the soft, springy tread that we had learned in our games of "hi barbaree." Billy could not hear our footfalls, nor could he see us; we could not see him, but he was running flatfooted with the sound of a galloping horse. It was play to evade him—mere play. Very clumsy at our game of hi barbaree was Billy, the bartender. We yelled "thief" at him some more; then desiring to give him the slip, we darted into a black alley. Billy followed; and almost immediately banged into a huge box of tin cans in the rear of the Grand hotel. Billy couldn't have crept down that alley on hands and knees without making as much noise as a runaway milk wagon.

We had darted down it dozens of times, and knew by instinct the location of every pile of bottles, barrel of cans and pile of boxes. So a hundred feet or so away from Billy we stopped and laughed at him while he crawled from among the cans, swearing like a pirate. Charley found another stone somehow, and, guessing his "range" by the sound of the bartender's swearing and the rattle of the cans, he let drive with all his might.

He made a fairly close shot, I think. He rattled the cans with the stone, and couldn't have missed Billy more than a yard.

We slipped between two buildings, crept quickly under one of them and shot out into the dark street through a place where a board hung on one nail and could be shoved aside if you knew the trick; darted across the street, sped down another alley, doubled back between two buildings and slipped into a couple of barrels in pitchy darkness, to rest and listen. I suppose that while we were doing all that Billy was tiptoeing around in the dark alley, thinking every minutes that he would collar us. But at our hi barbaree game he was thick-headed and clod-footed.

"You called Billy a thief," I remarked as we made warily for home a little while later. "What do you suppose he thought?"

"He thought somebody had the goods on him, I reckon," answered Charley.

"The goods?"

"Yep, the goods. When he come out of the back room from putting the Swede to bed, he stopped at the far end of the bar right by the lamp and looked around sly like. Then he fetched from his inside pocket a bunch of bills. He looked around sly like again, and listened; and then he stooped in front of the bar where I couldn't see him. I'll bet he hid the bills down by the foot rail under a spitoon or something; and in the morning he'll have the Swede clean out bright and early before anybody is around, or maybe he'll get him out of bed tonight somehow; and he'll fix it so that the poor fathead'll find the money there himself."

Such was Charley's diagnosis. It was about 100 per cent correct. The next day it was noised about the town that Gus Larsen had done the funniest thing! He had been on a tear the night before, and somehow, dropped a roll of bills into a cuspidor close to the footrail of the bar.

Billy had found them there when he was cleaning out that morning; and he just picked up the spitoon and took it into the back-room, where Gus was sleeping off a drunk, and woke Gus up and made him fish the bills out himself so that he'd know how it was that he'd lost his money.

Gus felt mighty sheepish about it, it was said. Others remarked that if all bartenders were as honest as Billy, saloons wouldn't have such a bad name. Gus felt so sneaking about it, having accused Billy of stealing his money, that the next day he treated everybody that came in the saloon as long as his money lasted.

# "The Barrier" By REX BEACH

(Continued from page [illegible].)

nostrils before adding, "you'll jus' be wastin' tam'!"

Gale looked up from beneath his thatch of brow, and asked, quietly:

"Why?"

"You 'member—story I tol' you wan day, two, t'ree mont' ago," Poleon remarked, with apparent evasion, "'bout Johnny Platt w'at I ketch on de Porcupine all et up by skeeter-bugs?"

"I do," answered Gale.

"Wal,"—he met their eyes squarely, then drew another long breath from his cigarette—"I'm jus' hopin' nobody don' pick up dis Runnion feller de same way. Mebbe dey fin' hees han's tie' behin' 'im wit' pieces of hees shirt—"

"Good God!" cried the trader, starting to his feet. "You—you—"

"—of course, I'm jus' s'posin'. He was feel purty good w'en I lef'. He was feel so good I tak' hees coat for keepin' off dem bugs from me, because I lef' it my own shirt on de canoe. He's nice feller dat way; he give up easy. Ba gosh! I never see worse place for skeeters!"

Gale fell silent, and "No Creek" Lee began to swear in little, useless, ineffective oaths, which were but two ways of showing similar emotions. Then the former stepped up and laid a big hand upon Poleon's shoulder.

"That saves us quite a trip," he said, but "No Creek" Lee continued to swear softly.

It seemed that Poleon's wish was to be gratified for no news of the missing man came through in the days that followed. Only a fishing village far down the river, where a few native families had staked their nets and weirs for salmon, a hunter told a strange tale to his brothers— a tale of the white man's idiosyncrasies. In sooth, they were a strange people, he observed, surpassing wise in many things, yet ignorant and childish in all others, else why should a half-naked man go wandering idly through the thickets holding a knotted rag behind his back, and that when the glades were dense and the moss-chinks filled with the singing people who lived for blood? The elders of the village nodded their heads sagely, and commended the hunter for holding aloof from the inert body, for the foolishness of this man was past belief, and—well, his people were swift and cruel in their vengeance, and sometimes doubted an Indian's word, wherefore it were best to pay no heed to their ways and say nothing. But they continued to wonder why.

Father Barnum found the three still talking in the store when he had finished an hour's counsel with Necia, so came straight to the point. It was work that delighted his soul, for he loved the girl, and had formed a strong admiration for Burrell. Two of them took his announcement quietly, the other cried out strenuous objections. It was the one-eyed miner.

"Right away! Not on your life! It's too onexpected. You've got to hold 'em apart for an hour, anyhow, till I get dressed." He slid down from his seat upon the counter. "What do you reckon I got all them clothes for?"

"Come as you are," urged the father, but Lee fought his point desperately.

"I'll bust it up if you don't gimme time. What's an hour or two when they've got a life sentence comin' to 'em? Dammit, you jest ought to see them clothes!" And by very force of his vociferations he succeeded in exacting the promise of a brief stay in the proceedings before he bolted out, the rags of his yellow mackinaw flapping excitedly.

The priest returned to Necia, leaving the trader and Poleon alone.

"I s'pose it's best," said the former.

"Yes!"

"Beats the deuce, though, how things work out, don't it?"

"I'm glad for see dis day," said the Frenchman. "He's good man, an' he ain' never goin' to hurt her none." He paused. "Dere's jus' wan t'ing I want for ask it of you, John—you 'member dat day we stop on de birch grove, an' you spik 'bout her an' tol' me dose story 'bout her moder? Wal, I was dreamin' dat tam', so I'm goin' ask it you now don' never tell her w'at I said."

"Doesn't she know, my boy?"

"No; I ain 'never spoke 'bout love. She t'inks I'm broder wit' her, an'—dat's w'at I am, ba Gar!" He could not hold his voice even—it broke with him; but he avoided the old man's gaze. Gale took him by the shoulders.

"There ain't nothing so cruel in the world as a gentle woman," said he; "but she wouldn't hurt you for all the world, Poleon; only the blaze of this other thing has blinded her. She can't see nothing for the light of this new love of hers."

"I know! Dat's w'y—nobody onderstan's but you an' me—"

Gale looked out through the open door, past the sunlit river which came from a land of mystery and vanished

(Continued on the following page.)

**Lily Creek and Lily Hill.**

Dear Aunt Nellie: We get the Farmer every week and as soon as we get it I look for the letters. I write to a girl at Friday Harbor. Her name is Nettie Johnson. We have lived on this place for seven years. It will be eight years in April. It is a cattle ranch. We have lived here for nearly five years without any neighbors. When we first came here there was alder trees growing right against the porch. All the level land there is around here is tideland. There are five fields that we raise hay in. In the summer time when we are putting in the hay I have a lot of work to do. I drive the hay fork and hay rake, milk the cows, drive the cows in, water and feed the horse, I work and sometimes unharness her. I will have more to do next summer. I will have my work in the house, feed seven rabbits, feed chickens besides the other things I have told you. I hope to see this letter in print. When the lilies are blooming Nora Jones and Edith Jones and I go way back over a hill in the woods after lilies. There is a little creek that runs through between two hills. We call one of the hills Lily hill and the creek, Lily creek. One time my father sent me to find a cow. She had a little calf. I hunted for a long time before I could find her. She was standing under a spruce tree with her little black and white calf along her side. It was just the color of her. I had a hard time getting her home. The calf fell in the mud once. She was a fine milk cow. Afterward she was going across a bridge and she slipped and broke her leg. Her foot went under the end of the bridge so she couldn't get out. She smothered in the mud. Papa moved the bridge as soon as he could. I have five little rabbits and two old ones. The little ones just opened their eyes. Johnnie is running all over. He is my brother. Well I am about out of news. Is there any girls about 12 years old? If there are I would like to hear from them. I just passed into the sixth grade.—Alice Case, Tokeland, Wash.

**Goldie Has Joined Our Corner.**

Dear Aunt Nellie: May I join your happy Corner? If I may please write to me and tell me. I live on a farm of 240 acres. My father owns about 3000 acres of land, but we do not live on it. We haven't any cows, but have about 105 horses. The ranch we live on now we are trying to sell. I am 11 years old. I will be 12 years old January 13. Have I a twin? If I have one I wish they would write to me whether it is a boy or girl I don't care. I enjoy reading the letters very much. I belong to the Red Cross and I have got a war saving stamp. I have two brothers, but no sisters. My brothers' names are Alfred, age 17, and Noble, age 19. My brother will have to go to the war if they take them from 19 to 45. I like to think that our soldiers will give up their lives to make the German people free from their government. I will send a few riddles to you. A long house, a small door. Pull its tail and it will roar. What is it? Upon the hill there is a green house, in this green house there is a pink house, in this pink house there is a red house, in this red house there is a lake, in this lake there is a boat, in this boat there is a beautiful lady, with golden hair. On this lady's shoulders there is a pair of blue birds. What is her name? Aunt Nellie, if you only would just put your address in the Farmer I do believe more children would join and the Corner would grow larger. I hope to see my letter in print. I am in the sixth grade.—Goldie Yohnka, Box 685, Ritzville, Wash.

**Water All Around the House.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I am 11 years old and in the seventh grade. My birthday is the 22d of June. Have I a twin? If so, I would wish to correspond with her or with any one else. I have four sisters, Helga, Bertha, Elver and Teckla. I have three brothers, Edward, Leo and Verner. The dreadfullest thing happened here lately. The Skagit river has flooded over because of the snow from the mountains. The flood came December 30. It was Sunday. I guess every one had a happy New Year, but I did not have a happy one. When I awoke I looked out through the window and all that I saw was water. We have three feet of water here now. It did not come here very fast because the Great Northern railroad was between our farm and the river. In Riverside it was 15 feet of water. The water came with such a current that it made a great big slough in a man's farm. Lots of houses and barns were wrecked. We do not know how many people or cattle were killed. When you look outside it looks like an ocean. I am just getting tired of it, and it gets more and more hateful because I know I ought to be in school and not sitting inside reading, sewing or doing something else. The only relief is a boat ride. We have moved all our cattle and horses away. Every evening and morning my brother Edward goes to milk on a raft about two miles away. I guess my letter is getting too long. I hope I see it in print. Also I wish to be a cousin.—Agnes Sunnell, R. 5, Box 58, Mount Vernon, Wash.

**Brothers Are in Honolulu.**

Dear Aunt Nellie: This is the fourth time I have written to the Children's Corner. I have not written for a long time, so thought I would write. I have a twin. Her name is Mable Margret. She is just one day older than I am. I was 12 years old December 19, 1917. There are more girls write than boys. I have three brothers and one sister. Her name is Beulah. My brothers' names are Almon, Frank and Walter. Almon and Frank have joined the army. They are both in Honolulu. It is pretty warm over there. My brother and I joined the Red Cross at school. In Elma most all of the children are joining the Red Cross to help the soldiers. I know how to tat and knit. My teacher's name is Miss McDonnell. I like her fine. Our Corner is getting pretty little. I wish more of the children would write so our Corner will get larger. The water is up quite high. The water is back of our house. I had a good time Christmas. My aunt and uncle, Mr. and Mrs. Gale, were up from Montesano for Christmas. My father could not come home for Christmas for he had a hurt leg. He is in the hospital now. We only had seven school days for Christmas vacation. I hope all of the children got lots of presents for Christmas. I wish some of the children would write to me.—Ruby Warren, R. F. D. Route 1, Box 2B, Elma, Wash.

**Likes to Coast Downhill.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the cousins' letters very much and would like to be a member of the Corner. I am 10 years old and am in the fifth grade at school. My birthday is June 21. Have I a twin? I go to the Jones school, district No. 146. The schoolhouse has one large room and one teacher. Her name is Miss Alpharetta Kellie. She is a very good teacher. I have brown eyes, medium brown hair and my complexion is fair. It is snowing very fast today. I am glad for I enjoy snowballing and coasting down hills. I have two brothers, both younger than I. Their names are Raymond and Elmer. Raymond goes to school and is in the second grade at school. Elmer doesn't go this year, but will go next year. I hope all the cousins had such a happy Christmas as I did and I got the most beautiful present. It was a piano. I would like very much if some of the cousins would write to me.—Lucille Genevieve Gerlitz, Route 1, Box 40, Penawawa, Wash.

**Likes to Read Books.**

Dear Aunt Nellie: It has been a long time since I wrote a letter to the Corner. I think it is about time I wrote. The cousins do not seem to want to write to me. I don't know why. I surely would answer their letters and would be very glad to hear from them. I am 15 years old. It is snowing hard outside. I suppose there will be lots on the ground in the morning. We are only milking three cows now. Did you cousins get many Christmas presents? I got 15 and they were all nice. I am writing to one girl and she sent me a nice silk handkerchief. I haven't heard from her for quite a while. But I guess the letter is delayed somewhere. If any of the cousins want to read a good book get "The Rover Boys in the Mountains" or "The Rover Boys in Southern Waters." They are very good books. Every book I read I like awfully well. "Jack, the Runaway," is another good book. I hope the cousins get to read them. I will try and write again if I get time, Aunt Nellie.—Iris Chevalier, Prevost, Wash.

**Knitted Washrag for Uncle in France.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old and in the second grade. Our teacher's name is Verna Wheeler. I have one brother. His name is John. He is 12 years old and in the eighth grade. We all knit at school. I knitted a washrag and sent it to my Uncle Al, now in France. Mama, John and I are members of the Red Cross. My papa died eight years ago. We live on my uncle's farm of 340 acres. I have one cow. Her name is Tommy. I have two kittens, Toby and Puss. I can milk my cow, too. My Uncle Jake is at Bremerton in the navy. There is a spruce camp across the Wynooche river. We have had no winter at all. Our roses are still in bloom. I like to be one of the cousins and would be glad to hear from some little girl. My birthday is September 17.—Anna Larson, Route A, Montesano, Wash.

**A Dog and a Cat for Pets.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it will not be the last. I am 13 years old and in the fifth grade. I live on a farm and have a dog and a cat for pets. We have about 50 cows and calves all together and about 30 horses and 29 pigs and about 50 chickens. My complexion is light. I have light blue eyes and light yellow hair. I have one brother and one sister. My brother is 16 years old and my sister is 5 years old. We are having two weeks' vacation at our school. We have a nice teacher. His name is Mr. Harry Smith. There are 10 going to our school. Their names are as follows: Harold Harris, Erick Shultz, Frank Reinbold, Lena Reinbold, Bertha Reinbold, Susie Thuringer, Mary Brodin, Ruth Cenard and myself. I like to go to school. I would like to see my letter in print. If I have a twin I would like to hear from her.—Selma Schillinger, Miles, Wash.

**Three Teachers This Term.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old and in the sixth grade in school. I have only one sister. Her name is Esther and she is 10 years old and in the fifth grade in school. We have had three different teachers this year. The first one was Miss Schragg, the second Miss Prewett, and the third one was one of our neighbor girls that taught when our other teacher was sick. I have two miles to go to school and walk most of the time, for we haven't had much snow yet. There are just 10 scholars in our school and just two in my grade. I live on a 320-acre farm. We have three cows and four calves. We have one dog and two cats, 11 horses and two colts. The dog's name is Tige. We had some vacation for Christmas and New Year's. I go to Sunday school. We get the Farmer and I enjoy reading the letters in it very much. I would like to correspond with somebody if they would write to me. I will be 13 October 18. If this does not reach the wastebasket I hope to see my letter in print.—May Nightingale, Box 28, Schragg, Wash.

**Helen Adds a Letter to the Corner.**

Dear Aunt Nellie: This is the first letter I have ever written to you, but it will not be the last. I am 13 years old. My birthday is April 4. Have I a twin? I surely do enjoy reading the letters in the Children's Corner and I wanted to add one to them. We only live a little ways from town. We have three cows, Maggie, Daisy and Rose. We have six calves, two pigs, one horse and 35 chickens. We also have a pretty cat that looks like a tiger, so we call it Tiger. I go to school every day. I am in the sixth grade. My teacher's name is Miss Thurber and I have a sewing teacher by the name of Miss Morris and a music teacher, Miss Katherine Duran. I also have two sisters, Rachel and Lydia. Rachel is 8 and Lydie is 6.—Helen Inez Dowk, Medical Lake Wash.

**Cousin Lois Raises Chickens.**

Dear Aunt Nellie: I like to read the letters in the Corner. I am 10 years old and in the fourth grade. I go to school a half a mile. Our teacher's name is Miss Barkley and we all like her. I have a cold and haven't gone to school for a week but expect to go Monday. I have some Black Minorca chickens. I am going to raise enough to buy another war saving stamp. I like chickens and my papa likes hogs. He raises Poland China hogs. We live on a high hill three miles north of Oakesdale and we can see all over the Palouse country. I have four younger brothers, Stanton, Wayne, Del and Donald. I wish to see this in print. This isn't the last time I am going to write.—Lois Walker, R. F. D. 2, Oakesdale, Wash.

**Mail Box Is Five Miles Away.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 14 years old. I am in the seventh grade at school. Our teacher's name is Miss Johnson. I love to go to school. We live on a 40-acre farm. We have three horses. Their names are Jim, Fannie and Katie. I ride horseback to our mailbox. It is five miles away. I have four brothers and three sisters. My brother's names are Nick, Steve, Egnoce and Pete. Nick and Steve are in the navy at Seattle. My sisters' names are Emma, Jennie and Mary. Have I a twin I hope this letter will not find the wastebasket. I would like to have it printed. I shall write again.—Elsie Gronka, Route 2, Box 31, Sequim, Wash.

**Goes to Glenwood School.**

Dear Aunt Nellie: I am 10 years old. My birthday is the 26th of January. Have I a twin? If so write to me. I go to school. The name of the school is Glenwood school. I am in the fifth grade. I have two miles to walk to school every day. This is the second letter I have written to the Corner. I have four brothers and no sisters. My brothers' names are Rex, Max, Wilbur and Francis. The baby's name is Francis. He will be 3 in July. Max is in the navy. Rex might be drafted. I can't think of any more, so will close for now.—Dorothy Cain, Box 200, R. R. 6, Vancouver, Wash.

**Edna Has a Pony.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I wrote twice, a year ago this winter. I am nine years old and in the fourth grade. We have two cows and two calves. I have a pony. I live on a 160-acre farm. We have 36 chickens and 12 turkeys and six hogs. We have 12 horses. We had a Christmas program at school. Everybody said it was fine. My teacher's name is Hazel Hamilton.—Edna Smith, Riverside, Wash.

**Ella's First Corner Letter.**

Dear Aunt Nellie: I have never written to the Children's Corner. I am 11 years old and in the fifth grade. I have two brothers and one sister. My brothers' names are John and George. My sister's name is Annie. Annie began to go to school this year. She was seven years old in October. We have 17 cows and five calves, eight horses and one colt. We have 50 chickens, two cats and one dog.—Ella Wasko, Prosser, Wash.

# THE BARRIER

(Continued from the preceding page.)

into a valley of forgetfulness, past the forest and the hills, in his deep-set eyes the light of a wondrous love that had lived with him these many weary years, and said:

"Nobody else can understand but me—I know how it is. I had even a harder thing to bear, for you'll know she's happy at least, while I—" His voice trembled, but, after a pause, he continued: "They neither of them understand what you've done for them, for it was you that brought her back; but some time they'll learn how great their debt is and thank you. It 'll take them years and years, however, and when they do they'll tell their babes of you, Poleon, so that your name will never die. I loved her mother, but I don't think I could have done what you did."

"She's purty hard t'ing, for sure, but I ain't t'ink 'bout Poleon Doret none w'en I'm doin' it. No, I'm t'ink 'bout her all de tam'. She's li'l' gal, an' I'm beeg, strong feller w'at don' matter much an' w'at ain' know much—'cept singin', an' lovin' her. I'm see for sure now dat I ain' fit for her—I'm beeg, rough, fightin' feller w'at can't read, an' she's de beam of sunlight w'at blin' my eyes."

"If I was a fool I'd say you'd forget in time, but I've lived my life in the open, and I know you won't. I didn't."

"I don't want to forget," the brown man cried, hurriedly. "Le bon Dieu would not let me forget—it's all I've got to keep wit' me w'en I'm lookin' for my 'New Countree.'"

"You're not goin' to look for that 'New Country' any more," Gale replied.

"Today," said the other, quietly.

"No."

"Today! Dis affernoon! De blood in me is callin' for travel, John. I'm livin' here on dis place five year dis fall, an' dat's long tam' for voyageur. I'm hongry for hear de ax in de woods an' de moose blow at sundown. I want for see the campfire t'rough de brush w'en I come from trap de fox an' dem little wild fellers. I want to smell smoke in de dusk. My work she's finish here, so I'm paddle away today, an' I'll fin' dat place dis tam', for sure—she's over dere." He raised his long arm and pointed to the dim mountains that hid the valley of the Koyukuk, the valley that called good men and strong, year after year, and took them to itself, while in his face the trader saw the hunger of his race, the unslaked longing for the wilderness, the driving desire that led them ever north and west, and, seeing it, he knew the man would go.

"Have you heard the news from the creeks?"

"No."

"Your claims are blanks; your men have quit."

The Frenchman shook his head sadly, then smiled—a wistful little smile.

"Wal, it's better I lose dan you—or Necia; I ain' de lucky kin', dat's all; an', after all, w'at good to me is riche gol'-mine? I ain' got no use for money—any more."

They stood in the doorway together, two rugged, stalwart figures, different in blood and birth and every other thing, yet brothers withal, whom the ebb and flow of the far places had thrown together and now drew apart again. And they were sad, these two, for their love was deeper than comes to other people, and they knew this was farewell; so they remained thus side by side, two dumb, sorrowful men, until they were addressed by a person who hurried from the town.

He came as an apparition bearing the voice of "No Creek" Lee, the mining king, but in no other way showing sign or symbol of their old friend. Its style of face and curious outfit were utterly foreign to the miner, for he had been bearded with the robust, unkempt growth of many years, tanned to a leathery hue, and garbed perennially in the habit of a scarecrow, while this creature was shaved and clipped and curried, and the clothes it stood up in were of many startling hues. Its face was scraped so clean of whiskers as to be a pallid white, but lack of adornment ended at this point and the rest was overladen wondrously, while from the center of the half-brown, half-white face the long, red nose of Lee ran out. Beside it rolled his lonesome eye, alive with excitement.

He came up with a strut, illumining the landscape, and inquired:

"Well, how do I look?"

"I'm darned if I know," said Gale, "But it's plumb unusual."

"These here shoes leak," said the spectacle, pulling up his baggy trous-

(Continued on page thirty-nine.)

# NEWS FOR BREEDERS

Professor Potter head of the animal husbandry department of the O. A. C., placed the stock for the students' judging contest at the Denver stock show, the week of January 21. The previous week Professor Potter delivered an address at the meeting of the National Live Stock association at Salt Lake and attended the meeting of the National Wool Growers' association in the same city.

That there will be the best lamb crop in many years in the Willamette valley and in the entire northwest, for that matter, is the prediction of Professor Oran M. Nelson, assistant professor of animal husbandry at the O. A. C. The ewes have been pastured all winter on good growing wheat, the best feed in the world for breeding ewes. They are strong and in good condition to produce good strong lambs. But bad weather is apt to be on hand just at lambing time, Professor Nelson points out, and the good condition of the ewes is no reason for relaxing vigilance and care. At this time when the need of food conservation is so great and when every lamb means so much money, every flock master should try to make this a record year in the number of lambs born and saved. H. A.

## Goldie's Nehalem Beauty.

After making the junior 3-year-old world's record, Goldie's Nehalem Beauty, owned by Clifford Reid, Portland, Ore., is living proof that a cow can make a big record without impairing her health and come back the next year with a much larger record.

Goldie finished her junior 3-year-old world's record September 9, 1916, freshened again in two months and one day, started her test at 4 years 6 months and 6 days, and on November 17, 1917, finished with 904.91 pounds of fat, 1131.137 pounds of butter, 80 per cent fat. This makes a record for her in two years two months and one week of 27,691.2 pounds milk and 2068.15 pounds butter.

Mr. Reid writes: "As far as we know this record made at 4 years 6 months is unsurpassed by any other Jersey cow at the same age, and we think the record made for the two years is also unsurpassed by any cow of the same age."

## National Shorthorn Congress.

The Farmer is in receipt of a communication from Frank D. Tomson with regard to the National Shorthorn congress, show and sale, from which it is glad to take the following extracts:

An impression of the responsive attitude of the American Shorthorn breeders toward the announcement of the forthcoming National Shorthorn congress, show and sale February 18-23 at Chicago, is gained in the scope of territory represented by those who have made entries for this event. From the Atlantic coast to the Rocky mountains and from Canada to the gulf and the states between there have come requests for entries such as have never before responded to the call of any event of a kindred nature. In all 81 breeding establishments from 20 different states have made entries and applications from many others have come too late for acceptance.

The prize list is an alluring one, with from 15 to 20 prizes in each class and with a maximum of $50 and a minimum of $20 to any prize winner, not including trophies offered as special awards. It is the intention to arrange the various divisions so that practically the same number of contestants will be included in each section—a plan most equitable to the exhibitors—and the awards will be placed by judges of international reputation.

## Red Polled Calf.

F. H. Porter, one of the Oregon delegation who attended the Chicago International stock show, while there, purchased a 6-day-old Red Polled bull calf, from Gene Duluth farm, for a future herd header. The little fellow is a son of Teddy's Charmer and out of Susie II., that were grand champion Red Polled bull and cow at the last two Internationals. It was bred by J. W. Larabee of Illinois, who showed both animals last year and sold the dam after she was bred.

## Davis Holstein Sale.

The dispersal sale of the H. C. Davis Holstein herd will be held at Granger, Wash., February 5. The Davis herd of 60 head is one of the most prominent of any of the registered herds of the northwest. Its dispersal is due directly to conditions brought about by the war. When Mr. Davis became president of the Central Bank and Trust company of Yakima he leased his ranch and the herd to Butchard Bros., two promising young stockmen, who are of military age. The fact that both boys may have to serve in the army, and the further fact that labor conditions add to the uncertainty of continuing the existence of the herd during a time like this, make the dispersal necessary. Mr. Davis is not complaining. He gladly releases the boys for the nation's service, but a change in his system must be made to meet the situation.

## To Sell His Shorthorns.

Alex. Morrison, a well-known Shorthorn breeder of Valley, Wash., on account of ill health, has decided to retire from the stock business and will hold a dispersion sale of his entire herd of beef and milking Shorthorns at the Union stock yards, Spokane, on February 20th, with Harry C. Cranke as auctioneer. Mr. Morrison will rent his frams at Valley.

## Advertising Has Done Wonders

Advertising has been defined as the force which "has transformed the parlor melodeon into a pianola, the cracker barrel into a hermetically sealed package, the crane over the hearth into a fireless cooker, and everything else in like degree."

This is not over-stating the value of advertising.

If each of us consults his own experience he will think of dozens of articles which he would never have known about had it not been for advertising. The silo, the cream separator, the telephone, the phonograph, the reaper and countless other articles have been advertised and advertised until they are now universally known, universally used.

What new things and new improvements are being offered in the year 1918? For an answer consult the advertisements.

## SHEEP

## SHEEP

Full blood Lincolns, Romneys, Corridales and Hampshires. Ewes and rams, small or large lots. For sale by

H. STANLEY COFFIN,

Breeder and Importer, Yakima, Wash.

Eggs from best of hens, mated with Pompadour Jim, 2d prize cockerel P. P. I. E., $2.50 per 15.

A few speckled Sussex, $3.00 per 15.

W. A. DUNLAP, Springfield, Ore.

### Mammoth White Holland Turkeys

from first prize winners at the recent Portland poultry show.

MRS. E. D. SITTON, Carlton, Ore.

PARK'S BRED TO LAY

Barred Rocks; line bred. Eggs, $1.50 setting. $8 per 100. 25 yearling hens at $1.50 each.

F. J. WIRTNER, Mica, Wash.

## RABBITS

BARBER RABBITRY.

Pedigreed and registered Flemish and Checkered Giants. Bucks at stud. Stock for sale. Correspondence solicited.

MRS. R. W. BARBER, R. 4, Boise, Idaho.

In writing advertisers, be sure to say that you saw their advertisement in this paper.

# ANNUAL SHORTHORN SHOW AND SALE

*Spokane, Wash. . Feb. 23*
*Portland, Ore. . . Feb. 25*

## 100 Registered Shorthorn Bulls and Heifers at Each Sale

Among consignors to Spokane sale are such well-known breeders as Jos. Turner, A. D. Dunn, J. H. McCroskey, Gibson Estate, Day & Rothrock Co., and others.

All entries to Spokane sale judged Friday, Feb. 22—one day preceding sale.

**Consignors to Portland sale announced next week.**

For particulars and catalogue write now to

F. M. ROTHROCK, Exchange Bank Bldg., Spokane, Wash.,
or
FRANK BROWN, Carlton, Oregon.

## TRAP NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen on the place trap nested. My first pen has, I believe, for the past two years, the highest Barred Rock average egg record in the world. All other pens are practically the same blood lines. A few last fall cock birds and cockerels from $5 up, according to pedigree and quality.

Eggs from first and second pen, $5 per 15. Others, $3.75 and $2.50. No day-old chicks.

IRVINE P. GARDNER, Riddle, Ore.

# Fifty Bulls for Sale at Auction

GEORGE D. HARRAH OF NEWTON, IOWA, will bring to Caldwell two car loads of two-year-old Registered Shorthorns and Hereford Bulls that will be sold at Public Auction on

## FEBRUARY 20, 1918

AT CALDWELL SALES & COMMISSION COMPANY'S YARDS

Mr. Harrah informs us that these bulls are especially selected for this sale, having plenty of quality and lots of bone; not fat, but in good breeding condition.

Positively none of these bulls sold before this sale.

Mr. Harrah is one of the best known breeders in the Central West, having succeeded his father as owner of the Harrah Stock Farms at Newton, Iowa, which have been noted for their purebred cattle for over sixty years.

For catalogue, terms and further information address

CALDWELL CATTLE CO.
H. W. Dorman, President. Caldwell, Idaho

We have for sale at private treaty on our farm, on liberal terms, Fifty Registered Shorthorn Cows, many with calves at foot.

In answering advertisements please mention this paper.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Jan. 28.—Shrinkage of industrial and shipping demand here as a result of traffic congestion counteracted an upward tendency today in corn prices. The market closed steady at the same as Saturday's finish with March 126¾ and May 125¼@125⅝. Oats gained ⅝c to 1½c. The outcome in provisions ranged from 10 cents decline to an advance of 5 cents.

Unfavorable weather for the crop movement from the country made corn prices harden a little at the outset, but the fact speedily became apparent that the adverse conditions prevailing had materially diminished. A further reason given for the evident cautiousness of buyers was the prospect of enlarged government control of grain prices other than wheat.

Urgent export demand for shipment by the way of the gulf did much to hoist the value of oats, and so, too, did the meagerness of arrivals. New high price records for the season were reached by all deliveries, with the market showing its greatest strength just at the close.

Provisions averaged slightly higher owing to the fact that hog receipts were less plentiful than had been expected. Aggressive support, however, was lacking.

### Pacific Northwest Grain.

PORTLAND, Ore., Jan. 28.—Grain, 30-day option bids. Oats—No. 2, $61.50; barley feed, $57; barley brewing, $61.

Eastern oats and corn in bulk bids: Oats—No. 3 white, $57.50; 38-pound clipped white, $58.50; corn, No. 3 yellow, $62; No. 3 mixed, $61; oats, No. 3, $57; clipped, $58; corn yellow, $61.50; corn mixed, $61.

### San Francisco Grain.

SAN FRANCISCO, Jan. 28.—Barley, $2.97.

### Cash Quotations.

CHICAGO, Jan. 28.—Corn—No. 2 and 3 yellow nominal; No. 4 yellow, $1.55@1.60.

Corn—No. 3 white, 85 3-4@87c; standard, 86 1-2@87 1-4c.

Rye—No. 2, $2.05. Barley, $1.40@1.65.

Timothy, $5@8.25; clover, $21@30.

Pork nominal. Lard, $24.85. Ribs, $23.27—24.02.

### Minneapolis Grain.

MINNEAPOLIS, Jan. 28.—Flour unchanged. In carload lots standard flour quoted at $9.75 a barrel in 98-pound cotton sacks. Shipments, 62,880 barrels.

Barley, $1.40@1.54.
Rye, $2.05@2.07.
Bran, $32.50.
Wheat—Receipts, 201 cars, compared with 591 a year ago.
Corn—No. 3 yellow, $1.65@1.70.
Oats—No. 3 white, 84¼@85¼c.
Flax, $3.59@3.63.

## Live Stock Quotations.

### At Omaha.

OMAHA, Neb., Jan. 28.—Hogs—Receipts 7800; market steady. Heavy, $15.65@16; mixed, $15.70@15.90; light, $15.60@15.95; pigs, $10@15; bulk of sales, $15.70@15.90.

Sheep — Receipts 12,000; market steady and stronger. Yearlings, $11.50@14.50; wethers, $11@13; ewes, $10.75@12.25; lambs, $16.25@17.25.

### At Chicago.

CHICAGO, Jan. 28.—Hogs—Receipts 24,000; market slow, 15c above Saturday's average. Bulk, $15.50@15.80; light, $15@15.70; mixed, $15.20@15.90; heavy, $15.20@15.90; rough, $15.20@15.35; pigs, $11.75@14.

Cattle—Receipts 5000; market strong. Native steers, $8.40@13.75; stockers and feeders, $7.25@10.40; cows and heifers, $6.25@11.75; calves, $9@15.50.

Sheep—Receipts 3000; market firm. Wethers, $9.90@13.40; lambs, $14.75@17.75.

### At Portland.

PORTLAND, Ore., Jan. 28.—Cattle active; receipts 985. Medium to choice steers, $10.35@11; good to medium steers, $9.35@10.35; common to good steers, $7.75@9.25, choice cows and heifers, $7.75@9; common to good cows and heifers, $6.50@7.75; canners, $3@6; bulls, $5@7.50; calves, $7.50@11; stocker and feeder steers, $6@9.

Hogs 25c to 35c higher; receipts 1160. Prime light, $16.10@16.25; prime heavy, $16.20@16.35; pigs, $13.75@15; bulk of sales, $16@16.15.

Sheep steady; receipts 21. Western lambs, $15@15.50; valley lambs, $14.50@15; yearlings, $13@13.50; wethers, $12.50@13; ewes, $10@11.

### Spokane Stockyards, Monday.

Hogs—Receipts none; market strong. Prime light, $15.75@16; prime heavy, $15.85@16.10; pigs, $14.25@15.25; stockers and feeders, $12@13.50.

Cattle—Receipts 90; market steady to strong. Best beef steers, $10@10.75; good steers, $9@9.75; common to good steers, $7.75@8.75; best beef cows, $8.50@9.25; good cows, $7.50@8.25; ordinary to good cows, $6.25@7.25; best heifers, $8.50@9.25; bulls, $5@7.50; calves, $6.50@10; stocker and feeder steers, $6@8.

Sheep — Receipts none; market steady. Prime lambs, $14.50@15.25; good lambs, $13.25@14; prime yearlings, $12.50@13.25; prime wethers, $12@12.75; best mutton ewes, $9@10.75.

## Portland Market.

PORTLAND, Ore., Jan. 26.—After reaching record marks, oats and barley prices eased off at the close of the week because of a lighter local demand. Advices from the valley are that farmers are still holding fair stocks or oats, and as feeding is light, because of the open winter, they are more inclined to dispose of their surplus. Hay prices are also weakening because of the reduction of stock feeding.

Notice has been issued by the food administration to feed dealers calling attention to the fact that only a reasonable profit can be charged on resales of millfeed. The administrator in this state has fixed the maximum profit at $2 a ton.

After shipping a dozen cars of Oregon eggs to eastern markets, most of them to New York city, the movement was brought to an abrupt halt by the milder weather that struck the middle western and southwestern egg producing sections. From 52 cents, the top price that prevailed here the market dropped to 46 cents at the close of the week. Local buying also slowed down when prices began to tumble. Shippers think the eastern demand may revive with colder weather again prevailing east of the Rocky mountains.

Butter prices have turned weaker as there has been some increase in arrivals of country creamery cubes. Cheese is moving slow at the recent advance.

Poultry and dressed meats continue high in price and scarce.

Because of the car shortage only two cars of onions were sent out of the state last week. The shipping demand was good at $1.75 at country points. Potato shippers also complain of scarcity of cars.

A few hop sales were made in the last week at 17 to 18 cents. The eastern brewery demand is still poor.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $61.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $58; brewing, $61.25; rolled, $66@68.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50; grain, $22.

Eggs — Oregon ranch, case count, 46c per dozen; candled, 48@51c.

Poultry—Hens, 22@24c; ducks, 20@25c; turkeys, live, 25c; geese, 16@18c.

Butter — City creamery, prints, 52@54c per pound; cubes, extras, 49c.

Cheese — Tilamook triplets, 25c; Young Americas, 26c.

Dressed meats — Veal, 18@18 1-2c; pork, 19 1-2@20c.

Hops—1916, nominal; 1917 crops, 17@18c.

Potatoes—Oregon, buying price, $1@1.15 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 50@55c.

Beans—Buying prices: Oregon white, 9@10c; colored, 8c.

## The Wool Market.

BOSTON, Jan. 25.—The Commercial Bulletin will say tomorrow:

"Business in the wool market this week was slow, with a disposition on the part of buyers to await the colonial wool auctions Thursday and Friday. Possibly a million pounds of various classes and grades of wool were sold through the week privately. At the auctions prices on merino wools were off about 5 per cent, according to the general consensus of opinion. The opening of staple worsteds for next fall by the leading factor was at an advance of 50 to 75 per cent over last year, due to the increased cost of labor and raw materials."

Scoured basis:

Texas fine 12 months, $1.68@1.72; fine 8 months, $1.55@1.60.

California northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.46@1.50.

Oregon, eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory: Fine staple, $1.35@1.90; 1-2 blood combing, $1.70@1.75; 3-8 blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60; pulled extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

### LINSEED.

DULUTH, Jan. 26.—Linseed, $3.53@3.68; January, $3.53 bid; May, $3.50 1-2 asked; July, $3.45; October, $3.15 bid.

## Seattle Market.

SEATTLE, Jan. 26.—While the visible supply of potatoes is running to a surplus and market conditions generally make for still lower levels, the Yakima government-graded gem is stronger.

It is noticeable that potatoes that were held at Yakima are in good condition, while the product of the same part of the state that has been held in common storage here shows decay almost equally with the native stock, due to the climatic conditions which, while easy on the coal pile have been severe on potatoes which require other than temperatures of 50 to 60 degrees to keep them through the winter. Jobbers have been increasing their orders for gems, owing to a brisk demand. The request of the government for 1,250,000 pounds of potatoes for the cantonment at Camp Lewis is expected to stiffen prices, although no unusual effects are looked for. A similar order was placed early in the winter.

### BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle.

Eggs—Local, 45@50c per dozen.

Poultry—Live hens, fat, over 4 lbs., 25c lb.; 4 lbs. and under, 25c; old roosters, 16c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.; springs, live, 25c lb.

Butterfat—58c lb.; dairy butter, 35@36c.

Beef—Buying prices: Prime beef steers, 11@12c lb.; cows, fat, 9@11c lb.; heifers, 10@11c lb.

Hogs—Light, 18x20c lb.; heavy, 17@18c lb.

Veal—Fancy light, 14@17c lb.; heavy, 12@14c lb.

Hides — Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 lbs.), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 10c lb.; dry full wool sheep pelts, 36@39c lb.; salt bulls, 12c lb.

### SELLING PRICES.

Feed—Scratch, $74 per ton; all grain chop, $68 per ton; oats, $64 per ton; rolled oats, $65.50 per ton; bran, $33@34 per ton; shorts, $35@36 per ton, soy bean meal, $68 per ton; whole corn, $73 per ton; cracked corn, $74 per ton; alfalfa meal, $35; rolled barley, $63@$65.50.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $30@31 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c lb.; do bricks, 53c lb.

Eggs—Fresh ranch, 54c dozen.

Potatoes—Puget sound, $1.25@1.35 per cwt.; eastern Washington, $1.50@1.60 per cwt.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25@1.50 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, 2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.25 box; Wageners, $1@1.50 box Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.65 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Winconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 30c lb; broilers, 32c lb; old roosters, 11c lb; ducks, 20@23c lb; geese, 20@23c lb.

### Hide Quotations.

**Green Cows and Steers**—25 lbs and up, 11c; salted cured, 14c; green bulls and stags, 10c; salted cured, 12c; kip, 15 lbs. to 25 lbs., 16c; calf skins up to 15 lbs. 23c; dry flint hides, 30c; dry, salted, 25c; dry calf skins, under 10 lbs. 28c; dry sheep pelts, 30@35c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

## Seattle Wheat.

SEATTLE, Wash., Jan. 26.—More or less wheat has been going out of the country to eastern millers from Oregon, Washington and Idaho this week, according to reports from field agents of Seattle millers now in the territory. No means are at hand of ascertaining how much wheat has been sold in this way, but it is sufficient to cause considerable anxiety among millers as to what is to become of the visible that must suffice them into the new crop year in September.

Bid and asked prices on 'change for the week-end were as follows:

Barley, No. 2 feed, prompt, $60.50@64.50; February, $61@64.50. Oats, No. 2 white feed, prompt, $60@64; February, $61@64. Forty-pound barley, prompt, $59@62; February, $59.50@62.

Timothy, prompt, $30@34. Alfalfa, prompt, $23@24.50. Straw, prompt, $11@12.50.

Canadian oats, extra No. 1 feed, prompt, $58@60; February shipment, $58.50@62.

Oats, 38-pound bulk, white clipped, eastern weights and grades, prompt, $58@61.50; February shipment, $59@62.

# THE BARRIER

(Continued from page thirty-five.)

ers to display his tan footgear, 'because they was made for dry goin'—that's why they left the tops off; but they've got a nice, healthy color, ain't they? As a whole, it seems to me I'm sort of nifty." He revolved slowly before their admiring gaze, and while to one versed in the manners of the far east it would have been evident that the original owner of these clothes had come from somewhere beyond the Susquehanna, and had either been a football player or had traveled with a glee club, to these three northmen it seemed merely that here was the modish echo of a distant civilization.

"W'at's de matter on your face?" said Poleon. "You been fightin'?"

"I ain't shaved in a long time and this here excitement has kind of shattered my nerves. I didn't have no lookin' glass, neither, in my shack, so I had to use a lard can cover. Does it look bad?"

"Not to my way of thinking'," said Gale, allaying "No Creek's" anxiety. "It's more desp'rate than bad, but it sort of adds expression." At which the miner's pride burst bounds.

"I'll kindly ask you to note the shirt—$10 a copy, that's all! I got it from the little Jew down yonder. See them red spear heads on the boosum? 'Flower dee Lizzies,' which means 'calla lilies' in French. Every one of 'em cost me four bits. On the level—how am I?"

"I never see no harness jus' lak it mese'f!" exclaimed Doret. "You look good 'nough for tin horn gambler. Say, don't you wear no necktie wit' dem kin' of clothes?"

"No, sir! Not me. I'm a rude, rough miner, and I dress the part. Low cut, blushin' shoes and straw hats I can stand for, likewise collars—they go hand-in-hand with pay streaks; but a necktie ain't neither wore for warmth nor protection; it's a pomp and a vanity, and I'm a plain man without conceit. Now, let's proceed with the obsequies."

It was a very simple, unpretentious ceremony that took place inside the long low house of logs, and yet it was a wonderful thing to the dark, shy maid who hearkened so breathlessly beside the man she had singled out—the clean-cut man in uniform, who stood so straight and tall, making response in a voice that had neither fear nor weakness in it. When they had done he turned and took her reverently in his arms and kissed her before them all; then she went and stood beside Gale and the red wife who was no wife, and said, simply:

"I am very happy."

The old man stooped, and for the first time in her memory pressed his lips to hers, then went out into the sunlight, where he might be alone with himself and the memory of that other Merridy, the woman who, to him, was more than all the women of the world; the woman who, each day and night, came to him, and with whom he had kept faith. The burden she had laid upon him had been heavy, but he had borne it long and uncomplainingly; and now he was very glad, for he had kept his covenant.

The first word of the wedding was borne by Father Barnum, who went alone to the cabin where the girl's father lay, entering with trepidation; for, in spite of the pleas of justice and humanity, this stony hearted, amply hated man had certain rights which he might choose to enforce; hence, the good priest feared for the peace of his little charge, and approached the stricken man with apprehension. He was there a long time alone with Stark and when he returned to Gale's house he would answer no questions.

"He is a strange man—a wonderfully strange man; unrepentant and wicked; but I can't tell you what he said. Have a little patience and you will soon know."

(To Be Continued.)

## A 350 to 900-Pound Separator

# For Only $2.00 DOWN

**Beats Them All**

I am certainly satisfied with my separator. It runs very easy, is a close skimmer and is handy. In competition with 208 separators in our district, our separator outskimmed all others and left the least amount of cream in the skim milk.

(Signed) J. W. MEYERS, West Salem, Ill.

For this small payment down you can have a Brookfield cream separator. It is a close skimming, high-class machine, fully guaranteed, equal to the hardest service, tested by years of actual use. Our liberal offer makes it pay for itself as it goes along. You have a year to pay in small monthly payments. We back this offer with our 37 years of square dealing with hundreds of thousands of men and women everywhere in America. Write for free catalog and full details of our offer.

## The Brookfield

Thirty days' free trial on your own farm is your guarantee that the Brookfield Separator will meet any test. You run it yourself. You are the judge. We take all the risk. We could not make this exceptional offer if we did not know the Brookfield has come with flying colors through the severest trials. It is capable of standing up to the hardest work day in and day out. Now is your opportunity to get this separator for only $2.00 down. Don't miss writing for this offer. Cut off coupon and send it for free illustrated catalog and full details of our terms and low prices.

## Free Trial

There will be no expense whatever to you for your chance to prove the superiority of the Brookfield by giving it thirty days' free trial on your own farm. If you are not perfectly satisfied, you may return it and we will refund your $2.00 and all freight charges. No offer could possibly be fairer. We are confident enough in the Brookfield separator to send it to you and let you judge for yourself if it does all that we claim for it. So don't delay. Now, remember, should you ask for a free trial, you are to be the sole judge

## Easy Payments

We have made the time payments especially low so that you have a full year in which to pay—while you are learning of the marvelous qualities of the Brookfield—how it gives you greater cream poundage and thus saves the money you pay for it. We charge you nothing for extending you credit. No interest is added. The Brookfield is sold in the exact way we carry on the other departments of our big business. There is no discount for cash. There is only one price for the Brookfield Separator—that is the *very* lowest.

## Mail Coupon for Free Catalog

**Straus & Schram (Inc.)**
Dept. 2281—**W. 35th Street, Chicago, Ill.**

Gentlemen:—Without any obligation on my part please send me your Free Catalog on the Brookfield Cream Separator, also full details on your 30-days free trial offer.

*Name* .....

*Address* .....

*P. O.* ..... *State* .....

Don't take a chance of missing this opportunity. Mail coupon and get the catalog describing the Brookfield Separator and what it will do. Remember, the Brookfield has to do its work in your dairy for thirty days and prove it is a perfectly made piece of dairy machinery and a money-maker for you.

You cannot afford not to send for the catalog and learn all about this separator and this offer. Our guarantee is back of this machine and back of every statement we make. Mail coupon today.

VOL. XLI. NO. 6. FEBRUARY 7, 1918. ** WEEKLY.

# Farmers of Washington Pledge More Food

## *Figures Compiled by This Paper Indicate Stupendous Efforts Toward Increased Production*

In response to their country's call the farmers of Washington are sending their full proportion of sons to war. Farm help is harder to get and costs more than ever before. All farm supplies, including food, feed and machinery, have jumped to unprecedented prices.

In the face of these facts, what is the attitude of the farmers of the state toward the urgent appeal that they increase their production of wheat and hogs and other staple products?

In order to learn this attitude from the only source that knew it, the farmers themselves, this paper sent out blanks a few weeks ago asking them for their plans for increasing or diminishing their productions of various foodstuffs. The inquiry was scattered broadcast to insure representative replies. Scores of replies have been received, representing the farmers of 34 counties. The attitude shown is unmistakable.

In the same manner that the sons of the farm have answered the call to army or navy service, the fathers and mothers and brothers and sisters are answering the call for increased production. Figures don't lie. At the bottom of this page are figures in detail covering the reports on more than a score of the principal farm products of the state. To those who have feared that the farmers were not awake to the importance of their industry during the war these figures should be encouraging.

For example, they indicate reliably that nine out of ten wheat growers are going to try to produce more wheat this year than heretofore; that eight out of ten corn growers are going to try to grow more corn; that nine out of ten growers are going to try to grow more vegetables to take the place of meat and wheat that the allies and the American soldiers need; that nine out of ten hay raisers are going to increase their output of feed for livestock if nature does her share; that hundreds of farmers are going to increase meat animal production, including poultry and hogs.

Of special interest is the report concerning hog production. It has been feared and actually believed by many, that hog production was due to slump tremendously this year, but 83 per cent of the growers who

# Roads and War Are Big Issue

## Farmers Are Becoming Conscious of a Large Responsibility in the Conduct of the War; All Must Do

local interest in this community at this time is roads. The most important problem of national or worldwide importance is the war and what we can best do to assist in bringing it to a successful issue for the allies. The farmers are becoming more and more conscious of the fact that their part is to be of great importance in settling the matter in controversy and settling them right. Prospects for the 1918 crop grow better from week to week. The mild winter has made feed conditions very easy and live stock is in better condition than usual at this time of the year, notwithstanding the feed costs being less. There is not a very pronounced interest here in the special winter courses or demonstration weeks at the state college or university and no one attending from here, as far as I know. Possibly one reason for this is that few farmers are satisfied that they and their families are here to stay or are in their life work. GEORGE HINGSTON.

### Bulk Grain Is Problem.

COLVILLE, Stevens County, Wash., Jan. 23.—A very important problem facing this community at present is the question of handling grain without the prospect of obtaining sacks for the coming season. The storage of loose grains on the farm and at shipping points while offering a hard problem that must be met, has brought up another question. What effect will the loose handling of grain have on the minimum price of wheat? If the wheat is handled loose, must the farmer absorb the price of sacks? It is impossible at present to state what effect the shortage of labor will have on farming operations the coming season. The winter has been mild, with a light covering of snow during the time of frosts and as a result the late seeded fall wheat will likely come through in good shape. There was an unusually large amount of fall plowing done, which speaks well for the spring crop. The late fall rains and the melting snow at various times has soaked in well. This has, so far, been an unusually good winter for live stock, many requiring but little additional feed outside of what they were able to rustle. In most localities they are in good shape at this time. But very few farmers are able at this time to attend the short coures at the state college, owing to the shortage of farm help. A. R. HAHNER.

### Mild Winter Helps.

CHIMACUM, Jefferson County, Wash., Jan. 26.—At present the market conditions are good in this part of the state. There has been a large demand for fresh milch cows or springers and many buyers have to leave this part of the county as most of the cows for sale have been disposed of and the farmers who have them, on account of the mild winter, are going to hold them as they will have hay enough to last throughout the winter. The farmers are receiving about 55 cents per pound for butterfat, eggs 45 cents per dozen, cow beef 11 to 12 cents dressed, pork 19 cents dressed. I think pork raised by the farmers who have skimmed milk and finishes them with grain can be produced at about $12 to $15 per 100 pounds dressed. Most of the markets are local and what is shipped out goes to Seattle. As most of the winter has gone by the farmers have taken advantage of the fine weather, and have most of the plowing done, and when spring opens up they will be in shape to plant as soon as the weather permits.

JOHN VAN TROJEN JR.

### "Earnest Desire to Help."

CENTERVILLE, Klickitat County, Wash., Jan. 25.—The problem for us here is an earnest desire to help in all things pertaining to the government. As far as the crops are concerned every effort will be put forth here to utilize as much ground for grain or for the crops most needed. The stock is doing fine, having consumed very little of the feed saved up for winter. The prospect now is for a considerable amount of feed carried over on account of the mild winter and which will also mean a lower price. There are three parties attending special winter courses from here. The 1918 prospects for winter wheat is better. We have had a very heavy rain, consequently, some will be drowned out; also some complaint that the late wheat is not rooting any as we have not had frost to pull it much so far, so we are not looking for damage from that source unless it comes later oon. C. A. LESTER.

### Not Trying New Crops.

KENNEWICK, Benton County, Wash., Dec. 31.—The government regulation has evidently not changed the prices of the material to any great extent from what it was previous to regulation, however, the general feeling is that it has materially stabelized prices. Public opinion generally favors more such regulation rather than less, although there is often criticism in particular cases. Farmers generally feel that where prices are fixed on farm products, they should also be fixed on the material that the farmer has to buy. The mild weather has materially lessened the amount of hay fed, although the extreme dry fall made the grass start late, consequently the sheep and range cattle have had poor grazing. A number of farmers are making use of corn stover and straw, which previously went to waste. One method of using stover is to chop it and soak it before feedings, on farms where there are no silos. Each locality has materially noticed the decrease of boys and young men on the farms. From the Richland locality alone I am informed that 35 have gone to the army or navy. These, I think, in every instance were farmers' sons. On many farms in the county where farmers' sons have left, two facts are noticeable, one is, more intense patriotism and more of a national view of life; the other is materially less undertaking in the way of new development and preparation for new crops.

LEE M. LAMPSON.

### Churches Display Flag.

Bishop Henderson of Detroit, Mich., has issued an order that every Methodist church in his diocese shall display the Stars and Stripes for the duration of the war.

Eureka Potato Planter

*Pays for Itself in Labor and Time Saved*

**One man** and team with an Eureka Potato Planter needs no hired help to plant the whole crop. Whether you plant 4 acres or 400, the Eureka Planter will pay for itself many times over. Better than hand planting. Increases yield. Does 5 operations at once, automatically—accurately.

Opens furrow, drops seed any distance and depth, drops fertilizer (if desired), covers up and marks next row. **Furrow opens and seed drops in plain sight**—an equal distance apart, at uniform depth, with **absolutely no injury to seed.** Easy to operate in any soil, made of steel and malleable iron—assuring long life, light weight and few or no repairs.

Write for **free** catalog on this great line of potato planters—the largest line made. 3 sizes, 1 or 2 rows, with or without fertilizer attachment **In Stock Near You.** A success for over 19 years. Whether you are a large or small grower—**write today.**

IMPORTANT

You may think you are doing your full duty when you garden or farm in an intensified way. Of first importance is the selection of your seeds.

We are a home concern, producing seeds suitable for northwest planters. These will give much better results in this section than seeds that have been grown especially for the eastern and southern sections. Our seeds are dependable, pedigreed seeds.

# THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 41. No. 6 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF February 7, 1918

# Washington Live Stock Situation Is Encouraging

The bureau of crop estimates, United States department of agriculture, office at Spokane, has just issued an interesting compilation of figures covering the live stock situation in this state. E. T. Marchetti, field agent, located at Spokane, who issued the statement, says that the tendency is toward an increase in live stock, regardless of the conditions that might seem to lead otherwise. Here is the statement in full:

**Horses and Mules.**

The number of horses in the state, which has had a tendency to decrease in the past two years on account of war demand, has increased over a year ago. There have been slight decreases west of the Cascades, in Ferry and Stevens counties, and the Yakima valley from the number a year ago. However, with few exceptions the number of horses in the wheat producing areas of the state has increased, which is especially evident in the Big Bend counties. The average prices of horses are slightly higher than a year ago, as better stock is being retained, but some localities report considerably less demand and a slightly lower price than last year.

The number of mules in the state is the same as a year ago. There have been occasional decreases on farms where gasoline engines are being substituted, and in some areas west of the Cascades, but the increases on the occasional farms in the wheat areas of the state have practically counterbalanced the decreases, and, taking the state as a whole, the number of mules remains the same as last year. The prices of mules have increased over the prices a year ago, due to the demand in the wheat producing portions of the state.

**Milch Cows.**

In spite of the general opinion that milch cows have decreased considerably in number in this state, the tabulation of hundreds of typical farms indicates a slight increase over a year ago. Although a large number of milch cows have been sold off the past year, these represent the inferior grade cow and indicate a tendency to substitute better bred cattle in all areas of the state. In some of the larger herds west of the Cascades and in portions of the southeast counties there have been decreases on account of high feed prices, but many smaller herds in all portions of eastern Washington and even west of the Cascades have increased the number of milch cows by the retention of better grade heifers the past two years which have now matured and caused increases in the total number of milch cows in the state as a whole. The largest increases of milch cows have been in Chelan, Okanogan and the Big Bend counties. Due to the sloughing off of inferior grade milch cows the past few years and the retention of the better grade milch cows, the average price per head has increased slightly over the last year in the state.

**Other Cattle.**

There has been an increase in the number of other cattle over that of a year ago. Although there have been fairly noticeable decreases in some areas west of the Cascades, in Spokane, Whitman, Ferry, Stevens, portions of Benton and the southeast counties on account of high feed prices and partial crop failures, the number has materially increased in portions of Okanogan, the Big Bend, Klickitat counties and the Yakima valley. There have unquestionably been decreases in the number of farms which reported "no cattle" a year ago, especially in the Big Bend counties, and the general tendency to increase the smaller herds in practically all portions of the state have increased the number of other cattle over last year. Prices of other cattle have advanced since January 1 last year, due to the unusual demand.

**Sheep.**

The number of sheep has increased materially in all portions of the state excepting in the northwest and southwest counties, where dogs and cougars have materially interfered with sheep increases. Large increases are noted in Okanogan and Klickitat counties and in the Yakima valley. Many farmers are retaining a few head at present who never before raised sheep in this state. The prices of all classes of sheep have increased over a year ago.

**Swine.**

The number of swine over six months old has decreased materially from that of a year ago, excepting in the northwest portions of the state, where there have been increases in the number of swine of this age. However, there has been an abnormal increase in the number of swine under six months old and the total number of swine of all ages is the same as that of a year ago. Practically every part of the state indicates unusually large increases in the number of young swine and there has been a tendency throughout the state to retain brood sows considerably in excess of the number retained the last two years. The prices of swine were higher on January 1 this year than on the same date a year ago.

The general tendency is toward an increase of all classes of live stock in this state in the succeeding year, and the patriotic response of growers, especially the small farmer, to increase numbers on account of the great food requirements of the world has been very commendable. The shortage of labor throughout the state, lack of feed in areas of Spokane and Whitman counties on account of abnormally small crops, have hampered the growth of the live stock industry somewhat. The winter, however, has been unusually favorable for all classes of live stock. Had the winter been as severe as the two preceding years, undoubtedly unusually large decreases of stock would have probably occurred instead of increases on account of the high hay and feed prices prevailing. It is extremely encouraging to note the large increases in the number of calves, heifers, young swine and steers on small farms that are being retained in practically all portions of the state.

The following is an interesting table showing the comparative number and price of the various animals a year ago and now. The figures are for January 1 of each year:

**Washington.**

| | Number | | Value per head | |
|---|---|---|---|---|
| | 1917. | 1918. | 1917. | 1918. |
| Horses | 300,000 | 309,000 | $ 98.00 | $108.00 |
| Mules | 19,000 | 19,000 | 111.00 | 117.00 |
| Milch cows. | 263,000 | 266,000 | 59.50 | 70.00 |
| Other cattle. | 280,000 | 294,000 | 30.40 | 36.00 |
| Sheep | 571,000 | 661,000 | 7.10 | 11.40 |
| Swine | 283,000 | 283,000 | 11.10 | 20.00 |

**United States.**

| | Number | | Value per head | |
|---|---|---|---|---|
| | 1917. | 1918. | 1917. | 1918. |
| Horses | 21,210,000 | 21,563,000 | $102.89 | $104.28 |
| Mules | 4,723,000 | 4,824,000 | 118.15 | 128.74 |
| M. cows. | 22,894,000 | 23,824,000 | 59.63 | 70.59 |
| Other cattle | 41,689,000 | 43,546,000 | 35.92 | 40.88 |
| Sheep | 47,616,000 | 48,900,000 | 7.13 | 11.82 |
| Swine | 67,503,000 | 71,374,000 | 11.75 | 19.51 |

An interesting comparison is the difference between the value per head and number of live stock in the state on January 1, 1906, and January 1, 1918, which is as follows:

| | Number | | Value per head | |
|---|---|---|---|---|
| | 1906. | 1918. | 1906. | 1918. |
| Horses | 237,000 | 309,000 | $ 70.51 | $108.00 |
| Mules | 3,000 | 19,000 | 75.37 | 117.00 |
| Milch cows. | 167,000 | 266,000 | 32.50 | 70.00 |
| Other cattle. | 309,000 | 294,000 | 15.03 | 36.00 |
| Sheep | 850,000 | 661,000 | 3.03 | 11.40 |
| Swine | 179,000 | 283,000 | 7.40 | 20.00 |

This does not mean that the incomes of the producers have increased proportionately to the value, as the free range has been greatly decreased since 1906; feed prices have greatly increased; labor wages have advanced; and breeding stock has also materially increased in value; so that the actual income to the producer on some classes of live stock is even probably no more on January 1, 1917, than on the same date in 1906.

## Let Your Money Earn Something

Real efficiency, the kind that makes for success in any line of business, is the kind that has everything at work. The successful farmer doesn't keep "boarder" cows, nonlaying hens or work horses that do not work. Neither does he keep money lying idle. He invests it in something that will earn for him or puts it directly to work earning interest.

This paper recently offered to the government to become agent for war stamps issued by the treasury department as one means of raising funds to carry on the war. The offer was accepted, and a special department has been established to handle the great mass of business detail connnected with the selling of $50,000 worth of thrift and war savings stamps. But the Farmer is glad to be able to serve both its readers and Uncle Sam. The excellence of the war stamp plan can not be too often or to strongly stated. Here it is in a nutshell:

**The Plan in Brief.**

The government issues two kinds of stamps, both of which are backed by every resource of the country. The first is a thrift stamp costing 25 cents, designed for the man or woman or boy or girl who has an occasional or a frequent quarter that ought to be saved. The second is a war savings stamp, costing $4.13 during February, and a cent a month more for each month thereafter. This stamp is designed not only as a savings opportunity, but as an investment opportunity. It draws interest at the rate of 4 per cent compounded every three months. That makes it worth $5 on January 1, 1923. A book of 20 of these stamps would cost now $82.60 and would be worth $100 on January 1, 1923.

And here is another remarkable feature: You don't have to keep a war savings stamp that long. You can cash it any time you want to and if you have had it three months or more you get not only your money back, but interest for the time you have had it at the rate of 3 per cent. It is almost like having a checking account in your bank drawing interest.

The Farmer has no interest in the matter except to help you and Uncle Sam get together and help each other. The coupon presented herewith is self-explanatory. If you have some money that isn't at work, however small the amount may be, you can "kill two birds with one stone" by buying stamps of one kind or the other. You can make yourself a safe investment and at the same time help win the war. Count your change and look up the idle bank account today and see if you don't want to put a part of it—anything from 25 cents to $82.60—to work right now. For more details refer back to this paper of January 24.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

## "No Swearing Allowed."

An item of interest to the visitor at the Carnation Stock Farm, Carnation, Washington, is the placards bearing the notice, "No Swearing Allowed. These Are Contented Cows." These and other placards bearing similar legends were of great interest to spectators at the various eastern and western shows in which the Carnation herd was entered last fall.

**Japan Railroad Wages.**

Japan has 110,000 railroad employes receiving an average wage of 31 cents a day. The average wage of an American engineer is $5.40 a day.

# Farm Labor Outlook

## *Is Community Problem Pure and Simple*

### By A. L. ROGERS, Waterville, Wash.

The farm labor department of the state council of defense will do all in its power to adjust local matters and see that all crops are planted and harvested and all foods conserved, but the initiative in this work must come from the farmers themselves. The responsibilities of their individual adjustments are up to them. These are community problems, pure and simple.

In cases of local emergency I have maintained, and still maintain, that any agricultural and horticultural community can increase its labor efficiency 100 per cent, and more if needed, by patriotic service, self-denial and everybody pulling together. They can produce and save all crops for 1918-1919 and several more years should the war continue. Of course this would mean good community organization and much personal sacrifice, but it can be done.

Furthermore I want to state that it is impossible to sacrifice or waste the general opportunities of food production in any state of the union at the present time. Of course, the acts of God and weather conditions are excepted.

The present federal administration and the world at large are so well aware of its vital importance in winning this war, and the present machinery that is now organized to do this great work could be immediately adjusted to meet any emergency demands that may confront it. To illustrate, the governors and their state councils of defense, with the sanction of the federal department and the commander of any cantonment, can immeditately look over the questionnaire of every soldier in their command, and those suits can be ordered into the fields who are skilled in agricultural pursuits can be ordered into the fields and continue there until all crops have been planted, and later harvested and all emergencies met. This will apply to any other industry that is vital to the winning of this war.

Suggestions on farm labor problems for 1918. I think we should carry on our work on much the same plan as last season. That is, a close coordination of the different labor departments, federal and state schools, harvester leagues and county councils of defense. We must do teamwork and all pull together.

It would be almost a crime and national sin for any council or commission to step in and try to shield and protect any class of citizens from getting the benefits in the way of the many personal sacrifices that will have to be made in fighting and winning this great war and the principles that are involved.

Whenever the American people, as a whole, become awakened to these facts and get down to thinking in war terms and on a war basis, they will discover with the most of us that 50 per cent of all we eat, all we drink, all we wear and all we do, are absolutely nonessential, and a sharp modification of these conditions will not detract one jota from the stability and intrinsic value of the nation's great resources, and God knows our coming generations need this discipline.

It is a very simple thing for the old pioneers that came to this northwest 30 and 40 years ago, and started in on the basis of a sack of flour and a side of bacon, to put a fair valuation on our present day standard of living.

America's great prosperity is making our people fat and flabby and they are in danger of losing their vital powers of resistance. Whenever they start to swap fundamental principles for personal comforts the nation is doomed.

The other day when that modern sphinx, Colonel House, and his commission returned from Europe he leaked just enough to prove to some people that he is a philosopher of the highest type. He said of England, France and Italy: "Their determination to win without thought of cost is admirable."

That must be America's attitude of mind if our people expect any benefits in this great world's struggle for human rights.

It is worth the price, Let's pay it.

To The Washington Farmer: Please find enclosed $1 for which send me the Washington Farmer for three years and The Twice-a-Week Spokesman-Review for one year, as stated by your big combination bargain offer. We have taken The Washington Farmer for three years, and could not get along without it. There is so much valuable reading in it, both for the farm and house.

C. R. TALBOTT.
Elma, Wash.

# Carroll Freeland

## Twelve-Year-Old Newspaper Man

By RAY W. FELTON.

Carroll Freeland, 12-year-old son of Mr. and Mrs. Ray Freeland of White Swan, Yakima county, is perhaps the youngest newspaper publisher in Washington. Carroll is a farmer boy. His father owns and operates 80 acres near the little village of White Swan, on the Yakima Indian reservation. There are perhaps 25 families in White Swan and until Carroll started his paper three weeks ago there was no medium through which the local news could be disseminated. Carroll has been selling subscriptions for a magazine and recently he approached his father with a proposition to buy a small printing press and some type. He agreed to put up half the money if his father would loan the other half. The plan was agreed upon and the printing outfit was installed. Then appeared the first issue of the White Swan Record, a weekly paper, giving local news, war news and other interesting information.

Carroll has a real subscription list. He charges 35 cents for a nine-months' subscription and his parents have impressed upon him the necessity of issuing his paper regularly and making good the obligation he assumes when he accepts money for a subscription. The three stores in White Swan use the Record as an advertising medium.

# Sow Alfalfa With Barley

To the Editor: I wish to seed 30 acres to alfalfa the coming season. The land is wheat and oat stubble. Can I seed it with wheat or barley Which would be the better crop or would you advise either? The reason of this is under the conditions I hate to lose the use of the land this season. The country is calling upon us to produce and I would like to have the land in alfalfa. I have 14 acres now and could use 100 acres. I am controlling and own 100 acres and I need alfalfa. The land is clear of all foul vegetation. Information will be highly appreciated. This land here is natural alfalfa land on the hills as well as lowlands.—W. B. R., Bossburg, Wash.

Professor George Severance, vice dean, college of agriculture, Washington State college, answers the above questions as follows:

I believe it feasible to seed alfalfa with wheat or barley, preferably barley, this spring, provided you get the crop in early so that the alfalfa may become well established before the dry season comes on and so that the grain may mature and be removed at as early a date as possible. If the land has never grown alfalfa it would be safer to inoculate the seed. If the dry weather comes on unusually early this season it might be wise to cut the wheat or barley for hay, to give the alfalfa a better opportunity to endure the drouth. If hay is scarce you may possibly do your country as great a service by producing the hay as by producing grain.

### Southern Mills Busy.

Entrance of the United States into the European conflict with its consequent demand for materials for ships has set every southern pine mill in the timber belt working overtime in an effort to supply the need of the nation. Nearly 300 wooden ships are now under construction in this country. Hurry is the watchword everywhere and within a few weeks the goal of a million feet a day is expected to be reached.

# To Seize Nation's Water Power

## *Aims of the Shields Bill Now Pending in Congress*

Not only farmers, but the public in general should cordially approve the spirit of these clearcut resolutions adopted by the Idaho State Federation of Agriculture at Lewiston:

Whereas, Owing to the needs of this world war, there are increasing demand for the use and development of hydro-electric power to take the place of oil and coal; and,

Whereas, Much of this cry is made by corporations greedy for monopoly of the coveted heritages of the people, the hydro-electric power of this nation; therefore be it

Resolved, that this federation of agriculture demand that the federal and state governments shall retain ownership of all water power not already owned by the power trust and ownership of water rights already seized; and, be it further

Resolved, That the ownership and development of water power by municipalities and states be encouraged as the only means of preventing monopoly and trust prices, and that we go on record as opposed to the infamous power trust steal known as the Shields bill, now pending in congress.

As our leaders will recall, we have vigorously condemned the Shields bill so emphatically denounced by the foregoing resolutions. That measure aims at the practical seizure of and perpetual ownership by private interests of vast undeveloped water powers now owned by the people.

This issue has been before congress for more than a decade. When Roosevelt was president his administration took a firm and courageous stand against further looting of the country's natural resources, and Gifford Pinchot, Mr. Roosevelt's able and courageous head of the forest bureau, made a splendid fight for the preservation of our forests, our water power, our vast deposits of coal, oil, gas and the phosphates that some day will be vitally needed for fertilizing the exhausted soils of the nation.

Few men in public life have been attacked as Mr. Pinchot has been assailed by the special interests wanting to get control of these resources. But he has never faltered in his good work, and at last victory seems at hand with regard to water power.

As a substitute for the vicious Shields bill, President Wilson's administration has brought forward in congress a water power measure that meets with Mr. Pinchot's cordial approval. We know of no one whose judgment we would rather follow on this subject, and are glad to give space hereith to his commendation of the administration measure. Mr. Pinchot writes:

The 12-year fight to keep the nation's water power from capture by the power monopolists is at last on the verge of being won. The administration water power bill, now before congress, opens the way to save for the people of the United States their most valuable natural asset. Some 50,000,000 water horsepower is at stake.

The bill in question was formulated under the direction of the secretary of agriculture, the secretary of war and the secretary of the interior, was submitted to the president for his approval, and recently put forward as an administration measure. It deals with water power in national forests, public lands, Indian lands and navigable streams. A special committee of the house has been created to consider it.

It is an admirable measure, drawn with thorough knowledge and unusual skill. The principles essential for the wise use and development of our public water powers in the public interest are all embodied in it.

The administration water power bill will first come before the house of representatives, where an effort will certainly be made to amend it in the interest of the power interests. If that fails, the water power lobbyists will endeavor to have the indefensible provisions of the Shields bill substituted in the senate for the administration bill. Beaten in that, they will fall back upon the formula of obstruction and delay they have used so successfully for the last 10 years.

This measure is practical, fair and wise. The friends of conservation should insist that their friends in congress shall give their prompt and full support to the administration water power bill and shall see to it that it is passed without emasculation, substitution or posiponement. It is of vital interest to our country while the war is on and will be equally important after the war is over.

The passage of this law will secure to the American people for ever vast resources whose use for the good of all will make this land a safer and a better place to live in. All the forces of conservation are behind it. Sincerely your, GIFFORD PINCHOT.

# Ewe Brings $3500

## Red Cross Benefits From the Sale

By Ray W. Felton.

A 3-year-old half-blooded ewe brought $3501 at the close of a banquet held recently at Yakima in connection with the joint convention of the Washington Wool Growers' and Washington Forest Users' associations. This probably is a record price paid for a ewe. The proceeds go to the Red Cross. Under the hammer of Auctioneer George Gue the sheep was sold between 50 and 60 times, several purchasers buying the animal three or four times, and each time turning it back to be sold again.

Bidding for the Washington Wool Growers' association, President T. J. Drumheller of Walla Walla reached the top price when he paid $480 for the ewe. He immediately relinquished all claim to it and bidding went on, stopping only when Frank M. Rothrock of Spokane paid $75 for it, with the understanding that the animal is to remain in the custody of A. Duncan Dunn until H. Stanley Coffin takes it to the national sale at Salt Lake City, where the Washington sheepmen plan to buy it back and keep it going from one sale ring to another for the benefit of the Red Cross.

The sale was sprung as a surprise on the assembled merrymakers, who had partaken heartily of a bounteous spread in the banquet room of the Commercial hotel. True to old-time custom, the sheepmen had made the most of an evening of fun. Tom Drumheller and Stanley Coffin had just completed a highland fling on the stage occupied by the orchestra when the door opened and in came the much-bewildered ewe, led by an employe of the Yakima Meat company, who donated the animal for the sale. Auctioneer Gue was immediately pressed into service after a brief announcement as to the purpose of the sale. Gue rolled up his sleeves and entered into the spirit of the affair with his usual "pep," and the bidding started. It never lagged a moment, and it is hardly possible to estimate what the animal might have brought had the bidding not been stopped when it was learned that the $3500 mark had been reached.

With Duncan Dunn presiding as toastmaster the banquet lived up to old-time traditions. There were speeches, songs and dances and a more whole-souled type of good fellowship is rarely found than that which prevailed.

Following is a list of the bidders on the Red Cross ewe. In several cases the amounts following the names represent two and three bids on the part of the individual:

George Pryor, Yakima, $60; Tom Smith, Yakima, $60; T. J. Drumheller, Walla Walla, $60; Butler & Knox, Prosser, $60; F. M. Rothrock, Spokane, $135; Anderson Brothers, Ellensburg, $50; R. A. O'Brien, Yakima, $65; Bob Jackson, Dayton, $100; John Rennie, Yakima, $50; Fred Farmer, Yakima, $300; Yakima Sheep company, $50; P. Ager, Yakima, $60; A. Pryor, Yakima, $50; Sam Stewart, Yakima, $50; George Jackson, Yakima, $50; W. P. Prater, Ellensburg, $10; Robert Hopkins, Yakima, $10; Yakima Meat company, $45; A. Roberts & Son, Tampico, $25; Kenneth McColl, Yakima, $15; A. D. Dunn, Wapato, $65; Kennedy Forsman, Yakima, $15; A. A. McPherson, Ellensburg, $30; Congdon Orchards company, Yakima, $10; Dave McColl, Ephrata, $10; United States forest service officials, $56; Columbia Basin Wool Warehouse company, Portland, $50; Raymond Escure, Quincy, $60; John Smithson, Ellensburg, $25; Robert Herron, Yakima, $50; Nagle Brothers, Ringold, $50; Tom Smith, Yakima, $150; Prosser Sheep company, Prosser, $50; Mercer & Hill, Prosser, $50; H. Stanley Coffin, Yakima, $250; Washington State Forest Users' association, $110; Washington State Wool Growers' association, $480; George Hendrix, Kahlotus, $50; Alex. Taylor, Yakima, $45; Commercial hotel, Yakima, $50; Benson & Nyre, Prosser, $75; C. M. Longmire, Selah, $25; G. W. Hopkins, $50; K. O. Kohler, Ellensburg, $50; L. Lauzier, Ephrata, $50; Spokane Union Stock Yards company, $50; George Chambers, Yakima, $50; Louis Schneider, Yakima, $50; William Wilson, Yakima, $50; A. Trieber, Yakima, $50; C. A. Hales, Pasco, $50.

### Wilbur Union Elects.

The following officers have been elected for the Farmers' union at Wilbur: President, J. C. Mearns; vice president, Dan Hudkins; secretary-treasurer, Joseph Kunz; chaplain, T. W. McCord; conductor, Veggo Jurgensen; doorkeeper, J. R. Wibomey; executive committee, Chris Lyse, H. Krause and William Lauritzen.

# Produce More Food Now

## *Food Production Administrator Is Great Need*

Is there any agency that would so forcibly awaken all the American people to the great and supremely important work being done by the United States department of agriculture as the immediate appointment of the ablest available man for a national War-Time Food Production Administrator?

The opportunity is now here, not only for stimulating production of food supplies now to the utmost but of placing the agricultural industry itself upon a more attractive plane for young men than ever before.

Here is another instalment of letters received on this subject:

**Agricultural Workers.**

Congressman Ernest Lundeen of Minnesota writes:

"To the Editor: Receipt is acknowledges of your letter of January 1st, enclosing articles on the necessity for agricultural workers. I agree as to the need of a great production of food and will support well-considered and wise legislation to that end.

"ERNEST LUNDEEN."

**Reorganization Imperative.**

Dean Charles S. Knight of the Nevada College of Agriculture writes:

"To the Editor: I have your letter of December 31, with accompanying leaflets on the farm labor situation in this country. Nevada is very much interested in a nation-wide method for speeding up food production. During the past year considerable loss has been caused by labor shortage in crop and live stock production. The labor situation, however, for the present year will undoubtedly introduce more serious problems. In coping with this momentous and most important food propaganda a reorganization of our present methods of farming operations is imperative. However, there will be a limit to the extent of this readjustment on account of labor shortage if we are to maintain or increase our present production. We feel this matter can not be given too serious consideration. CHAS. S. KNIGHT."

**Too Many Heads.**

Secretary Charles F. Kennedy of the Indiana state board of agriculture is determined to keep an open mind, while at the same time expressing his opinion with regard to food production:

"To the Editor: I have your letter, with enclosures, and have read them over in a casual way, and the work suggested in your letter requires no argument at my hands or anybody else's to establish the fact that it is of an important nature. I happen to know that when the food commissioner was appointed a great many people seemed to have no understanding of the importance of this move, and I can see a good many reasons why it might have failed; but it did not fail, because the president found the very best man that could have been provided for the place. Now, then, to create a third department in Washington—and that is what this proposition means—would seem to be covering the territory with too many heads of departments. What there is which applies to agricultural work should emanate from the secretary of agriculture, as I see it. I am not so obtuse but that I can be convinced that I am mistaken, but it is ideas that you are asking for, and these are mine. CHAS. F. KENNEDY."

**Has Merit.**

Congressman John R. Ramsey of New Jersey writes:

"To the Editor: This is to acknowledge receipt of your letter dated January 1st, with clippings attached. I think that your communication to the president has merit and is worthy of consideration. If matters along this line are presented for the consideration of congress they will certainly have my careful attention.

"JOHN R. RAMSEY."

**Not Essential Industries.**

While agreeing with the general proposition that nonessential industries of the country should certainly be curtailed during these war days, yet there are those that will question Congressman Eugene Black of Texas in his quoted sentiments that not more than 25 per cent of the automobiles of the country are essential to industries.

"To the Editor: I am just in receipt of your letter of the 1st inst., in which you enclose me a copy of a telegram which you have recently sent to President Wilson relating to the subject of the scarcity of farm labor. To be sure, I am deeply interested in this important subject, and think that it should receive the most earnest and careful attention. I fear that the matter of adequate food production is going to be neglected until the point of danger

(Continued on page eleven.)

# Farmers of Washington Pledge More Food

(Continued from page one.)

answered the question as to swine production said they were planning to produce more pork this year than previously.

The survey just made was also made to cover both Idaho and Oregon, and the same general results were obtained. In addition to the detailed statement covering the state of Washington at the bottom of page 1 there follows a detailed statement by counties and also a statement covering the three states of the northwest.

**WASHINGTON, COUNTY BY COUNTY**

Here are details of the production plans for Washington, county by county:

ADAMS COUNTY: **More**—Wheat 2, rye 2, potatoes 2, hay 2, beef cattle 1, swine 2, poultry 1. **Less**—Dairy cattle 1.

ASOTIN COUNTY: **More**—Wheat 4, oats 1, barley 4, rye 2, corn 1, potatoes 4, peas 1, beans 3, horses 3, beef cattle 2, sheep 2, swine 1, poultry 2. **Less**—Hay 3, horses 1, beef cattle 2, swine 2.

BENTON COUNTY: **More**—Wheat 2, oats 1, rye 1, corn 6, potatoes 2, peas 2, beans 3, vegetables 3, fruits 2, hay 5, horses 1, beef cattle 1, dairy cattle 2; sheep 4, swine 2, poultry 4, carrots 2, mangels 3, turnips 2, silage 2. **Less**—Potatoes 2, beans 1, sugar beets 1, horses 3, beef cattle 3, dairy cattle 2, swine 1, rutabagas 1.

CHELAN COUNTY: **More**—Wheat 2, barley 2, corn 1, potatoes 1, beans 1, vegetables 1, hay 2, horses 1, beef cattle 2, sheep 1, swine 2, poultry 1. **Less**—Potatoes 1, horses 1.

CLALLAM COUNTY: **More**—Wheat 2, oats 1, barley 1, corn 2, potatoes 3, peas 2, vegetables 1, fruits 2, hay 4, beef cattle 1, dairy cattle 2, sheep 2, swine 3, poultry 2, carrots 1, mangels 2, rutabagas 2, silage 1. **Less**—Wheat 1, oats 1, barley 1, potatoes 1, horses 1, dairy cattle 1, swine 1, poultry 1.

CLARKE COUNTY: **More**—Wheat 1, corn 1, potatoes 1, peas 1, beans 1, vegetables 1, hay 1, beef cattle 2, dairy cattle 2, swine 1, poultry 1, rutabagas 1, turnips 1, silage 1. **Less**—Corn 1, beans 1.

COLUMBIA COUNTY: **More**—Wheat 1, oats 1, potatoes 1, peas 1, beans 1, hay 1, beef cattle 2, dairy cattle 1, swine 2, poultry 1, carrots 1, mangels 1, silage 1. **Less**—Oats 1, barley 1, rye 1, corn 1, potatoes 1, sugar beets 1, vegetables 1, fruits 1, horses 1, sheep 1, rutabagas 1, turnips 1, artichokes 1.

COWLITZ COUNTY: **More**—Wheat 7, oats 4, barley 3, rye 1, corn 3, potatoes 3, peas 6, beans 4, vegetables 4, fruits 2, hay 6, horses 3, beef cattle 6, dairy cattle 2, sheep 1, swine 5, poultry 6, carrots 6, mangels 4, rutabagas 2, turnips 3, artichokes 3, silage 4. **Less**—Wheat 1, oats 4, barley 3, rye 1, corn 1, potatoes 4, peas 1, beans 1, vegetables 3, fruits 2, hay 1, horses 1, beef cattle 1, dairy cattle 4, poultry 1, rutabagas 1, turnips 1, artichokes 1, silage 1.

DOUGLAS COUNTY: **More**—Wheat 2, barley 1, rye 1, corn 1, potatoes 2, beans 2, vegetables 3, horses 2, beef cattle 1, sheep 1, swine 1, poultry 2, carrots 2, mangels 2, rutabagas 2, turnips 1, silage 1. **Less**—Oats 1, barley 1, swine 3, poultry 1.

FERRY COUNTY: **More**—Wheat 3, barley 2, rye 1, corn 2, potatoes 1, peas 1, beans 1, vegetables 3, hay 3, horses 2, beef cattle 3, dairy cattle 1, sheep 1, swine 3, poultry 1, carrots 1, rutabagas 1, silage 1. **Less**—Oats, 2, potatoes 1, poultry 2.

GARFIELD COUNTY: **More**—Wheat 1, corn 2, potatoes 2, beans 1, hay 1, beef cattle 1, sheep 1, swine 1, poultry 2, carrots 1.

GRANT COUNTY: **More**—Wheat 17, oats 3, barley 3, rye 4, corn 4, potatoes 13, peas 3, beans 6, vegetables 8, fruits 5, hay 11, horses 8, beef cattle 7, dairy cattle 8, sheep 3, swine 12, poultry 7, carrots 6, mangels 2, rutabagas 1, turnips 1, silage 2. **Less**—Wheat 5, oats 2, rye 2, barley 3, corn 4, potatoes 3, beans 2, vegetables 3, fruits 2, hay 1, horses 2, beef cattle 3, dairy cattle 2, swine 2, poultry 5, carrots 1, mangels 2, rutabagas 2, turnips 2, artichokes 1.

GRAYS HARBOR COUNTY: **More**—Wheat 2, oats 3, barley 1, rye 1, potatoes 1, peas 3, beans 1, hay 3, dairy cattle 2, swine, 2, poultry 1, carrots 1, mangels 1, rutabagas 3, silage 2. **Less**—Wheat 1, potatoes 2, dairy cattle 1.

ISLAND COUNTY: **More**— Wheat 1, oats 1, rye 1, potatoes 1, peas 1, fruits 1, hay 1, dairy cattle 1, swine 1, poultry 1, carrots 1, rutabagas 1. **Less**—Barley 1, rye 1, beans 1, sugar beets 1, beef cattle 1, dairy cattle 1, mangels 1.

JEFFERSON COUNTY: **More**—Wheat 3, oats 6, barley 3, rye 1, corn 2, potatoes 4, peas 6, beans 3, sugar beets 2, vegetables 3, fruits 2, hay 6, beef cattle 1, dairy cattle 6, sheep 1, swine 5, poultry 2, carrots 4, mangels 4, rutabagas 5, turnips 1, silage 4. **Less**—Corn 1, potatoes 1, poultry 1, carrots 1, mangels 1.

KING COUNTY: **More**—Wheat 2, oats 2, rye 1, corn 2, potatoes 2, peas 1, beans 1, vegetables 2, fruits 2, hay 1, dairy cattle 2, swine 1, poultry 2, carrots 2, mangels 2, rutabages 1, turnips 2, artichokes 1, silage 1. **Less**—Barley 1, sugar beets 1, hay 1, horses 1, beef cattle 1, sheep 1, swine 1, rutabagas 1, silage 1.

KITTITAS COUNTY: **More**—Wheat 1, potatoes 1, hay 1, dairy cattle 1, swine 1, carrots 1, mangels 1.

KLICKITAT COUNTY: **More**—Wheat 15, oats 10, barley 7, rye 6, corn 2, potatoes 8, peas 4, beans 4, vegetables 15, fruits 1, hay 12, horses 4, beef cattle 11, dairy cattle 7, sheep 3, swine 8, poultry 11, carrots 4, rutabagas 3, turnips 4, artichokes 2, silage 1. **Less**—Wheat 1, oats 4, barley 2, rye 1, corn 1, potatoes 2, beans 1, sugar beets 1, vegetables 1, hay 3, horses 1, dairy cattle 3, swine 1, poultry 1, carrots 1, mangels 1, rutabagas 1, turnips 1.

LEWIS COUNTY: **More**—Wheat 6, oats 3, barley 1, rye 3, corn 4, potatoes 3, peas 1, beans 1, sugar beets 1, vegetables 2, fruits 2, hay 4, beef cattle 2, dairy cattle 4, sheep 3, swine 4, poultry 2, carrots 2, mangels 3, rutabagas 2, silage 5. **Less**—Wheat 2, corn 1, potatoes 2, peas 1, beans 1, horses 1, beef cattle 1, dairy cattle 1, poultry 1.

LINCOLN COUNTY: **More**—Wheat 9, oats 6, barley 4, corn 1, potatoes 6, beans 3, vegetables 2, fruits 2, hay 2, horses 2, beef cattle 7, dairy cattle 5, sheep 1, swine 5, poultry 5, carrots 3. **Less**—Wheat 1, oats 1, barley 1, vegetables 1, horses 1, sheep 1, swine 1.

MASON COUNTY: **More**—Wheat 4, barley 1, rye 1, corn 4, potatoes 3, peas 1, beans 3, vegetables 2, hay 2, beef cattle 1, dairy cattle 1, swine 5, poultry 1, carrots 3, mangels 4, rutabagas 2, turnips 1, artichokes 1, silage 4. **Less**—Oats 2, hay 1, dairy cattle 2, poultry 1.

OKANOGAN COUNTY: **More**—Wheat 5, oats 6, barley 2, rye 1, corn 6, potatoes 7, peas 2, beans 6, vegetables 5, fruits 4, hay 8, horses 6, beef cattle 3, dairy cattle 6, swine 6, poultry 7, carrots 5, mangels 4, rutabagas 1, turnips 2, silage 1. **Less**—Wheat 1, sugar beets 1, beef cattle 1, dairy cattle 1, swine 1.

PACIFIC COUNTY: **More**—Wheat 2, barley 1, rye 1, potatoes 1, peas 1, fruits 1, hay 1, horses 1, beef cattle 2, swine 1, poultry 1 rutabagas 1, turnips 1.

PEND OREILLE COUNTY: **More**—Wheat 1, oats 1, potatoes 1, hay 1, horses 1, beef cattle 1, swine 1, poultry 1.

PIERCE COUNTY: **More**—Potatoes 1, fruits 1, swine 1, poultry 1, carrots 1.

SKAMANIA COUNTY: **More**—Wheat 1, oats 1, corn 1, peas 1, beans 1, fruits 1, hay 2, dairy cattle 2, swine 1, poultry 1, carrots 1. **Less**—Potatoes 1, vegetables 1, hay 1, turnips 1,

SNOHOMISH COUNTY: **More**—Wheat 1, oats 2, barley 1, rye 1, corn 1, potatoes 1, peas 1, beans 1, vegetables 2, fruits 2, hay 3, dairy cattle 2, sheep 1, swine 3, poultry 2, carrots 1, mangels 1, silage 3. **Less**—Oats 1, corn 1, potatoes 2, vegetables 1, horses 1, poultry 1, rutabagas 1.

SPOKANE COUNTY: **More**—Wheat 22, oats 16, barley 8, rye 2, corn 7, potatoes 18, peas 12, beans 13, vegetables 10, fruits 5, hay 16, horses 11, beef cattle 6, dairy cattle 11, sheep 1, swine 16, poultry 13, carrots 14, mangels 7, rutabagas 4, turnips 3, artichokes 1, silage 8. **Less**—Wheat 2, oats 4, barley 1, rye 2, potatoes 2, peas 4, beans 1, sugar beets 3, vegetables 2, fruits 4, beef cattle 1, hay 2, horses 4, dairy cattle 2, sheep 1, swine 6, poultry 4, mangels 1, turnips 1, artichokes 1.

STEVENS COUNTY: **More**—Wheat 6, oats 6, barley 4, rye 1, corn 3, potatoes 5, peas 4, beans 2, sugar beets 3, vegetables 7, fruits 1, hay 7, beef cattle 5, dairy cattle 5, sheep 3, swine 6, poultry 7, carrots 5, mangels 6, rutabagas 4, turnips 4, artichokes 1, silage 2. **Less**—Rye 1, peas 1, sugar beets 1, fruits 1, hay 1, horses 2, beef cattle 1, dairy cattle 1, sheep 1, carrots 1, mangels 1, rutabagas 2, turnips 2, chokes 2 silage 1.

THURSTON COUNTY: **More**—Wheat 3, oats 2, barley 1, rye 1, corn 3, potatoes 4, peas 4, beans 4, sugar beets 2, vegetables 3, fruits 1, hay 4, horses 1, beef cattle 2, dairy cattle 4, swine 4, poultry 3, carrots 4, mangels 3, rutabagas 1, turnips 2, artichokes 1, silage 2. **Less**—Oats 1, hay 1, horses 1, beef cattle 1, sheep 1, mangels 1, rutabagas 1, turnips 1, artichokes 1.

WALLA WALLA COUNTY: **More**—Wheat 2, oats 1, barley 1, corn 1, potatoes 2, peas 1, beans 1, vegetables 1, hay 1, horses 1, beef cattle 1, dairy cattle, swine 2, poultry 2, carrots 1, rutabagas 1, turnips 1, artichokes 1.

WHATCOM COUNTY: **More**—Wheat 2, oats 6, barley 1, rye 1, corn 2, potatoes 3, peas 6, beans 2, vegetables 2, hay 5, beef cattle 1, dairy cattle 5, sheep 2, swine 5, poultry 4, carrots 3,

## PRIZES FOR WAR GARDEN PLANS

The Washington Farmer will give $10 in prizes for plans and directions for growing the best war-garden on the farm. This includes:

1. As to size and length of rows and where and when to plant the various garden vegetables.

2. The best methods of cultivating the garden throughout the season and the best methods of fighting garden pests.

3. The best methods of harvesting, preserving and storing winter supplies of garden vegetables

4. In short, how to produce in variety and quality the largest amount of food for the farmer's family table with the least interference with other necessary farm production.

First prize, $5; second prize, $3; third prize, $2.

All entries in this contest must be received on or before February 28. Any entry received on or before February 21, and that article takes a prize, one dollar will be added to the prize.

Mail to the Editor of The Washington Farmer, Spokane, Wash.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Awake to Labor Situation*

Forty-one farmers of one Washington county (Douglas) recently signed a petition asking the government to make some plans for providing adequate labor for the farms. The government has its hands decidedly full at the present time, but if there is anything that warrants petition to federal officials it is labor shortage in this time of food stringency. The government should see to it that there is plenty of labor if a thorough survey of the situation shows an actual shortage. And the government is taking steps in that direction. J. C. Scott, federal labor specialist, told the grain convention at Spokane recently that the authorities were making plans for the utilization of labor and labor saving devices this season in the most efficient manner possible. His own efforts, and those of other specialists in the northwest, are proof of the government's interest. Colonel Clarence Ousley, assistant secretary of agriculture, from Washington, D. C., told the farmers attending the convention at Spokane to put in the maximum acreage possible, declaring that the government would take whatever means were later found necessary to guarantee the harvesting of any crops produced.

## *Beware of Solicitors*

The council of national defense is doing a good work in taking up the matter of solicitors of miscellaneous funds for various purposes. This is a peculiarly easy time for two classes of solicitation to operate unwarrantedly—the professional bunco steerer and the well-meaning, but unwise beneficent organization. Here are some of the recommendations made by the council of national defense to the state councils all over the union:

That the council of national defense requests each of the state councils of defense so to organize that it may assure itself of the worthiness of the objects in support of which appeals for assistance are made and of the integrity and financial responsibility of those making such appeals;

That the council of national defense requests that all campaigns for private aid be conducted in entire cooperation with the state councils of defense;

That the council of national defense urges the people of the country to contribute assistance, financial and otherwise, only to those persons and objects that are accredited and approved by the council of defense in each state;

That the council of national defense suggests that the state councils of defense approve appeals for financial aid only where it shall be understood that an accounting of the moneys received and spent shall be made public.

## *"Awake or We Perish"*

Samuel Fraser, a Geneseo, New York, farmer, whose clearcut and emphatic utterances on agricultural problems are attracting national attention, told the Wholesale Grocers' association of New York city last week that "the food production of the United States in 1918 will not equal that of 1917 unless we have three exceptional conditions."

Favorable weather.

Additional capital.

More labor at the disposal of the farmers.

Mr. Fraser and a delegation of New York farmers recently told Secretary Houston, of the United States department of agriculture, that a famine threatens the land in 1918.

"They were told," remarked Mr. Fraser in his talk before the wholesale grocers, "that they should be hopeful and talk patriotic. But neither," the speaker added, "will grow food. The growing of food for 1918 is one of the most serious problems confronting the world today. Awake or we perish! We have basked in fancied security long enough."

Mr. Fraser is right. There is too much basking in fancied security at Washington. The Farmer has realized that fact for some time, and it was just that conviction which led it to launch a movement for the appointment by the president of a national food production administrator, who would impart to that work the same fine spirit of tremendous earnestness that Mr. Hoover has put into the work of food conservation.

"The present federal food administration," added Mr. Fraser, "does not regard crop production as within its scope, and the lack of recognition that they are so closely interrelated as to be inseparable parts of a whole is bound to cause waste and bring disaster to the work of both organizations."

Are these warnings unduly gloomy? If you think so, listen to the words of the American minister to Denmark, Dr. Maurice Francis Egan, recently home from Europe to arouse the American people to a more vivid realization of actual conditions.

Mr. Egan says that European food experts are agreed that the entire world will be brought to the verge of starvation if the war continues two years more.

It daily becomes more apparent that Mr. Hoover's original conviction, that food supplies, or the lack of them, will win or lose the war, was well founded. Yet a fear is growing that neither the president nor his secretary of agriculture has fully grasped the significance of these warnings.

## *The Dirt Silo Question*

In a recent issue of this paper there appeared an article telling the results of an experiment with a dirt silo. The story was reliable. There is no ground to doubt the truth of the report, and it was to the effect that 120 tons of sugar beet tops were placed in a dirt pit 100 feet long, 4 1-2 feet deep and 14 feet wide, a layer of straw and a layer of beet tops alternating. The entire mass was tramped down by the teams as the tops were unloaded, and when the pit was full it was covered by a six-inch layer of straw and a six-inch layer of manure to exclude the air. The report says that the beet tops were perfectly preserved and made excellent feed.

There is no reason to discourage experiments of this kind, and the use of the lessons thereby learned. But the pit silo without a lining thoroughly impervious to water is questionable in most localities. There are many localities where water seeps through the soil during the very period of the year when it is desired to have the silo full.

But the report of this experiment is valuable. This silage was made at a cost of 60 cents a ton. It is another illustration of what can be done by a thorough and scientific study of conditions.

## *A Lamb on Every Lawn*

A sheep on every lawn! Eliminate the lawn mower, fertilize the lawn, grow wool, grow mutton! This is the idea expressed by E. F. Benson, head of the agricultural department of the state of Washington. And Commissioner Benson has offered to prove that the idea is a good one. He is himself a sheep man, and he has offered the Red Cross two ewes with twin lambs each if that organization will furnish him a couple of portable pens and the state board of control allow him to graze the sheep on the lawn of the statehouse. There is evidence that his offer will be accepted. If it is he proposes to calculate to a nicety the money saved through the elimination of the lawn mower and the money made through the production of wool and mutton from feed ordinarily thrown away. If he makes good, a large number of families may be producing sheep on their lawns next year.

## *Washington Gleanings*

Ten students of the college of veterinary science, Washington state college, have enlisted in the medical reserve corps of the army.

Pack train service into the Rimrock region has been installed pending the opening of the canyon road and mail and provisions are being sent in that way.

A loan of $77,687 by the Spokane Cattle Loan company has been made to H. V. Wexler of Pasco, Wash., on the latter's band of sheep numbering 12,064.

Skagit county oats are being used entirely in the manufacture of "Mount Vernon Oatmeal," the new product put out by the Mount Vernon Milling company.

Charles E. Hill, with the Whitman Implement company at Pullman, has accepted a position as manager of Dr. E. A. Bryan's extensive "Riviera" tracts on the Snake river.

Stockholders of the Selah-Moxee Canal company will make another attempt to vote a $500,000 bond issue to secure money for improvements, according to E. M. Chandler, director and consulting engineer.

The Richland Farm Loan association stockholders report that 51 applications for loans have been furnished to the federal land bank, of which 29 have been closed and the money paid, amounting to $46,450.

Five trustees have been elected at the annual meeting of stockholders of the Old Union Ditch company. O. L. Gardner, H. J. Madill, Clarence Starcher, F. A. Huntley and W. C. Ferguson were chosen. The company expended $3100 during the last year in improvements.

A plan of mobilization for farmers exempted from the selective draft, advanced by J. R. Shinn, county agriculturist of Spokane county, has been accepted by W. A. Lloyd, national director of county agent work for the government, as a model for a campaign throughout the west and northwest.

Developments of a new hybrid wheat by the state experiment station at W. S. C. has been announced. The wheat, known as Triplet, is believed to be a maximum yielder, hardy, a good grader and remarkable smut resister. It was developed from fife, little club and turkey red after four years of experimentation.

R. K. Tiffany, president of the commercial club of Yakima, has appointed A. H. Huebner chairman of the permanent live stock committee and also chairman of the special committee to cooperate with G. E. Frevert of Salt Lake and R. P. Bean of Yakima in making necessary arrangements for the dairy products show scheduled for Yakima, February 28-March 2.

Resolutions adopted by the Forest Users' association at its recent session in Yakima indorse the hearty cooperation given stockmen by officials of the forestry department; ask regulations allowing more stock in grazing permits; prompt reseeding of burned areas; permission to graze sheep in portions of Rainier National park, and for a change in the regulations concerning ownership of hay lands for winter feeding.

## *What Others Say*

Farmer and Stockman: The farmer needs special training just as much as do the doctor and the lawyer.

Field and Farm: Patriotism isn't just dying for your country. It is trying to live for it—honestly and uprightly.

Hoard's Dairyman: The farmer has come to the point that if he continues to work his farm he must expend a certain amount of capital to house his help.

Rural New Yorker: The garbage can is the true test of housekeeping, and in like manner the idle hours are the true test of character. What does man or woman throw away? Find that and you know your friends for what they are.

The "Four-Ninety" Light Delivery is not a makeshift, built by an alien corporation. It is a Chevrolet product.

No. 5 Light Delivery; without top; No. 6, with top, as illustrated. Express body with panels 10 in. deep, 5-inch flare boards. Loading space 43 in. wide, 63 in. long. No. 6 is 52 in. high; has top, complete with rolled side and back curtains, celluloid lights both sides of seat.

No. 5 Light Delivery Now $675 No. 6 Light Delivery Now $695

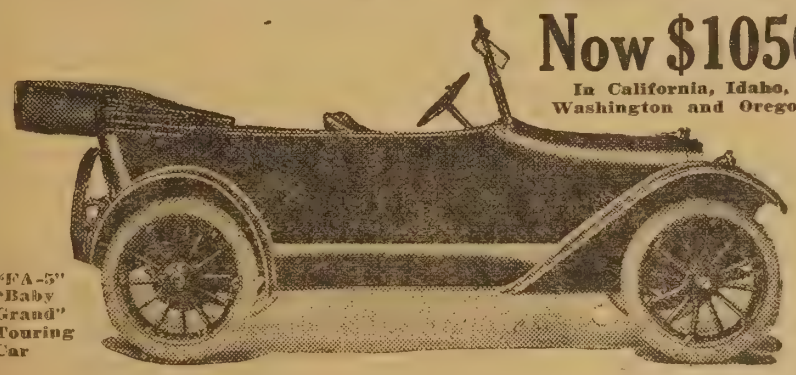
No. 7 Light Delivery—Full panel top, double doors with glass panels in rear end. Glass in side panels beside driver's seat. Solid slatted roof. Back and cushion. Loading space. 44 in. wide, 56 in. long, 54 in. high.

No. 7 Light Delivery ..... Now $740

CHEVROLET one-ton trucks are sanely designed, properly constructed and built of known material. The result of long and careful study of motor truck transportation problems. Appreciating the responsibility attached to the manufacture of a commercial unit, we have subjected these trucks to the most gruelling tests. They have been driven the distance across the continent and back again; put to road tests and load tests. And from these tests we know just what the trucks will do under the most trying conditions.

Sturdiness of each vital unit making up the running gear is a striking feature of the truck. Each one is meant for plain, hard work. Axles, front and rear; motor, clutch, transmission, frame, springs—all have been designed with the idea of giving steady, uninterrupted service.

THE NEW CHEVROLET ONE-TON WORM-DRIVE TRUCK.



SPECIFICATIONS.

Capacity, tons ..... 1
Wheelbase, inches ..... 125
Tires, front, inches, 31x4, pneumatic.
Tires, rear, inches, 32x4 solid.
Bore, inches, 3 11-16.
Stroke, inches, 5¼.
Speed, miles per hour, ..... 25
Gear-ratio in high gear, 7 to 1.
Final drive, worm.

Chassis only ..... $1225
Add for open delivery body ..... $120
Add for 8-post top with curtains ..... $75
Complete, as illustrated.. $1420

# Let Your Dollars Be Patriots!

This war is a test of democratic government. It is also a trial of democracy as to its fitness to survive. A small group of autocrats within whose hands are the resources of Central Europe are attacking the principle of the right of people to govern themselves. Should the United States and its allies fail in this war, there will not remain on earth a people absolutely independent of the dictation of the Teutonic empires, organized for military efficiency and bent on using the efficiency for the purpose of forcing their will upon the world. Let the Teutons triumph and the world will not be a safe place for democracy, and to make it such a safe place is not only the expressed purpose of the United States in taking up the challenge of the Huns, but also the purpose of the other powers who took up the challenge when Germany sent it forth three years and a half ago, and who for three years and a half have borne the burden of the conflict.

For this reason **the present business of the United States is war**—war to exterminate organized unrighteousness and to establish peace among the nations of the world.

The government has perfected a plan which will enable all of our people, without exception, to take a definite part in winning the war.

One of the first great steps called for by the government is ***saving.*** The American people must cease to require all of the pleasant and comfortable luxuries which they consumed before the war, the production of which calls for the energy of millions of men and women. These men and women must devote themselves to the production of the things which are needed to win the war. This is the key to the present situation; it rests in the hands of the average man, woman and child in every state in the Union, by refraining from everything not absolutely necessary to health and efficiency, to release strong arms for the production of materials of war to support our army and navy.

# Dairy Efficiency

## System Must Be Used for Results

This is an age of efficiency everywhere. Never did the fittest survive and the less fit, in whatever line of life or industry, fall by the wayside any more certainly than today. This is just as true in the dairy business as elsewhere. Under the stress of present circumstances, none but the efficient dairy can pay wages and interest on investment. Therefore, increase your efficiency as a dairyman if you are in the business.

Study the feed problem. Don't feed merely what you have or what you can get most easily. Don't feed miscellaneous amounts of feed of miscellaneous characters.

Test your cows. You can not always tell from the appearance of the cow or the quantity or the appearance of her milk whether she is a real producer or not. If there is a testing association in reach of you, join it. If not, take a means of your own to determine exactly which cow is producing the butter fat and which is boarding at your expense.

Breed for better stock. Whether you intend to keep and raise the calf of your cow or not, select a sire exactly the same as if you did intend to raise the calf to maturity and add her to your herd. Some one will, and every drop of scrub dairy blood that is perpetuated in the community or county is just that much dead weight that the dairy industry must get rid of before its real efficiency can be attained.

Develop yourself. Remember that dairy cows are sensitive in many ways. They respond quickly to good or bad treatment, as readily to the one as to the other. Poor quarters, unwholesome or unpalatable feed, harsh treatment and the like reduce the production of those things for which the dairy is conducted. Work out these finer points and discover the difference between a dairyman and a keeper of cows.

# Dairy Questions

## Are Answered by A. B. Nystrom

Which do you consider the best feed for milch cows—potatoes or dried beet pulp, according to market values? I am feeding oat and vetch hay.

M. W. M., Chehalis.

I presume you refer to cull potatoes which would have a value of about $8 per ton. These could be used in small quantities from 15 to 20 pounds daily for feeding dairy cows when no other succulent is available. But potatoes are rather laxative to some cows and in all cases the butter is affected so that it is hard to churn and does not have the quality of grass butter. Dried beet pulp does not affect the cow in the same way, with reference to the butter, but it also is slightly laxative. I do not know the price of dried beet pulp at present, but I believe it is around $40 per ton. In that case a succulent feed made by soaking the dried beet pulp in about four times its weight of water would cost about $10 per ton. If you could dispose of your potatoes at $10 per ton I think it would be better to feed the beet pulp, rather than the potatoes. If the potatoes will bring a price very much under this it would be best to feed them. Cows do better on cooked potatoes, but the cost is usually prohibitive. Potatoes should always be cooked for hogs.

### Ration Needs Succulence.

Will you please tell me what it is most economical to feed from the following feeds at the prices quoted:

| | Per Ton. |
|---|---|
| Alfalfa | $24.00 |
| Bran | 30.00 |
| Shorts | 33.00 |
| Oat middlings | 33.50 |
| Ground barley | 58.00 |
| Alber's Carnation stock feed | 33.00 |
| Wheat straw | 14.00 |

Those are the feeds available at the present time, but I am in hopes to be able to get dried beet pulp a little later, but don't know at what prices. I will be glad to have the information.

E. L., Snohomish.

Using the feeds you have mentioned I would suggest that you give the cow almost as much alfalfa hay as she will clean up and from five to seven pounds of straw per day. As a grain ration mix equal parts by weight, of oat middlings and wheat bran, feeding this to the proportion of one pound of grain for each four pounds of milk produced. This ration is by no means perfect in that it does not contain succulence. If you get dried beet pulp at a reasonable price I would suggest that you soak some in four or five times its weight of water, and feed it to the cow as succulence. If it is not convenient for you to soak it you can get nearly as good results by feeding it dry with the grain ration. I do not know anything about the Albers Carnation stock food.

### Snoqualmie Cow Records.

The following are the 10 high butterfat cows of the Snoqualmie Valley Cow Testing association for the month of November, as reported by L. F. Champlin, official cow tester: Baldy, Guernsey, owned by F. Krouse, produced 1218 pounds of milk and 54.8 pounds of butterfat; 33, Jersey-Guernsey, owned by L. J. Clark, 1176 pounds milk, 54 pounds butterfat; 5, Holstein, owned by G. Barr, 1338 pounds milk, 52.1 pounds butterfat; Nellie, Holstein, owned by F. Krouse, 1473 pounds milk, 50 pounds butterfat; Queen, Durham-Jersey, owned by T. B. Lodean, 1185 pounds milk, 47.4 pounds butterfat; Toots, Jersey, owned by A. Chisholm, 1137 pounds milk, 46.6 pounds butterfat; Topsy, Jersey, owned by V. Hanson, 885 pounds milk, 45.1 pounds butterfat; Baxter, Ayrshire, owned by F. Krouse, 897 pounds milk, 44.8 pounds butterfat; Jane, Jersey-Holstein, owned by E. Boulch, 783 pounds milk, 44.6 pounds butterfat.

Four cows gave over 50 pounds butterfat, four cows gave over 45 pounds butterfat, and 14 cows gave over 40 pounds of butterfat.

SPOKANE, WASH.

**Give her good silage and she'll give you big PROFITS**

**Now is the time when you need an IDEAL GREEN FEED SILO**

THESE cold, wintry days when your milk flow is shrinking because your cows are on a dry feed ration make you wish that you had installed an Ideal Green Feed Silo last year.

But there's no use crying over lost milk. The profits you might have had this winter, with milk at present prices, if you had installed a silo, are gone beyond recall. It's too late now to remedy your oversight.

But that's all the more reason why you should make your plans right now to install a silo.

Before you know it the rush of spring and summer work will be on you again, and if you let the matter drag along you will probably come around to another winter and still not have a silo.

Your cows will give 25% more milk on a silage ration than on dry feed with grain, and you can feed them much more cheaply on silage.

An Ideal Green Feed Silo will preserve your silage better than any other silo made, and will last longer. Thousands of Pacific coast cow owners have proved this to their own satisfaction.

**Plan for your Silo NOW**

**Write today for details of the Ideal Green Feed Silo and interesting information about silos and silage.**

**DE LAVAL DAIRY SUPPLY CO.**

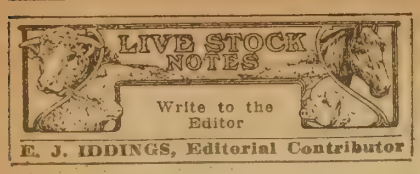
61 BEALE ST., SAN FRANCISCO, Cal.

*Keep Cow Troubles in the Background*

Your dairy can be healthy and profitable with but little care and expense on your part—if you just exercise the same "first aid" principles as you would use in your own family. Do not wait until a cow is nonproductive; the intelligent use of Kow-Kure will prevent the diseases that sap her life and vigor.

Cows frequently need medical attention, and in most cases you can supply the need yourself with the aid of KOW-KURE—just as thousands of the best dairymen have been doing for over twenty-five years.

Kow-Kure has made many a poor milker profitable. Do you have a cow that is worth the expense of a package of Kow-Kure to prove for yourself what it will do? This well-known cow medicine has a positive action on the digestive and genital organs—a preventive of disease and a sure, quick remedy for such common cow ills as Abortion, Barrenness, Scouring, Lost Appetite and bunches. Used before and after calving, Kow-Kure is a sure preventive of milk fever and Retained Afterbirth.



Kow-Kure is sold by druggists and feed dealers; 55c and $1.10 packages. Send for free treatise, "The Home Cow Doctor."

# Good Winter for Sheep

By RAY W. FELTON.

"This mild winter weather is saving me a thousand dollars a day" says H. Stanley Coffin well-known Washington sheepman. "Our bands are scattered over a good many sections of Washington and up to this time we haven't fed a spear of hay to our range sheep. The grass is excellent and the sheep are wintering in fine shape. It has been years since we have experienced as favorable weather conditions as have prevailed this year."

While there are many ups and downs in the sheep business the years 1917 and 1918 promise to go down in history as record breakers for the woolgrowers of the northwest. Added to fancy wool prices and the consequent demand for stock even for the old "gummies," comes this grass-producing winter.

"I have just returned from our range in the Rattlesnake hills," remarked Fred Cleman, who, with his father, John Cleman, is engaged extensively in the sheep business in the Yakima valley. "What I saw there made me feel good. Green grass a-plenty and old ewes in as fine a condition as one could ever wish for. The green stuff has forced its way up so suddenly that it is well mixed with the tall dead grass, thereby making a green food and roughage combination that is hard to beat."

Sheep and cattle men laid in heavy supplies of hay last fall and not a few have experienced losses as a result of heavy rains and high water. Few of them worry over that, however, as they regard an ample supply of hay for winter feeding much as any business man would his insurance policy.

The plentiful supply of grass has weakened the hay market to a considerable extent.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

*"The Laboratory that knows how"*

## Hog Feeding Problem.

To the Editor. The writer has been feeding a bunch of hogs for spring shipment and in order to save wheat, as we all should do, we have been feeding principally shorts, but some weeks ago one of them seemed to get stiff in all of its legs, and when helped up would squeal as in pain, and now there are others affected. Two of the best ones have died. They are all thrifty and look well and have made a good growth. A few days ago an old Iowa hog raiser told me it was feeding too much flour or wheat. I bought a ton of corn and ground it and am feeding this to the exclusion of wheat or shorts and after one week I can see an improvement in those hogs. I have been feeding stock food continuously. Other men who are feeding wheat only are having the same trouble. I am confident that a change of feed will bring relief. Feed liberally with salt in the slop and watch them grow and make pork to win the war. A. O. LEE.

Othello, Wash.

## Veterinary

Dr. S. B. Nelson

**Staggers**—Please give me the best remedy you know for staggers.

J. G. K

There are many different treatments advised for staggers. The word "staggers" as a disease means one thing to some people and another to others. As a general rule, however, it includes a disturbance of the circulation to the brain. One of the remedies advised for this trouble is to give the animal a thorough purge, either of one ounce of aloes and two drams of ginger made into a ball or a quart of raw linseed oil. Then follow this treatment for a week or 10 days with one dram of powdered potassium iodine given on the feed morning and evening.

**Warts**—I have a heifer that recently freshened which has seemed to grow warts on her teats almost over night. Have used every known treatment, but they return. They dry up and fall off about once a week after acquiring a growth of one-fourth to three-eights inch in length.

R. D. L., Yakima, Wash.

Supposing you try an internal treatment of giving to the heifer one-half ounce of Fowler's solution of arsenic, either on her feed or in a drink morning and evening for a while. If you use this treatment, which has proved very efficacious in a number of cases, you will have to cease using the milk for human consumption for a number of days during the treatment and a few days afterward.

We have a calf that has had fits for two months, and when it gets one of these it goes through anything. It has been cut several times in barb wire. Sometimes it has two or three fits a day. L. H., Viewpoint, Ore.

Fits, as you describe them as occurring in cows, are generally caused by overfeeding of the animals. Once in a while it is due to a brain trouble, but not so often as due to indigestion. I would, therefore, recommend that you take the calf off feed for a day or so, giving it plenty of water in the meantime. Give it about two to four ounces of castor oil, depending upon the size of it. Later, if you are feeding milk, add a little lime water to it, say about two to three ounces of lime water twice a day, if you feed it that often. Give it 10 grains of potassium iodine in about four ounces of water once daily for a few days.

**Jerseys for Net Profits**

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

**A FEW COWS AND HEIFERS**

MELLOW LAWN FARM HIGH PRODUCING JERSEY HERD. HERD AVERAGE, APPROXIMATELY 700 POUNDS BUTTER.

Every cow in the herd on test. Our herd is getting too large to give proper care, with present labor scarcity, so am forced to sell a few. Some of the best in the herd, now milking around 50 lbs., are for sale. Write for pedigree and prices. Ranch 7 miles south of Silverton, 12 miles east of Salem.

*F. A. DOERFLER, Silverton, Ore.*

**La Creole Farm Register of Merit A. J. C. C. Jerseys**

under U. S. government control for health. No. T. B. or abortion ever in herd. A breeder for 15 years; high-class stock, for high production.

We offer you a bull that is O. K., guaranteed; sired by Oxford You'll Do Jr.; daughters producing ever 2 pounds b. f. per day. His dam, Morrow's Select 828 lbs., is the first tested daughter of Golden Glow's Chief. She was 5 weeks on fair circuit while on test and only dairyman's care when at home, otherwise she would have produced close to 1100 lbs. This bull is 2½ years old and solid color. We have a bull calf from this cow, otherwise would not sell. Priced right.

W. O. MORROW, Independence, Ore.

**Jersey Isle Stock Ranch**

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

**Every Cow a Record**

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM, Oswego, Ore.

**914 Pounds of Butter**

This is the official record for a year of the dam of a choice bull calf by Rosaire Olga Lad, sire of 29 tested daughters. He and others priced according to quality.

# Produce More Food Now Is Urgent Need

(Continued from page five.)

is reached. To my mind some of the nonessential industries of the country must certainly be dispensed with during the period of the war or else we are going to encounter disaster before it ends. For instance, I read an article in Collier's Weekly of recent date in which it was stated that 1,000,000 workers are now engaged in the production of automobiles and that 5,000,000 people were depending upon this industry for a living and support. I dare say that not more than 25 per cent of this effort is put forth in manufacturing vehicles that are essential to carrying on the industries of the country, and that it is a conservative statement to say that at least 75 per cent of this effort goes into the manufacture of vehicles which will be used for pleasure purposes only. A condition of this kind can not continue indefinitely without surely bringing disaster on the country, and it is certainly a foolish policy to take men who are engaged in essential production of foodstuffs and leave men in automobile factories manufacturing pleasure cars. To my mind nothing can be more absurd. The above illustration, of course, offers only one phase of the matter, and there are many more similar ones which might be cited. EUGENE BLACK."

**Situation Very Acute.**

Secretary Wilfrid Wheeler of the Massachusetts state board of agriculture indicates by his letter that the extreme northwest and the extreme northeast portions of the country are facing the same serious problem of increased food production:

"To the Editor: The telegram, copy of which you sent us under date of December 29, has been received, for which I thank you. I fully agree with the sentiments expressed therein. Our problem here is very similar to yours, and the conditions are even worse, owing to the fact that we are so near the manufacturing centers that practically all our labor has gone into the factories and munition plants. We are conducting at the present time a system to utilize the boy and young women labor on our farms, and hope in this way to supplement the farmers' already depleted labor stock so that we will get a fair production this year. But the situation is very acute, and you have not expressed it any too seriously, and I hope that your telegram will bring good results.

"WILFRID WHEELER."

**Serious Labor Situation.**

In his letter Andrew L. Felker, commissioner of the state department of agriculture of New Hampshire, writes:

"The market condition for labor is the most serious that he is confronting, and farming in this section or any other section of the country will not take its place among the industries which it is entitled to fill until the farmer can go into the market and buy his labor in competition with other industries on at least somewhere near an equal basis. Our farmers are finding it exceedingly hard to pay $60 to $80 per month for the labor which they are able to secure, and this in most cases is plus the keep of the man, which under present conditions is an added cost of $20 to $30 per month. By the increased use of modern machines, including tractors for motive power, and with a favorable season New Hampshire will do much better than she did one year ago, even while we face the labor shortage. We are assured of better seed, at fairly normal prices, than we used last year. There is a great conserving of farm manures for fertilizer and the better planning of the farm business. All these conditions seem to warrant us in saying that the New Hampshire farmer will be a winner in 1918."

Congressman Albert Johnson of Washington writes:

"To the Editor: On my return from the west I have had pleasure in reading your letter of January 1, with enclosures. I am heartily in favor of the best possible steps to promote increased farm production and shall be pleased to cooperate in the splendid effort along that line which you are making. ALBERT JOHNSON."

World Standards Wheat— Gold— & GOODRICH TESTED TIRES

AS wheat is the standard and measure of food, and gold of money, so Goodrich Tested Tires, are the standard and measure of tires the world round. Wherever you see that name and trademark on a tire, you can be sure you will get maximum service in that tire, backed up by the good faith of the maker.

In the purchase of any product, experience dictates you put your buying faith in a standard brand. It safeguards you from deceiving appearances. Nowhere are appearances more deceiving than in tires; and your best protection is Goodrich, the name which for a half century has stood for the best in rubber.

Whether you need an automobile tire, large or small, a tire for your truck, motorcycle or bicycle, trust the trustworthy brand of Goodrich. You are sure of the service because it is a service proved the nation over by Goodrich Test Car Fleets. The teeth of the roads of the nation have gnawed at Goodrich Tires and the tires, fighting back, conquered with phenomenal mileage.

Get Goodrich pneumatic tires for automobiles, motorcycles, or bicycles, and get the greatest tire strength and mileage for your money.

Get Goodrich Truck Tires and you get truck tires that in actual test have outworn steel. Trust in the Goodrich brand, and you will save time and money, and gain comfort by it.

## Interest in Trapnests

To the Editor: Please give me directions for making trapnests. I have about three dozen hens and only get seven to 10 eggs a day. J. E. L.
St. Maries, Idaho.

Many requests are coming in for a description of a trapnest. These is an increased interest in trapnesting, and this is encouraging. The trapnest is the weapon to fight the Hun hen with. Poultrymen who are making a success of commercial poultry-keeping owe it very largely to the trapnest.

Oregon station trapnest with side removed to show construction.

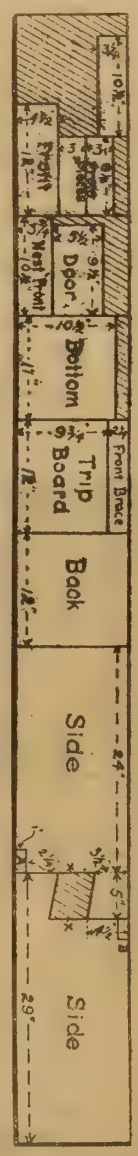
The trapnest is not producing good layers, but it is identifying the good layers and spotting the bad layers. It gives the breeder the opportunity to make an intelligent selection of breeding stock and to take advantage of that powerful factor for improvement—heredity. The progressive poultry-keeper is letting heredity work for him. The trapnest picks out the best; the poultryman mates the best to the best, and heredity does the rest.

There are various kinds of trapnests. The one described herewith which is in use at the Oregon station, has given good results. It is accurate and simple in construction, requires no adjustment after the hen is relieved, and is in two compartments so that the hen after laying goes to the outer compartment to be released and is not so likely to stand on the eggs and break them. These are all good points in a good trapnest. But there may be others as good if not better that I am not informed of.

Inventers have not yet designed a trapnest that will obviate the necessity of an attendant releasing the hens after they lay and get their number. This is the only objection to the use of the trapnests. They require considerable labor and attention. Those who have the time to attend to them will find it pays as it is the best method, if not he only method of surely weeding out the poor layers and enabling the poultryman to increase the production of his flock by breeding from the best.

For a flock of 50 hens 10 to 12 nests will be sufficient. The nests have to be opened several times a day to release the hens. If not attended to often enough the nests may be all occupied at times and other hens will lay on the floor if they can not get into the nests.

The Oregon station trapnest can all be cut out of a board 10 feet long and 12 inches wide. The main point in making it is to adjust the door so that the weight of the hen when she walks into the nest will close the door behind her. Dimensions given are for a medium sized or small hen. For a large hen an inch or two should be added to the size.



The material consists of:

One board 1 inch by 12 inches by 10 feet.

Six screw eyes, No. 210 Bright.

Two pieces of iron rod 3-16 inch by 12 inches.

Two pieces of rawhide 9 inches by one-half inch.

The diagram shows how the nest may be cut out of the board. The shaded portions are the waste pieces of the board. The solid black lines show where the board is to be cut. When cutting the sides apart it will be necessary to cut only as far as "X," then split the boards apart, after which cut out the required angle.

After nailing together, turn the nest on its side and bore the holes in the sides for the three sixteen-inch iron rod. The holes are one inch from the bottom and one and a quarter inch from the nest front.

On the bottom of the trip-board, put a screw eye seven-eighth inches from the end and one inch from each side. At the other end of the trip-board, bore three-eighth-inch holes, one inch from one end and three inches from each side.

On the bottom and at each side of the door put in a screw eye one and one-half inches from the end and three-fourths inch from the sides. On the upper side tack two rawhide strips, using a small staple or nail for each. The end of the strap will be two inches from the end and one-half inch from the side of the door.

Place the door in front of the trip-board, the screw eyes down; push the rawhide strips through the holes in the trip-board; turn the boards over and draw the strips up tight, then bend the door back over the trip-board until there is full three-fourths inch between the boards when laid flat; the strap should then be tacked to the lower side of the trip-board.

The door and trip-board are put in place by pushing the iron rods through the sides and the screw eyes.

# No New Orchards

## Produce Food Quickest Way Now

There is a strong sentiment going around now to do no work this year where returns in the form of food are slow in coming. The idea is to conserve labor as much as possible for the immediate and urgent needs of war-time food production.

One specific recommendation that has been made by labor specialists is that no new orchards be planted this year, the argument being that it will be a number of years before food will result from the work done. This seems like a blow to the orchard industry, and arguments can be found both for and against the idea. But these are terrible times; more terrible than most of us realize, though we are beginning to wake up to the truth.

But one thing is certain: Orchards already planted must not be neglected. Whether they are in bearing or not yet old enough, they should be cared for thoroughly. If they are in bearing their crops should be increased as much as possible, both as to quantity and quality. Fruit is a valuable food.

### Survivor of Revolution.

Daniel F. Bakeman, the last survivor of the war of independence, died in 1869 at the age of 88 years.

## TRANSPLANT WITH CARE.

### Damage Often Occurs to the Tree.

Whether you are putting out a berry patch, a half dozen apple trees or a large commercial orchard, it is vital that the transplanting be done well and scientifically. The injury is twofold if a tree or shrub dies—the original cost and cost of labor is lost and the season passes with no tree or shrub growing.

Director W. S. Thornber of the extension department of the state college of Washington recommends that trees or shrubs be heeled in immediately after they are received if they are in good condition. If they are not in first-class condition he says that they should be covered all over, roots and tops, with moist earth for a few days before being set out. This is for the purpose of softening up all the tissue and bark of both roots and trunks so that they may be in shape to begin at once to perform their functions when transplanted.

Trees should never be cramped when set into the ground. Plenty of root space should be allowed. The roots should be allowed to rest firmly on the bottom of the hole and the earth well settled and packed about them as the hole is filled up.

## NO MORE WASTE.

### Byproducts Plants Life-Savers.

The last year has been the year of the byproducts plant. As never before in the history of the northwest, inferior grades of fruit have been converted into something very much worth while. The cull apple, not so very long ago considered hardly worth saving for feed except as the hogs could harvest them from the ground, has this year brought thousands of dollars to the producers, the products plant operator and the worker, and, what is even more important, has added greatly to the supply of foodstuffs at a time when foodstuffs are unusually in demand.

If the war does nothing else for this country it will have resulted in some good in the stimulation of the spirit of saving on the part of a shamefully wasteful people.

The coming season will, without doubt, see the conversion of more inferior fruits and vegetables into valuable food, and the salvage of more waste products in all forms, than any other season in the history of the United States.

## WOULD IMPORT RUSSIANS

### Beet Growers Want Enough Help

A largely attended meeting of formers at Sunnyside, Wash., recently went on record in favor of importing large numbers of Russian families for the purpose of relieving the labor shortage in that section, especially with regard to the beet crop. It is stated that 6000 acres of beets will be grown about Sunnyside the coming season, and definite plans are under way for the importation of labor of some kind.

### At the Editor's Desk.

"Soil Physics and Management," by J. G. Mosier and A. F. Gustafson and published by J. B. Lippincott company, Philadelphia, Pa., This is really a text book for students, and is most thorough and exhaustive in its treatment, from the origin of soils and the various agencies which have their part in making and affecting them, down to actual crop production. For those who wish to understand the theory of soil formation and the action of natural forces on soils, the book will be well adapted, but it is not intended for popular reading nor for those who are interested only in results and care nothing for causes. The book is founded on careful, accurate observation and study, and is well illustrated.

Howard Evarts Weed has recently issued a revised issue of Spraying for Profit, a booklet on this subject which puts in succinct form this chief method of fighting injurious insects and fungous diseases. It is clear and conveniently arranged. It is put out by the Horticultural Publishing Co., Caxton bldg., Cleveland, Ohio.

### Beans From Burma.

There was an increase in the exportation of beans, particularly to Great Britain, during 1916. In general, other agricultural products declined because of high freight rates or lack of tonnage. Great Britain took about $1,1000,000 worth of cotton—an increase of nearly 50 per cent; India took less than $300,000—a decrease of about 33 1-3 per cent; and Japan about $90,000—a decrease of about 40 per cent.

**Averyize Your Farm Work**

THERE isn't any question any more about the success of tractor farming—the only question now is—which is the best tractor for you to get.

When you **Averyize** your farm you can be sure you have made a wise selection. When you get an Avery you are getting a tractor that is long past the experimental stage. It has been put to every test known.

We proved our faith in the Avery design by introducing Avery Tractors on a sold-on-approval policy. We have proved the success of the Avery design by entering it in every important motor contest and demonstration held in this or any other country.

And the strongest proof of the success of the Avery design is that men who bought the first Avery Tractors years ago are buying more Avery Tractors—and sons, brothers, cousins and neighbors who have watched Avery Tractors at work are buying them in large numbers.

Avery Tractors are built by a company having over thirty years' experience in building power farming machinery with tens of thousands of Avery machines in operation all over the world, and by a company owning a large factory with branch houses and distributers covering every State in the Union and over 60 foreign countries.

**A Size for Every Size Farm and Every Kind of Work**

There are six sizes of Avery Tractors from which you can pick exactly the right size tractor for your work.

There's an Avery Two-Row Motor Cultivator for doing your cultivating and other light traction and belt work.

Then you can get an Avery Plow and an Avery Thresher to fit any size tractor, and you have an equipment of Tractor Farming Machinery that will enable you to raise a larger crop at less expense and save it after you raise it.

The five sizes of Avery Tractors—8-16, 12-25, 18-36, 25-50 and 40-80 h. p., are all built of the same design.

Avery Tractors are the only tractors with a double carburetor and duplex gasifier that burns ALL the kerosene. They have a patented sliding frame that eliminates the intermediate gear used on other tractors. Saves expense and increases the power.

They are the only tractors with renewable inner cylinder walls, crankshafts one-half the diameter of the cylinders, adjustable crankshaft boxes, no fan, fan belt, governor belt, fuel pump, or water pump.

There's also a 5-10 h. p. Tractor, especially built for small farms and lighter work on large farms.

**All Sizes Plows and Threshers**

You can get an Avery Tractor Plow, either light or heavy, in any size from 1 to 10 bottoms, and an Avery Thresher in any size from a small 19x30 inch up to a large 42x70 inch.

**Write for the 1918 Avery Motor Power Book**

It shows all Avery machines in their natural colors, both stationary and actual working scenes. It has unusual detailed illustrations of tractor construction. Write for free copy and ask for special information about the size machines you need. Address

**AVERY COMPANY, 3305 Iowa St., Peoria, Ill.**

Get a Guaranteed Avery Grain Saver Thresher in any size, 19x30 inch up to a large 42x70 inch.

**AVERY**

There's a size Avery Tractor for every size farm and every kind of work.

**90 Bushels per Acre**

Wht. 30 bu.
Oats .. 53½ bu.
Potatoes .. 148 bu.
Barley .. 37 bu.
Rye .. 27¼ bu.
Flax .. 13½ bu.
This is the 1915 average per acre from Government statistics.

**Send for FREE Book**
**"Home-Seekers' and Settlers' Guide"**
Contains valuable and interesting information based on Government returns.

**Mr. A. J. Woolen writes:**
"I arrived in Canada with practically nothing. Nevertheless I made good, and my first crop of oats went on an average 90 bushels to the acre."
Mr. Woolen is only one of thousands of farmers who have made good in Western Canada. Government statistics show the average yield of oats per acre is 53½ bushels; of wheat 30 bushels.

**128,000 Farms FREE!**

Whether you have capital to buy land or not, there is a farm for you in Canada. You can get one of the recently surveyed 160-acre fertile homesteads along the Canadian Northern Railway. Here you have the same opportunity to succeed as did Mr. Woolen. First comers get choicest locations.

**Best Farm Lands**
**$15 to $25 Per Acre**

Thousands of acres of specially selected, centrally located land, *close to the railway*, can be purchased on easy cash payments, or part cash and part crop payments. Here are modern free schools, good transportation, telephones and automobile roads.
Crops produced can only be equaled on farms costing $150 to $200 per acre in more densely settled communities.

**Special Low Fares**

The Canadian Northern Railway, which takes you to all parts of this territory, provides special low fares to home-seekers and settlers. Here is wealth and a home for you. Send today for the free literature telling you exactly how to make a home in Western Canada.

# Good Plowing

is necessary for good crops, and good plowing is largely dependent on the plow you use.

Moline plows have long been famous for the good quality of their work. In addition they have many improvements which add to their convenience, durability and light draft. No matter what your plowing requirements or the type of your soil there is a Moline plow made for you.

## Moline Wheel Walking Gang

A strong, heavy plow of the "open and shut" type for work in rough, hilly country. Extra heavy beams with great clearance enable the plow to turn under high stubble. Bottoms always scour well. Guiding lever enables a straight line of draft to be maintained when horses are crowding on a steep hillside. Made in 2, 3 and 4-bottom sizes. Can be furnished with rear wheel and riding attachment. Equipped with either Moline chilled bases or steel bottoms.

## Moline Best Ever Sulky and Gang

An easy foot-lift plow made in 1 or 2-bottom sizes. Extremely light in draft because the wheel control is correct. The rear wheel is not affected by any motion of the tongue, and the tongue is not crowded against the horses by the rear wheel. Does splendid work under all conditions. Equipped with either Moline chilled bases or Moline steel bottoms.

## Moline Wheel Guide Two-Way

A popular plow for hillside plowing or plowing irrigated land. To raise the bottom simply press a foot lever. Wheels run in the corner of the furrow and do not climb the furrow wall. The tongue always remains parallel with the furrow and does not crowd the horses. Hitch automatically shifts at the ends of the rows.

## Moline Power-Lift Gang

Fits any size tractor. Power lift is so arranged that bottom can be raised entirely or any intermediate distance by simply pulling a cord—a desirable feature in difficult plowing. Very strongly constructed for hard usage. Thoroughly turns the soil and covers trash. Made in 2, 3, 4 or 5-bottom sizes. Equipped with either Moline chilled bases or steel bottoms.

Your Moline Dealer will be glad to show you these plows. If there is no Moline dealer in your locality write us for further information. Address Dept. 60

# The Use of Lime

## Problem Should Be Well Studied

C. C. Farr, agriculturist for Snohomish county, delivered a most interesting address on the subject of lime and its scientific use at a meeting of fruit growers some time ago.

The generally admitted acidity of western Washington soils, Mr. Farr explained, to be due to the presence of much organic matter, or humus, whose gradual reduction produced humic acid, and also the leaching out of the soils of the various bases normally present. In the arid sections the salts liberated in various ways are less likely to be leached out, so that in eastern Washington, for instance, sodium, calcium and potassium are found in liberal quantities. Sometimes they are even too abundant, as the result of the gradual accumulation at lower levels of salts in solution, carried down in seepage water and deposited by evaporation. This is the origin of alkali soils and deposits, perhaps the most famous example of which is "Death valley," with its borax deposits.

"The three elements of soil fertility upon which most emphasis is placed," continued Mr. Farr, "are phosphorous, potassium and nitrogen. There are 10 elements altogether, upon which vegetable and animal life are dependent. All of these of course are found in the soil, but the three named are the ones most apt to be deficient in quantity. Calcium, the basic element in lime, you will notice is not mentioned among these three critical elements, because what may be called 'normal soil' contains sufficient lime. It is only where local conditions have caused the disappearance of lime from the soil that this trouble is encountered."

Lime, the speaker continued, might be called an "indirect fertilizer," because its action is largely locked up with that matter of the availability of other mineral elements. Available elements are those which, because of their solubility can be made use of in the plant economy. Sometimes availability is a disadvantage, as when it leaves quantities of easily leached plant food in the soil at the beginning of winter. This trouble is successfully dealt with by the use of catch crops, which seize the available plant food and build it into their tissues.

The matter of excessive alkalinity or acidity of soils was treated by Mr. Farr in connection with two points. First, the effect of these changes from normal on osmosis, or the drawing in of a thin solution by a thicker or heavier one. This is the method by which the juices in plants draw in their nourishment—their greater concentration enables them to draw in the soil water, bearing dissolved plant food. An excess of acid or alkali, by raising the weight or solid content of this soil water, makes it impossible for this process of absorption to proceed.

Acidity, in addition to this possible effect on osmosis, brings to bear upon the growing plant an actual toxic or poisonous effect. The relative tolerance of different plants to alkalinity and acidity must of course be taken into consideration, so that the mistake of heavily liming ground for potatoes, which can stand considerable acidity, will not be made.

"Whenever the presence of acidity in the soil has been determined," Mr. Farr told his audience, "the first step to take is to find the cause, and as far as possible to remedy it. This means drainage, for the bacteria whose by-products in the soil give rise to acidity, belong to those which must work in an air-free medium, and the air permeation which follows successful drainage, discourages their activity. In this connection, the practical question is often asked whether we can determine in advance just how much lime is needed to correct the acidity of the soil. I may say that at present there are several fairly accurate methods of doing this, two tests in particular worked out by investigators having done much to make liming less of a hit or miss operation than it used to be.

Touching briefly upon the effect of lime in counteracting the tendency of colloidal bodies to bind clay soils too firmly together, the agriculturist concluded by calling attention to the difference in calcium content in the various forms of lime on the market. Quick lime, he stated to contain about 40 pounds of calcium to 56 of other elements; hydrated lime, 40 of calcium to 60; and lime stone, 40 of calcium to 100. As calcium is the thing the farmer is really buying when he buys "lime" in any form, Mr. Farr advised those present always to figure out comparative prices on this basis. It is not how much "lime" you buy, but how much calcium you get for your money which really counts.

# A MISHAP FOLLOWS FLO'S COQUETTISH INDULGENCE

Flora Flirt is feeling great,
So she's going out to skate.

Slowly gliding o'er the ice
Comes a youth who thinks she's nice.

Flo's roguish eyes and girlish laughter
Cause that young man to follow after.

Flora skates fast as she can,
Followed by that handsome man.

He pleads with her, "Oh, please be mine."
They never heed the danger sign.

With cries of terror, in a trice
They both have broken through the ice.
**The Moral**—Now, flirting girls, take this advice:
Don't go "skating on thin ice."

# Death to Strikers

## *This Is Way Germany Rules Labor*

The iron hand of the military authorities in Germany has come down with a death grip on the element in that country who, sick and tired of the war, have sought to bring it to an end by striking in the factories. A wholesale policy of death to those who refuse to work has been announced by the head of the military authority in Berlin.

It has been believed that a general strike in Berlin and other manufacturing cities, both in Germany and Austria, has been threatening, if it has not actually taken place. It was reported with some semblence of reliability that 700,000 workers, including some women, had gone on strike in the munitions factories of Berlin. A summary order was given that they return to work by Monday of this week, and the promise of death was made to those who defied the military authorities.

### Americans in the Fight.

Reports from Europe indicate that the American soldiers are getting into the actual battles more and more. It is estimated that nearly half a million troops from this country are now in Europe or on the way, preparing to enter vigorously into the war as soon as spring opens.

### Fight to Finish.

The allied war council has had a formal meeting to consider the peace terms recently outlined in the German parliament by Chancellor Hertling, and has reached a definite agreement to give the terms no further thought. They are held to be wholly unacceptable as a basis on which to discuss peace. The council is determined to carry the war on to a finish satisfactory to the allies' ideals of peace.

### Railroad Control.

Congress is likely to pass a measure soon requiring that the railroads return to private control within a specified time after the conclusion of the war. There has been a movement on the part of some to make the government control, now being exercised, permanent.

### Want War Council.

Though the heat of the controversy over United States war preparations has somewhat subsided, the fight for a central war council to oversee all the various phases of the conduct of the war on the part of the United States continues. President Wilson is opposed to such central council. Many senators and congressmen agree with him; many are anxious to have a council established.

# Stockmen to Meet

## Conference Planned for Spokane

February 21, 22 and 23 will be big days for the live stock producers of the northwest. On the first two days the annual northwest live stock conference will be held in Spokane and on the last day the annual purebred Shorthorn sale at the Spokane Union stockyards.

The conference will be for the purpose of threshing out the big problems of the industry and the program will contain addresses and discussions by some of the most noted men of America. Heading the program as announced is Duncan Marshall, minister of agriculture, Calgary, Alberta. Professor C. H. Eckles of the University of Missouri, recognized as one of the leading authorities on dairy cattle, will speak also. Other national and international figures will be present.

The following is the program just announced:

**Thursday.**

Address of welcome—Mayor Fassett of Spokane, Wash.

T. S. Lane, prseident chamber of commerce.

T. S. Griffith, president Spokane Interstate fair.

"How the Stockman Can Best Help to Win the War," by Charles Hebberd, food administrator for Washington.

"The County Agent's Work"—Professor O. D. Center, Oregon Agricultural college.

"The Bank and the Agriculturist"—R. A. Blanchard, Live Stock State bank, North Portland, Ore.

"Crop Production for the Livestock Farmer"—Professor George Severence, Washington State college.

Demonstration by packing house and address by E. R. Gentry, Chicago.

"Cooperative Shipping of Live Stock"—C. M. McAllister, Portland, Ore.

"The Future of Live Stock in the Northwest"—A. D. Dunn.

"The Conservation of Dairy Live Stock"—E. R. Brady, Satsop, Wash.

"Prospects for Live Stock Production"—Dean E. J. Iddings, University of Idaho.

"War-Time Feeding of Live Stock"—Professor W. T. McDonald, commissioner of live stock, British Columbia.

"Combating Some Common Diseases of Live Stock"—Dr. Otto Menig, Spokane.

Address—E. F. Benson, commissioner of agriculture, state of Washington.

**Friday.**

Shorthorn show at Spokane Union stockyards. All stockmen invited.

"The Dairy Cow"—Professor C. H. Eckles, University of Missouri, Columbia, Mo.

Address—T. W. Tomlinson, secretary American National Live Stock association, Denver, Col.

Address—Duncan Marshall, minsiter of agriculture, Calgary, Alta.

"Sheep"—William Hislop.

Demonstration by packing house.

Annual stockmen's dinner in the evening.

The committee in charge urges all those attending to ask their ticket agents for receipts for their fare so that the benefit of a reduced return fare can be had. All railroads are making the reduction.

### Just Plain Dog.

Sam was reading the paper, when suddenly he snorted and addressed Mrs. Sam:

"What tomfoolery, Maria! It says here that some idiot has actually paid a thousand guineas for a dog!"

"Well, my dear, those well-bred dogs are worth a lot of money, you know," answered his wife.

"Yes, of course, I know that. But a thousand guineas! Why, it's a good deal more than I'm worth myself."

"Ah, yes, Sam, but then some dogs are worth more than others, you see."

Study Power Farming at the Gas Engineering Short Course

given by the state college of Washington, Feb. 18 to March 9. Three weeks of practical instruction and work on gas tractors, motor trucks and farm gas engines. Tuition $5. For further information address

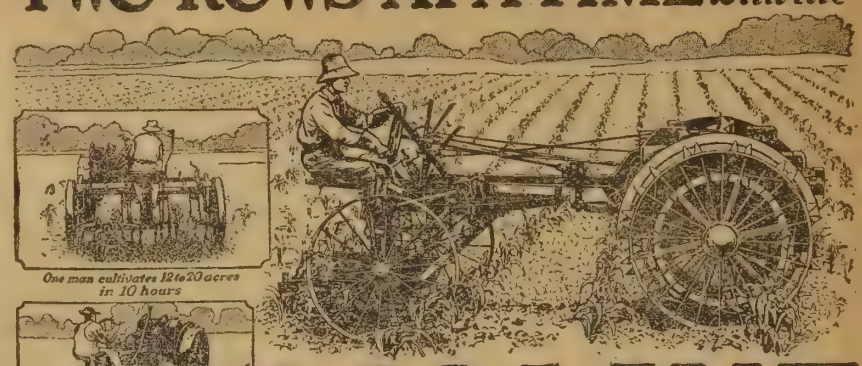
THE REGISTRAR.

State College of Washington

Pullman, Wash.

Men Mechanically Inclined, Your Services Are Needed.

NEVER before has the demand for Automobile, Tractor, Truck and Aeroplane motor Mechanics been so great. Your service is needed in the Army, driving and repairing Trucks and Ambulances; in the Aeroplane section repairing motors; on our farms using Tractors; besides, remember that this country has 4,000,000 Automobiles. Thousands of mechanics who formerly took care of them are in the Government service. Somebody must take their places. It is up to you to take the places in the garage, etc., of the men that must go. Realizing these conditions I have made preparation to train men to fill these important positions. The demand for men is here. I am ready to train them. If you are in the draft come here and be trained so that you can give a special service to your Country.



WRITE FOR FREE CATALOGUE.

I have written a catalogue that shows pictures of all departments and describes my school. I want you to have it. It will tell you how I teach the Automobile, Tractor business; open your eyes to the opportunities for splendid positions at good money. This Country must have trained Mechanics. Take advantage of present conditions, write for my free catalogue; it's a trip through the greatest school in the world. Today is the day of oppportunities, grasp them.

ONE MAN CULTIVATES TWO ROWS AT A TIME with the

One man cultivates 12 to 20 acres in 10 hours

One man plows 5 to 8 acres in 10 hours

One man lists 12 to 20 acres in 10 hours

One man harvests 15 to 25 acres of grain in 10 hours

One man harvests 8 to 10 acres of corn in 10 hours

Equipped with rear carrying truck for odd jobs

MOLINE UNIVERSAL TRACTOR

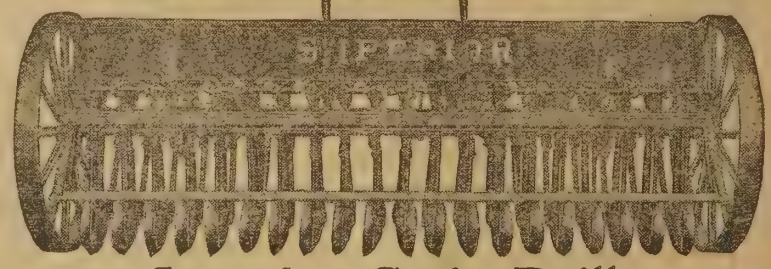
"It Solves the Farm Help Problem"

More time is spent in cultivating than any other single operation. Sixty per cent of the crops grown on most farms are planted in rows which require cultivation.

If one man is to farm more land than ever before, he must also cultivate more. With the Moline-Universal Tractor one man cultivates two rows at a time and does it better, quicker and cheaper than with horses.

The Moline-Universal Tractor has ample clearance to straddle the corn row at all stages of growth. The operator sits on the cultivator in line with the right drive wheel of the tractor—not directly behind the tractor. This gives a clear view of the rows ahead. By keeping the right wheel of the Moline-Universal a certain distance from the outside row the whole outfit will go properly. For dodging individual hills the cultivator gangs are easily shifted by the operator's feet.

But cultivation is only one of all the farm operations which the Moline-Universal can do. It is light, but has more than enough power to pull two 14-in. plow bottoms, because all its weight is available for traction.



The Moline-Universal isn't the kind of a tractor that will do your plowing and seed bed preparation and then rest while your horses do the planting, cultivating and harvesting. It works to full capacity throughout the entire year with the greatest speed and economy.

Your Moline-Universal is ready now. Write today for further information and name of your nearest Moline dealer.

MOLINE PLOW COMPANY, MOLINE, ILL.

PLANT for PROFIT

Superior Grain Drills

plant for profit, because every feed sows a measured quantity of seed; because the Superior does not skip, choke or bunch; because every furrow opener makes a perfect, roomy seed trench; because an equal amount of seed is sown in every furrow; because the seed is planted at an even depth. "Even Sowing Means Even Growing"—an evenly ripened crop.

The purchaser of a Superior Drill runs no risk whatever, because the warranty covers every vital point.

Superior Drills meet every seeding condition that confronts the northwest farmer. They are easy on both man and team. Light draft, great strength. Light running Disc Bearings that are guaranteed never to wear out. Positive Force Feeds, Hard-work Change Speed Disk Gear Drive, Furrow Openers that will work in any soil no matter how wet, sticky or dry. The Superior will stand right up to the work year in and year out, and satisfy the most particular farmers.

Send for The Superior Catalog. Read it. Note the warranty. Then go to your Implement Dealer and insist on seeing the SUPERIOR.

# Farmers Must Win

## President Makes Vigorous Appeal

President Wilson told the farmers of America last week that the result of the war depended upon them. This declaration was made in a formal message to an agricultural conference meeting at Urbana, Illinois.

After outlining the diabolical conduct of Germany in her warfare against humanity, the president says:

"We are fighting, therefore, as truly for the liberty and self-government of the United States as if the war of our own revolution had to be fought over again, and every man in every business in the United States must know by this time that his whole future fortune lies in the balance. Our national life and our whole economic development will pass under the sinister influences of foreign control if we do not win. We must win, therefore, and we shall win. I need not ask you to pledge your lives and fortunes with those of the rest of the nation to the accomplishment of that great end.

"And let me say that the stimulation of the agencies I have enumerated has been responded to by the farmers in splendid fashion. I dare say that you are aware that the farmers of this country are as efficient as any other farmers in the world. They do not produce more per acre than the farmers in Europe. It is not necessary that they should do so. It would perhaps be bad economy for them to attempt it. But they do produce by two to three or four times more per man, per unit of labor and capital, than the farmers of any European country.

"They are more alert and use more labor saving devices than any other farmers in the world. And their response to the demands of the present emergency has been in every way remarkable.

"Last spring their planting exceeded by 12,000,000 acres the largest planting of any previous year, and the yields from the crops were record-breaking yields. In the fall of 1917 a wheat acreage of 42,170,000 was planted, which was 1,000,000 larger than for any preceding year, 3,000,000 greater than the next largest, and 7,000,000 greater than the preceding five years' average.

"But I ought to say to you that it is not only necessary that these achievements should be repeated, but that they should be exceeded. I know what this advice involves. It involves not only labor, but sacrifice, the painstaking application of every bit of scientific knowledge and every tested practice that is available. It means the utmost economy, even to the point where the pinch comes. It means the kind of concentration and self-sacrifice which is involved in the field of battle itself, where the object always looms greater than the individual. And yet the government will help and help in every way that it is possible.

"I will not appeal to you to continue and renew and increase your efforts. I do not believe that it is necessary to do so. I believe that you will do it without any word or appeal from me, because you understand as well as I do the needs and opportunities of this great hour when the fortunes of mankind everywhere seem about to be determined and when America has the greatest opportunity she has ever had to make good her own freedom and in making it good to lend a helping hand to men struggling for their freedom everywhere.

"You remember that it was farmers from whom came the first shots at Lexington, that set aflame the revolution that made America free. I hope and believe that the farmers of America will willingly and conspicuously stand by to win this war also.

"The toil, the intelligence, the energy, the foresight, the self-sacrifice and devotion of the farmers of America will, I believe, bring to a triumphant conclusion this great last war for the emancipation of men from the control of arbitrary government and the selfishness of class legislation and control and then, when the end has come, we may look each other in the face and be glad that we are Americans and have had the privilege to play such a part."

# May Furlough Labor

## Administration Considers Problem

In reply to a letter from Governor Capper of Kansas urging upon the administration the necessity of providing adequate labor for the farms this season, President Wilson says that congress now has before it a measure that would empower the war department to furlough drafted or enlisted men during the rush seasons of farm work. Here is the president's letter to Governor Capper:

"Under the new selective service regulations, under which the present classification of registrants is now proceeding in very specific terms in those regulations, it is provided that skilled farm laborers essential to the continued and undiminished operations of farms shall be deferred in class two. It is our present hope and belief that we shall be able to raise all the forces in immediate prospect without invading any deferred classification and therefore we can assume, I think, that future drafts will not interfere with the supply of skilled farmers.

**Would Furlough Selected Men.**

"I also had very prominently in mind the advisability of furloughing selected men during planting and harvesting time and to this end the war department has asked of congress authority to grant such furloughs without pay, whenever, in the opinion of the secretary of war the military situation justifies such a step. Of course, it is impossible to say in advance what the changing conditions of warfare may impose upon us, but I can assure you that, if this authority is granted by congress, we shall permit these furloughs whenever it is possible to do so.

"I take it that what I have said is precisely responsive to what you have in mind and I hope and believe that the various selection boards composed of men of your choice will exercise the authority to defer skilled farm labor in such a way as to meet the situation you present in the fullest way it could be met under our present circumstances."

THE SELF-OILING WINDMILL
has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load.
We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

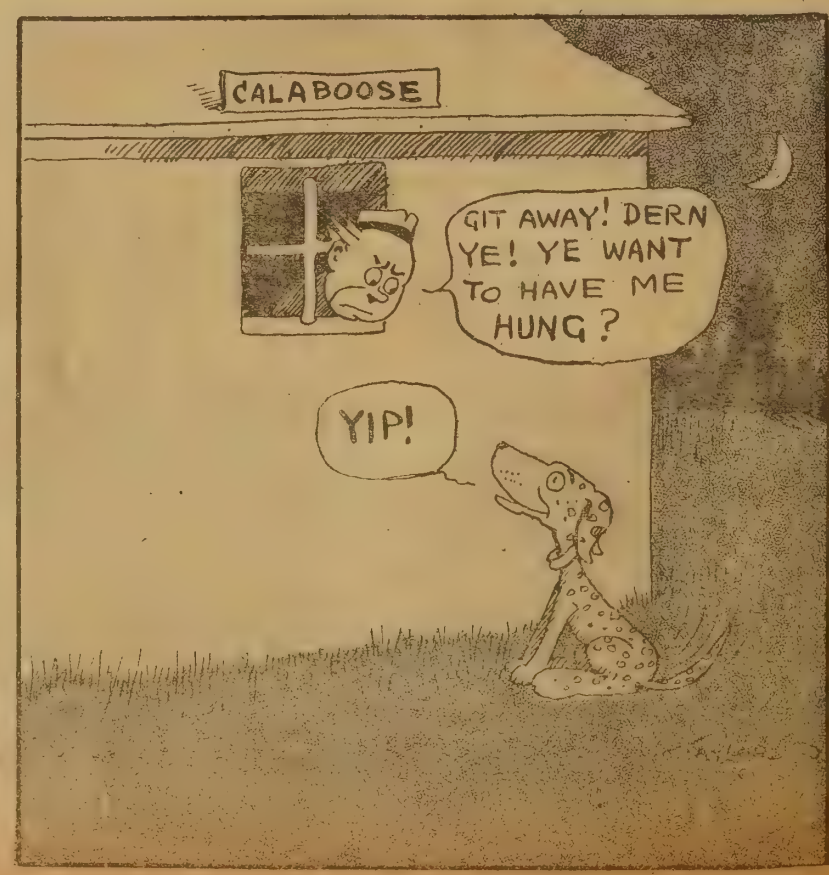
# UNLUCKY LOOIE ATTRACTS A LOST DOG



# Keep Posted About the War

The days we are living through now are among the most momentous in the history of the world. Our country is making preparations for war on such a gigantic scale that the effects are felt in every home throughout the land. Our sons, brothers and neighbors are marching in the military encampments. In a few months a million of our boys will be at the front. You and your family will want to keep in touch with the movements of the American armies. You will want to know where the boys from your home town are sent. You will want to know every detail of this great drama. You can not do better than subscribe for

## The Twice-a-Week Spokesman-Review

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line.

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a big saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers.

## A REMARKABLE CLUBBING OFFER

**Twice-a-Week Spokesman-Review, 1 Year**
**The Washington Farmer 3 Years, Both for $1.00**

These are days of high and rapidly rising costs in the publishing business. Clubbing offers are rare. This fact makes the clubbing proposition of The Twice-a-Week Spokesman-Review with your state farm paper especially noteworthy. Our advice is not to delay but to accept this liberal offer at once.

# No Minors Allowed

By JOE L. ASHLOCK

PART II.

Some boys I knew many years ago when eastern Washington was in bunchgrass, homes far apart, and amusements few, got a bad start in life. For their bad start a certain "medicine" known as "bull bitters" was chiefly responsible.

We boys that went to town in those days went in quest of "excitement"; and we needed excitement worse than food.

There were no theaters, no city parks with bands playing, no picture shows—what a lot of us would have gone to town and come home sober if only there had been a "movie" to go to instead of a saloon! And there were no religious services till the Salvation Army came to town. When it did come the saloon crowd backslid in a bunch and went in for salvation, even Hop Lee, the town Chinaman, who cursed the bartender's yellow-eyed cat so luridly and in such wrath that the cat, lacking any one of its nine lives, would surely have been singed, scorched and incinerated!

But when the Salvation Army left town the saloon crowd, Hop Lee included, backslid again, hellward, this time, and all the kegs in town were dry at the spigot the next morning.

My mother had decided views on the liquor question. I told her one morning how Charley Blank went to a dance with me, and toward morning got so drunk on bull bitters that we had to take him out to the barn and put him to sleep in a horse blanket. Charley didn't want to let his mother know about his drinking. While we were bedding him down in the hay he wept drunkenly and swore that he would kill any one of us that ever let his mother know.

A little while after this Charley got drunk at another dance and tried to get to bed toward morning without awakening his mother. He stole into the house, took off his shoes at the foot of the stairs, and threw them to the landing at the top, where they banged against the door of his mother's bedroom. Aroused by the racket, she came out and by the light of the candle she had lighted beheld Charley trying to creep up the stairs in his stocking feet.

Hearing of these matters from me, mother told me that it was her desire that I should never touch liquor in any form; but that if I chose to do so against her will she would ask me not to play the sneak about it. She told me to buy my booze, bring it home, drink it at home, and sleep off my drunk behind the stove.

Her placing the proposition before me in that sportsmanlike way made me see the drinking bouts of my companions with new eyes. Booze, sellers of booze and consumers of booze stood before me in the same new light. The idea of deliberately buying a bottle of whisky, bringing it to my home, sitting down by the stove and drinking it all, then sleeping off my drunk behind the stove while mother poked wood into the stove to keep me warm was both ludicrous and repulsive. The very thought of such a thing eventually became to me actually nauseating.

The mental picture of myself in the performance of so disgusting a thing got into my mind in such a way that thereafter, whenever I saw a flat flask of whisky, or a tall, round quart—and I saw many—I immediately looked through the evil liquid and saw myself curled up behind the stove sleeping off the drunk I had acquired by consuming the contents of the bottle—with mother poking wood into the stove to keep me warm!

The mental picture of myself in this condition was so angering and so disgusting that I felt like smashing the bottle at once. This did not mean, however, that I had any "anti-saloon" predilections. Far from it! In fact, I had not grasped the meaning of the word "temperance" as applied to liquor reforms, and would not have been interested if I had.

I was simply in the position of one who, finding that a fly has been cooked in his favorite pudding, thereby loses his appetite for the pudding, though has no desire to keep others from eating their fill of it. The fly in the pudding was the picture of myself sleeping off a drunk with mother poking wood in the stove. Ugh! It makes me shudder yet to think of it.

Mother is dead now. She was sure before she died that I would not be a "drinking man." But she never knew how, by the picture she put in my mind, she shut off the possibility of my ever falling into the habit of drink, which I can see, as I look back, has laid a number of my boyhood companions in drunkard's graves; or, worse still, let them stagger on, pitied by some, loathed by others, and useless to all, including themselves.

Charley Hill started a candy store in our bunchgrass town in the early days. He kept his chocolates in fruit jars with the lids screwed fast on the rubbers. He had various other knicknacks and kickshaws, including a nickel-in-the-slot machine and variously colored and flavored pop—strawberry, lemon, vanilla, raspberry and ginger ale.

I bucked his slot machine for a royal flush one day, which nearly sent him into bankruptcy. I didn't care for his chocolates and cigars, but took kindly to the pop. My royal flush gave me 50 bottles of this at 10 cents a bottle. I didn't care to drink it all at once; nor did I care to call in a crowd to help drink it all at once, for he had less than 50 bottles on hand. So we agreed that I should use up two or three, maybe four bottles every time I came to town for the next couple of months.

My first taste of Charley's pop was a shock. I mistook its "bite" for the sting of whisky on an untanned palate. I asked Charley when he had gotten a license to sell booze. Charley, an extremist among the town "dries," who scarcely doffed his white ribbon long enough to go to bed, was offended at my question; but cooled off when he saw that I was merely ignorant of the right and harmless nature of pop.

It was my pop habit, I think, that ultimately got me tangled up with bull bitters—I failing to recognize in bull bitters the counterpart of the other enemy that came in small, flat flasks and tall quarts and conjured in my vision the picture of myself sleeping behind the stove with mother poking in wood while I slept off a drunk.

It was Charley Blank who discovered bull bitters to us. He bought it in black bottles holding a quart. It had a "bitey" taste, and was seasoned with herbs or roots of some sort. I know now, but did not then know that to all intents and purposes bull bitters was whisky in disguise; and it was not very good whisky, nor was it very well disguised.

Five or six of us used to gather in the shade of the town store on not Sunday afternoons, some from the harvest fields north, others from the stock ranges south. Bull bitters and pop went the rounds. Charley drank the bitters and made fun of the pop. Under the sting of his ridicule we of softer palates began to sip the bitters and took more as our mouths and palates got toughened to the sting of the fiery liquid.

Charley was a handsome young fellow with wavy, black hair, clean cut features, hard muscles, and quick wit when himself. Drunk or sober, he was the best horseman I have ever seen. He was gifted socially, and all the girls liked him. For a time he had "kept company" with the prettiest girl in all the bunch grass countryside, but a little while before the forming of our bull bitters club that met Sundays on the shady side of the town store, she had quite sensibly "given him the mitten" on account of his drinking.

On a Sunday afternoon I have in mind Charley consumed the better part of a quart of bull bitters, and was quarrelsome. His face was flushed, his eyes were unnaturally bright, and he used a wide range of bad language. Another of the boys, who was somewhat less freighted with bull bitters, took occasion to joke Charley about the throw-down the girl had given him. Charley, in a drunken way, began to abuse the girl and the joker, and his words stirred some bad temper amongst us.

I cut in presently with a remark which Charley resented. To tell the plain truth, my own share of the bull bitters had gotten pretty well to my head and temper—though I did not realize it. I was not thoroughly drunk. In the venacular of the bunchgrass, I was "three sheets to the wind and another a-floppin'."

One who drinks loses command of his head and temper before he loses command of his legs, usually. Just before his pins begin to wobble he imagines himself a regular Goliath, and usually can exert more than the normal of his strength for a couple of punches. Then he wilts. I was at about this point when I began to quarrel with Charley. He had reached and passed the wilting point.

I know now that I was considerably out of my normal self when Charley lurched up to me and called me a name which in our country was instantly followed by blows. Had I been in my right mind I likely would have waited till he was sober and then demanded a settlement. As it was, in a flash of temper I struck him.

I remember yet my feeling of dull astonishment at seeing Charley reel backward and crumple up under the blow. He fell in a sodden way, prone in the dirty street. Cursing thickly he rolled over on his side and tried to get up. He got on all fours like a dog, but his head sagged limply, and his efforts to rise ended in a spasmodic attempt which sent him sprawling with face sunk deeply in the dust. He rolled over on his side to get air, coughing and spitting the dust from his mouth. He tried to wipe his flushed, dust-streaked face with his hand, but the effort amounted to only a feeble waving of his hand near his face.

"You've hit a drunk man," sounded in my ears from a long way off, and then, "You're drunk yourself."

I told whoever spoke that he was a liar. Somebody laughed.

The bitters had taken possession of me, muscles and mind, all in a flash, following my scuffle with Charley. I knew that he who I had called a liar had spoken the truth. I was insanely angry at some one or something—just what I did not know. Some one laughed in an unpleasant way and said:

"Too much bull bitters!"

I wanted to get out of town at once, and asked where my pony was. A couple of fellows, one on each side, partly led and partly carried me to my horse, I suppose. Anyway, my next sensation was that of trying to keep a saddle under me, which wasn't easy. I rolled this way and that, like a ship at sea, and tried till sweat rolled from my face to regain control of my lost faculties.

There presently arose in my fog-stricken mind the conviction that some one had robbed me. With this came the great fear that the thief would escape. I vowed that I had been robbed, and told what all I would do to the thief, which was plenty.

There was more laughing, and the laughing made me surer than ever that some one had robbed me. The sinister words, "too much bull bitters," hammered in my mind with anvil blows, and each crash on the anvil was a shout that I had been robbed.

Wildly I felt in my pockets for the things which the thief had taken. Something was missing. Alternately I cowered in fear, and waxed mighty in wrath in the presence of imagined thieves. I knew I had been robbed of something.

Some one asked me what it was. I didn't know, but searched my pockets for the missing thing, thinking to find the stolen articles, and then exhibit them in proof of the fact that I had been robbed! There was more laughing; again the phrase "too much bull bitters," which in my ears was hell-sent proof that I had been robbed.

Now I understand it. I merely missed certain mental powers, and the control of my thinking and speech. My muscles were not pulling in their usual well-oiled grooves. Blighting as the breath of hell, the fiery alcoholic mist had risen to my brain and paralyzed it. The thief was bull bitters. The thing which had been taken away was myself.

My pony knew the way to the harvesting crew with which I was working that summer, and it was by his wits rather than by my own that I finally reached the outfit. Leaving the horse saddled in the barn lot I steered a rather devious course for a haystack about which were the beds of my harvest field companions, mine included. I walked, or staggered right over somebody's bed, and trod on the foot,

(Continued on page twenty-three.)

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

### How to Get Up and Dress the Physical Culture Way

Radiant eyes, a clear complexion, symmetry and grace and a cheerful disposition are possible of attainment by practically every person. A little attention to the muscles and the discreet use of odd moments considered of small importance alone often accomplish the results desired.

Dr. Hirshberg

If, with reluctance and a prayer unuttered, you arise in the morning with the wish that you had no need of daily bread or payment of war tax to recall you from a relapse into the land of nod, you should stretch yourself firmly on your back with hands above your head and your feet pressed upon the footboard. Then you will have taken a first step in physical training.

Thus outstretched, inhale deeply and deliberately 12 times. Without belts, straps, stays or corsets, you thus give vent to the bad air of the anatomy.

**Make Movements Count.**

The muscles of your back and those of the chest are thus given a morning tone, which may overcome much of the slovenly attitude of which part of the world speaks and you fail to notice in yourself.

Dr. Leonhard Fald of the committee of education in New York city maintains correctly that you should not turn over on your side and roll out of bed without regard to gymnastics. Not at all. Get some benefit out of every little ordinary movement.

Hold your hips with your hands; catch your toes at the bottom of the bed; sit up without the slightest aid from your hands. That's the way to train your physical self. Difficult, doubtless, at first, but it soon gives a glow of pleasure and purpose to the day's beginning.

So many muscles in the grown-up human have become flabby, fat-ridden and almost useless that it requires just such simple exercise as these to train them into symmetry.

**Getting Most Benefit.**

As you lie prone on your bed, force yourself day by day to rise to a sitting posture by the strength of the abdominal muscles. Elevate the legs with the knees bent until the legs are at right angles to the body.

Straighten the legs now and point the toes toward the ceiling and then allow the legs to sink unbent to the bed. This is extremely difficult at first, and there may be a tremor from the strain, but after some practice this will disappear and then the manoeuvre can be carried out with success.

Do not hunch your back when you put on your stockings. Hold firm, lie on your back, rise your knee to your chest and pull on the stocking.

To put on your shoes, stand in an upright position in your stocking feet. Raise the foot and balance on the other one as you slip on the shoe. This is no easy method. It calls for purpose, persistence and practice—three important P's.

The way to lace your shoes, yet help your muscles and cords, is to kneel on one knee as you lace the shoe on the other foot. Bend the knee until your body almost touches your foot, but do not bend the spine. Move the leg backward, kneel on the other knee and then lace the other shoe.

These movements are done slovenly, carelessly and with no purpose by most people. Yet they can be converted into helpful physical culture exercises if daily carried out as here suggested.

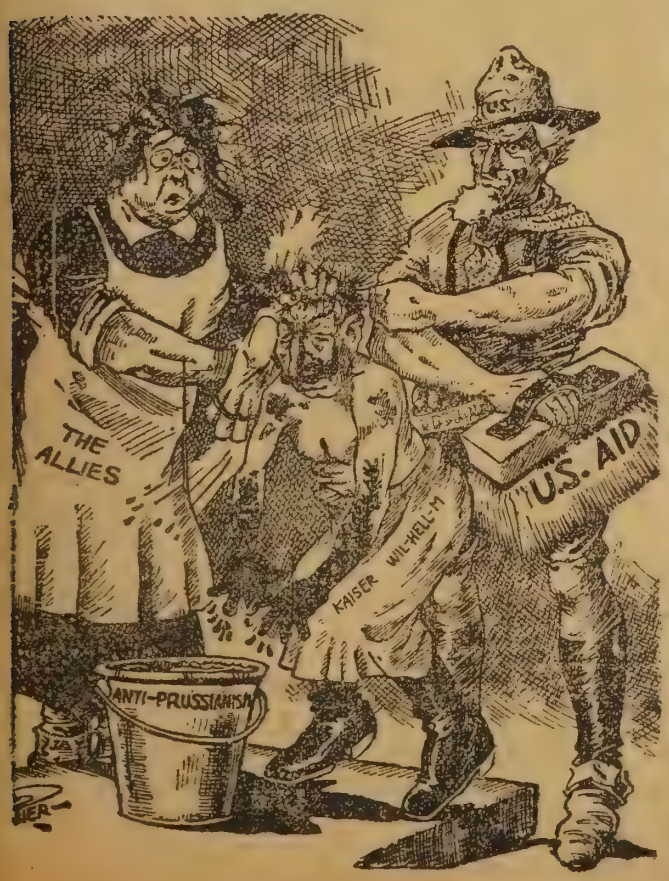
# All the World's a Stage, and All the Men and Women Merely Players

## Getting Milk to Babies

—Copyrighted by International Film Service.

Due to the terrific snowstorms that have hit Chicago, the streets became impassable for wheeled vehicles and milkmen could not make the daily rounds. Frank Clements, owner of a team of reindeer, succeeded in delivering milk to many kiddies who would otherwise have had to go without.

## Bundles of Sisal Leaves



Mexico is the home of the sisal fiber industry. In Yucatan the sisal plant is grown on large plantations embracing thousands of acres and supplying nearly all the fiber used in harvesting the crops of the world. Manila fiber is procured from the Philippine islands, which supply about 15 per cent of the fiber used in the manufacture of binder twine. This photograph is taken from "Harvest Scenes of the World," issued by the service bureau of the International Harvester company.

## Filming World's Greatest Drama

Sergeant Leon H. Caverly, United States marine corps, a "movie" camera man of Uncle Sam's fighting forces in France, is shown photographing our participation in the great war, for the nation's archives. These men daily risk their lives recording the world's greatest drama for future generations. Enemy soldiers spot him with powerful glasses and because they fear his records, train their guns on him. The moving pictures have been used in a new way as a result of the European war in the production of actual fighting scenes. While they are not half so thrilling and spectacular as the pictured sham battles of previous years, they have had a tremendous grip on the imagination and are expected to be of ultimate use to the various movements organized throughout the world to prevent wars in the years to come.

## "The Worst Is Yet to Come!"

—Los Angeles Times.

## Soldiers Near Front Attend Divine Services

—Copyrighted by International Film Service.

Even in the midst of ruin the minds of French soldiers turn to religion and spiritual thoughts that were once commonplaces of a peaceful civilization. This photograph, taken near the western front, shows the gallant poilus leaving the cathedral of Rombercourt after service.

## CHAPTER XIX.

### The Call of the Oreads.

There was mingled rejoicing and lamentation in the household of John Gale this afternoon. Molly and Johnny were in the throes of an overwhelming sorrow, the noise of which might be heard from the barracks to the Indian village. They were sparing of tears as a rule, but when they did give way to woe they published it abroad, yelling with utter abandon, their black eyes puckered up, their mouths distended into squares, from which came such a measure of sound as to rack the ears and burden the air heavily with sadness. Poleon was going away. Their own particular Poleon. Something was badly asked in the general scheme of affairs to permit of such a thing, and they manifested their grief so loudly that Burrell, who knew nothing of Doret's intention, sought them out and tried to ascertain the cause of it. They had found the French-Canadian at the river with their father, loading his canoe; and they had asked him whither he fared. When the meaning of his words struck home they looked at each other in dismay, then, bred as they were to mask emotion, they joined hands and trudged silently back up the bank with filling eyes and chins a-quiver until they gained the rear of the house. Here they sat down all forlorn, and began to weep bitterly and in an ascending crescendo.

"What's the matter with you tikes, anyhow?" inquired the lieutenant. He had always filled them with a speechless awe, and at his unexpected appearance they began the slow and painful process of swallowing their grief. He was a nice man, they had both agreed long ago, and very splendid to the eye, but he was nothing like Poleon, who was one of them, only somewhat bigger.

"Come, now! Tell me all about it," the soldier insisted. "Has something happened to the three-legged puppy?"

Molly denied the occurrence of any such catastrophe.

"Then you've lost the little shiny rifle that shoots with air?" But Johnny dispelled this horrible suspicion by drawing the formidable weapon out of the grass behind him.

"Well, there isn't anything else bad enough to cause all this outlay of anguish. Can't I help you out?"

"Poleon!" they wailed, in unison.

"Exactly! What about him?"

"He's goin' away!" said Johnny.

"He's goin' away!" echoed Molly.

"Now, that's too bad, of course," the young man assented; "but think what nice things he'll bring you when he comes back."

"He ain't comin' back!" announced the pair, with the tone that conveys a sorrow unspeakable.

"He ain't comin' back!" wailed the little girl, and, being a woman, yielded again to her weakness, unashamed.

Burrell tried to extract a more detailed explanation, but this was as far as their knowledge ran. So he sought out the Canadian, and found him with Gale in the store, a scanty pile of food and ammunition on the counter between them.

"Poleon," said he, "you're not going away?"

"Yes," said Doret. "I'm takin' li'l' trip."

"But when are young coming back?"

The man shrugged his shoulders.

"Dat's hard t'ing for telling'. I'm res'less in my heart, so I'm goin' travel some. I ain' never pass on de back trail yet, so I 'spect I keep goin'."

"Oh, but you can't!" cried Burrell. "I—I—" He paused awkwardly, while down the breeze came the lament of the two little Gales. "Well, I feel just as they do." He motioned in the direction of the sound. "I wanted you for a friend, Doret; I hate to lose you."

"I ain' never got my satisfy yet, so I'm pass on—all de tam' pass on. Mebbe dis trip I fin' de place."

"I'm sorry—because—well, I'm a selfish sort of cuss—and—" Burrell pulled up blushingly, with a strong man's display of shame at his own emotion. "I owe all my happiness to you, old man. I can't thank you—neither of us can—e shall never live long enough for that, but you mustn't go without knowing that I feel more than I'll ever have words to say."

He was making it very hard for the Frenchman, whose eart was aching already with a dull, unending pain. Poleon had hoped to get away quietly; his heart was too heavy to let him face Necia or this man, and run the risk of their reading his secret, so a plaintive wrinkle gathered between his eyes that grew into a smile. And then, as if he were not tried sufficiently, the girl herself came flying in.

"What's this I hear?" she cried. "Alluna tells me—' She saw the telltale pile on the counter, and her face grew white. "Then it's true! Oh, Poleon?"

He smiled, and spoke cheerily. "Yes, I been t'inkin' 'bout dis trip long tam'."

"When are you coming back?"

"Wal, if I fin' dat new place w'at I'm lookin' for I don' never come back. You people was good frien' to me, but I'm kin' of shif'less feller, you know. Mebbe I forget all 'bout Flambeau, an' stop on my 'New Countree'—you never can tol' w'at dose Franchemans goin' do."

"It's the wander-lust," murmured Burrell to himself; "he'll never rest."

"What a child you are!" cried Necia, half angrily. "Can't you conquer that roving spirit and settle down like a man?" She laid her hand on his arm appealingly. "Haven't I told you there isn't any 'far country'? Haven't I told you that this path leads only to hardshi pand suffering and danger? The land you are looking for is there"—she touched his breast—"so why don't you stay in Flambeau and let us help you to find it?"

He was deeply grateful for her blindness, and yet it hurt him so that his great heart was nigh to bursting. Why couldn't she see the endless, hopeless yearning that consumed him, and know that if he stayed in sight and touch of her it would be like a living death? Perhaps, then, she would have given over urging him to do what he longed to do, and let him go on that search he knew was hopeless, and in which he had no joy. But she did not see; she would never see. He laughed aloud, for all the world as if the sun were bright and the fret for adventure were still keen in him, then, picking up his bundle, said:

"Dere's no use argue wit' Canayen man. Mebbe some day I come paddle back roun' de ben' down yonder, an' you hear me singin' dose chanson; but now de day she's too fine, de river she's laugh too loud, an' de birds she's sing too purty for Francheman to stop on shore. Ba gosh, I'm glad!" He began to hum, and they heard him singing all the way down to the river bank, as if the spirit of Youth and Hope and Gladness were not dead within him.

"Chante, rossignol, chante!
Toi qui a de coeur gai;
Tu as le coeur a rire
Mai j' l' ai-ta pleurer,
Il y a longtemps que j' t'aime
Jamais je ne t'outblierai."

A moment later they heard him expostulating with some one at the water's edge, and then a child's treble rose on high.

"No, no! I'm goin', too; I'm goin', too-o-o-o—"

"Hey! John Gale!" called Poleon. "Come 'ere! Ba gosh! You better horry, too! I can't hol' dis feller long."

When they appeared on the bank above him, he continued, "Look 'ere w'at I fin' on my batteau," and held up the wriggling form of Johnny Gale. "He's stow hisse'f away onder dem blanket. Sacre! He's bad feller, dis man—don' pay for hees ticket at all; he reg'lar toff mug."

"Sing, little bird, oh, sing away!
You with the voice so light and gay!
Yours is a heart that laughter cheers,
Mine is a heart that's full of tears.

Long have I loved, I love her yet!
Leave her I can, but not forget."

"I want to go 'long!" yelled the incorrigible stowaway. He had brought his gun with him, and this weapon, peeping forth from under Poleon's blanket, had betrayed him. "I want to go 'long!" shrieked the little man. "I like you best of all!" At which Doret took him in his arms and hugged him fiercely.

"Wal, I guess you don't t'ink 'bout dem beeg black bear at night, eh?" But this only awoke a keener distress in the junior Gale.

"Oh, maybe de bear will get you, Poleon! Let me go 'long, and I'll keep dem off. Two men is better dan one—please, Poleon!"

It took the efforts of Necia and the trader combined to tear the lad from the Frenchman, and even then the foul deed was accomplished only at the cost of such wild acclaim and evidence of undying sorrow that little Molly came hurrying from the house, her round face stained and tearful, her mouth an inverted crescent. She had gone to the lame puppy for comfort, and now strangled him absent-mindedly in her arms, clutching him to her breast so tightly that his tongue lolled out and his three legs protruded stiffly, pawing an aimless pantomime. When Johnny found that no hope remained he quelled his demonstrations of emotion and, as befitted a stout-hearted gentleman of the woods, bore a final present to his friend. He took the little air-gun and gave it into Poleon's hands against that black night when the bears would come, and no man ever made a greater sacrifice. Doret picked him up by the elbows and kissed him again and again, then set him down gently, at which Molly scrambled forward, and without word or presentation speech gave him her heart's first treasure. She held out the three-legged puppy, for a gun and a dog should ever go together; then, being of the womankind aforesaid, she began to cry as she kissed her pet goodby on its cold, wet nose.

"W'at's dis?" said Poleon, and his voice quavered, for these childish fingers tore at his heart-strings terribly.

"He's a very brave doggie," said the little girl. "He will scare de bears away!" And then she became dissolved in tears at the anguish her offering cost her.

Doret caressed her as he had her brother, then placed the puppy carefully upon the blankets in the canoe, where it wagged a grateful and amiable stump at him and regained its breath. It was the highest proof of Molly's affection for her Poleon that she kept her tear-stained eyes fixed upon the dog as long as it was visible.

The time had come for the last goodby—that awkward moment when human hearts are full and spoken words are empty. Burrell gripped the Frenchman's hand. He was grateful, but he did not know.

"Good luck and better hunting!" he said. "A heavy purse and a light heart for you always, Poleon. I have learned to love you."

"I want you to be good husban', M'sieu'. Dat's de bes' t'ing I can wish for you."

Gale spoke to him in patois, and all he said was: "May you not forget, my son."

They did not look into each other's eyes; there was no need. The old man stooped, and, taking both his children by the hand, walked slowly toward the house.

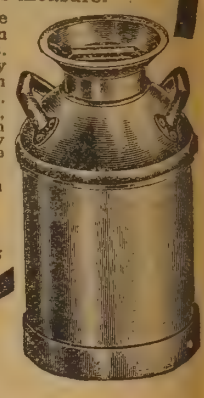
"Dis tam I'll fin' it for sure," smiled Poleon to Necia.

Her eyes were shining through the tears, and she whispered, fervently:

"I hope so, brother. God love you—always."

It was grief at losing a playmate, a dear and well-beloved companion. He knew it well, and he was glad now that he had never said a word of love to her. It added to his pain, but it lightened hers, and that had ever been his wish. He gazed on her for a long moment, taking in that blessed image which would ever live with him—in his eyes was the light of a love as pure and clean as ever any maid had seen, and in his heart a sorrow that would never cease.

"Good-bye, li'l gal," he said, then dropped her hand and entered his canoe. With one great stroke he drove it out and into the flood, then headed away towards the mists and colors of the distant hills, where the Oreads



Sturges Milk Cans

Accurate in Capacity

Each Sturges Milk Can is made to hold just so much and no more. Always agrees with the city sealer's measure.

Only highest grade steel plate is used in Sturges Milk Cans. That's why they last longer than usually expected. Carefully tinned, seams soldered smooth as a china bowl—easy to keep clean. Write for Catalog No. 133.

were calling to him. He turned for one last look, and flung his paddle high; then, fearing lest they might see the tears that came at last unhindered, he began to sing:

"Chante, rossignol, chante!
Toi qui a le coeur gai;
Tu as le couer a rire
Mai j' l' ai-t-a pleurer.

He sang long and lustily, keeping time to the dip of his flashing paddle and defying his bursting heart. After all, was he not a voyageur, and life but a song and a tear, and then a dream or two?

"I wish I might have known him better," sighed Meade Burrell, as he watched the receding form of the boatman.

"You would have loved him as we do," said Necia, "and you would have missed him as we will."

"I hope some time he will be happy."

"As happy as you, my soldier?"

"Yes; but that he can never be," said her husband, "for no man could love as I love you."

"Yours is a heart that laughter cheers,
Mine is a heart that's full of tears.
Long have I loved, I love here yet;
Leave her I can, but not forget—"

came the voice of the singer far down the stream.

And thus Poleon of the Great Heart went away.

The End.

## No Minors Allowed

(Continued from page twenty.)

stomach or head of the sleeping occupant who awoke with a yell and wanted to know where the devil I was walking.

From somebody else's disturbed bed came the sleepy ejaculation, "He's all lit up!"

Being "lit up" in a harvest crew late Sunday night explained away a multitude of sins. So the fellow on whose foot, stomach or head I had walked did not follow me to execute vengeance.

By a sort of animal instinct I knew where my bed was, and headed for it, rounding, or trying to round the corner of the haystack in my course. At the turn I lost my balance and nearly pitched into the dust. Right in my path stood a tall, heavily stooled wheat plant which somehow the harvesters had missed.

Clutching the air to regain my balance, my hand found the wheat straws, and there I stood, reeling slightly from side to side, clutching a straw to make up the deficiency in my legs.

A cool breath of night air fanned my feverish, sweating face as I stood there. It revived me somewhat—seemed to blow back into my head certain mental powers that had strayed away. I found myself standing there, clutching the wheat straw, with the cool wind in my face—and the humor of it all struck me. I laughed. Up there in the pale sky was the round harvest moon and I looked up at it, laughed, and called it a fool for shining that way. Then I bethought myself of bed, and let go of my straw.

## Sidelights

**Wrong and Right.**

Teacher—Tommy, spell "wrong."
Tommy—"R-o-n-g."
Teacher—That's wrong."
Tommy—That's what you asked me to spell."

**His Viewpoint.**

"They have four bathrooms in their new house and——"

"Why—gol-ram it!—there ain't no four Saturday nights in one week!" astoundedly exclaimed Jason Greenhaw.—Wroe's Writings.

**Hurry Up, Please.**

Young Hopeful (to his sister): "I say Nell, pass me the butter."

Nell (in a tone of sisterly reproach): "If what, Johnny?"

Johnny (goaded to desperation by the delay): "If you can reach it."

**Eunice Knew How.**

Little Eunice was attending her first class in domestic science, and was asked to tell briefly the surest way to keep milk from souring. And Eunice, who was an exceedingly practical child, gave this recipe: "Leave it in the cow."

**The Stake Holder.**

Jack (pushing into papa's room): "Papa, the coffee pot and the kettle are singing."

Papa: "Nothing strange about that, my boy."

Jack: "But they are singing for a wager."

Papa: "Nonsense!"

Jack: "But I can prove it."

Papa: "How?"

Jack: "Because the frying pan is in the middle holding the steaks!"

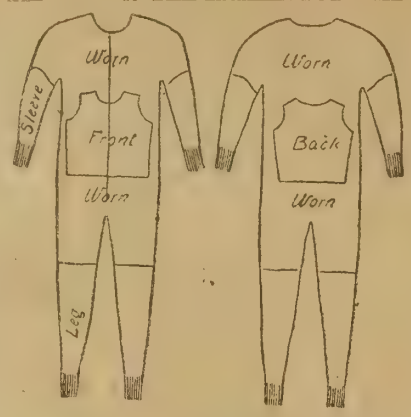
# Making Over Clothes

Both muslin and knitted underwear may be cut over if it has not been too much worn. There is not much wear on the ruffle of a woman's cotton petticoat and this will often make the whole skirt for a child. A good quality of lace or embroidery nearly always wears longer than the garment and may be used on another.

Knitted underwear may be cut down for both boys and girls. Seams should be made as flat as possible and the

**"Footing" stockings. This method doubles the lifetime of a pair of hose.**

neck, bottom, wrists and arms' eyes may be finished first by stitching on the machine, back-stitching or binding. A shell crochet or a blanket



**Baby overalls. By sewing the tops of stockings together, overalls to draw over the baby's underclothes may be made.**

stitch may then be used as a final finish. This is easier than making a hem.

**Save the Stockings.**

Hose should never be thrown away, because the feet are worn out. New feet may be cut from old uppers. Tops of old stockings may be used to reenforce tops of new ones. One ingenious mother sews the tops of two stockings together and draws them on her creeping baby. In this way the underclothing is kept clean much longer. The closely woven tops of father's or big brother's socks make

**Union suit for the children. Father's and mother's may often be made over for the little people.**

splendid wristlets for the small folk when skating is good. The folded leg of a long stocking makes a first rate holder for use in the kitchen. Fold in to the desired size and shape, overcast about the edge or even buttonhole it and then quilt a few times and you will have a useful article.

# Oatmeal Dishes

Oatmeal makes delicious puddings and other good things and is even better fixed up for dinner or supper than as a breakfast food, according to a leaflet issued by the United States food administration.

To cook oatmeal stir slowly two and one-half cups of rolled oats into five cups of boiling water which has in it two and one-half teaspoons of salt. Cook for one hour or over night in a double boiler or fireless cooker. This will serve five people. If you want it for two meals, cook twice the amount to save time and fuel.

Try this oatmeal pudding when you have a light dinner or supper: Two cups cooked oatmeal, four apples cut up small, one-half cup raisins, one-half cup sugar, one-fourth teaspoon cinnamon. Mix and bake for one-half hour. Serve hot or cold. Any dried or fresh fruits, dates, or ground peanuts may be used instead of apples.

Scotch soup with bread and dessert is enough for lunch or supper. Two and one-half quarts water, one and one-fourth cups rolled oats, five potatoes cut in small pieces, two onions, sliced, two tablespoons flour, two tablespoons fat. Boil the water and add the oatmeal, potato and onion, one-half tablespoon of salt and one-half teaspoon pepper. Cook for one-half hour. Brown the flour with the fat and add to the soup. Cook until thick. One cup of tomato adds to the flavor. Serves five people.

Oatmeal bread is delicious with all meals: One cup milk or water, one teaspoon salt, two and one-half cups wheat flour, one-third yeast cake, one cup rolled oats. Scald the liquid, add salt and pour over the oats, cool, half an hour, add the yeast mixed with one-fourth cup lukewarm water, and the flour. Knead and let rise until double the size. Knead again and let rise in the pan until the size is doubled. Bake in a moderate oven for 50 minutes. Makes one loaf, weighing one and one-fourth pounds.

The whole family will like spiced oatmeal cakes and they are easily made: One and one-half cups flour, one-half cup cooked oatmeal, one-fourth cup sugar, one-fourth cup raisins, one-fourth teaspoon soda, one-half teaspoon baking powder, one-half teaspoon cinnamon, three tablespoons fat, one-fourth cup molasses. Heat the molasses and fat to boiling. Mix with all the other materials. Bake in muffin pans for 30 minutes. This makes 12 cakes.

Especially crisp and good as well as cheap are Scotch oat crackers: Two cups rolled oats, one-fourth cup milk, one-fourth cup molasses, one and one-half tablespoons fat, one-fourth teaspoon soda, one teaspoon salt. Grind or crush the oats and mix with the other materials. Roll out in a thin sheet and cut in squares. Bake for 20 minutes in a moderate oven. Makes three dozen crackers.

Instead of meat, cook baked oatmeal and nuts for your family: Two cups cooked oatmeal, one cup crushed peanuts, one-half cup milk, one teaspoon vinegar, one-fourth teaspoon pepper, two and one-half teaspoons salt. Mix together and bake in a greased pan 15 minutes. This is enough for five people.

# To Dry Cure Beef

To the Editor: I would like to know how to cure beef so it will keep. Some years ago when the government boats were working on the Columbia river, they had some beef that was very fine. It was salted, but was not in any brine. It seemed to be dry cured. Could you tell me how to do this?

G. S. M.

William Hislop, professor of animal husbandry, Washington State college, to whom the above question was referred, answers as follows:

It would appear to me that the meat in question was dried to keep.

The process of securing dried beef is as follows:

To each 100 pounds of meat weigh out five pounds of salt, three pounds of granulated sugar and two ounces of saltpeter. Mix these materials thoroughly together. Rub the meat an all surfaces with a third of the mixture and pack it in a tight jar, allow it to remain there three days, then remove it and rub it again with another third of the mixture. In replacing the meat put on the bottom the pieces that were on top the first time. Let it stand for three days, then remove again and rub with the remaining third of the mixture and allow it to remain for three days more. The meat is then ready to be removed from the pickle. The liquid forming in the jar should not be removed, but the meat should be repacked in the liquid each time. After being removed from the pickle the meat should be smoked and hung in a dry attic where the water will evaporate from it. It may be used any time after smoking, although the longer it hangs in the dry attic the drier it will get.

**Prefer Irregular Lines.**

The straight line is an abomination to the Chinese. They endeavor to avoid it in their streets and buildings, and have banished it completely where country field paths are concerned. They will always substitute a curve wherever possible or they will torture it with a zigzag. To the Chinese mind the straight line is suggestive of death and demons.

They wear like iron—

**Conservation Fruit Cake.**

No wheat flour nor sugar is used in this cake. The recipe follows:

One cup molasses, two and one-fourth cups rye flour, one cup sour milk, two teaspoons cinnamon; one and two-thirds teaspoons soda, one-eighth teaspoon clove, one-half teaspoon salt, one-fourth teaspoon nutmeg, four tablespoons shortening (melted), one cup seeded raisins. Mix in order given, beat well and bake as cup cakes, or as a loaf cake, in a moderate oven.

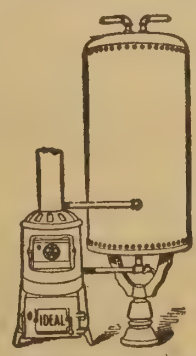
**Cook Cereals in Skim Milk.**

Cereals cooked in milk instead of water gain in flavor and food value. A particularly nourishing dish is prepared by cooking down 10 to 12 parts of skimmed milk to one of rice, oatmeal or other cereal. Where this is to be served for a dessert, use one-fourth cup of rice and one-fourth cup of sugar to three cups of milk. Cook until thick. This can be used in place of cream with stewed fruit.

**Supper Dish of Rice.**

Steam a cupful of rice with one sweet red pepper, chopped. When the rice is thoroughly cooked, stir in one can of condensed tomato soup. Season to taste.

# Save on coal bills with IDEAL heating



The old folks who have suffered the ills and bills of old-fashioned heating methods, are glad to give their approval to the economy, safety and comfort of IDEAL heating

The best recommendation we can give as to the success and satisfaction of IDEAL heating is from the old folks on the farm. They require the most *dependable* heat. IDEAL heating suits them exactly, it is sure and safe, warm in the morning and all day and mild at night. It is easily regulated to the weather, eliminates drafts and chill spots in the house—easy to take care of—most cleanly heat there is—no coal gas or ash dust, no repairs or over-hauling necessary.

AMERICAN RADIATORS & IDEAL BOILERS

IDEAL heating can be put in any farm cottage or house as a cellar or water pressure system is not necessary, and IDEAL Boilers and AMERICAN Radiators are made in every size to fit requirements.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

## IDEAL heating means big fuel savings

Careful and scientific burning of the low-priced fuel of your locality produce saving dividends which soon repay first cost. IDEAL Boilers are the greatest heat producers and fuel savers known. Thousands of farm houses equipped with them.

## Get copy of valuable heating book free

We will gladly send you a copy of our illustrated and interesting book, "Ideal Heating," which we want you to read carefully. Write for it today—no obligation to buy.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Sold by all dealers. No exclusive agents

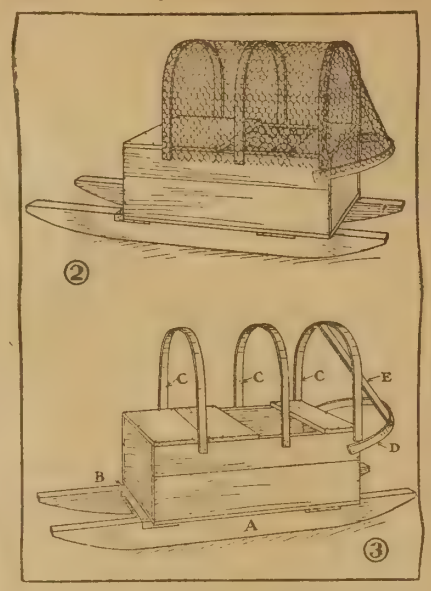
# Handicraft For Boys

By A. Neely Hall.

## An Armored Pushmobile.

The next time you boys build a fort for a snowfight, suppose those of you who are to attack it provide yourselves with armored pushmobiles like the one in Fig 1. You will find that this new idea provides the means for making a snow battle double exciting, because the attacking party has as much protection as the defenders of the fort have, and with their pushmobiles can push up within as close range as they



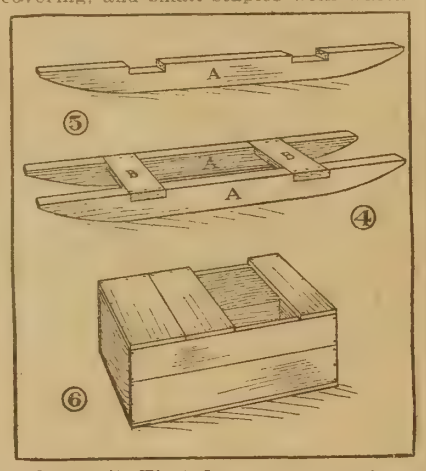
want, before firing upon the fort. Besides the protection which the pushmobile affords the boys who are attacking, it provides a protected magazine large enough for 100 or more snowballs. You will acknowledge that this is dandy, because you will not have to prepare snowballs while under fire. The wire-mesh armor makes it possible for the boy within to see where he is advancing to, and when he has pushed up into a position for firing he is enabled to watch for the opportunity to jump out of cover and throw snowballs at the defenses of the fort when they are least prepared. Having thrown as many snowballs as he could carry in his hands, he can seek the protection of the pushmobile again.

### Sled for Runners.

If you own a sled you can use it for the runners of a pushmobile, but as it is so simple a matter to prepare a pair of runners, probably you will want to build the entire pushmobile, Fig. 2 shows a side view of the completed pushmobile, and Fig. 3 shows a detail of the completed framework.

You can use whatever proportions you wish, but I would suggest that you make the runners (A, Fig. 4) about four feet long, and that you cut them out of 2x4s. Fig. 5 shows how to notch each runners one foot from each end for the connecting crosspieces B (Fig. 4) to fit in. These crosspieces may be pieces of board one inch thick and four inches wide. Cut along each end of the notches with a saw, and split out the wood between with a chisel. Nail the crosspieces securely in the notches.

Fig. 6 shows the box which is fastened to the runner crosspieces, on which the boy rests his chest and



stomach in pushing the pushmobile. Nail the cover boards on crosswise of the box, with an opening left between them large enough to allow access to the inside of snowball magazine.

### Framework for Armor.

Procure four barrel hoops for the supporting framework for the wire-mesh armor. Remove the nails which fasten together the ends of these, and open out and fasten three of the hoops to the sides of the box to form the vertical ribs C. Fasten the fourth hoop to the front of the box D and connect it to the front hoop C by means of the diagonal stick E.

Get a small sized wire mesh for the covering, and small staples with which

to fasten it. First fasten on one piece to extend from end rib to end rib, and from one side of the box over the rib tops and down to the opposite ends; then cut another piece to fit over the box framework.

## Trade in Home Town

Not long ago we received a letter from one of our subscribers saying that if he wished to buy a certain commodity (which by the way was handled by one of his home town dealers) he would send to a mail order house for it. This, of course is his privilege. But supposing a majority of his neighbors in that community were to do the same thing continually. Would it not mean discouragement to all local storekeepers in that community? Would it not mean slow starvation to all merchants already located there and stand as an effectual barrier against the business advancement and enterprise of the neighborhood?

We do not mean to express or imply that there should be no trading done with mail order houses, for it happens frequently that such houses offer certain lines of goods not obtainable from local stores. But we believe that the home town storekeeper should be given all the trade encouragement possible where he is doing the best he can to deserve it. Even though his prices on some lines may be a trifle higher, due to the fact that his volume of trade will not permit his buying in big lots, it must not be forgotten that he is (or can be made) an important factor in the development of the community in which you are, or should be interested.

Bear in mind that the storekeeper, whether he keeps a little store or a big one, is a giver of service. He invests his money and his time in supplying you and your neighbors with commodities that you might otherwise be at considerable inconvenience to obtain. As a rule the storekeeper in your community is what your community makes him. If you withhold your trade from him he is held back in his efforts to keep a fresh and varied line for you to select from. He is entitled to a reasonable profit on what he sells you just the same as you are entitled to a profit on whatever you produce for sale. The storekeeper is not a drone in the community hive. He is a very necessary factor in making the community a better place for you and your family to live in. Public spirited cooperation with your home town merchants is like bread upon the waters. It comes back to you in the form of a more prosperous, more progressive community center

## The Silo Is Popular

The popularity of the silo for storing dairy cow feed is indicated in a letter from M. R. Alleman, county agent for Clallam county, when he says that every member of the Clallam County Cow Testing association, with one exception, has at least one silo, and that that member is planning to have one for this season

"A considerable number of silos were put up in the county this year," says Mr. Alleman, "and in several instances by those who already had a silo and had been using it successfully for several years. There will be a great many more put up the coming season."

Owing to the unusually fine weather for hay-making last summer, a number of farmers put up their feed in the form of hay in Clallam county, says Mr. Alleman, but some of them have already expressed regret, finding that they need the succulent silage for the best dairy production. A report from the county that the silo was growing in disfavor apparently was founded on the cutting of some of the crops as hay. Mr. Alleman's statements make it clear, however, that the farmer of his county are strongly in favor of the silo.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4662 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

We prepay parcel post on all wearing apparel.

BIRDS HATCHED EARLY

GROW BEST, LAY BEST, PAY BEST

The outlook for unusual profits from poultry—especially farm flocks—is very bright.

Order breeding fowls, hatching eggs or baby chicks early. You will find the ads of some of the best and most reliable poultry breeders in the Pacific Northwest on the Breeders' Page and the "Want Ad" page of this paper.

POULTRY BREEDERS

If you have breeding birds, hatching eggs or chicks to offer, remember that we can render you good service in finding buyers. Tell us what you will have to offer and we will prepare an ad for you free and send you our rates.

THE WASHINGTON FARMER

Poultry Adv. Dept. 36 Review Bldg.

Spokane, Wash.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much. I hope this will not be the last. I go to school and am in the sixth grade. I am 13 years old and my birthday is July 25. Have I a twin? I would like if some one would correspond with me. I have two sisters. Their names are Alice and Eileen. I have four rabbits. Their names are Bonny, White Tail, Brownie, White Nose and Little Bonny. Little Bonny is cute. I have one turkey and she is laying eggs now. She has laid 91 eggs already and she is still laying. She is my dearest pet. I have some fish in my spring. They are little fish.—Johnnie Hanley, R. F. D. Route 1, Twisp, Wash.

**Skate and Slide on the Pond.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. The first time I wrote about my calf. Her name was Beauty. One evening I was at the barn. Beauty was afraid of me. Always before when I went over to her she did not make a move. I petted her, but she did not even move her head. I told papa she was sick. He said: "She just wants to be friendly with you." I went to the house and told mama my calf was sick. Mama and papa went to see what was the matter with her. She really was sick. That evening mama and papa gave her medicine and tried to make her stand up. Beauty acted like she had been poisoned. In the night some time she died. Papa gave me another calf. I called her Jean. Our farm is just across the road from the schoolhouse. In the winter the school children come down to a small pond on our place. They skate and slide on my sled. In our school are 11 children. There are four girls and seven boys. I have two big brothers, George and Leslie. George is 20 years old and Leslie is 18 next month. I was 10 years old last September 7. Have I a twin? We have a Ford car. One Sunday last summer papa and mama, George and I went to Spokane and spent the day with my aunt. We have 24 head of cattle, two horses, one pig and 43 chickens. I have a cat and dog. I am left-handed.—Ruth Ada Jones, R. F. D. 1, Box 49, Newport, Wash.

**Rained Enought to Last Five Years.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but I hope it won't be the last. My name is Esther. I was 12 years old last October 17 and am in the seventh grade. I have blue eyes and light hair. If I have any twins will they please write to me? I have four sisters. Mary is 18 years old and is a teacher; Elsie is 8 years old; Minnie is 3 years old and my brother's name is Hugo and he is 14 years old. We have three cows, Jersey, Nancy and Daisy. We have two calves, Spotty is the name of one. Our dog's name is Tige and our pony is named Dolly. I go to the Fernwood school which is half a mile from our place. It has two rooms, one for the primary grades and the other for the upper grades. My teacher's name is Miss Johnson and I like her very much. We have had only a little bit of snow this year, but it has rained enough to last five years, I think. My letter is getting a little long, and as it is about 9 o'clock, I think I'll retire to Bedlam.—Esther Hoglund, R. F. D., Box 222, Port Orchard, Wash.

**Has Lunches at School Every Day.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 13 years old and in the sixth grade. I have three sisters and one brother. My sisters' names are Mary, Evelyn and Wilma. Mary is 15 years old and is in the seventh grade. Evelyn is seven years old and is in the third grade. Wilma is the baby. She is three months old. Clay is in the fourth grade and is 11 years old. We live on a 168-acre farm. We have two horses and four cows. We have 16 chickens and 15 of them are mine. I have six tame rabbits. Two are the old ones and four are little ones. We haven't had very much snow this winter. I forgot to tell my teacher's name; it is Miss Rose Gute. She lives at Cloverland, five miles from our place. We have 20 scholars at school. We have hot lunches at school every day. I like it fine.—Vierbie Miller, Cloverland, Wash.

**Brother Is in the Navy.**

Dear Aunt Nellie: We have six cows and about 30 chickens, five geese, three pigs and a few calves. We have a puppy. The puppy's name is Daisy. We have no name for the cat. I live on a 62-acre farm. I have five sisters and five brothers and two nephews. I live in a 14-roomed house. I am 10 years old and will be 11 June 17. If I have a twin I hope she will write. I'm in the fourth grade. My teacher's name is Mrs. Brooks. Seven of our family are going to school. I just about forgot to tell you how many horses we have. We have two horses and a wagon. I have a brother in the navy. There are 12 children in my school. One of my sisters goes to Ilwaco school. There are about 400 in that school. There are only three girls home. My oldest sister is married.—M. E. Sargant, Nahoota, Wash.

**Likes to Live on a Farm.**

Dear Aunt Nellie: I like to live in the country on a farm better than in the city. I have one brother and one sister. My brother joined the twenty-third engineers. My birthday is the 25th of March. I will be 13 years old. Papa is plowing on the first of January. We have one cow, one yearling calf, and one little calf, two horses, one dog and one cat. The cow's name is Bossie, the calf's name is Pansy and the little calf is Carol. The horses' names are Nellie and Prince. The dog's name is Woodrow and the cat's name is Tom. I made one crotcheted yoke for a Christmas present. I can crotchet and knit. If I have a twin I hope he or she will write to me. I go to Elk school. I am in the sixth grade. My best studies are grammar and spelling. I wish any one of my age would write to me.—Gladys Bentley, R. F. D. 1, Elk, Wash.

**Cousin Iris Loves All the Birds.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I would like to be a cousin. May I? I am a little girl 11 years old. My birthday is the 6th of December. If I have a twin I would like to hear from her. I have one sister, Lois, and two brothers, Robert and Arthur. They are younger than I. My sister and I have a butterfly collection that we captured this summer. We love birds and do all we can to protect them and hope you all will do the same. I won the first prize on a bird composition at the last Washington state fair and got $3. I live on a 40-acre farm. We have four cows, Daisy, Bessie, Pansie and Blossom. We have two work horses, Dick and Prince. Maud, our mare, has a colt. Ribbon is our driving horse. We have three calves, lots and lots of chickens, ducks and turkeys.—Iris White, Wapato, Wash.

**Knitting Belgian Squares.**

Dear Aunt Nellie: I am a little girl 9 years old. I am in the third grade at school. My teacher's name is Miss Corbett. I am taking music lessons on the piano. My music teacher's name is Mr. Blankenship. I enjoy the letters very much. I have one brother. His name is Glenn. He is 20 years old. I have one kitty. Her name is Snowball. I also have a canary bird. His name is Ned. Have I a tin? If I have I wish she would write to me. My birthday is August 20. I take Little Folks' magazine. I like it real well. It has letters in it also. How many other little girls take it? We third graders at school are knitting Belgian squares. Some of us are knitting wash rags. I am making a Belgian square.—Vesta Kelly, Box 126, Dixie, Wash.

**Saddle Pony Is Called June.**

Dear Aunt Nellie: This is the first letter I have written to the Children's Corner. I enjoy reading the letters very much. My papa takes the Farmer. We live on a 320-acre farm in Okanogan county. I am 12 years old and will be 13 the 5th of August. Have I a twin? If I have I would like to hear from her. I am in the seventh grade. Our teacher's name is Miss Anderson. I have three sisters and one brother. Their names are Violet, Elsie, Melvia and Karl. We have eight cows and seven horses. One is a saddle pony. Her name is June. I hope to see my letter in print. If I do I will write again.—Pearl Thomason, Wauconda, Wash.

**A Good Time at the Children's Party.**

Dear Aunt Nellie: I have been reading the letters in the Children's Corner and I would like to join. I am 12 years old and I am in the sixth grade. I go to No. 12 school and I like my teacher very much. Her name is Miss Rowe. There are five in my class and 20 pupils in the school. We had a Christmas tree at our schoolhouse. We did not have an entertainment, just a party for the school children. Each one of us got a present for one another and each brought sandwiches or a cake. We had a real good time. Miss Rowe said we would have an entertainment some time.—Verna Jennings, Friday Harbor, Wash.

**Leslie Burns Stumps in the Spring.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We live on a farm of 100 acres cleared and 60 acres not cleared. We have 160 altogether. In the spring my brother and I have to burn stumps. I have two sisters and one brother. My brother's name is Clyde and my sisters' names are Oma and Stella. I like to live on a farm. We have 26 head of cattle and 10 horses. We also have 42 hogs. I am 10 years old and will be 11 the 5th of October. Have I a twin? If I have I would like for them to write to me.—Leslie Davis, Fruitland, Wash.

**Goldie Is in the Third Grade.**

Dear Aunt Nellie: I'm eight years old and in the third grade and my teacher's name is Miss Dunngan. We had a Christmas tree and I got a little bell off of the tree and a doll and basket. Buster got a little car.—Goldie Miller, Box 63, Mayview, Wash.

**Has Emma Twin Anywhere?**

Dear Aunt Nellie: This is the first time I have written to the Corner. I have two sisters and five brothers. Their names are Irene, Myrtle, Bernard, Dan, Frankie, Karl and Glen. We have two cows; their names are Lucky and Kate. We have about 100 chickens and one cat. Her name is Slivers. I am in the fourth grade. My teacher's name is Miss Snider. I was 10 years old the 12th of September. Have I a twin? If so, I hope he or she will write to me. I hope some of the other cousins write me, too. I must close now and go to bed.—Emma LaPen, Yelm, Wash.

**Helen's Friend, Leona.**

Dear Aunt Nellie: This is the fourth time I have written to the Children's Corner. My subject is my friend, Leona. My friend's name is Leona Chamberlain. We have lots of fun playing. She got a little baby doll for Christmas. Christmas when she went to bed her mother dressed it in a little gown. She put a chair beside her and put the doll on it. The next morning when Leona awoke and saw it she was so surprised. She and I have all sorts of fun playing with it. I made a little dress for it Christmas. She has lots of clothes for it. Every night she puts its little gown on it and puts it to bed. It is just about the size of a real baby. Its name is Ervin Lloyd Chamberlain. She named it after her brother. She washes and irons its clothes on Saturday and has them clean for Sunday. She takes as much care of it as a woman takes of a baby. She washes it and puts in much of her time taking care of it. I hope to see my letter in print again. I will soon be 11 years old. My birthday is the 20th of January. My friend's birthday is the 11th of February and she will be 10 year old. Have we any twins? If we have we would like to hear from them. —Helen Schoenberg, Prosser, Wash.

**Have a Big Clam Beach.**

Dear Aunt Nellie: It has been a long time since I have written to you. This makes the third time I have written. I will tell you about the islands I can see around here. We live about a half a block from the beach. We live on a farm. We have two cows, a horse and a pig, and 17 sheep and a dozen chickens. We have four cats and two dogs. I have three brothers and one sister. I wrote to a girl. Her name is Verna Huffman. She did not answer my letter. I hope she will soon. I am looking for a letter from her every day. I am 10 years old. My birthday is the 13th of June. I am not going to school now. I have three miles to go to school. I will tell you about our boats. We have three little row boats and two gas boats. Their names are Mermaid and Pawnee. We have a big clam beach not far from our house.—Pearl Droullard, Prevost, Wash.

**Tip and Rags Are the Dogs.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old. I am in the third grade. We live on a three-acre ranch in Wallace addition. We have two cows, one calf. Our cows' names are Cherrie and Flossie. Our horse's name is King. We have two dogs, Tip and Rags. I have been reading the Children's Corner. Have I a twin? We take the Farmer. There are 10 pupils in our school. I will tell you about our family next time.—Alonzo Murray, Kelso, Wash.

**Raise Wheat, Oats and Alfalfa.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I am eight years old and in the second grade. I live on a farm of 80 acres. We have five horses and two colts, one cow and two calves, also about 45 chickens and five geese. We raise wheat, oats and alfalfa and hogs. I have a brother four years old. His name is Vern. We have a new Ford car. I have two sheep and two cats. Their names are Bess and Yank. I hope to see my letter in print.—Virgil Glen McGee, Oakesdale, Wash.

**Alice's Second Corner Letter.**

Dear Aunt Nellie: This is the second time I have written to the Childrens' Corner and it will not be the last. I have three brothers and one sister. Their names are Alfred, Vastor, Robert and Amy. Alfred is 14 years old, Vestor is seven years old, Robert is 17 months old and Amy is 10 years old the last August 23. Have I a twin? If so, I wish she would write to me and I would answer. I hope Santa Claus was kind to all the cousins this year.—Alice E. Ritchey, Chesaw, Wash.

**Going to Join the Red Cross.**

Dear Aunt Nellie: My papa works in a logging camp, but he takes the Farmer. I am going to join the Red Cross after a while. My mother is going to teach me to knit. Last summer we lived near the Nooksack falls. They are beautiful. I have two sisters. Their names are Fay and Vivian. I have two brothers. Their names are Burton and Beecher. I am nine years old. My birthday is March 23. I am in the fourth grade.—Leona Adkinson, Maple Falls, Wash.

**Zenia's Dogs Are Bob and Jack.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it won't be the last time. I am nine years old. My birthday is the 12th of May. I live on a farm 10 miles north of Davenport. I have three brothers and two sisters. I have two dogs and their names are Bob and Jack. We have lots of cats.—Zenia Light, Davenport, Wash.

**Big Gray Cat Is 14 Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. It has rained here for several days and it is very muddy out. I do wish it would snow as we have had very little snow and sleigh rides this year. I have a great big gray cat for a pet about 14 years old and his name is Tabby. I go to the Davenport graded school and I was 12 years old November 16. Have I a twin? I have only one brother, 9 years old, and his name is James. I am so glad he does not have to go to war, but he said "He would like to go."—Josephine Holland, Box 77, Davenport, Wash.

**Lillian Tells Us a Good Joke.**

Dear Aunt Nellie: I did not write to the Children's Corner yet, but I liked the letters so well that I thought I could not help writing to you. We are having nice warm weather, but I wish I could go sleighriding soon. It doesn't seem like winter the way the weather is now. My sisters, Elizabeth, Edna and I have two miles to go to school and I am in the fifth grade. We had a basket social in October and an entertainment with it. We also had an entertainment on Christmas eve. I think it is great fun to be in the little plays. Here is a little joke I think some of the cousins would like to read: A young farmer applied for a position on the farm. As he walked into the barn he addresesd the farmer: "Hey, Mister, will you job me?" "Will I what?" asked the farmer. "Will you job me? Make me work yet?" "Oh, I see; you want a job," said the farmer. "Well, how much do you want a month?" "I tell you. If you eat me on der farm I come for $30, but for $45 I eat myself at Schmidt's." If the Corner cousins like the funny jokes I will write again and tell you some more.—Lillian Lehman, Paha, Wash.

**Letter From Daddy's Right-hand Man.**

Dear Aunt Nellie: This is the second time I have written to the Corner. We had a nice Christmas tree and I got a lot of nice things. Daddy gave me a watch. We had two weeks' vacation and the weather has been fine and daddy is plowing. I have to do all the chores and I clean out the barn and get the horses up for daddy. I help him harness the horses and sometimes I help hook on the plow. I went after the mail on horseback and the mailbox is five miles from home. My saddle horse is Jessie. We have two towns, one is Wilbur and one is Almira and we have a car. It is a Dodge. I help daddy pump water for the cows and our pump is hard to pump. Sometimes when daddy is gone all night I get the cows up and water them and then put them in the barn. Then I feed them and mother milks the cow. We have three milch cows, but we are just milking one. I feed the pigs and we have two of them. One is brown and we call it Brownie and one is white and we call it Snowwhite. My teacher's name is Miss Fitzell.—Jerome Gottwals, Govan, Wash.

**Mamie Writes About Summer.**

Dear Aunt Nellie: My subject is summer. When summer comes you can go in the lake and swim. You can pick wild flowers and play ball. Now I will tell you what I got for Christmas. I got a doll, a puzzle, two books, a work box, some paper dolls, some candy, some nuts and an embroidery set. I got a doll buggy for my birthday and a calendar for my New Year present—Mamie Lien, Coulee City, Wash.

**Uncle and Cousin Were Drafted.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. My birthday is the 14th of August. I am 10 years old. My father and mother belong to the Red Cross. My uncle and my cousin were drafted. My uncle is in Camp Funston, Kansas. My cousin is in Florida. I would like to see my letter in print.—Lester Hoech, Wilson Creek, Wash.

**Tracy Is 11 Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on a 20-acre farm. I am 11 years old. I hope my letter will be in print. My teacher's name is Mrs. E. Waybright. I am in the fifth grade. —Tracy Germont, Greenacres, Wash.

THE BEST LINIMENT
OR PAIN KILLER FOR THE HUMAN BODY
Gombault's
Caustic Balsam
IT HAS NO EQUAL

# News for Breeders

## A Promising Holstein Herd.

Moorehead & Hobson of Outlook, Wash., have a promising herd of Holsteins on their 85-acre ranch. It was established in 1913 with six heifers, granddaughters of the noted bull, King Segis. It now numbers 56 purebreds, most of which are direct descendants of King Segis. Moorehead & Hobson's herd sire, Annie Dekol Segis, is a grandson of the celebrated Segis. A brother of Model Annie was purchased by Professor Wing for the college of agriculture of the University of New York. The herd now has five granddaughters of Segis, which averaged for seven days 26.59 pounds of butter. One of these cows holds the highest records for seven days and also for the year of any cow in the Yakima valley of her age. She produced 29.56 pounds of butter in seven days. Three of her calves are from Model Annie Dekol Segis and Vera Dutchess, and their four nearest dams averaged for seven consecutive days 30.35 pounds of butter.

## Talmadge's Boar Goes East.

Violet's Champion 219191, bred by Charles M. Talmadge of Newport, Wash., has been sold to A. J. Lovejoy & Son of Roscoe, Ill., to head their great herd in the east. Violet's Champion was sired by the well-known Laurel Champion, he by Rival's Champion Best, the famous boar owned by Dean C. F. Curtis of Ames, Iowa.

Violet's Champion was farrowed on May 17, 1914. He was grown out and developed by Mr. Talmadge and was sold to the Fontana Land company, Fontana, Cal., in December, 1915, together with a carload of gilts which he sold to the same people. The dam of Violet's Champion was Royal Violet II., bred by A. D. Hudson, Tangent, Ore., and was the grand champion sow of the Oregon and Washington state fairs in 1912, having been purchased by Mr. Talmadge the following year.

## Breaks Seven-Day Record.

A pure-bred Holstein cow again breaks a record for butter fat production. Lady Netherland Pontiac, with 43 1-2 pounds of butter to show for a week's work, has displaced Wandermeere Belle Hengerveld as junior 4-year-old in the seven-day division. Lady Netherland Pontiac produced in seven consecutive days 577.8 pounds of milk containing 34.817 pounds of fat, equivalent to 43.52 pounds of butter. Her sire is King Pontiac Konigen and her dam is Dretka Netherland II. Lass. She was bred by Julius V. Fredericks of Canajoharie, New York, and is now owned by Oliver Cabana Jr., of Elma Center, N. Y.
